RESCUE RADIO: CONGRESS COULD DESIGNATE BROADCASTERS AS FIRST RESPONDERS

U-S Senator Mary Landrieu, of Louisiana says that
she and a colleague plan to introduce
congressional legislation that would recognize
the role of local broadcasters in responding to
disasters on a federal level. Co-sponsored by
Senator Ted Stevens of Alaska, the First Response
Broadcasters Act of 2007 would designate
broadcasters as first responders, and as such,
entitled to federal supplies of "fuel, water and
emergency supplies so that they can remain in
operation in or near a disaster zone. The
Landrieu-Stevens legislation would also direct
FEMA to expedite access to the disaster area by
broadcast engineers to restore transmitters and
other key facilities of a broadcasters
infrastructure. The bill establishes a $10
million Broadcast Disaster Preparedness Matching
Grant Program that could be used to protect,
upgrade or enhance facilities. (RW)

**

RESCUE RADIO: NEW EMCOMMS DATABASE BEING DEVELOPED IN LOS ANGELES

A University of California at Los Angeles center is developing an online database and mapping system for first responders. This, to better address the needs of Los Angeles County's vulnerable populations in the event of a disaster.

The Center for Neighborhood Knowledge at the UCLA School of Public Affairs is using a 500,000 dollar endowment from the state Homeland Security Grants Program to develop the database. It along with maps are being designed for use by the Los Angeles County Office of Emergency Management.

The information will also be used the Los Angeles Mayor's Office, Los Angeles County Sheriff's Department, Los Angeles Police Department, and city and county fire departments. No word if the database will be available to volunteer agencies that utilize radio amateurs as primary communications. (CGC, others)

**

ENFORCEMENT: FCC SAYS THAT'S NO WAY TO RUN A REPEATER

Turning to enforcement news, the FCC has written to John C. Kimbrough, WR3S, of Murfeesborough, Tennessee, asking why has repeaters operated without apparent control and rebroadcast portions of commercial television programming and music on several dates in March of this year. The FCC told WR3S that this contrary to the FCC Part 97 rules. It also noted that its monitoring found that repeater control operators were failing to properly identify themselves.

The letter to Kimbrough goes on to note that the Commission requires that repeater be under the supervision of a control operator. Also, that it both requires and expects control operators to take whatever steps are necessary to insure that the repeater is in fill compliance with all FCC rules.

WR3S was given 30 days from the date of the FCC's April 12th letter to provide detailed answers to a list of questions asked by the FCC. He was also told that the information he submits will determine what additional action, if any will be taken in this matter by the FCC. (FCC)

**

ENFORCEMENT: FCC CANCELS HARTMANN JR ALJ HEARING AND DENIES APPLICATION

The FCC has told a hard to locate ham radio applicant that he will not get a hearing before an Administrative Law Judge and that his license application is denied. This, after Joseph W. Hartmann Jr of Lansing, Michigan, wrote to the judge assigned to the case telling him that he did not have the money to fight the agency's claims of alleged wrong doing.

For a long time the FCC could not communicate with Hartmann, Jr. Correspondence to him was returned unopened and unclaimed. Then Hartmann decided to contact the agency on his own initiative. In several electronic communications to Administrative Law Judge Arthur I. Steinberg, Hartmann Jr. stated that he did not have the resources to obtain legal counsel for a hearing nor have the resources for driving to hearing in Washington.D.C..

By way of background, the FCC had earlier designated Hartmann's license application for a hearing after noting that it had evidence suggesting that he had intentionally submitted fraudulent administrative updates to obtain the privileges associated with the General class license of another radio amateur with a similar name. That ham is Joseph V. Hartman Sr, K3GUX, of Oceanview, Delaware.

The Commission had earlier placed put Hartmann's January 2006 application for an Amateur Radio license on hold. This, while it was looking into why he'd filed numerous requests back in 2005 in attempts to change the name and address of the Delaware Hartman to that of his own.

Other than one being Hartmann Jr. and the other being Hartman Senior, there is also a difference in the spelling of the name. Joseph V. Hartman Sr, K3GUX, is spelled with only one letter "n" while Joseph W. Hartmann Jr. uses two. Its unknown if that's what caught the FCC's eye in this matter, but its likely a good guess. (FCC)

**

ENFORCEMENT: ONLY EXTRA CLASS CAN OPERATE THERE

Edib Zildzo, K2AAW, of Roselle, Illinois, has been sent a letter by the FCC. One that asks him to explain why he has been heard operating on frequencies reserved for Extra class license holders when he only holds a General class license.

In its note to Zildzo, the FCC says that it has a copy of documents submitted by him to unnamed

radio organization s where-in K2AAW claims that between February and July of 2006 that he operated at least 200 times on frequencies reserved for Extra class licensees. As such, it says that this raises questions whether or not Zildzo holds the qualifications to continue to hold an Amateur Service license.

Zildzo was asked to respond within 30 days to a series of questions regarding the operation of his station. He too was warned that future punitive action, if any, will depend on the information that he provides. (FCC)

**

ELECTRICAL SAFETY: SIGNS MIGHT HAVE SAVED STUDENTS LIFE

Purdue University says that it will update warning signs at all high-voltage areas, including the one where the body of an electrocuted freshman was found on March 23rd. The school said it will hold an independent review into the circumstances surrounding the death of 19-year-old aviation technology student Wade Steffey who had been missing since January 13th.

Under federal safety law, buildings constructed or renovated after 1981 are required to post signs on doors of rooms containing more than 600 volt circuits. Owen Hall, the dormitory where the Steffey was found was built in 1957.

According to published news reports investigators believe that Steffey probably walked into the room containing the high voltage circuitry. This, after trying several doors to enter the dormitory to retrieve a coat from a friend's room. An autopsy suggested that he died instantly when he made contact with the wiring. (Published reports)

INDUSTRY NEWS: ICOM IC-R3 MINI-TV RECEIVER IS AN ENDANGERED SPECIES

The Icom IC-R3, a small handheld receiver with a 2" T-F-T color display has been popular with ATV'ers involved in Emergency Communications for mobile reception of TV pictures may soon go extinct. Icom announced on April 26th that the IC-R3-26, blocked version for the United States market is currently on backorder with the delay is due to the FCC's Part 15.112 rules change.

This ruling states that all TV receivers imported
into the United States, after March 1, 2007, must
be DTV compatible. As the IC-R3 is analog only,
so it will no longer be imported for domestic
sales. When existing stocks are gone, that's all there will ever be. (CGC)

HAM RADIO ON THE WEB: THE DAYTON AMATEUR RADIO FORUM

Turning to ham radio on the World-Wide-Web, word
of a new on-line discussion board for hams in the
Dayton Ohio area. Its called the Dayton Amateur
Radio Forum and is in cyberspace and is billed as
a place to discus anything from vintage gear to
the latest operating modes and much more. Its
on-line at www.hamradioboard.proboards56.com/index.cgi (W8JWA)

**

THE SOCIAL SCENE: HAMVENTION 2007 - THE ANNUAL VHF DINNER

This years Dayton VHF Dinner is slated
for Thursday evening, May 17th at 6pm. The
venue is the Shuckin Shack, at 5512 North Main
in Dayton; This is a very casual. Affair where
such things as VHF contesting, gear and antennas will be discussed.

Seating is limited to about 60 and reservations
are required. If you plan to attend please
e-mail Dick Hanson, K5AND, at dick@dkhanson.com to reserve your spot.

Hamvention 2007 takes place May 18th to the 20th
at the Hara Arena in Dayton Ohio. Newsline's Ham
Radio Town Meeting is Saturday, May 19th from
12:45 to 2:45 PM. We hope to see you there. (VHF Reflector)

**

BREAK 2

Thirty years and still here to serve you. From

THE CHANGING OF THE GUARD: HOWARD LESTER, W2ODC - SK

One of the grates of the Amateur Radio service
has passed from the scene. This with word that

Howard Lester, W2ODC, passed away on April 16th.

Lester was best known for his work in forming the Upper New York Repeater Coordination Committee after the sudden collapse of the NorthEast Repeater Association in the early 1970's. He was also a member of the Schenectady Amateur Radio Association and heavily involved in the regions emergency communications planning.

In addition to his devotion to Amateur Radio, W2ODC was also an engineer and was credited as one of the inventors of color television during his tenure at RCA. He also devoted many hours helping local, State, and Federal officials solve radio communication problems. This included the Schenectady Police Department and the Schenectady County Emergency Operations Center.

Services for Howard Lester were held at Calvary Episcopal Church in Burnt Hills, New York on Sunday, April 22nd. He is survived by his wife Ruth; sons, Carl, David, Donald and Eric plus eight grandchildren and five great-grandchildren. (E-mail)

EMERGING TECHNOLOGY: THE TINY FRACTAL 2.4 GHZ ANTENNA

A new and very tiny Fractal antenna has come to light . In press release dated March 6th, the Spanish wireless antenna company Fractus released a 2.4GHz fractal antenna that is the size of a grain rice.

Fractus, the pioneer developer of fractal antenna technology says that it has set a new standard for antenna miniaturization with the launch of its smallest antenna for the I-S-M 2.4GHz band. The 3.7mm by 2mm Micro Reach Xtend provides device designers with significantly more available space to enable new multimedia applications or reducing the antenna space needed within devices.

The miniature antenna was developed especially for Bluetooth headsets and mobile handsets. It supports all standards working at the 2.4GHz ISM band, including Wi-Fi, and Bluetooth. Now the only problem is to convince Fractus that there's a restricted antenna ham radio market for a full kilowatt 20 meter version that would be about the size of a dime. More information s on line at http://www.fractus.com/main/fractus/news_english/ (New Technology)

**

RADIO IN SPACE: NASA MISSION TO STUDY THE AURORA BOREALIS

NASA has launched five satellites into orbit on a mission to study aurora like the famous Northern Lights. During the mission, the five satellites will observe an estimated 30 substorms in process and radio their findings back to Earth. At the same time, 20 observatories in Alaska and Canada will study the aurora from the ground.

The overall mission of these satellites is to solve the mystery of what causes geomagnetic substorms. Substorms are atmospheric events visible in the Northern Hemisphere as a sudden brightening of the Aurora Borealis that can have an impact on radio propagation. Researchers say that the findings may help protect commercial satellites and humans in space from the impact of particle radiation. Discovering why aurora fluctuate and fade will also provide scientists with important information on how the planet's protective magnetosphere works. (Space OnLine)

**

HAM RADIO IN SPACE: FO-29 GOES QRT

The Fuji-Oscar 29 satellite may have gone silent. Reports received from JE9PEL say that the Japan Amateur Radio League is asking for any received telemetry to be forwarded to them. The e-mail address given is lab@jarl.or.jp. (VHF Reflector)

**

HAM RADIO IN SPACE: INDIA PLANS HAMSAT-2

The secretary of AMSAT India says that organization that planning for a second Indian amateur radio satellite. It will be called Hamsat-2 and AMSAT India is asking for proposals from satellite operators, designers, and international AMSAT organizations. You can send your comments to info@amsat.in. (AMSAT India)

WORLDBEAT - UK: GB400AA CELEBRATES FOUNDING OF JAMESTOWN

Three clubs U-K radio clubs are banding together to celebrate the founding of Jamestown. The Clacton Radio Club, Felixstowe and District Amateur Radio Club and Harwich Amateur Radio

Interest Group have joined forces to operate
GB400AA as a special event station.

The station will commemorate the founding of
Jamestown, Virginia 400 years ago. This, when
the ships Susan Constant, Godspeed and Discovery
arrived in that then U-S colony. They carried
102 passengers and founded the first English
speaking settlement in North America.

GB400AA will be operated at the Mayflower Museum
on the Halfpenny Pier at Harwich where the
Harwich Society will have an exhibition showing
the local area's connections with the inaugural
voyages. The station is planned to operate from
May 11th to the 13th and again on May 25th and 26th. (GB2RS)

**
WORLDBEAT- GREECE: NEW 4 METER BEACON ON 70.040 MHZ

A new 4 meter beacon is on the air from Greece on 70.040 MHz..

4 meters, which was once a United Kingdom only
ham radio allocation is gaining favor across
Europe. The latest offering is the new SV1FOUR
beacon operation located in Athens that started operation on April 24th.

SV1DH is the beacon keeper. He reports over the
Four Meter website that the beacon is licensed
for 5 watts output to 5-element yagi antenna
beaming 315 degrees toward the UK.

At the moment SV1FOUR is only running at about 1
watt out and transmits its callsign followed by
several dashes and locator KM27AW in Morse. More
is on-line at www.70mhz.org (Southgate)

**

WORLDBEAT - UK: INTERNATIONAL MUSEUMS WEEKEND

The seventh International Museums Weekend special
event will take place on June 16th and 17th.
M1BYT, who is organising the event, asks that all
those intending to join in should please register
their museum via the International Museums
Weekend website at www.ukradioamateur.co.uk/imw.
Hams world-wide are encouraged to participate in
this event by setting up stations in their local
museums and showing the public the magic and mystery of Amateur Radio.
(GB2RS)

WORLDBEAT - ITALY: THE PONETE LIGURE DX MEETING

And the 4th annual Ponente Ligure D X Meeting
will take place in Imperia, Italy on May
19th. Topics covered include DXing, contests,
the Summits On The Air and Islands on the Air
award programs, and much more. Also, further
discussions will be held regarding the proposal
of an Italian team to build a permanent contest
station in Morocco. Award hunters may bring
their QSLs along to have them checked for the
DXCC, WAS or IOTA. More information is on line at
www.ariloano.it and http://www.arimperia.net (Southgate)

**

DX

In DX, word that the long awaited Scarborough
Reef BS7H DXpedition is on the air! At 03:00 UTC
on Wednesday, May 2nd, it was reported that four
operating positions had been built and that
operations are ongoing. Two stations will stay on
20 meters while the other two will search 15, 17, 30 and 40 for openings.

In other DX news, DS4DRE is currently active
stroke 4 from Hong Island. He will be there
until the 30th of June. Activity is on 80 through
10 meters using CW and SSB. QSL to his callbook address.

And EA4ATI is returning to Dakar, Senegal and
will remain there until April of 2008. He
expects to be active as with his own call
portable 6W and also as 6W1EA. Listen for him on
10, 15 and 20 meters using a beam and on other
bands using dipoles. QSL direct to his EA4ATI home call.

Lastly, PA5CW, will be active portable YB9 from
Bali through the 10th of May. QSL this one as directed on the air.

(Above from various DX sources)

**

THAT FINAL ITEM: THE DX ENTITY THAT NEVER WAS

And finally this week the story of the DX entity
that never was -- and likely never will be. Its
another tale from down-under described by Lim Linton, VK3PC:

--

The Hutt River Province Principality announced
two years ago plans to begin short-wave
broadcasts and also seek amateur radio DXCC

entity status. Not heard of it? Well this self-proclaimed independent territory on Australia's mainland is located just north of Geraldton, Western Australia and began in 1970.

The Royal Amateur Radio Society was formed as a body to represent the interests of amateur radio on the Hutt River Province. It was full steam ahead seeking United Nations, IARU and ITU recognition.

Special Hotel Five prefix callsigns were being made available to inaugural members of the Royal Amateur Radio Society.

ARRL DXCC rules were being quoted as enabling the Principality to qualify for separate country status. DXers and contesters were claimed to be eager to operate from Hutt River.

However today it is all but a memory, no mention is made on the Hutt River Province website of the former radio plans.

A source close to the ruler of the Hutt River Province, Prince Leonard, reveals he's gone totally cold on the radio ideas and is now very busy engineering a pyramid in his Principality.

I'm Jim Linton VK3PC.

--

Sounds as if Prince Leonard and ham radio have gone their separate ways. (WIA News)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Two reminders before we go. First we have a new poll for the month of May. This one asks the question now that the Morse exam is part of ham radio history, do you plan to upgrade or remain

the license class you are right now. Of coarse this is unfair to Extra class licensees because they cannot go any higher so this poll kind of leaves them out in the cold, To compensate, we added a third possible answer, but you will have to go to our website at www.arnewsline.org to see what it is.

Also, the nominating season for this years Amateur Radio Newsline Young Ham of the Year Award is now open. Any radio amateur age 18 or younger residing in all 50 United States, plus Puerto Rico and all 13 Canadian Provinces can qualify. Full details and nominating forms are on our special website at www.yhoty.org. Also see the Vertex-Standard sponsored ad on page 8 of the March issue of QST Magazine.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Willbanks, AE5DW, saying 73 and we thank you for listening.

Amateur Radio Newsline(tm) is Copyright 2007. All rights reserved.

>.
>Feb 07: 655,477. Mar 07: 655,048 Apr 07: 654,940

I disagree with the above. Based just on the www.hamdata.com info
(as opposed to ARRL "active-only" listings), the number of new
licensees is now above the number of expirations. As of 3 May 07
the New v. Expiration numbers for USA licensees are:

Last 30 days (total): New = 2,742 Expirations = 2,658

Last 60 days (total): New = 6, 417 Expirations = 5.494

Last 90 days (total): New = 8,972 Expirations = 7,767

Compared to the total number of licensees of 2 years prior
(total of 733,147) there are 10,957 fewer licensees as of 3 May 07.
The drop in total licensees is about 1.5% in two years.

By my observation, the trend of newcomers surpassing the
number of expirations in the USA appears to have begun. Yes,
it may be "a statistical anamoly" in numbers but the only way
to prove such a refutation is to jump ahead to 2008 and
produce numbers from then, something not yet within scientific
grasp. :-)

>Where are the "hoards of technically savvy" people in the wings "just
>waiting for the code requirement to disappear"?

I'm not sure that was anything but some convenient scapegoat
phrase (i.e., 'urban myth') used by those desiring the
continuation of the status quo as of the early 1990s.

The hordes of "technically-savvy people" are busily engaged in
a number of very technical avocations in areas like: Personal
computing (both hardware and software), Robotics (of more
tangible appeal to youngsters), Automotive electronics,
Amateur Scientific experimentation, Radio-control, Music
Systems from guitar amplifiers to high-end sound systems,
Home Security Systems, just to name a few. Add to those
Blog maintenance and web-surfing and non-electronic-but-

technically-complex hobbies like genealogy and computer graphics construction (of photos as well as original art) and all of the above is just a tip of the iceberg of interesting and challenging personal activities available to all in the last two decades.

Personal radio communication without the available infra-structure of other personal communications means has been faced with a great deal of competition for everyone's free time. Amateur radio - in and of itself in the old paradigms - hasn't come up with enough attraction to be competitive in the hobby area. Having always been older than the FCC, I can recall that amateur radio was an attractive hobby in the 1950s and 1960s. That was the 'baby boomer' era where youngsters were made aware of "radio" and the ability to talk around the world. But, that high-technology of its time was 50 to 40 years ago and technology of communications has made several quantum jumps in abilities of all to communicate since then. The Internet went public in 1991, just 16 years ago, has now become part and parcel of USA society today.

"Technically-savvy people' are generally engaged in work on savvy technology for a living. They are creating the savvy technology that others will enjoy next year or a few years later. That these "technically-savvy people" want to pursue free-time hobbies on other things than communicating by their own personal radios is not their fault. They have so many possible choices to occupy their free time that few will fall back on half-century-old 'technological' hobbies such as 'radio sport' contesting and/or collecting QSOs.

Given all the actual new technology made available for all to use in hobbies of the last two decades, those alleged "hordes of technically-savvy people" no doubt have taken up other technically-savvy hobbies and discarded the idea of emulating what the old pioneers of radio did long ago. I submit that many just got tired of waiting for the code test to be eliminated from testing and went on to other things.

73, Len AF6AY

>> "big numbers"...We need to have QUALITY licensees...That means solid
>> skills and a NON-COMPROMISED question pool like we have today.
>
>Exactly. History has proven time and time again that quality, not quantity,
>is the solution to most problems.

The word "quality" is both subjective and ambiguous used
above. Amateur radio is not an occupation. It can be an
enjoyable avocation for many in a "technically-savvy"
activity...without the requirement of years of formal education
or the necessity of enduring certain levels of accomplishment
as in a guild, union, or craft trade.

In most administrations of the world, the only requirement is
that all in amateur radio operate according to their regulations.
Disobeying regulations will result in 'firing' an amateur (loss of
license, fines, etc., depending on an administration's laws).
Otherwise, every licensed amateur retains their license for
whatever term an administration lawfully specifies. Their
quality of operating is up to the individual and whatever peer
pressure might ensue within a country.

In the USA I think that "quantity" is important to the health
and welfare of future amateur radio here. Primarily for the
"presence" of so many licensees having an effect on law-
makers' future decisions. Secondarily on the market presence
to insure that equipment and components will be available in
the future.

As to "history proving anything" for "solutions," I submit the
Roman Empire as an example. Roman engineering of its day
was the epitome then, resulting in roads over most of known
Europe, water supply and waste disposal, ships and trade over
all the long reaches of its empire. Historians have written that
the Roman Empire failed from within, not from the quality of
its civil engineering and other innovations for civilization of its
time.

"Radio" as a communications means is only 111 years old.
The radio of now is vastly different from early radio, not just in

technology but also in that elusive word "quality." To attempt pinning some specific era as the baseline for such "quality" is tantamount to trying to nail jelly to a tree... :-)

==>ARRL FINDS WELCOME NEWS IN FCC "SMART RADIO" ORDER

In a recent Memorandum Opinion and Order (MO&O)
<http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-07-66A1.pdf> on
cognitive or "smart radio" systems, the FCC has affirmed its favorable
policy toward the regulation of amateur software defined radios (SDRs). A
cognitive radio system is an SDR that can adapt its operating parameters by
interacting with its RF environment. The FCC's April 20 MO&O was in response
to petitions seeking clarification of the Commission's March 2005 Report and
Order (R&O) in ET Docket 03-108. In that proceeding the agency declined to
```

adopt any new regulations for cognitive Amateur Radio transceivers or for digital-to-analog (D/A) converters. ARRL Chief Technology Officer Paul Rinaldo, W4RI, says the April MO&O indicates that the FCC intends to treat Amateur Radio SDRs the same as any other Amateur Radio equipment.

"This is welcome news from the FCC as it clarifies the matter of certification of amateur equipment," Rinaldo remarked. "It applies not only to terrestrial amateur equipment but also to amateur satellites, which increasingly are using SDR in their designs."

AMSAT-NA has announced it's revamped the design of its Project Eagle satellite to take maximum advantage of software defined transponder (SDX) technology.

The "cognitive radio" proceeding is emblematic of the FCC's ongoing struggle to address thorny regulatory issues to keep pace with cutting-edge technology. In its 2005 R&O, the FCC concluded that neither software programmable amateur transceivers nor high-speed D/A converters "present any significantly greater risk of interference to authorized radio services" than conventional hardware radios.

April's MO&O was in response to petitions from Marcus Spectrum Solutions (MSS), owned by Mike Marcus, N3JMM, a former FCC staffer and a member of the ARRL Software Defined Radio Technology Working Group, and from Cisco Systems. While the League was satisfied that the FCC's 2005 R&O had exempted Amateur Radio SDRs from its certification requirement, MSS felt the Order was ambiguous and sought further assurances.

In response, the FCC said it "did not intend to impose any new certification requirements for Amateur Radio equipment" in its 2005 R&O, including SDR equipment that may be modified by someone other than the manufacturer. The Commission noted, however, that external RF amplifiers operating below 144 MHz and marketed for amateur use "will continue to require certification before they can be marketed."

MSS also requested a Further Notice of Proposed Rule Making with respect to digital-to-analog (D/A) devices. Marcus predicted that if high-power, high-speed D/A converters with antenna-like connectors ever became readily available, it could bypass the entire FCC equipment certification program and open the door to D/A-equipped computers capable of operating on any frequency. The FCC declined to act on Marcus's request, saying MSS did not "demonstrate any current need for regulation of D/A converters."

The FCC reiterated that it "may revisit the issue of the certification of amateur equipment with software modifiable features in the future, if misuse of such devices results in significant interference to authorized spectrum users."

ARRL General Counsel Chris Imlay, W3KD, expressed confidence that it would not prove necessary for the FCC to revisit the issue, however, "as no misuse of amateur SDR technology is anticipated." For the FCC to impose any limitations on amateur SDR equipment "would be contrary to the goals enunciated for the Amateur Radio Service in ï¿½97.1 of the FCC's rules," he

added.

Cisco had asked the FCC to revise its rules to better specify those classes of devices that do not require SDR certification. It also wanted the FCC to establish a policy that software that supports security measures not be made public if doing so could compromise security or enable illegal operation.

In response, the FCC revised ï¿½2.1(c) its rules to state that only radios with software "designed or expected to be modified by a party other than the manufacturer" -- such as downloading from the Internet -- and that would affect frequency range, modulation type, maximum power output or the circumstances under which the transmitter operates legally, would have to be certified as SDRs.

The FCC said it anticipates Commission requests for software source code would be extremely rare. "It would not be burdensome for a manufacturer to request confidentiality for software source code in the event we request it," the Commission added.

==>SCARBOROUGH REEF BS7H OPERATION SHUTTING DOWN THIS WEEKEND

If you haven't already snagged BS7H on Scarborough Reef <http://www.scarboroughreef.com/>, there's precious little time left to put the world's most-wanted DXCC entity into the log. The BS7H DXpedition has announced operation will cease by 0000 UTC on May 6. The Daily DX <http://www.dailydx.com> reports the BS7H team plans to keep two stations on 20 meters around the clock. Earlier this week, Wolf Harranth, OE1WHC, of Documentary Archives Radio Communications in Vienna interviewed BS7H team member James Brooks, 9V1YC, via satellite telephone. Brooks explained that the team has been operating from wooden platforms mounted atop each of the reef's four rocks that are exposed during high tide.

"Basically, we're like little birds perched on a small rock in the middle of the ocean," Brooks told Harranth. "It's a very dangerous reef," he went on to say. "There's lots of hazards. There's rain, there's wind, there's lightning, there's piracy."

The coral is also very sharp, and most of the team members have suffered cuts and scrapes. Changing shifts three times a day has been difficult and time consuming, and Brooks says the individual stations have barely been able to see each other during daylight.

Brooks said the DXpedition team was visited by several fishermen from the Philippines who asked for fuel and water. Visit the Dokufunk Web site <http://www.dokufunk.org/index.php?ID=2094#A2094> and click on the "BS7H Scarborough Reef 2007 -- Interview" link. The interview also is available from the BS7H DXpedition Web site.

The most difficult path from BS7H has been to the US Northeast, although many stations have been successful in the past few days in working the DXpedition on 30, 20 and 17 meters, and signals have been reasonably strong. Not everyone was thrilled with the extremely large pileups, however. On 20 meter SSB, the pileups often extended 50 kHz or more up the band from the

BS7H transmitting frequency and interfered with other activity.

Stations trying to work BS7H should exercise courtesy and make sure they have a clear frequency before transmitting, to avoid interfering with ongoing communications unrelated to the DXpedition.

Judging from anecdotal information, stations in the Eastern US should start listening around 1100 UTC. One station in Florida reported hearing BS7H on 20 meter CW from 1130 until 1630 UTC, The Daily DX reported. Brooks explained to Harranth that Europe, Japan and Oceania are easy to work most any time of the day, however.

The first QSO was made on April 29. As of 1400 on May 2, BS7H was operating four stations from four separate rocks, with two stations dedicated to 20 meters. All stations now are running 800 W, and activity has been on 10 through 40 meters. Substantial QRN on 40 and 30 has prevented the operators from hearing most stateside signals, however.

In part because of high winds, the team by week's end had not launched the helium-filled weather balloon to support an antenna for 80 and 160 meters. On the other bands, BS7H used vertical antennas, taking advantage of the salt water for a ground plane.

==>UPTICK IN ISS CONSTRUCTION TO AFFECT HAM RADIO OPERATIONS FROM SPACE

In a recent Amateur Radio on the International Space Station (ARISS) <http://www.rac.ca/ariss> progress report, ARISS International Chair Frank Bauer, KA3HDO, addressed some questions regarding ARISS operations and equipment upgrade and repair. Bauer says that with the successful space shuttle return to flight, ISS construction again has shifted into high gear. Delivery and assembly of two new ISS modules now are on the near horizon. But that activity's not without a downside for Amateur Radio activity from the ISS.

"If all goes well, the new European Columbus module and Japanese Kibo module will be installed on the ISS in the next 12 months," Bauer told the ARISS team. "This substantial workload on the crew is impacting ARISS operations directly."

Bauer explained that the launch of any new or replacement ham radio gear or computers to support ARISS operations "has been significantly curtailed due to the extremely limited 'upmass' capability." That's NASA's way of saying the cargo weight limits on construction flights are very tight.

"There are just too many higher priority activities from an international space agency perspective, and frankly we are a lower priority," he continued. "The extra workload on the crew has taken its toll on ARISS -- they have had very little extra time for Amateur Radio activities beyond school contacts."

Bauer concedes that while these developments are "somewhat frustrating" both to the ham radio community at large and to the ARISS International Team, ARISS nonetheless is pleased that space station crew members have "been able

to speak so often with youth groups worldwide, piquing their interest in Amateur Radio, science, technology, engineering and math."

One hoped-for fix during the recent flight of civilian space traveler Charles Simonyi, KE7KDP, was that Simonyi would be able to restore the Kenwood D700 ARISS Phase 2 transceiver to full functionality after it was inadvertently reprogrammed during Expedition 13. That has kept the packet system off the air.

"The ARISS team worked diligently with the Simonyi team to get Charles licensed, trained, and prepared to perform the Kenwood reprogramming," Bauer explained. "Unfortunately, the ARISS team hit a major hurdle a few weeks before Charles's launch."

Bauer said ARISS learned at the eleventh hour that additional software certification would be required to allow Simonyi to reprogram software to be used on the ISS computers.

"Through heroic efforts by the team, final software certification was successfully completed," Bauer reported this week. "Unfortunately, this was completed only a few days before Charles' return from space." As a result, there was not enough time for Simonyi to reprogram the D700.

"This last minute hiccup in software certification was not predictable," Bauer allowed, "so there was no way the ARISS team could have better prepared for Charles' flight."

Bauer says that at this point, it appears that reprogramming the D700 to get it back to its normal ARISS configuration "will require a substantial, concerted effort with full cooperation from our international colleagues and the Russian and US space agencies." This means identifying, purchasing (if necessary), certifying, testing and flying the components necessary to ensure the reprogramming is successful, he pointed out.

Given the challenge of weight restrictions on shuttle payloads devoted to transporting construction materials, Bauer said, the process "will likely take several months to accomplish, as the team will have to begin from square one."

ARISS meanwhile is looking into some partial, temporary workarounds. In the near term, ARISS will request the crew do some investigative analysis of the Phase 2 station. "This will enable the ARISS team to determine if the radio can be partially restored to provide some of the unattended operations that it once provided," Bauer said. "With Charles's successful landing, we have started down this new path."

Despite the setbacks, Bauer vowed that ARISS will continue working aggressively on the issue. "While our plans to have Charles reprogram the radio were thwarted, we were happy that he could speak to so many hams around the world during his short stay, and capture the imagination of students around the globe," he said.

==>FCC TERMINATES HEARING, DENIES APPLICATION IN "HAM LICENSE HIJACKING" CASE

The FCC has terminated with prejudice a hearing proceeding involving a case of apparent ham radio identity theft. The FCC has said its evidence suggests that Joseph W. Hartmann Jr of Lansing, Michigan, "intentionally submitted fraudulent administrative updates" to obtain the privileges associated with the General class license of a Delaware radio amateur with a very similar name. In a Memorandum Opinion and Order (MO&O) released March 23 <http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6518915438>, the FCC further ruled to dismiss with prejudice Hartmann's pending new Amateur Radio license application, which he filed after the FCC questioned his attempts to change the Delaware ham's record in the Universal Licensing System (ULS). After several apparently unsuccessful attempts to deliver a Hearing Designation Order (HDO) to Hartmann and even affording him more time to file a written appearance, Hartmann sent Presiding Administrative Law Judge Arthur I. Steinberg three identical e-mail messages.

"Mr Steinberg I am writing you in regards to this letter. I do not have the resources to obtain legal counsel for this hearing nor have the resources for driving to hearing in Washington.D.C," the FCC quoted Hartmann, noting that capitalization, punctuation, spelling and spacing were reproduced as they appeared in Hartmann's e-mails. "is there another way we can please have a phone conference in regards to this matter. please write back with your reply."

Several pieces of Certified Mail, Return Receipt Requested to Hartmann came back to the Commission as unclaimed, the FCC recounted in its March MO&O. "Interestingly, neither of the regular First Class Mail envelopes sent to Mr Hartmann's Lansing, Michigan, addresses has been returned," the Commission noted.

The FCC had put Hartmann's January 2006 application for an Amateur Radio license on hold while it was looking into why he'd filed a half-dozen administrative updates during 2005 seeking to change the name and address of Joseph V. Hartman Sr, K3GUX, of Oceanview, Delaware, to his own name and address.

In its March MO&O, the FCC declined to accept Hartmann's e-mails to Judge Steinberg as a proper written appearance, because he did not file in accordance with FCC rules. Consequently the Commission dismissed the hearing proceeding and Hartmann's pending Amateur Radio application with prejudice "for failure to prosecute."

The FCC had scheduled a hearing on Hartmann's January 2006 Amateur Radio license application after deciding that his alleged actions had raised "a substantial and material question of fact as to whether he possesses the requisite character qualifications to be a Commission licensee." In its December 2006 HDO, the Commission said Hartmann's repeated attempts to alter licensee information for the call sign K3GUX from Joseph V. Hartman Sr's name and address to his own name and address also raised "substantial and material questions of fact as to whether Hartmann Jr made false

certifications, misrepresented facts to the Commission, and/or demonstrated a lack of candor."

==>MOTOROLA SUSPENDS POWERLINE LV BPL DEVELOPMENT

Less than two years after announcing its Powerline LV Access BPL product, Motorola has decided to suspend product development and to devote its resources to more promising markets, industry sources say. Motorola reportedly has decided to focus on a product called Powerline MU, which is for use within multiple-unit dwellings. The decision to stop work on its Access BPL product reflects declining interest in residential broadband service delivery among utilities coupled with more immediate demand for in-building BPL systems. Motorola has indicated that it's not scrapping Powerline LV altogether, however.

Powerline LV united Motorola's Canopy wireless broadband Internet platform with enhanced ham band-notching HomePlug technology, drastically reducing BPL interference potential by restricting the application of high-frequency RF to the low-voltage side of the power transformers serving customers' homes, not the medium-voltage wires that line many residential streets. As a result, Powerline LV avoided the system architecture that poses the greatest risk of BPL interference to radio communication -- radiation from the medium-voltage power lines.

ARRL Chief Executive Officer David Sumner, K1ZZ, expressed appreciation for Motorola's approach to the thorny issue of radio interference from BPL systems. In an effort to minimize interference, particularly to the Amateur Radio bands, Motorola designed its Powerline LV system in close cooperation with the League's technical staff, Sumner noted. A test stand Access BPL system was in operation briefly at ARRL Headquarters. Measurements and subjective listening tests on the ham bands showed that Powerline LV was Amateur Radio-friendly.

"As one would expect from a company with such a distinguished record in the field of radio communication, Motorola acknowledged at the outset the seriousness of the interference problem," he said. "Motorola's system architecture influenced other vendors, raised industry awareness of the interference issue, and demonstrated the value of working with the ARRL to find positive solutions."

==>ARRL FOUNDATION PROVIDES SECOND DONATION TO ARISS COLUMBUS PROJECT

The ARRL Foundation has granted an additional $2000 toward the cost of constructing and installing Amateur Radio antennas and equipment on the International Space Station's Columbus module, set to launch later this year. The ARRL Foundation earlier contributed $5000 to the project.

Columbus will house an additional Amateur Radio station, including the first digital Amateur Radio TV (DATV) station in space as well as a ham radio transponder. Funding to finish and install ham radio antennas on the European Space Agency (ESA)-built laboratory module has been uncertain, however.

Amateur Radio on the International Space Station (ARISS) Vice Chairman Gaston Bertels, ON4WF, says donations from various sources covered a payment of 9000 Euros -- approximately $12,000 -- in March. A second payment is due this fall. Bertels says the IARU Region 1 Executive Committee also donated 2000 Euro to the project.

The antennas have been manufactured and will be tested for acceptance at the European Space Research and Technology Centre (ESTEC) before delivery to Goddard Space Flight Center in Maryland, where a silicon dioxide coating will be applied before the antennas are installed on the Columbus module, Bertels explained.

"Their development and manufacturing cost is now nearly covered, but not yet the cost of certification tests," Bertels told ARRL.

Other donations have come from AMSAT-NA and AMSAT-UK, among other organizations, as well as from many individual donors.

The yet-to-be-built Columbus Amateur Radio gear will make it possible for ARISS to establish wideband and video operations for the first time and allow continuous transponder operation.

AMSAT-Belgium has set up a bank account to receive additional donations for the Columbus project. Details are on the ARISS-EU Columbus Web page <http://www.ariss-eu.org/columbus.htm>. Click the "Donate" button in the left column.

==>SOLAR UPDATE

Solar sage Tad "Sunspot Baby" Cook, K7RA, Seattle, Washington, reports: The string of zero sunspot days ended Wednesday, April 25, and -- relative to the bottom of the solar cycle -- sunspot numbers over the past few days have been quite an improvement. Average daily sunspot number jumped from the previous week by 23 points to 25.1, and average solar flux increased over 14 points to 84.8.

This modest increase in sunspot activity may noticeably improve propagation compared to weeks with no sunspots.

For the near term, the US Air Force Space Weather Operation predicts a planetary A index of 5 for May 4-5, 8 for May 6-7 and 5 again for May 8-18, so the expectation is for quiet geomagnetic conditions. Based on the last period of higher geomagnetic activity, April 28-29, the 27.5 day solar rotation probably is what led to a prediction of 25 for the planetary A index on May 25.

Geophysical Institute Prague predicts quiet geomagnetic conditions for May 4, quiet to unsettled on May 5, unsettled May 6-7, and quiet to unsettled again on May 8-9.

Sunspot numbers for April 26 through May 2 were 17, 18, 20, 18, 38, 32 and 33, with a mean of 25.1. The 10.7 cm flux was 80.5, 82.7 84.9, 84.8, 87, 86.3, and 87.4, with a mean of 84.8. Estimated planetary A indices were 6, 16, 26, 23, 20, 8 and 3, with a mean of 14.6. Estimated mid-latitude A indices were 4, 10, 20, 16, 13, 5 and 1, with a mean of 9.9.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: The New England QSO Party, the MARAC County Hunter Contest (CW), the 10-10 International Spring Contest (CW), the Microwave Spring Sprint, the Seventh Call Area QSO Party, the NA High-Speed Meteor Scatter Spring Rally, the US IPARC Annual Contest (CW and SSB), the Portuguese Navy Day Contest (CW/SSB and PSK31), the Indiana QSO Party and the ARI International DX Contest are the weekend of May 5-6. The RSGB 80-Meter Club Championship (SSB) is May 7. The ARS Spartan Sprint is May 8. The SKCC Sprint is May 9. The NCCC Sprint Ladder is May 11. The Military/Amateur Radio Communications Tests to celebrate Armed Forces Day (see below) and the Nevada Mustang Roundup are May 12. The SBMS 2 GHz and Up WW Club Contest, the VK/Trans-Tasman 80-Meter Contest (phone), the CQ-M International DX Contest, the VOLTA WW RTTY Contest, the Mid-Atlantic QSO Party, the FISTS Spring Sprint, the EACW International Contest, the 50 MHz Spring Sprint are the May 12-13 weekend. The RSGB 80-Meter Club Championship (Data) is May 16. The NAQCC Straight Key/Bug Sprint and the QRP Minimal Art Session are May 17. The NCCC Sprint Ladder is May 18. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday, May 22, for these ARRL Certification and Continuing Education (CCE) online courses beginning Friday June 1: The ARRL Ham Radio License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). These courses will also open for registration Friday, May 18, for classes beginning Friday, July 6. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the CCE Department <cce@arrl.org>.

* Armed Forces Day Crossband Radio Communications Test Set: The US Army, Air Force, Navy, Marine Corps and Coast Guard will co-sponsor the annual military/Amateur Radio Communications Tests to celebrate the 57th Armed Forces Day. Although Armed Forces Day falls on Saturday, May 19, the 2007 Armed Forces Day Military/Amateur Crossband Communications Test will take place a week earlier, on Saturday, May 12, to avoid conflicting with the Dayton Hamvention May 18-20. The annual celebration features military station-to-amateur station crossband tests on SSB and copying the Secretary of Defense message via digital modes. Full details on participating stations, times and frequencies are available on the Army MARS Headquarters Web site <http://www.netcom.army.mil/mars/docs/ARMEDFORCESDAYFinal.doc>.

* AMSAT announces Dayton Hamvention activities: AMSAT-NA invites Amateur Radio satellite enthusiasts to its events and activities during Dayton Hamvention 2007 <http://www.hamvention.org>. A pre-Hamvention pizza party

takes place Thursday, May 17, 6:30-10 PM, at Marion's Piazza, 1320 North Fairfield Road. The AMSAT booth will be open Friday, May 18, 9 AM-6 PM, Saturday, May 19, 8 AM-5 PM, and Sunday, May 20, 8 AM-1 PM, Eagle area with operating components, and outdoor satellite demonstrations; the AMSAT Forum is Friday, May 18, 11:15-2 PM in Room 1, Hara Arena; the IMAX movie "Space Station" is Friday, May 18, 5-5:45 PM at the Air Force Museum; the AMSAT/TAPR banquet is Friday, May 18, 6-10 PM, at the Air Force Museum. AMSAT booth volunteers are welcome. Contact Gould Smith, WA4SXM <wa4sxm@amsat.org>, if you can help, indicating the hours you're available. AMSAT needs volunteers for two-hour shifts Friday, Saturday and Sunday as well as volunteers to set up Thursday afternoon and tear down Sunday afternoon. The "AMSAT at the 2007 Dayton Hamvention" Web page <http://www.amsat.org/amsat-new/hamvention/Dayton2007.php> has additional information and directions. -- AMSAT News Service

* FCC posts Amateur Radio enforcement correspondence: The FCC has posted new Amateur Radio enforcement correspondence on its "Amateur Radio Service Enforcement Actions" page <http://www.fcc.gov/eb/AmateurActions/Welcome.html>. Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth sent a Warning Notice to Anthony M. Amato, KR4UQ; a Warning Notice and request for station information to Edib Zildzo, K2AAW; and a Warning Notice and request for station information to John C. Kimbrough, WR3S. The FCC also has posted a Memorandum Opinion and Order (MO&O) in the case of Joseph W. Hartmann Jr, and a Forfeiture Order (NoF) to Parker Construction Inc. Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division.

* Amateur Radio on display during ITU disaster relief conference: Egypt Amateur Radio Assembly (EARA) <http://www.qsl.net/egyptham> operators attending an International Telecommunication Union (ITU) joint disaster relief and information technology conference in mid-April logged more than 1000 contacts from special event station SU8DRM (QSL via SU1KM). The Regional Joint Conference on Disaster Relief and Management (DRM) -- International Cooperation and Role of Information and Communication Technology (ICT) took place April 14-17 in Alexandria, Egypt. The conference's primary objective was to promote awareness of the important role that Amateur Radio plays in disaster relief communications. In his presentation, "Amateur Radio as a First Aid and a Tool of Emergency Communications," International Amateur Radio Union (IARU) Region 1 EmComm Coordinator Seppo Sisï¿½ttï¿½, OH1VR, told the gathering that World Radiocommunication Conference 2007 this fall could serve to augment emergency communication opportunities for the Amateur Radio Service if there are proposals to establish a 300 kHz worldwide Amateur Radio allocation on 40 meters and a worldwide 60-meter band. EARA said the special event operation introduced many conference delegates to Amateur Radio and what it has to offer in disaster relief situations.

* Texas radio amateur is among 2007 NOAA Environmental Heroes: Charlie Campbell, KC5EZZ, of San Angelo, Texas, was among ten 2007 National Oceanic

and Atmospheric Administration (NOAA) Environmental Heroes. NOAA says Campbell organized a repeater network to transmit "timely severe weather reports from NOAA National Weather Service SKYWARN-trained storm spotters to cover longer distances without degradation." The annual Environmental Hero awards commemorate Earth Day by recognizing individuals and organizations that volunteer their time to help NOAA carry out its mission. Meteorologists at the San Angelo National Weather Service office nominated Campbell for the national award, presented April 20 in Washington, DC. NWS Warning and Coordination Meteorologist Hector Guerrero, KC5BRB, also organized a gathering in San Angelo to recognize Campbell.

* David A. Rosenthal, N6TST, SK: QST author, DXpeditioner and photographer David Rosenthal, N6TST, of Ridgecrest, California, died March 16 after a long illness. He was 58 and an ARRL member. Between 1989 and 2002, Rosenthal contributed to QST on several occasions. He received the February 2006 QST Cover Plaque Award for his article, "Polar Bear Portable." During his military career, Rosenthal served as a combat helicopter pilot and as a photojournalist. During the Vietnam War, he earned two Distinguished Flying crosses and a Purple Heart. He worked for more than 30 years at China Lake Naval Weapons Station. Earlier, he worked an engineer for Hewlett-Packard. He also was a science reporter for CNN and a science correspondent for Radio Nederland. A world traveler, his photographs appeared in several regional and national publications, and he documented his adventures and accomplishments on his Web site <http://www.ridgenet.net/~n6tst>. A memorial service was held in March. Survivors include his wife Donna, KF6ZVE. The family has invited memorial donations to the Wiseman Cancer Research Foundation, 201 S Alvarado St, Suite 321, Los Angeles, CA 90057.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association For Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

819. Re: Before and After Cessation of Code Testing

> The decline in licensing continues unabated.

Well, maybe. But according to the numbers I've seen and posted in
recent months, the number of current, unexpired FCC-issued amateur
licenses held by individuals seems to have leveled off at around
655,000.

> With the exception of a minor uptick in October '06, the number of licens
ed
> amateurs has been in decline since '03
> .
> Feb 07: 655,477. Mar 07: 655,048 Apr 07: 654,940

The number I have for May 1, 2007 is 655,069. However, it should be
noted that the total number can vary up and down a couple of hundred
in just a few days.

> Where are the "hoards of technically savvy" people in the wings "just
> waiting for the code requirement to disappear"?

There are three possibilities:

1) They don't know the rules changed back in February.

2) They're busy studying for the written test, finding a VE session,
etc.

3) They don't exist.

There's also the idea that one of the purposes of amateur radio is to
create technically-savvy people. That's one reason for the emphasis
on young people. Like a kid who got his first license years before
high school, and the Extra years before college.

> > I've said it before and here it is again...Amateur Radio does NOT need

> Exactly. History has proven time and time again that quality, not quantit
y,
> is the solution to most problems.

Why can't we have both quality and big numbers?

And just what are "big numbers", anyway?

Back in the late 1940s, all through the 1950s and into the early 1960s, the number of US hams grew from about 60,000 just after VJ-Day to about 250,000 in 1964, even though all hams back then had to pass Morse Code exams and "secret" written tests.

Yet ham radio was far less popular back then than it is today, because the ratio of hams to total US population was much lower then than today.

The 1970s and early 1980s were another period of fast growth, even though the license test requirements had been considerably increased by the "incentive licensing" changes of 1968 and 1969.

This is the first edition of WIANEWS for WIA year four of the "new look
national WIA". ie for week commencing MAY 6 2007

PEDESTRIAN MOBILE

Jeff vk4xjj has now worked a couple more WIA listeners and broadcasters
as he walks from the bottom to the top of Australia.

Tuesday 1st May Jeff had arrived at Wirrealpa Station and he and his
Brother Bill, VK2FWGJ communicated the next night, Wednesday.

Although in the 'middle of Australia' VK4XJJ did manage to somehow attract
some rain, so has been a 'tad' wet from time to time.

Roger VK4BNQ the main relay station for Jeff, at Gympie, manages contact 75%
of the time but a few extra relay stations would be appreciated.
Main information required is latitude and longitude daily to VK4BNQ and
next days direction and destination.

Heading towards Birdsville, the Moomba maybe in two and a half weeks.

Macca (ABC) is interviewing Jeff today Sunday 6th April if things work out.

Jeff tries to be on time air at.....

1715 EST 7.032MHz CW

1720 EST 7.040MHz LSB
1730 EST 7.040MHz LSB ***
1745 EST 7.060MHz LSB

***
An update on Jeff's time on air please.
1730 EST 7.040MHz LSB
It has been crowded at times and confusing with the amount of information.
If necessary he or VK4BNQ can QSY nearby.
(Bill Johnson (VK2FWGJ brother bill))

AMATEUR RADIO - HOME OF THE GOOD GUYS

Home of the Good Guys

Grey Nomads, Campervanners or Motor homers are on the move around Australia
all the time and to keep in touch many of them use HF radio.

A group of them formed the HF Radio Club Incorporated in 1998 and have an
ACMA licensed network of base stations to help out members in need.

Late in April the club held its annual general meeting in Casino New South Wales. Making the best of the opportunity to promote the Foundation Licence was Amateur Radio New South Wales Councillor, Michael Corbin VK2YC.

He says after explaining the licence and making a copy of the Foundation Licence manual available at least six people showed definite interest.

While some were directed to inquire at various radio clubs that run training courses, Michael VK2YC says serious consideration is being given to running a Foundation Licence course and assessment session just before the next AGM of the HF Radio Club.

That club is associated with the Campervan & Motor home Club of Australia which has over 48,000 members making it this country's largest motor homing club in Australia. The potential to recruit new radio amateurs is obvious.

Michael VK2YC is one of a number of radio amateurs in the HF Radio Club who are now sharing their knowledge with the non-hams in the club on how to best operate their radios to maximise the effectiveness of HF communications.
(Jim Linton VK3PC)

Simbo Island Tsunami Appeal Wrap-up

$820.00 was raised by the Sewing Circle net for the people of Simbo Island, this is the total amount received from the generous Amateur Radio fraternity, all monies received have gone to the appeal with any transfer fees and other costs having been paid for by outside donations.

The people of Simbo are overwhelmed that a group of Australians totally unknown to them would be so generous to think of them in their plight!

To all who donated, congratulations on your generosity.

Once again the spirit of Amateur Radio shines again, thanks to all involved.

This week is National Volunteer Week

With more than 700,000 not-for-profit organisations around Australia, Among them are some 150 amateur radio organisations which includes the WIA, WICEN and scout radio groups.

Volunteering is an integral part of the Australian ethos. So what does this mean for you? Well all amateur radio organisations are in need of volunteers whether it be help out with specific tasks, working bees or club activities.

You're a new licensee and a bit reluctant to get involved?. Well if you have something to contribute to the well-being of your chosen organisation the fact that you are a new radio amateur, should not matter.

Volunteers all have to start somewhere and often there will be a friendly long-time volunteer more than willingly to take you under their wings.

And National Volunteer Week is also a time for those who have volunteered in the past to think about doing it again.

There are a number of previous club committee people who have dropped back into the 'comfort zone' of the general membership who still have something to offer, be in a different capacity.

Those with the attitude of ' I did my bit and so now it's something else's turn' are selling themselves short and perhaps depriving their organisation of their knowledge and experience.

I'm Jim Linton VK3PC and you're listening to VK1WIA.

I'm Spud VK8ZWM and it's off to the Country Music Capital of New South Wales for our first item today.

New venue for the Tamworth Radio Club.

The Tamworth Radio Club., now meet on the first Friday each month at the Tamworth / Oxley Scout Hall, that's the hexagonal brick building on the corner of Carthage and Hall Streets, Tamworth, at 7:30 pm.

web site is http://trci.org.au/

VK3

The MAY meeting of the NERG has been cancelled due to building works at the NERG hall.

To make up for this disruption the annual NERG dinner will be held at the nearby Di Riccardos restaurant in Lower Plenty on the regular meeting night, Thursday 10th May, starts 7:00 pm ($30 per person).

Please contact Don Haslam on 0409 024 597 for bookings if you would like to attend. further information on the web site www.nerg.asn.au

VK4

If your in the Brisbane area next Saturday, the day before Mothers day, make it along to the Mount Gravatt Showgrounds for the Brisbane Hamfest ably run by the Brisbane Amateur Radio Club.

6 HOUR PORTABLE MULTI-OPERATOR VK4NRL 204

6 HOUR PORTABLE SINGLE-OPERATOR VK4JAZ 80

24 HOUR HOME STATION VK4FIGA 350 AND AUSTRALIAN WINNER!!

6 HOUR HOME STATION (no vk4 station submitted a log in here)

VK5
This is Bob, VK5NZ with a news item on behalf of the Adelaide Hills Amateur Radio Society.

Our last meeting was a display of member's home made radio equipment.
We had aerials made from articles featured in Amateur Radio Magazine,
Receivers, antenna tuners etc. were also constructed.
It was encouraging to see our members making and using their creations.

We had around 65 members present. Our membership secretary believes if our last 15 renew their membership we will have around 140 members.

Our next meeting will be a talk on the electric car mystery. Many years ago I collected a Zeta car for such a project but lost my way with it.

Our next project, the Tregellas two tone oscillator, will be available soon in kit form.

Our next meeting is at the Belair Community Centre, Main Rd Belair on the 17th of May at 7.30pm. Visitors are always welcome.

Thanks to Jim VK5NB for putting pen to paper ,and keeping us informed.. well via email anyway.

Now back to VK8ZWM

VK8
(AUDIO CONTINUES FROM SPUD VK8ZWM)

That's it, so back to our "action central newsroom". I'm Spud VK8ZWM

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO

Calling CQ "Become a Radio Amateur"

That is the title of the WIA's new promotional brochure. Its theme is that 'Amateur radio is the fascinating new way to communicate for everyone.'

This colourful 12-panel convenient DL format publication provides information about who are radio amateurs and their multi-faceted world-wide hobby.

It gives snapshots of how it can be enjoyed at home, while caravanning or four wheel driving, during interstate and overseas travel, or while yachting or boating.

The educational benefits of amateur radio are covered with references to it being in schools and increasingly part of organised youth activities.

Australia needs more scientists, engineers and technicians. "Calling CQ" advises that 'developing an interest in amateur radio can lead to a rewarding career in science and technology.'

Home-brewing is not forgotten mention is made that radio amateurs often enjoy the challenges of building or constructing things, such as a simple wire antenna through to software or digital technique applications.

It provides information on how to contact a local radio club to access amateur licence training courses.

"Calling CQ" is an ideal tool for individual radio amateurs or clubs to promote amateur radio.

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Participating clubs keep this site up to date and post the latest information for all to see.

Also check the text edition of each news edition, where we do keep a secondary listing.

On the audio broadcast we will continue to give new information when it is received, but just in case you miss it one week, you can always access our text

Next Foundation Licence course, and Standard / Advanced assessments .....

The CRARC will be undertaking another Foundation Licence course on the weekend 19th & 20th of MAY.
Also running Standard and Advanced Licence Examinations and Assessments on the Saturday (19th May) for those who wish to sit.

If you wish to sit either the examinations, or do the F.L. Course, please contact Alan Hawes VK1WX via email to education@vk1.wia.ampr.org or by phone (after hours) to 02 6258 2568. Please note that all monies are to be paid by May 7th 2007 !

At Bendigo classes and licence assessments are conducted by Ross Pittard VK3FCE who can be contacted via email vk3fce@internode.on.net

The Central Goldfields Amateur Radio Club, Maryborough regularly holds classes. Contact Peter Rafferty VK3CC on 5460 4387 or email majorca49@hotmail.com

On the Gold Coast and want to talk to the world through their IRLP and EchoLink systems? Or already licensed and wish to upgrade Foundation to Standard? Well classes are held at the Nerang Clubhouse of the GCARS, ring Roy VK4IG on 5539 3530 Exams can be taken at a time to suit you.

TARC WIA Exams Information
Exam sessions are held on demand
with WIA Assessors and assessment packs
available for all 3 levels of licensing.
Contact theTARCinc WIA Exams
Regional Co-ordinator Roger/VK4CD

on mobile 0417 638366 to have
a mutually suitable date and WIA
Assessors assigned to your assessment.
Further information also available at
theTARCinc website ...
http://www.tarc.org.au/tarcexam.htm

VK5

Adelaide Hills Amateur Radio Society will run Foundation licence's
at the Aviation Museum, 56 Lipson Street Port Adelaide, 2 weekends
August 4th and 5th then November 3rd and 4th.
Contact the course convenor, Sasi Nayar on 0417 858 547

VK6
Re-Capping advice given earlier today by Mark, VK6FIVE:-
Foundation course for May on the 19/20 with an exam on the 26th.
So if you want to do the foundation license in WA, get in quick,
as the 21st & 22nd of July's course (with exam on the 28th
of July) is already one third full.
The next VK6 Exams for Standard and Advanced, if you miss next weeks,
are on June 30th. Think ahead, book early! Contact Neil VK6BDO.

CONGRATULATIONS - RESULTS

I'd like to read a lil note in from one of our listeners,
and one of our newer hams, and I quote

"Hi My name is Garry. I passed a foundation assessment on
Wednesday April 11 and have just recently received my call sign
and licence details on the ACMA data base.

For all who have assisted in me finally becoming licensed,
a very big thank you.

I believe I am the first blind candidate through the Wagga Wagga
club and they have made me feel very welcome.

My friend Wayne VK2FWHD vk2fwhd thought VK2F "No See" (VK2FNOC)
would be fitting as it is very true in my case.

Thank you one and all.

(Licence No Licence Category Callsign Licensee

INTERNATIONAL NEWS

Jubilee Dinner and AGM

The 75th Jubilee Dinner and AGM of the Irish Society took place at
the Vienna Woods Hotel in Cork. The Jubilee Dinner was on the Saturday

evening and 120 sat down to enjoy a first class meal.

Guests at the dinner included Dave Sumner K1ZZ, Secretary of the IARU and CEO of the ARRL, Angus Annan MM1CCR, President of the RSGB, and EI2P a Trustee of the Irish Society and one of the longest standing active call signs in EI being licensed since 1937.

AMERICAN RED CROSS REFUSES TO NEGOTIATE ON BACKGROUND CHECKS OF HAMS

The American Red Cross has told the ARRL that it will not back away from its demand that ham radio volunteers submit to a background check by a third party contractor. A check that that could include a examination of that persons finances.

According to a news item on the ARRL website, a meeting between the League and Red Cross officials to discuss the matter lead to am impasse. One with the Red Cross holding firm to its position on the right to have its contractor conduct a background check that could include personal finance check if it deems it to be necessary and refusing to modify any aspect of it stance.

In recent days, a growing number of hams have reconsidered volunteering their services to the Red Cross because of the potential of having their personal finances made a part of such a background check. They say that they are freely giving of their time to assist the relief agency and should not be subject to this level of lifestyle scrutiny.

The full story is on-line at League's website.

SPECIAL EVENTS, BEACON AND NET ADVICE

Some time ago we said we would update the progress on the WA Shires award.

Well its finally starting to take off !!

They have started an activity time of 4-30 pm Saturday arvo (and Sunday as well if you have the time) to come up on 40 mtrs 7.075 or 80 mtr , freq to be agreed, and have a go at getting some more shires in the log.

Some are up to 20+ at the moment and others are chasing fast behind.

There are many metro shires still to come up on air so the first 10-20 are relatively easy!

Keith VK6XH would also like people taking part in the HF side of RD contest to give out their shires as well, that would really swell the numbers.
(Keith Bainbridge VK6XH & VK6DXR Northern Corridor Radio Group (VK6ANC))

The seventh International Museums Weekend special event will take place on 16th and 17th June 2007.

THE QNEWS WORK BENCH - the nuts and volts report -
(Measure twice - Cut once!)

L-ION BATTERIES FOR YOUR CAR

Japan's Mitsubishi Heavy Industries hopes to start mass production of lithium ion batteries for automotive use in 2010. These rechargeable batteries would be sold to auto makers for use in electric and gas-electric hybrid vehicles.

Sanyo Electric which supplies nickel metal hydride batteries to Honda and Ford is also developing the technology. Also getting into the act are electronics conglomerate Hitachi, car battery manufacturer Yuasa Corp and electronic parts maker Murata Manufacturing.

Lithium ion batteries are more compact than nickel metal hydride batteries, contributing to fuel efficiency. But safety concerns such as overheating remain and the technology is still considered too expensive by many.
(arnewsline)

MEDIA WATCH

MIT press has come out with a book on HAMs drawing on their vast experience in field of communication technology.

Just 'google' MIT.Press.Ham.Radios.Technical.Culture

A review and brief could be read here:

http://mitpress.mit.edu/catalog/item/default.asp?ttype=2&tid=10967
http://www.wilsoncenter.org/index.cfm?fuseaction=wq.essay&essay_id=216929

Hope it will make interesting reading both for tech and non tech HAMs.
(73 Rahul VU3WJM)

As we start the new WIA year have you advised nationalnews@wia.org.au that your broadcast entry on the web page and tally sheet are still correct?

Next week we start afresh so if you do want your details publicised then let the news team know.

Some more figures in from the year just gone, a total of 80,000 text and RF checkins logged, the highest and most popular VHF outlet is Adelaide's VK5RAD 2 meter Sunday morning broadcast, some 2700 stations.
Highest on MF was VK2's Westlakes with 300 and HF saw VK6DXA's 80 meter Sunday night retransmission with some 600 calling back.

On a state wide look, we see

VK1 with 350
VK8 with 600
VK3 with 4700
VK6 with 5500
VK5 with 5600
VK7 with 5700
VK2 with 6900
VK4 with 9000

(figures rounded out)

WIRELESS WEATHER

Solar Cycle 24 predictions from ARRL

April 25, a Solar Cycle 24 Prediction Panel, consisting
of members from NOAA, NASA and other agencies looked at all
available predictions and attempted to reach a consensus. It looks
like the minimum between cycles 23 and 24 may not occur for another
year, until March 2008, a year later than recently reported. The
accuracy is expected to be plus or minus six months. The peak of
cycle 24 is expected to occur in October 2011 if there is a large
solar cycle, and August 2012 for a small cycle. You can see their
statement at,

www.sec.noaa.gov/SolarCycle/SC24/Statement_01.html

CHINA: THE INTERLOPERS ARE BACK

If you are trying to hold a QSO on the 17 meter band and you are
suddenly trampled by two short-wave stations fighting one another then
you have been jammed by a pair of broadcasters vying for the minds of
the people of China.

More accurately, one is trying to express its views to listeners in the Peoples Republic of China while the other is trying to jam it out.

No matter as neither the "Sound of Hope" which broadcasts from Taiwan nor the music station jamming it from the city of Hainan are supposed to be on 18.160 MHz nor anywhere in the Amateur exclusive world wide 18 MHz allocation.

But they are and its not the first time that either has showed up in an Amateur Radio allocation.

And while several nations Intruder Watch operations have logged the stations and complaints have been filed, it remains to be seen if anything can be done to chase the interlopers away.

North Queensland Amateur Radio Convention
Happening in twin cities of Thuringowa and Townsville.

REWIND - A LOOK BACK IN HISTORY
(Will McGhie VK6UU is WIA National Historian)

Rewind, a look back at history

On a recent ABC radio program quiz segment this question was put:
'In what year was Citizens Band Radio legalised in Australia?"

It was 1977, in fact July the 1st of that year after a Federal
Government inquiry that received a large number of submissions
in favour of the move, and intense lobbying by a number of CB radio groups.

Initially CB was 18 channels at 27MHz, requiring operators to have
a government issued callsign, pay an annual licence fee and use
type-approved equipment.

The big plan was that 27MHz, the amateur 11 metre band, was only
to be a temporary allocation and all CBers would move to UHF in five years.

However, 27MHz was retained and expanded in 1982, and the UHF band
continues today.

Gone has the licensing requirement too, with CB radio now covered in
2002 by a fee-free Radiocommunications (Citizen Band Radio Stations)
Class Licence.

So radio amateurs can commemorate the loss of their 11 metre band,
while CB operators can mark the 30th or Pearl anniversary of

legalised CB in Australia.

I'm Jim Linton VK3PC and you're listening to VK1WIA.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 6 MAY 2007

You are listening to Amateur Radio Station ZS6SRL of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is broadcast every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. This broadcast can also be heard on Echolink by connecting to ZS6FCS. To listen to a web stream go to www.sarl.org.za, click on ARMI and follow the links. This, and previous bulletins, can be downloaded from the web site of the SARL i.e. www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other news readers please change to suit).

SILENT KEY

It is with regret that we have to announce that Willie Steyn, ZS6BCV, passed away on Monday morning 23 April. Our deepest sympathies to his wife Saar, ZS6BVG, daughter Annamarie, ZR6HE, other children, grandchildren, relatives and friends.

In the news today:

CONSTRUCTION COMPETITION REVISED

CALL BOOK ON APRS.

PRESIDENT'S NET AND INTECNET TONIGHT

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

CONSTRUCTION COMPETITION REVISED

The South African Amateur Radio Development Trust has revised the 2007 construction competition to an open competition in which the entrant can decide what he or she would like to design and build.

Enter your idea in as much details as possible. Five entries will be chosen and provided with up to R1000 each to construct the project. The entries must have application in amateur radio. The five projects will compete for one of two FT2800M transceivers sponsored by the Overstay,

the distributors of Yaesu. Visit www.amateurradio.org.za for full details.

CALL BOOK ON APRS.

Recently Dick Stratford, ZS6RO, set up a server on APRS which can be used to obtain Call book information from anywhere in the APRS international network. APRS, the acronym for Automatic Position Reporting System, was developed by Bob Bruninga, WB4APR. The system uses amateur radio to transmit position reports, weather reports, and messages between users.

When querying a local South African callsign, the SARL database is used. When a DX callsign is queried via APRS, the QRZ.COM database is used in real-time. The same databases are used when querying from the packet radio network.

As the SARL Call Book is updated weekly, this database is searched first because its South African content would be more accurate. If the information is not found, a search is then made in real-time at QRZ.COM's database on the Internet.

To use this facility when operating APRS and assuming one is using the APRS program - UI-View, open the window to send a message and in the "TO callsign" field, type ZS6RO-WI ("WI" stands for "WHO IS").

Then in the "MESSAGE" area, type "F Callsign" and Enter. (The Callsign being any Callsign you wish to look up). ("F" stands for "FULL Information"). One can just type the Callsign and a one-line summary of information on that Callsign will be received via APRS.

Instead of a Callsign, one can type "F SARL" for example. This will give the phone number and email address of the South African Radio League. Other country's Radio Amateur Leagues' information can also be retrieved - for example, RSGB, DARC, etc.

To update your personal Call Book information, South African amateurs should send updated information to admin@sarl.org.za.

PRESIDENT'S NET AND INTECNET TONIGHT

Join SARL President Hartlett this evening (Sunday 6 May 2007) for a review and update of the SARL activities and information about the Youth Day event on 16 June 2007. The President's Net starts at 19:00.

The Intecnet follows at 20:00 with Chris Scarr, ZS2AAW, of the Port Elizabeth Amateur Radio Society speaking about the extensive repeater network that serves the Eastern Cape and stretches into the Western Cape and Free State.

Clubs wishing to join the link up should send details to armi@sarl.org.za before noon today.

The President's Net and Intecnet are active on many repeaters and on HF on 3 718 kHz, on 7 082 kHz and 14 320 kHz as well as on the web. Visit www.sarl.org.za and click on ARMI for full details. The presentationcan also be downloaded from the ARMI page through a right click and then selecting 'save target as'.

CLUB NEWS

THE KEMPTON AMATEUR TECHNICAL SOCIETY AGM

The Kempton Amateur Technical Society held their AGM on the 21st of April 2007 and the following members were elected to serve on the committee:

Chairman - Hannes Hanekom, ZS6LW; Vice Chairman - Vivian Dold, ZS6VD; Secretary - Theo Barkhuizen, ZR6TGB; Treasurer - Paul Corneluis, ZS6PJC.

Thank you to the previous committee for their leadership and congratulations to the new committee.

If you would like to know more about the Kempton Amateur Technical Society, visit their website on www.kats.za.net.

ERC FOX HUNT

A Fox hunt will be hosted at the East Rand Radio Club at their club house in Springs at 09:00 on 19 May 2007.

For more information visit www.zs6erb.co.za.

The fox hunt will be followed by an APRS Interest Group Meeting at 14:00 at the club house.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will continue at very low levels. The geomagnetic field is expected to range from unsettled to active levels on 20 May. The expected Effective Sun Spot number for the coming week will be less than 20.

20 m and 15 m will provide best opportunities for DX. There is a possibility of 15 and 20 m openings towards India from about 06:00 and again at 13:00 CAT. Conditions are going to be challenging towards Australia.

>From about 16:00, there may be good 15 and 20 m openings towards Europe. Contacts to the USA are going to be very challenging. For the CW and digital enthusiasts it may also be worth monitoring 10 MHz.

Although the predictions may not be too enthusiastic, HF always has the capability to surprise you as was once again demonstrated with the ZS1 and ZS3 expeditions this past long weekend. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

Today: 6 May - ZS3/ZS4 40 Metre Sprint and President's Net and Intechnet; 15 May - Closing date for applications for Itchen Valley bursaries; 19 May - ERC Fox hunt; 16 June - SARL Youth day; 30 June - Closing date for updating of SA DX Survey.

SARL News depends on clubs and individuals for news items of importance and interest to radio amateurs. The one and only way to ensure that your contribution will reach the SARL News team, is to place it in www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date. It will be appreciated if you will do it in both Afrikaans and English.

The SARL also invites all listeners to listen to the program Amateur Radio Mirror International this Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. Audio is also streamed on www.zs6mrk.org and on Echolink from ZS6FCS as for this bulletin. A repeat transmission takes place on Mondays at 21:00 on 3 215 kHz. Telkom and Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

You have been listening to a news bulletin by the South African Radio League, which was compiled by Gustav, ZS6BWN.

A prosperous week to all, 73.

/EX

WW2 portable steam chargers are still available, they come in a small
crate which can be airdropped.

http://www.prestonservices.co.uk/generators.htm scroll down to RICARDO
Military Radio Battery Charging Set

These units saw widespread use in remote locations, all you need is some
water and some wood. Not cheap though, they are now a collectors item
selling for around 2500 UK Pounds. (US$ 5000).

Answer: They know nothing whatever about any of this.

When the Internet opened to the public in the early 1990's, there was
a level of media interest that was almost indescribable. Have you made
any attempt to draw the media into this?

Virtually all military radiocomms nowadays uses spread spectrum techniques
to avoid jamming and interference.

For voice an SSB frequency hopper is simple and reliable. Digital stuff
tends to use broadband code sequence modulation.

Nor should rop kickyou experence after all if you could achive that
state (which I doubt) would you even have an interest in the ARS? I
doubt it
In your case your professional eperence is what brought you here

In Mine it was lsitening to audio from the YomKippur year and I think
before that the 6 Day war. Our life experences are what makesus who we
are as people and as Hams

"drop kicking" Our experences is form a sucide in a very real sense

But of course you are right Maxwell equation et alldo not change
suddenlyin the Ham bands

I read alternitive history and sometimes in my nightmares wonder what
what following the Conventional wisdom back when we ham were banshihed
to USELES HF would have produced today

I hope and Belive that the ARS has a future

One of the reasons I used the www.hamdata.com figures is that there
is no differentiation between "active" and "inactive" in quoting the
New (never before licensed) versus the Expired (very definitely out of
their grace period). That dynamic shows - directly - the
'replacement'
of attrited licensees by newcomers.

>... However, it should be
>noted that the total number can vary up and down a couple of hundred
>in just a few days.

Examining totals over a 30-day or longer period has an averaging
effect of minimizing the statistical anamolies occurring over just a
few days. "Smoothing the curve," so to speak.

>> Where are the "hoards of technically savvy" people in the wings "just
>> waiting for the code requirement to disappear"?
>
>There are three possibilities:
>
>1) They don't know the rules changed back in February.

That seems unlikely considering the FCC announced their decision
on 15 December 2006 and that news was then carried by the ARRL
in all their periodicals, in CQ magazine, in Popular Communications,
on www.qrz.com, on www.eham.net, on newsgroups oriented towards
amateur radio (and including SWL and CB enthusiasts), in major
electronics trade periodicals (EDN and Electronic Design, even
Microwaves & RF, the IEEE Spectrum membership magazine), even
in a few large newspapers. While the 'waiting period' was only
slightly longer than two months before legal activation, there had
been an NPRM and Comment period on it begun nearly a year and

a half prior in Docket 05-235 announced 19 July 2005. That NPRM
and Comments were also publicized by the major amateur radio
news providers in print and on the Internet. Anyone who is at all
concerned or interested in or about amateur radio in the USA is
bound to have found out about it ahead of time.

>2) They're busy studying for the written test, finding a VE session,
>etc.

While the more remote areas of the USA would still be difficult to
access a VEC examination location, those would also represent the
least populous areas. VEC exams exist in the urban centers and
are publicized by the dozen-plus VECs to those interested. In the
Greater Los Angeles area (population roughly 8 million) about half
of the exams scheduled were "walk-in," no advance notice
necessary. In close observation of all the Question Pools issued
by the NCVEC, there were very few questions directly concerning
morse code use that would be affected by FCC 06-178 so there
would be minimal studying any changes wrought by that R&O.

>3) They don't exist.

Or, more likely, the phrase did not exist in the alleged wide use
claimed by some. :-)

A more likely possibility is that there are 'hoards' [sic] of
technically-
savvy people who simply gave up on the old requirements of ham
radio testing and went on to other, newer technology-related hobbies
that were more interesting to them. They just were not interested
in spending their own time on learning a skill they would never use
after passing an amateur radio examination.

Yes, there was certainly a growth, but a number of factors were not mentioned. Firstly, all amateur radio operation was forbidden during the duration of World War II. Secondly, the wide use of radio for communications by the military during that war was certainly one of exposure to many military members that might have been mildly interested in radio in general at the time. Third, the large numbers of
"war surplus" radio equipment suitable for HF operation was a boon for all interested at the time to become radio active at low cost. I've
witnessed all of that first-hand.

>Yet ham radio was far less popular back then than it is today, because
>the ratio of hams to total US population was much lower then than
>today.

I have to disagree with that for several reasons. Independent amateur radio publications CQ and 73 began a many-decades publishing existance in that period. Several other radio-interest publications began and some pre-WWII publishers restarted in the late 1940s. Publishing of electronics subjects in all areas began in earnest during
the late 1940s and into the 1950s and those have increased up to today.

Electronics in many applications flourished after WWII, even before the invention of the transistor and first appearance of low-priced production devices almost a decade later. With that increase in general electronics production, not to mention the avalanche of TV receivers being made, came an increase in the availability of electronic components through distributors and dealers, most being suitable for "radio" applications. Thousands of small start-up businesses and proto-corporations involved in electronics began during that period; few were directly involved with amateur radio per se since all of the electronics industry was undergoing a rapid

expansion...something that hasn't stopped.

The immediate post-WWII period saw little change in amateur radio technology or operation, the vast majority concerned with HF bands as they were then, that mostly using radiotelegraphy mode. Voice on HF ham bands required double-sideband AM techniques which didn't begin to be replaced by new-fangled SSB until the late 1950s. Data (actually RTTY then) was rare and confined to those who could get surplus teleprinter terminals. Only a few knowledgeable amateur experimenters were engaged in radio above 30 MHz, a part of the spectrum considered almost "other-worldly" by so many HF hams and inhabited only by TV, FM, and radars. :-) The first significant change in worldwide amateur radio came about (in my observation) at WARC-79 and the creation of new HF bands for amateurs. In the USA there was little advancement in amateur radio regulations to keep pace with the growing influence of electronics in all consumer applications and radio for other purposes than broadcast or ham use.

CB on the former 11m ham band slice of HF had a notable growth among U.S. radio producers after 1958. All of the bigger radio makers were involved plus several start-up companies. Less than a decade later came the off-shore produced CB sets at lower prices and the explosion in CB set use on highways began. While there are no easily-obtainable statistics now, estimates of CB set use today outnumbers amateur radio licensees by at least 7:1. With the off-shore production of CB transceivers came the off-shore produced amateur radios having competitive quality and cost.

>The 1970s and early 1980s were another period of fast growth, even
>though the license test requirements had been considerably increased
>by the "incentive licensing" changes of 1968 and 1969.

Not having taken any "incentive licensing era" tests for amateur radio, I can't comment on "requirements being considerably increased." I do note that the time period was one in which the [Japanese] "Big3" of amateur radio designers-producers got started and firmly established their position in the ham market. Hallicrafters
of Chicago dissolved their business, National Radio went to all-government contract work and morphed into other things, Collins Radio dropped out of the amateur market though it is still heavy into commercial and military radios as a division of Rockwell Intl. Heath Company of Benton Harbor, MI, quit most of its fabled kit business and changed owners. Yaesu, Kenwood, Icom rule in the HF-VHF-UHF ham radios off the shelf today. All three plus the smaller off-shore makers offer quality in production and design at competitive prices. I would think that such would have a direct bearing on whether any newcomers would be attracted to amateur radio of today or of the 1980s and 1990s.

However, with such "fast growth" ('fast' being subjective) came the increased demand to eliminate the code test for amateur radio

license exams. Several countries had established "T-hams" who did not test for morse code skill but were restricted to VHF and up. The USA lagged behind those other countries in finally establishing the Technician class (no-code-test) license in 1991. The rest of the radio world was giving up using any morse code modes...if it had ever established it from a radio service's beginning.

In 1970 there was little competition for free time from the Internet (made public 1991), Bulletin Board Systems (as yet a decade away), personal computers (four years away for a beginning, a decade away for the "IBM PC"), less than half of all homes had color TV and most had screens smaller than 23 inches, nothing like the 100 channels for model radio control at 72-74 MHz, few amateur radios on the market for VHF and higher, cellular telephone service just starting (at lower frequencies than L-band), no standardization on Compact Disc recordings (magnetic recordings had begun to compete with vinyl discs), no standard magnetic tape recording system for television recordings, "Pong" was just taking hold as a novelty electronic game in restaurants and lounges (all-digital, first models did not use a microprocessor), TTL digital devices were becoming a market-demand leader for digital electronics, some specialty analog ICs were new and available although most would be out of production in three decades, "auto electronics" consisted of an in-dash AM/FM radio and an ignition system little changed from 1940 designs. Personal radio was limited to 11m CB that was undergoing an explosive growth from inexpensive foreign production and becoming popular with truckers. Electronic music augmentation was just beginning and the first music synthesizers had appeared.

Three decades later there is considerable competition for free time and personal entertainment. One out of three Americans has a cell phone subscription. One out of five American households has some form of Internet access. CDs have replaced all previous formats of music recording and DVDs have replaced former means television recordings. Retail dealers and renters of both have been created. We are in the transition phase of conversion to HDTV which has already shown a superior video and audio service. Most U.S. households have multi-channel television-music service by cable or satellite relay. We've had direct-dial telephone service for two decades to any other same-service telephone in the world. The Internet is firmly established as part of U.S. social fabric and is found on all continents of the world. We have license-free FRS HTs over the counter as pairs for under $100. 11m CB is still with us and still used on highways by the millions. Remote control of models by radio in the 100 channels of license-free bands at 72 and 74 MHz is the standard for modelers, wireless local area network equipment is off-the-shelf for businesses and residences. Cell phone service is available on all major U.S.

highways, even in remote areas (excluding parts of Alaska). We have cordless telephones that operate at 5.6 MHz, using secure digital modulation as well as older 2.4 MHz units with the same features, both a practical impossibility in 1970.

I've not included such things as voice-over-Internet protocol, the ability of modern PCs to typeset a printed page as good as any compositor plus include imagery as part of a finished document. I've not included the (literally) thousands of different games available for PCs. I've not even mentioned that the average under-$1500 over-the-counter PC suite of today having more processing power than any IBM-360 or RCA Spectra 70 mainframe computer of 1970. I've not mentioned that digital electronics and photosensing have changed personal photography from film to electronic form, capable of being "developed" at any PC or added-function stand-alone printer. I've not included the (license-free) radios that open car doors, open garage doors, sound various music when wireless door bells are pushed, activate electrical devices remotely, carry security TV camera signals, or identify products by RF, all using relatively-secure digital codings.

The preceding has been just a summary of the kinds of things which can compete for free time for all Americans, whether they are licensed in the amateur radio service or not. It is that kind of competition that future amateur radio in the USA has to work amongst to attract newcomers. Amateur radio must attract newcomers or it won't survive as a radio service. Amateur radio must change with the times or just disappear as human attrition takes its toll on those who refuse to adapt.

> > of experience in radio nor of formal training in radio. Further, the
> > FCC gives all licensees a great deal of freedom of choice in their
> > class's frequency spectrum and modes of communications. There
> > is no compelling mandate that any licensee must 'operate' in
> > according to what certain groups of amateurs say one must.
>
> > "Radio" and all of electronics works by the same laws of physics,
> > regardless of the federal regulations on use made by governments.
>
> Nor should rop kickyou experence after all if you could achive that
> state (which I doubt) would you even have an interest in the ARS? I
> doubt it
> In your case your professional eperence is what brought you here

Actually, military experience "brought me here." :-) That's given
at

http://sujan.hallikainen.org/BroadcastHistory/uploads/My3Years.pdf

My first interest in "radio" came about while flying free-flight model
aircraft in 1947. I'd heard about radio control and wanted to know
more. Of course, there wasn't much technology involved in 1947
for that. :-)

> But of course you are right Maxwell equation et alldo not change
> suddenlyin the Ham bands

James Clerk Maxwell was one of the rare geniuses who came
up with the basic equations defining electromagnetic waves.
"Maxwell's Equations" serve all radio of today...even if some of
the users can't understand what they mean. :-)

> I hope and Belive that the ARS has a future

I'd like to think so, too. But, it must adapt to the times and
technology and not be bound to certain modes and procedures
established in the middle time of its existance.

73, Len AF6AY

1 GB2RS NEWS Sunday 29 April

The news headlines

* Radio ham saves sailors

* ISS crew connects with schools

* FCC petitioned to restore Morse tests

An amateur radio operator from Comboyne in Australia answered the calls of two sailors battling treacherous five-metre seas in the Pacific Ocean during Good Friday.

Harold Ralston, 62, has been a radio ham for 30 years and was working in his shed when he heard the cries for help.

Sailors Bob Wilson and Mike Ross struck rough seas 75 nautical miles south east of Port Macquarie. Then were left drifting helplessly when the propeller on the 14m long vessel, Maniunda broke. With no power, no steering and battling against 40 knot winds they were unable to pick up English speaking radio operators. However as Ralston was 600m above sea level he had a greater range. He was 200km away and kept in touch and alerted the rescue authorities.

The Amateur Radio on the International Space Station, ARISS, program has had a very busy and successful April. This month, amateur radio has made it possible for youngsters at nine schools in the US, the Netherlands, Australia, Hungary and Russia to speak with the astronauts and cosmonauts aboard the ISS. On 12 April, students at three schools got the chance to talk with those aboard the ISS. Two ARISS school contacts were made on 17 April and brought the total to 286 since the first ISS crew came aboard in November 2000. ARISS International Secretary Rosalie White, K1STO, commented that it was a very ambitious schedule for the dedicated team of volunteers. She noted that civilian space traveler Charles Simonyi, KE7KDP/HA5SIK, has been spending some of his precious time in space on the air.

Further ARISS contacts are planned for 5 May at around 10.24 and 13.34. The ISS audio, on 145.800MHz FM, should be audible across Europe. The contact will also be relayed via Echolink.

The American communications regulator, the FCC, has received petitions to reverse its recent decision to drop the Morse requirement from amateur radio licences. Petitioner Anthony R. Gordon, KG6EQM, of West Covina, California, contends that significant national security

implications require that the FCC take another look at the issue.

The Swains Island N8S DXpedition team made 117,205 QSOs. This represents the fourth highest alltime DXpedition contact total. After shutting down on April 15, the crew made it back to American Samoa late the following day and soon will begin the operation from Samoa as 5W8AA. The first N8S QSL cards will be available in about a month. YT1AD will handle cards for N8S.

Four CubeSats containing payloads operating on amateur radio frequencies were among several spacecraft launched successfully on 17 April from Baikonur Cosmodrome, Kazakhstan.

The rocket deployed seven CubeSats plus seven other satellites from Egypt, Saudi Arabia and Ukraine into Earth orbit, and signals from the four CubeSats have been copied on Earth. Among the spacecraft was Colombia's first satellite.

2 The Renfrew Amateur Radio Society has received a #3000 award from the All Scotland National Lottery Grant. They are planning to buy two new HF transceivers and two aerials for their special event day, the 100 year scout celebration, Scotland. It is due to take place between 25 and 27 May.

Three clubs in East Anglia, Clacton Radio Club, Felixstowe and District Amateur Radio Club and Harwich Amateur Radio Interest Group have joined forces to operate the GB400AA special event station. The station will commemorate the founding of Jamestown, Virginia 400 years ago when the ships Susan Constant, Godspeed and Discovery arrived in Virginia. They had 102 passengers and founded the first English speaking settlement in North America.

GB400AA will be operated at the Mayflower Museum on the Halfpenny Pier at Harwich where The Harwich Society will have an exhibition showing the local area's connections with the inaugural voyages. The station is planned to operate on 11 to 13 May and 25 to 26 May.

IARU Region 1 invites HQ stations of its member societies and stations of special emergency communication groups to participate in the second EmCom Party On The Air on May 5 at 11.00 to 15.00. The operation will occur on the emergency centre of activity frequencies on 40, 20 and 15 meters. The exercise will test how usable these frequencies are across Region 1. It will also increase interest and find best practice for emergency communications between emergency groups such as RAYNET. It is emphasised that this is not a contest but an emergency communications exercise.

The aim for participants is to contact IARU Region 1 HQ station OF3F in Finland and also as many other national HQ and emergency communication group stations as possible using SSB.

More information on the UK involvement in this exercise can be obtained from the RAYNET HF Team website at www.raynet-hf.net.

Now the rallies and events for the coming week.

[Note to newsreaders: as usual, use your discretion on the 29 April events.] On Sunday 29 April the Radio-Active Show takes place from 10am at the Civic Hall, Nantwich. The show will be opened by RSGB President Angus Annan. On Sunday 29 April a Surplus Electronic And Electrical Sale will take place from 10.30 at Aldridge and Barr Beacon Radio Club, Aldridge Community Centre, Anchor Meadow, Middlemoor Lane, Aldridgre. On Sunday 6 May the DAMBUSTERS HAMFEST takes place from 10.30 at Thorpe Camp Museum, Coninsby. Details form Tony, G3ZPU, on 01507 527835.

Details forthcoming rallies and events are on pages 88 and 89 of the May RadCom. Now for news of special events.

>From 25 May to 6 June, Mike Bryant, GW6NLP and Colin Kenton, MW0JNI, will be running a special event station GB100TT in association with Scarlett Point amateur radio society, to celebrate the 100th anniversary of the TT races. It will be based at Scarlett Point Tower in Castletown. For more information log onto www.qsl.net/wars or www.scarlettpoint.com. Special event station ON50EU is active until 31 December to celebrate the 50th anniversary of the Treaty of Rome.

3 Look for special event station OX60AD to be on air throughout April to commemorate the 60th anniversary of the US Air Force and the 56th anniversary of the Defence Treaty between the US and Denmark for the Protection of Greenland. Activity will be on 40, 20, 17, 15 and 10m using CW, SSB and RTTY. The Flight Refuelling ARS is operating special event station GB2FRA until 4 May to commemorate its 25th anniversary. Activity will be on HF, VHF and UHF using CW, SSB and FM. Special station EV5IPY is on the air to celebrate the participation of Belarus in the 4th International Polar Year. Operations are conducted under the aegis of the newly born Department of Polar Researches at the Belorussian Geographic Society. Special callsign HF40PAZ will be aired until 30 April and again on 1 to 30 September to celebrate the 40th anniversary of club station SP6PAZ.

The Letchworth and Baldock District Scouts, Cubs and Beavers will be operating G0LBS from 9am - 6pm at their Centenary Camp between 4th and 7th May 2007. Operation will be on 20, 40, 80, 160m and 2m. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Fred, PY2XB will sign VP5/PY2XB from Providenciales Island, NA-002 from April 19 to May 3. Operation will be on the low bands QRO on 160, 80 and 40m, and WARC bands 30, 17 and 12m. Digital modes including BPSK31 and RTTY will be emphasised. Some unusual islands will be activated for the RSGB IOTA contest in July:

* Proti, Greece, EU-158 will be activated by DL7IO and team.

* Great Bernera, UK, EU-010 will be activated by M0LSB.

* Batz, France, EU-105 will be activated as TM7BA, by F5NCU and F6EHJ.

* Quadra, Canada, NA-091 will be activated by VA7AQ.

* South Marsh (USA), NA-140, will be activated by W3RFA. PA5CW, will be active portable YB9 from Bali from 25 April to 10 May. Kang, DS4DRE, is currently active as DS4DRE/4 from Hong Island until 30 June. Activity will be on 80-10m, CW and SSB Len, UR3HR, Sergey, UR7HTX, Max, UR7HTZ, 3D2TZ, Alex, UT5UY, 3D2UY and Alex, UX0LL, 3D2A, will be activating two IOTA groups between late April and early May. Their activity will start from Taveuni Island OC-016, using the callsign 3D2AP, 3D2TZ and 3D2UY between April 27 and May 3. The team will then move to Yanuca Island in the Ringgold Isles Group OC-189 as 3D2RI between 3 and 7 May. QSL cards should be sent direct to home callsign or through the bureau,QSL 3D2UY via UT5UT, 3D2AP via UX0LL and 3D2TZ via UR7HTZ. Due to the high cost of this operation on a remote Pacific Island, the group is asking for sponsorship by various DX organizations and individuals around the world. If you would like to help fund or sponsor their DXpedition, please contact Alex, UT5UY, by e-mail at: ut5uy@ukr.net. Dani, EA4ATI is returning to Dakar, Senegal and will remain there until April 2008. He expects to be active as 6W/EA4ATI and 6W1EA, probably with a beam for 10, 15 and 20 meters, and dipoles for the other bands. QSL direct via homecall.

4 DL9MWG will be active from Malta as 9H3RT from 18 April to 11 May. Activity will be on HF, mainly CW. Kevin, BA4XA, Mary, BA4XYL, Roy, BA4VE, Li, BD4XD, Wang, BD4XW,Chang, BG6IQD and Tiger, BG4VGJ will be active as homecall 4 from Dongxilian Island, AS-135, on 1 to 7 May. They will operate holiday style on or around the usual IOTA frequencies using 100 watts into a 2-element Yagi, vertical and dipole antennas. QSL via home calls. Eduardo, CU2AF will be active as C91AF from Maputo, Mozambique from 27 April to 6 May. He plans to operate for a few hours daily on 80-10 meters SSB, RTTY and PSK31. QSL via home call. CQ5MGP is the special callsign used by the Portuguese Navy amateur radio group, Nucleo de Radioamadores da Armada, CS5NRA, during the Portuguese Navy Day Contest. This year's event will be held on 5 to 6 May. Karen, DL8HK, CW and Alfred, DB1VQ,SSB, will be active as DL0EFA/p from Usedom Island, EU-129, O-13 for the German Islands Award, from 26 April to 1 May. QSL via DK9VB. John, K9EL will be active from St. Martin, NA-105, from 27 April to 6 May and will operate holiday style as FS/K9EL on 10-80 meters mainly CW and SSB. QSL via home call, direct or bureau. Jim, MM0BQI will be active as MM0BQI/p from Shuna Island, EU-008 from 28 April to 5 May. He plans to operate RTTY, CW and SSB on 17-80 meters. QSL via home call, direct or bureau. A group of operators from the Radio Club de Honduras will be active as HQ9L from Little Cay, Bahia Islands (NA-057) on 4 to 6 May. They will operate SSB. CW and digital modes on 160-10 meters. QSL via HR2RCH, direct or bureau. Look for Marconi memorial station IY0TC to be active from Civitavecchia on the 28th for the International Marconi Day. QSL via I0KHP. Fabio, IW1DFU will be active as IA5/IW1DFU from Elba Island, EU-028, on 25-30 April. Expect him to operate mainly CW on 20 and 30 meters. QSL via home call, direct or bureau. Look for JS6RRR/JS6 and JI3DST/JS6 to be active on 160, 80, 40, 17, 15, 12, 10, 6 and 2 meters SSB, CW, RTTY, SSTV and FM) from the Miyako Islands, AS-079, from 27 April to 7 May.

QSL via bureau only. Jim Martin, MM0BQI, will be operating from the island of Shuna, in the Inner Hebrides, NW Scotland, IOTA EU008 and IOSA FL08 from 28 April to 5 May. He will also have a boat available so other island activations may be possible in the local area. Operation will mostly be on 80, 40,30 and 20m, RTTY, SSB and CW. Now the contest news

The RSGB 144 MHz activity and club championship contest takes place between 2000 and 2230 local time on 1 May, on all modes. The exchange takes the form of RST, serial number and locator. The ARI International contest takes place between 2000 on 5 May to 1959 on 6 May on the 1.8 to 28MHz bands CW, SSB, DATA modes. The exchange takes the form of RST and serial number.

5 The RSGB 432 to 248GHz contest takes place between 1400 on 5 May to 1400 on 6 May on the 432MHz to 248GHz bands, on all modes. The exchange takes the form of RST, serial number and locator. The RSGB 432MHz Trophy contest takes place between 1400 to 2200 on 5 May, all modes. RST, serial number and locator form the exchange. The RSGB 10GHz Trophy contest takes place between 1400 to 2200 on 5 May, all modes. The exchange is RST, serial number and locator.

Now the solar factual data for the period from 16 to 22 April, compiled by Neil Clarke, G0CAS.

Solar activity was very low with no solar flares taking place. The solar disc was spotless except for the 17th and the 18th when a small single spot appeared. Solar flux levels remained at 69 units except for the 19th when it declined to 68. The average was 69 units. The 90 day solar flux average on the 22nd was 74 units, that's one unit down on last week. X-ray flux levels remained below the minimum A1 level everyday. Geomagnetic activity was quiet, for example the Ap index was only 1 unit on the 16th. A coronal hole disturbance arrived as forecast on the 22nd when the Ap increased to 10 units. The average was Ap 6 units. The ACE spacecraft saw solar wind speeds decline from 430 kilometres per second to 280 by the 21st. Speeds then increased to 470 kilometres per second during the 22nd. Particle densities were low everyday but increased to 32 particles per cubic centimetre on the 22nd. Bz varied between minus 3 and plus 2 nanoTeslas on the quiet days and between minus 8 and plus 10 nanoTeslas on the 22nd. At HF, 14MHz remains the only really consistent band, with some good evening openings to South-East Asia. Occasional good openings, mainly over southerly paths, occurred on 18 and 21MHz. 24 and 28MHz were patchy at best. Some areas of the UK enjoyed enhanced tropo at VHF and UHF. And finally the solar forecast.

This week solar activity looks set to continue at very low levels. Solar flux levels should be around the 70 mark. Geomagnetic activity is expected to be unsettled today due to a recurring coronal hole. For the rest of the week activity should be mostly quiet. MUFs during daylight hours at equal latitudes should be around 18MHz for the south and 15MHz for the north. The darkness hour lows are expected to be about 9MHz.

Paths this week to India should have a maximum usable frequency with a 50 per cent success rate of around 22MHzs. The optimum working frequency with a 90 per cent success rate will be about 17MHz. The best time to try this path will be between 0800 and 1600 hours UTC. Normally the start of May heralds the start of the sporadic-E season. Openings could take place on 28MHz and 50MHz. It maybe a couple of more weeks yet before openings take place on 144MHz. And that's all for this week from the propagation team.

6 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 29 April Chesham and District Amateur Radio Society is running its Advanced Licence Course. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Monday 30 April Basingstoke Amateur Radio Club is having a club night. Contact Frank, M0AEU, by email to barc@2lo.info.

On Monday 30 April Felixstowe and District Amateur Radio Society is having a visit to BBC Norwich or RAF Wattisham with Mark, M5BOP. Contact Paul, G4YQC, by email to paul.whiting@bt.com.

On Tuesday 1 May Chelmsford Amateur Radio Society is having a talk entitled 'microwaves demystified' by John Wood, G4EAT. Contact Martyn, G1EFL, on 01245 469 008.

On Tuesday 1 May Cray Valley Radio Society is taking part in the 2m Club Championship. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Tuesday 1 May Horndean and District Amateur Radio Club is having a social evening. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Tuesday 1 May Stevenage and District Amateur Radio Society is having a project night. Contact Neil, M0ARH, on 01438 217 077.

On Wednesday 2 May Dover Radio Club is having a natter and operating night. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 2 May Fareham and District Amateur Radio Club is having a natter and operating night with G3VEF and G8KGI. Contact Jim, M1JJN.

On Wednesday 2 May Newbury and District Amateur Radio Society is discussing antennas. Contact Kevin, G6FOP, on 01635 826 397, g5xv@ntlworld.com.

On Wednesday 2 May Norfolk Amateur Radio Club is having a talk on multiband antennas by Ted, G3FEW. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 2 May Worthing and District Amateur Radio Club is having a talk on surface mount technology by G1ZTN. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 3 May Cray Valley Radio Society is having a talk on Digital Radio Mondiale by G0UKN. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Thursday 3 May Horsham Amateur Radio Club is having a talk on the future of electronics by Mike Underhill, G3LHZ. Details on the web at www.harc.org.uk.

On Thursday 3 May Maidenhead and District Amateur Radio Club is having an informal evening. Contact John, G8RYW, on 01628 628 463, or by email to g8ryw@tesco.net.

7 On Thursday 3 May Shefford and District Amateur Radio Society is having a talk on the ins and outs of radio by Terry, G4OXD. Contact David, G8UOD, on 01234 742 757.

On Friday 4 May Crystal Palace Radio and Electronics Club is having a talk and demonstration of a high voltage Tesla coil by Ian Daniels, G4VTD. Contact Bob, G3OOU, on 01737 552 170.

On Friday 4 May Mid-Sussex Amateur Radio Society is having a quiz night with quiz masters Gavin and Phil. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 4 May Wey Valley Amateur Radio Group is having a talk on laptop radio wizardry for beginners by Derek Stanners, G3HEJ. Details on the web at www.weyvalleyarg.org.uk. NEWS FOR THE SOUTH-WEST

On Sunday 29 April Bailiwick Of Guernsey Raynet Group is taking part in the RAYNET Zone 7 Exercise ICE 4. The Control station will be setting up at Beau Sejour from about 9.30am local time and visitors are most welcome. Contact Mike, GU3WHN.

On Wednesday 2 May Exmouth Amateur Radio Club is having a spring clean of the shack plus an auction bring and buy. Contact g0uil@eclipse.co.uk.

On Wednesday 2 May South Bristol Amateur Radio Club is having a workshop on Morse code with G4YZR. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 2 May Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to

tonytsgarc@beeb.net.

On Wednesday 2 May Trowbridge and District Amateur Radio Club is having a talk on amateur radio and Sumburgh Lighthouse, GB2SLH, with Tony, G0GFL and Nikki, M5YLO. Contact Ian, G0GRI, on 01225 864 698, E/W.

On Thursday 3 May Cornish Radio Amateur Club is having a talk on RAF RF by Wayne Gannon. Contact Ian, 01872 561 058.

On Thursday 3 May Saltash and District Amateur Radio Club is planning the club rally table. Contact Brian, M0BHG, on 01752 844 321.

On Thursday 3 May Swindon and District Amateur Radio Club is having a contest operating workshop with James, M1DST. Contact Mike, M5CBS, on 01793 826 465.

On Thursday 3 May Yeovil Amateur Radio Club is having a talk on aerials by G3MYM. Contact Derek, 01935 414 452, or by email to m0wob@tiscali.co.uk.

On Friday 4 May Bournemouth Radio Society is having a talk entitled Radars 20MHz to 40GHz by Chuck Hobson, G0MDK. Contact John, G0HAT, on 07719 700 771.

On Saturday 5 May Flight Refuelling Amateur Radio Society is running its Foundation training course. Contact Chuck on 01202 881421.

NEWS FOR THE MIDLANDS

On Sunday 29 April Aldridge and Barr Beacon Amateur Radio Club is having its 8th annual sale of surplus and radio electrical goods at the Aldridge Central Hall. Contact Charles, 01922 636 162.

8 On Monday 30 April Gloucester Amateur Radio and Electronics Society is having a VHF operating and workshop evening. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Monday 30 April Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

On Tuesday 1 May Derby and District Amateur Radio Society is having a May Day junk sale. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 1 May Loughborough and District Amateur Radio Club is having a magazine review night. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 1 May Wythall Radio Club is taking part in the 2m Club Championship from the shack. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Thursday 3 May Stafford and District Amateur Radio Society is looking at the restored receiver collection of Mike, G8BMP. Contact Graeme, G4NVH, on 01785 604 534, or by email to graeme.boull@ntlworld.com.

On Friday 4 May Cheltenham Amateur Radio Association is having a talk on digital techniques on 20m by Ron, G3SZS and Colin, G3VTS. Contact Pat, G3IKR, on 01386 792 542.

On Friday 4 May Hucknall Rolls-Royce Amateur Radio Club is on the air on VHF and UHF from 8pm. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

On Saturday 5 May Lincoln Short-Wave Club is operating the special event station GB2CWP from the East Kirkby Aviation Heritage Centre. Contact John, G1TSL, on 01526 323 153.

On Sunday 6 May Lincoln Short-Wave Club is visiting the Dambusters Hamfest at Thorpe Camp, Coningsby. Contact John, G1TSL, on 01526 323 153.

NEWS FOR THE NORTH OF ENGLAND

On Sunday 29 April North Cheshire Radio Club is holding its AGM. All members, past and present, are urged to attend. Details from Gordon Adams, G3LEQ, on 01 565 652652.

On Sunday 29 April Great Lumley Amateur Radio and Electronics Society is running its Foundation Course. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Sunday 29 April Mid-Cheshire Amateur Radio Society is running Radio active 2007 and all members are required to help out. Contact Richard, G0JIT, by email to rsa@zetnet.co.uk.

On Sunday 29 April Macclesfield and District Radio Society is attending the Radio Active Rally. Contact Tom, M1EYP, on 01625 612 916, tommyread@hotmail.com, or on the web at www.gx4mws.com.

On Monday 30 April Macclesfield and District Radio Society is having a talk by RSGB President Angus Annan, MM1CCR. Contact Tom, M1EYP, on 01625 612 916, tommyread@hotmail.com, or on the web at www.gx4mws.com.

On Monday 30 April South Manchester Radio and Computer Club is having its monthly technical forum. Contact Ron, on 0161 969 3999.

On Monday 30 April Thornton Cleveleys Amateur Radio Society is having a talk on radio installation in motor vehicles by John, G0JFE. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

9 On Tuesday 1 May Chester and District Radio Society is having part two of the talk on green boxes by John Langan. Details on the web at www.chesterdars.org.uk, or by email to info@chesterdars.org.uk.

On Tuesday 1 May Macclesfield and District Radio Society is operating special event station GB5OMR every Monday in May, when the club will be open to the public. Contact Tom, M1EYP, on 01625 612 916, tommyread@hotmail.com, or on the web at www.gx4mws.com.

On Tuesday 1 May Mid-Cheshire Amateur Radio Society is having a post show analysis session and starting planning for next year. Contact

Richard, G0JIT, by email to rsa@zetnet.co.uk.

On Tuesday 1 May Stockport Radio Society is having a presentation and demonstration of railway telegraphy by James France, G3KAF. Contact David, M1ANT, on 0161 456 7832.

On Tuesday 1 May Warrington Amateur Radio Club is having a talk on hobbies by Steve, M1DOT. Contact Paul, on 01925 268 096, or by email to paulg7odj@btinternet.com.

1 GB2RS NEWS Sunday 6 May

The news headlines

* RSGB creates two Life Vice Presidents at the AGM

* RAYNET service award to G3STG

* Worcester Radio Amateur team up with VMARS

The RSGB held their 80th Annual General Meeting on Saturday 28 April in Edinburgh. The meeting was opened by RSGB President Angus Annan, MM1CCR. Also on the rostrum were RSGB General Manger Peter Kirby, G0TWW, Honorary Company Secretary Rupert Thorogood, G3KKT, and Honorary Treasurer Bob Dingle, G0OCB.

The afternoon was more of an informal session with Board members giving presentations about their portfolios, followed by a question and answer session at the end.

The AGM dinner was held at the Paramount Carlton Hotel. The president was joined by guests of honour Trevor Baylis, OBE, inventor of the clockwork radio, and Practical Wireless editor Rob Mannion, who received an award to celebrate the 75th birthday of PW.

Two Life Vice Presidents were created at the RSGB AGM. David Pratt, G4DMP, and Mike Dixon, G3PFR, were awarded this prestigious honour for their decades of service to amateur radio.

The RSGB Raynet Cup was presented to Geoff Griffiths, G3STG, at the RSGB AGM. Geoff joined RAYNET in 1957 and receives this award in his 50th year of membership, in recognition of his long-standing service to RAYNET. He served as chairman of both the RSGB National RAYNET Committee and the Network's Committee of Management. Geoff commented, "I was surprised and very pleased to receive the RSGB RAYNET Trophy this year. I have enjoyed working for RAYNET for many years."

Many other presentations and awards were made during the AGM. A full report will appear in the June edition of RadCom.

Over the weekend of 19 to 20 May, members of the Worcester Radio Amateurs Association and members of the Vintage Military Amateur Radio Society are teaming up for a special weekend camp just outside the Worcester City boundary.

The weekend camp is a combination of antenna testing, operating vintage military radio equipment and portable operation practice. Many members

of both groups have a wide ranging interest in anything wireless and military, so there will be much to be learnt from the camp.

Members of VMARS are planning on erecting a large Shirley antenna, which has been used by the military for field communications for many years. Many are looking forward to putting this strange antenna to the test.

There will be several military vehicles at the camp for the duration of the weekend, including a couple of Ferret armoured personnel vehicles, a Saracen, a Uni-Mog and a couple of land Rovers, all fully equipped with radio gear. There will also be a very special Bedford MK lorry on site on Saturday only, fully fitted with some rather interesting equipment. Anyone interested in coming along can find more information at www.wraa.co.uk.

2 A new website, www.RadioDXer.co.uk, has been launched to create an online community for UK based amateurs and other radio enthusiasts where they can participate in discussion on anything to do with radio as a hobby.

Graeme Stoker, M0EUK, the man behind the website believes that there are a number of similar American-based forums, but nothing really with a UK focus. He is also trying to foster a community and collaborative spirit, which can hopefully become self-perpetuating in terms of supporting fellow enthusiasts.

RAYNET controllers are requested to confirm or update group data to rcvs@rsgb.org.uk as soon as possible. Details required are Group Controller name, callsign, address, contact phone numbers and e mail address, plus group web site address if there is one. If a group has a deputy controller and/or secretary, then please send their details as well. County and regional controllers (non-Network) are also requested to send their details. Address will be kept confidential, but other data will appear in the 2008 Yearbook and RCVS on-line database.

ALL groups are invited to submit photographs of recent operations/exercises for possible inclusion in the Yearbook and other publications. Please provide information as to group, venue, event, date, etc., with each image. Network Group details will come via the Network database.

NASA has announced that US astronaut Clay Anderson, KD5PLA, will succeed Suni Williams, KD5PLB, as International Space Station Expedition 15 Flight Engineer later this spring. Anderson will arrive aboard the ISS aboard the shuttle Atlantis, set to launch on 8 June. The same shuttle mission will carry Williams back to Earth. Suni Williams has been in space since early December. During her ISS stay, she set a record for spacewalks by a female astronaut, conducting four excursions for a total of 29 hours and 17 minutes. Upon her return, she will have accumulated more time in space than any other woman. She has also logged 20 school contacts so far.

ARISS International Chair Frank Bauer, KA3HDO, has recently addressed some of the questions regarding ARISS operations and equipment upgrade and repair. He says that ISS construction has again shifted into high gear and the delivery and assembly of two new ISS modules is now on the near horizon. But that activity has a downside for amateur radio activity.

Bauer explained that the launch of any new or replacement ham radio gear or computers to support ARISS operations has been significantly curtailed because the cargo weight limits on construction flights are very tight. There are just too many higher priority activities. The extra workload on the crew has taken its toll on ARISS they have had very little extra time for amateur radio activities beyond school contacts. Bauer concedes that while these developments are somewhat frustrating both to the ham radio community at large and to the ARISS International Team, ARISS nonetheless is pleased that space station crew members have been able to speak so often with youth groups worldwide, piquing their interest in Amateur Radio, science, technology, engineering and maths.

Colchester Radio Amateurs are holding a one day Foundation Licence Assessment day on Sunday 24 June. To enrol, or for further information, contact Kevan, 2E0WMG, on 07766543784 or e-mail colchesterradioamateurs@hotmail.co.uk.

An RSGB presentation is being held on 14 May at the Helena Thompson Museum, Workington at 7pm. Regional Manager Kath Wilson, M1CNY, and board member Dave Wilson, M0OBW, are to make a presentation on the RSGB and take part in a question and answer session.

All amateurs are welcome. To attend contact the Deputy Regional Manager, Norman Williams, M0CRM, telephone 01946 692462, or email norman72@btinternet.com.

3 Thirty amateurs from across the north of England congregated at Silcoates School, Wakefield for the first ever ARDF Seminar in the UK. The seminar was hosted by the Silcoates School Radio Club and delivered by members of the RSGB ARDF Committee. The aim of the seminar was to trigger the start of regular ARDF competitions in the north of England. At present the events programme is restricted to the midlands and south of England and there is a `chicken and egg' element in the situation in the north.

The day comprised of three short classroom presentations, hands on sessions with DF receivers for both 144 MHz and 3.5 MHz and two mini DF hunts in the grounds of the school. The attendees were of all ages and there were representatives from two Scout groups and an Air Training Corps wing, to emphasise the attraction that ARDF has to young people. The greatest enthusiasm and competitiveness for the mini DF hunts was apparent amongst the ten young licence holders who participated.

In addition to the practical elements of the day, a small shop was operated offering for sale DF receivers for 3.5 and 144 MHz as well as

receiver kits, plus transmitters for both bands and aerials. A final feedback session saw many questions and a general desire to try to further the development of ARDF in the north of England.

AMSAT-NA reports that after many years of forwarding packet messages via UO-22, GO-32 and AO51, the Satgate System will shut down. The total of 35 worldwide stations in the system a few years ago has dwindled due to a lack of traffic, maintenance problems, change of location and operator attrition. The system originated with David Medley, KI6QE, and the driving force over the past several years has been Andrew Sellers, G8TZJ, who developed software to permit Satgate stations to be fully automated. Meanwhile, an analog transponder of the FO-29 satellite reportedly has shut down, although Earth stations are looking into resurrecting the satellite and invite telemetry reports via e-mail. Ground controllers want to develop a plan to restore the decade-old satellite to operation. Mineo Wakita, JE9PEL, has created a simple decoder program for FO29's CW telemetry downlink, should signals be heard.

A small group of radio hams in Florida have set up a Group on Yahoo, a web based directory that can be accessed by almost any ham. The aim is that the site will be used by visitors to and from the UK and USA for local information, repeaters, simplex, Psk and digital modes, HF frequencies and ham radio related news. For more information log onto groups.yahoo.com/group/k4eez.

Now the rallies and events for the coming week. [Note to newsreaders: as usual, exercise your judgement about reading the Sunday 6 May event].

On Sunday 6 May the Dambusters Hamfest takes place from 10.30 at Thorpe Camp Museum, Coninsby. On Monday 7 May the Dartmoor Radio Rally takes place from 10.30 at Tavistock College, Tavistock. Details from Peter, M1AYI, on 01822 860277. On Sunday 13 May the MARS Rally takes place from 10am at Alderbrook School, Solihull. Details from Norman, G8BHE, on 0121 422 9787, or on the web at www.midamradio.co.uk.

More details of these and future events can be found on pages 88 and 89 of the May edition of RadCom. Now for news of special events.

>From 25 May to 6 June, Mike Bryant, GW6NLP and Colin Kenton, MW0JNI, will be running a special event station GB100TT in association with Scarlett Point amateur radio society, to celebrate the 100th anniversary of the TT races. It will be based at Scarlett Point Tower in Castletown. For more information log onto www.qsl.net/wars or www.scarlettpoint.com.

4 Special event station ON50EU is active until 31 December to celebrate the 50th anniversary of the Treaty of Rome.

Special station EV5IPY is on the air to celebrate the participation of Belarus in the 4th International Polar Year. Operations are conducted under the aegis of the newly born Department of Polar Researches at the

Belorussian Geographic Society.

The Letchworth and Baldock District Scouts, Cubs and Beavers will be operating G0LBS from 9am to 6pm at their Centenary Camp between 4 and 7 May 2007. Operation will be on 20, 40, 80, 160m and 2m. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

The European CW Association, Fraternizing CW Party takes place on the second weekend of May. Operation will be on Saturday 12 May from 1000 to 1200 UTC and Sunday 13 May from 1800 to 2000 UTC. All amateur radio operators and SWLs and will be carried out on the 80, 40, 20, 15 and 10 meter bands. After a delayed start due to rough seas, the BS7H DXpedition on Scarborough Reef, the most wanted DXCC entity in the world, now is on the air. The first QSO was made at 1347 UTC 29 April, said a brief announcement on the DXpedition Website.

PA5CW will be active portable from Bali from 25 April to 10 May.

DL9MWG will be active from Malta as 9H3RT until 11 May. Activity will be on HF, mainly CW.

Special station LZ07KM will be active on 1 to 31 May to celebrate St Kiril and Methodius' Day. QSL via LZ1PJ, direct or bureau requests for bureau cards can be sent to lz1pj@qsl.net.

Special event station IR1ALP will be active from Cuneo, Italy on 1 to 31 May. A special postage stamp will be affixed on the cards confirming QSOs made on 12 and 13 May, during the 80th Italian Alpine troops gathering. QSL via QSL via IK1AAS. Information on the relevant award, sponsored by ARI Cuneo, can be found at http://www.qrz.com/callsign/IR1ALP.

Valery, RW3GW, Andrey, RW3AH, Alexander, RA3MR, and Artemiy, UA3MQM, will be active as OX/NA1SA from Kangerlussuaq, Greenland, NA-018, on 4 to 10 May. They plan to operate SSB, CW, RTTY and PSK31 on the HF bands, with an emphasis on the low and WARC bands. On 3 to 11 May the team will operate as OZ/NA1SA from Copenhagen, Denmark. QSL via operator's instructions.

Jurgen, DB5YB will be active as OZ/DB5YB from Bornholm Island, EU 030 on 5 to 18 May. He plans to operate SSB on 20, 17 and 15 metres. QSL via home call.

Celebrating the 100th anniversary of the Fenerbahce Sports Club, TA1HZ and TA2RX will operate as TC100FB, QSL via TA1HZ, from Istanbul on 1 to 31 May, and TA1CM will operate as TA100FB QSL via TA1CM on 13 to 27 May from Tekirdag. Now the contest news

The RSGB 80m Club Championship contest takes place between 1900 to 2030 on 7 May on the 80m band, SSB. The exchange takes the form of RST and serial number.

5 The Volty RTTY contest takes place from 1200 on 12 May to 1200 on 13 May on RTTY, using the 3.5 to 28MHz bands. The exchange takes the form of RST, serial number and CQ Zone.

The CQ M contest takes place between 1200 on 12 May to 1200 on 13 May on CW and SSB. The exchange takes the form of RST and serial number.

The RSGB 432MHz activity evening takes place between 2000 to 2230 local time on 8 May on all modes. The exchange takes the form of RST, serial number and locator. Now the solar factual data for the period from 23 to 29 April, compiled by Neil Clarke, G0CAS.

As forecast several weeks ago, the present spell of solar inactivity came to an abrupt end. However, despite the large size of the sunspot group solar activity only increased to low on the 24th when a single small C class solar flare took place. As the sunspot group rotated into view solar flux levels increased from 69 units on the 23rd to 85 by the 28th. The average was 79. The 90 day solar flux average on the 29th was 74 units, that's the same level as last week. X-ray flux levels increased from below the minimum level to A4.7 units by the 26th. The average was A3.5. That's the first week that the average as been above the minimum level since the end of February. Geomagnetic activity started at quiet levels with an Ap index of only 3 units. The predicted coronal hole arrived on the afternoon of the 27th. The most disturbed day was the 28th with the Ap index at 26 units. The average was Ap 14 units. The ACE spacecraft saw solar wind speeds increase from 400 kilometres per second to 720 by the 29th. Particle densities were low except for the 27th, which increased to 13 particles per cubic centimetre. Bz varied between minus 4 and plus 6 nanoTeslas on the quiet days to minus 9 and plus 8 nanoTeslas on during the disturbance. HF propagation was unexciting, though there were again good openings to the Far East on 14MHz and 24MHz produced contacts with Africa on several days. On the 22nd, GM4CXP reported strong signals from the German beacon DL0IGI, which he heard again weakly on the 23rd. This was the first substantial sporadic-E opening of the new season. As we move into May the chances will improve of contacts at 28 and 50MHz, though it could be a few weeks before they are an everyday occurrence. High latitude VHF aurora was reported on the 27th and 28th. And finally the solar forecast. This week the quiet side of the Sun is expected to be rotating into view. Solar activity could be low at first but decline to very low levels around midweek. Solar flux levels are expected to decline and be around the 70 mark by next weekend. Geomagnetic activity should be quiet for most of the week. MUFs during daylight hours at equal latitudes should be about 18MHz for the south and 15MHz for the north. The darkness hour low should be around 10MHz. Paths this week to South Africa should have a maximum usable frequency with a 50 per cent success rate of about 23MHz. The optimum working frequency with a 90 per cent success rate will be around 17MHz. The best time to try this path will be between 0700 and 1600 hours UTC. Sporadic-E could take place on some days with openings up to 50MHz. Finally, a meeting of space physicists in the United States last week concluded that the next cycle, 24, will not start until March 2008. They were split over

whether it will be an intense cycle, peaking in 2011, or a substantially weaker one reaching maximum in 2012. Even for the best experts long-range forecasting of how the Sun will behave remains an uncertain business. And that's all for this week from the propagation team.

6 Next, the Local News:

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Monday 7 May Braintree and District Amateur Radio Society is planning for the Mills on the Air weekend, and having part 2 of the safety testing evening. Contact John, M5AJB, on 01787 460 947.

On Monday 7 May Cray Valley Radio Society is taking part in the 80m SSB Club Championship. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Monday 7 May Southdown Amateur Radio Society is having a talk entitled "do you remember the Woodpecker?". Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com.

On Tuesday 8 May Harwell Amateur Radio Society is having a rig checking session with Mike Stevens, G8CUL. Contact Martyn, G0THY, or by email to g0thy@btinternet.com.

On Tuesday 8 May Stevenage and District Amateur Radio Society is having an HF operating evening. Contact Neil, M0ARH, on 01438 217 077.

On Wednesday 9 May Aylesbury Vale Radio Society is working on the club project, on the air and having a discussion evening. Contact Roger, G3MEH, on 01442 826 651, or by email to roger@g3meh.com.

On Wednesday 9 May Chesham and District Amateur Radio Society is having a kit building evening. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 9 May Dover Radio Club is having three short talks. Geoff, M0GID will explain PSK, Brian, G8ZYZ will speak about amateur satellite operations and Ham Radio Deluxe will be explained by Geoff, M0GID. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 9 May Fareham and District Amateur Radio Club is having an initial planning meeting for the Scout's Centenary Camp station. Contact Jim, M1JJN.

On Wednesday 9 May Farnborough and District Radio Society is having a lecture by Derek, G3HEJ, on the History of Marconi's beam stations and the associated SWB transmitters. Contact Colin, M3IHS, for more information.

On Wednesday 9 May Harwich Amateur Radio Interest Group is having a summer events planning night. Contact James, M0ZZO, on 01255 242 746.

On Wednesday 9 May Havering and District Amateur Radio Club is having a talk on various QSL options. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 9 May Norfolk Amateur Radio Club is having its AGM and initial planning meeting for Barford. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 9 May South Essex Amateur Radio Society is having a quiz night with Ken, G0BBN. Contact Dave, G4UVJ, on 01268 697 978, or by email to southessex.ARS@btinternet.com.

7 On Wednesday 9 May Worthing and District Amateur Radio Club is planning for Mills Weekend. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 10 May Echelford Amateur Radio Society is having a talk on QRP and homebrew by Hans Summers, G0UPL. Contact John Osborne, G4GSC, on 01784 451898.

On Thursday 10 May Reading and District Amateur Radio Club is having a talk by Nick Challacombe, G0LGG, on the Legend of PSK31. Contact Pete, G8FRC, on 01189 695 697.

On Thursday 10 May Shefford and District Amateur Radio Society is having a visit to Henlow Museum. Contact David, G8UOD, on 01234 742 757.

On Friday 11 May Cambridge and District Amateur Radio Club is having a talk on inexpensive GPS frequency standards by James, G3RUH. Contact David, G8JKV.

On Friday 11 May Loughton and Epping Forest Amateur Radio Society is having a VHF on the air evening. Contact Marc, G0TOC, on 020 8502 1645, or by email to info@lefars.org.uk.

On Friday 11 May Mid-Sussex Amateur Radio Society is having a radio night and preparing for Mills on the air. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 11 May Torbay Amateur Radio Society is operating special event station GB60TR. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Friday 11 May Wimbledon and District Amateur Radio Society is having a discussion on antennas led by Eric, G0KRT. Contact Jim, M0CON, on 020 8874 7456.

On Saturday 12 May Basingstoke Amateur Radio Club is taking part in Mills on the Air at Longbridge Mill. Contact Frank, M0AEU, by email to

barc@2lo.info.

On Saturday 12 May Cambridge and District Amateur Radio Club is taking part in Mills on the Air from Cattells Windmill, Willingham. Contact David, G8JKV.

On Saturday 12 May Loughton and Epping Forest Amateur Radio Society is operating GB6EHL at Queen Elizabeth's Hunting Lodge, Chingford. Contact Marc, G0TOC, on 020 8502 1645, or by email to info@lefars.org.uk.

On Saturday 12 May Mid-Sussex Amateur Radio Society is taking part in Mills on the Air at Jill Mill, Pyecombe. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Saturday 12 May Radio Amateur Old Timers' Association is having a get-together in Derby. Contact Ian, G4EAN, on 0115 926 2360 or by email to gensec@raota.org.

On Sunday 13 May Chesham and District Amateur Radio Society is running its Advanced Licence Course at The White Hall Community Centre from 2.00pm to 6.00pm. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Sunday 13 May Felixstowe and District Amateur Radio Society is taking part in National Mills day, operating GB2WTM from Woodbridge Tide Mill. Contact Paul, G4YQC, by email to paul.whiting@bt.com.

The military aviation band of 225 to 400 MHz uses conventional
AM but stations there can use a variety of voice-frequency
Keyers* for security. Jamming fast-movers tooling at 0.8 Mach
requires enormous RF power to stay within their range, something
not normally done by all sides. :-) There are "Have Quick"
modifications to military avionics but I don't know for sure what is
public data on that.

* capitalized 'Keyer' refers to its nomenclature and does not
have any direct reference to a morse code keyer.

Land forces can use the AN/PRC-104 family manpack HF
radio which has its carrier manually dialed in. The same
Keyers can be used on that SSB voice frequency radio
as with military aviation. Going operational in 1985, the
"104" is essentially QRP and includes an automatic
antenna tuner side-by-side in the pack to optimize the
whip antenna. Mobile and fixed variants use the same
R/T with external power amplifiers for up to 400 W. The
104 family is the first of the IHFR or Improved High
Frequency Radios for the U.S. Army. A replacement is
due to be selected soon. "Green" radio collectors might
want to start looking for surplus 104s by next year...makes
a good HF transceiver for portable work.

Prime use for all land forces is the 30 to 88 MHz band, FM, whether on foot, vehicular or airborne. The keystone in that is the AN/PRC-119 family called SINCGARS (SINgle Channel Ground Air Radio System). The "119" uses digitzed voice (even though sent over FM) in-clear, can be connected to a variety of data terminals for sending-receiving that. The salient feature of SINCGARS is the ability to both frequency-hop and/or "scramble" the digitized voice according to an entered "hopset" done by the operator on a touch-screen on its front panel; it has no direct manual carrier frequency controls, only the touch-screen input. In the FHSS mode the hop rate is ten per second. The SINCGARS family includes mobile, airborne, and fixed variants with RF power amplifiers to boost the manpack R/T Tx output of about 10 W. There are two types of HTs operational which are SINCGARS format compatible and Harris Corporation is making a SINCGARS compatible transceiver for the UK military. The SINCGARS general format has been adopted by NATO members. The PRC-119 went operational in 1989, saw some use in the first Gulf War. A later "SIP" or Sincgars Improvement Program dropped the PRC-119 size and weight in half. As of late 2006 the total number of SINCGARS radio sets hit a milestone of 300,000 units made, the maximum number of radios of one kind made anywhere, any time, most produced by ITT division in Fort Wayne, IN.

SINCGARS requires precise timing and updating to maintain a net contact in full encryption mode. This is initially provided by a TCXO and further precision of time-of-day updated by connection to an AN/PSN-11 HT GPS receiver (older 119s) or by an internal GPS receiver (newer SIP 119s). A nice feature of FHSS mode is that many networks can be operational within the same 30 to 88 MHz band without interference. As to DF-ing techniques in the field, that is extremely difficult even with sophisticated test equipment; the encryption code for voice and data is very robust and cannot be broken in the field for any tactical advantage of "the other side." To effectively jam them over an octave of bandwidth requires enormous amounts of broadband RF power, enough to render "the other side's" communications useless.

Although a few PRC-119 (old version) have been seen on eBay for sale, those are only the cases and chassis frame. Some of the internal ICs are custom with no commercial replacements. It is not promising for "surplus."

Standardization of the JTRS or Joint Tactical Radio System is underway by all U.S. military branches. That uses the entire spectrum from 30 to above 400 MHz, will

be compatible with existing formats and offer the flexibility of software defined radios of extreme versatility.

All of the preceding information is obtainable from public sources.

While I was in the Army not the USN during the early 1950s, (sending RTTY across the Formosa Straits, not myself), the encryption method used with old-style 5-level TTY was robust enough that there is no evidence that any other side was able to break it. It took direct physical capture of the USS Pueblo and its TTY encryption equipment to effect an intercept. While I can't vouch for USN radio equipment of the 1950s, Army fixed-station RTTY circuits used better-than-average demodulators for 850 Hz shift RTTY that could effectively ignore transient noise spikes on receive.

833. How Popular Is/Was Amateur Radio

Newsgroup: rec.radio.amateur.moderated
Date: 2007-05-06 01:54:42 UTC
From: N2EY@AOL.COM
Message-ID: <1178416466.392328.291990@p77g2000hsh.googlegroups.com>
Source record: 4638

The following are approximate numbers of US amateurs on the stated dates, compared to the US population.

1930: US population 122 million, US hams 18,000, 1 ham per 6778 Americans

1940: US population 131 million, US hams 50,000, 1 ham per 2620 Americans

1950: US population 150 million, US hams 90,000, 1 ham per 1667 Americans

1960: US population 179 million, US hams 230,000, 1 ham per 779 Americans

1970: US population 223 million, US hams 270,000, 1 ham per 825 Americans

1980: US population 227 million, US hams 350,000, 1 ham per 649 Americans

1990: US population 249 million US hams 550,000, 1 ham per 453 Americans

2000: US population 281 million, US hams 683,000, 1 ham per 411 Americans

May 5 2007: US population (estimated) 301,773,107 US hams 655,219, 1 ham per 460 Americans

Except for the 1960s, every decade from the 1930s to the 1990s saw US Amateur Radio growing faster than the US population.

Some areas of the country have a higher density of hams.
My town (Pahrump, NV) has about 35,000 population and 284 hams, for a ratio
of 1 ham per 123 residents.

Does any other town or city have a higher density?

Some years ago, I realized that a lot of the people I ran across
in my brief visit to Fairbanks were hams. If someone here has an
easy way to get the number of licensees up there, we can compare
it to the Census Bureau's 2003 estimate of 31,000 people.

According to the license database at http://www.wm7d.net/fcc_uls/ there are 558
licenses with Fairbanks addresses, including 3 clubs. That leaves 555
individual hams. Dividing 555 into 31,000 computes to 1 ham per 56 residents.

Thanks, Dick. So it still is a very high percentage.

Irish Radio Transmitters Society
Radio News Bulletin

Sunday May 6th 2007

Michael Gallagher EI3CK: Silent Key

The Mayo Radio Experimenters Network is sad to announce the passing of Fr. Michael Gallagher, EI3CK after a short illness. Michael was originally from Achill, Co. Mayo and is predeceased by his brother Dennis a former Government Minister.

Fr Michael was ordained on April the 10th 1955 in Carlow Cathedral and was appointed to Ogoja diocese in Nigeria. He was stationed and Lyamoyong where he was involved in the building of St. Brendan's school. He also worked in Nkalagu and while stationed there he contracted TB meningitis and was invalided home to Ireland in 1966. After two years of treatment and convalescence Michael took up a position in St Peters in the Glasgow archdiocese and ministered there from October 1968 to March 1969. He then moved to the diocese of Motherwell in Scotland and served in St Brides parish Cambuslang and St Leonards in East Kilbride. From there he went to St Davids parish, Airdire where he served from 1984 until his retirement in September 2004. He held the UK callsign GM3AHB.

Fr. Michael joined the Mayo Radio Experimenters Network in the late 1990s shortly after the club was formed. He was a regular attendee at meetings and club events and will be sadly missed by his large circle of friends. His death brings to two, the number of members of the Mayo REN to pass on in the last few months. Don Gibbons EI5IA, passed away in November 2006.

Michael is survived by his sisters Mary and Sr. Kathleen, by his brothers Eoin, Brendan and Terry and by his sisters-in-law Maureen, Diane, Joan and Mary.

Our deepest sympathy to his family and friends. May he rest in peace.

Date Announced for Mayo Rally 2007

Rally Director Padraic Baynes, EI9JA, told the May meeting of the club that the date of November 18 had been set for the 2007 Rally. The venue, the Belmont Hotel, Knock, remains same as other years and full details will be announced later.

Emcomm party on the air

The second IARU Emcomm party on the air took place on Saturday last the 5th of May. Three AREN stations using callsigns from the EI0RENE sequence were on the air. Band conditions on 7, 14 and 21 MHz were good and the weather ideal for the portable operations. Logs are being studied at present and a report will be posted on the AREN Website.

Galtee Walking Festival

There are just 4 weeks to go to the 2 days of activity in the Galtees on the Saturday and Sunday of the June Bank Holiday weekend. John Ronan EI7IG is event Coordinator and hes is being assisted by John EI2JB and other members of the Tipperary Amateur radio Group. Preparations are at an advanced stage but there are still radio positions to be filled on Saturday and on Sunday. Newcomers are welcome and training will be provided by AREN each morning. Please contact John EI7IG on 086 8167310 or John EI2JB at QTHR

Ladies Mini Marathon

The 2007 Flora Ladies Mini Marathon takes place on Bank Holiday Monday the 4th of June at 3.00 pm. It starts from Fitzwilliam Square, and finishes in Stephens Green Dublin 2. Sadly this years event will happen without the familiar voice of Donnchadh OShea who traditionally operated the net control station. This years public service event will be dedicated to his memory. The co-ordinator for the event again this year will be George Adjaye who may be contacted by phone on 086 2586103 or Fax 01 4908546 or email george_adjayeg at dcu.ie.

Comeragh Cycle Race

There are just 8 weeks to go to the national under 23 road racing championship in Waterford on the 1st of July. Richie EI9HR is event Co-ordinator and he is

being assisted by John EI8JA. This years race, though run over essentially the same route as last year will be on a greater scale with over 160 riders taking part. The Civil Defence have come on board this year to help with marshalling and RTE will be filming the event. AREN will provide the communications for safe traffic management and accident reporting. There will be more radio reporting points and mobile stations than last year so more radio operators are required. Again newcomers are welcome and training will be provided on the morning of the race. This is an excellent opportunity for operators to put their radio skills to good use in a very enjoyable and rewarding way for the benefit of the Community. All operators irrespective of experience are welcome.

Please contact Richie on mobile 085-1465465 or evenings on 051-854315. You can also contact Richie by e-mail at "ei9hr at yahoo dot com".

---

2 Metre Counties Contest

Thanks to all the participants of the recent 2 metre counties contest. If you or your club participated, please send logs to EI8IU at QTHR or email to "contests at irts dot ie by the 9th of May.

International Marconi Day

On the recent International Marconi Day, EI0MAR operated from the Radio Museum in the Martello tower in Howth as a special award station. As befits the event and the location, most contacts were on CW. There were many visitors in the afternoon. The good weather brought a lot of people out and Howth was buzzing. Tony (EI5EM), Joe (EI4FV), Eamonn (EI2CHB), Mike (EI2DJ) Conor (EI5GAB) and Joe (EI4JA) attended.

Tony (EI5EM) handed over an Elecraft KX-1 transceiver and audio amplifier that he had built to Joe Deery, EI4JA. Joe is a blind operator and the KX-1 has a nice optional feature that relays whatever appears on the screen to the operator in CW. As Joe is an avid CW operator this is of great assistance to him.

Mid Ulster Amateur Radio Club (GI3CFW)

The Mid Ulster Amateur Radio Club Rally will take place on Sunday the 20th of May 2007 at the Discovery Centre, Oxford Island, Lough Neagh, Lurgan. Doors open at

mid-day and talk-in is on 145.525 MHz.

Limerick Radio Club

The next meeting will take place on Thursday the 10th of May at 7 p.m. at Limerick Institute of Technology.

Limerick Radio Club has been invited by the Foynes Flying-Boat Museum to operate a special Amateur Radio Station in conjunction with the commemorative Transatlantic Re-Enactment Flight 1937 from Newfoundland Canada to Foynes Ireland. A special call-sign has been allocated to the station EI-70-FOY. The station will be on the air from the 6th to the 8th of July 2007. On HF the station will operate from 80 to 10 metres. It will also operate on VHF / UHF using the EI70FOY call-sign.

A special QSL card, commemorating the Re-Enactment Flight, will be sent to all stations worked over the three-day event. All QSL cards should be sent to the Clubs QSL Manager Alan Cronin EI8EM at QTHR.

Limerick Radio Club can be contacted at ei4lrc at eircom dot net or at www.qsl.net/ei4lrc.

South Eastern Amateur Radio Group

Going forward and starting from Monday the 28th of May, meetings of South Eastern Amateur Radio Group will take place on the last Monday of each month instead of last Wednesdays. The move has been decided in order to facilitate a number of members who are unable to attend on Wednesdays.

The committee meetings will also take place on the first Monday of each month and the next committee meeting will take place on Monday the 7th of May.

Theory Examination

The next Theory Examination for the Experimenters Licence will be held on Thursday the 28th of June next. Places for the examination are limited and will be allocated on a first come first served basis. In order to reserve a place for the exam, intending candidates should forward the appropriate fee to Se&#65533;n Nolan EI7CD, 12 Little Meadow, Pottery Road Dunlaoghaire, Co. Dublin. The fee is 50 Euro or 25 Euro for full time registered students, those who are

retired, are unemployed or have a disability. In addition to the exam centre at the ComReg offices in Dublin, it has now been decided with the agreement of ComReg that an examination should be held on the same date and with the same paper at the Community Centre, Carrigtwohill, Co. Cork. This is to facilitate those at present attending classes for the experimenter licence examination in Cork and Waterford."

The closing date for the examination is the 16th of June and it will be strictly adhered to. Sean EI7CD's address again is 12 Little Meadow, Pottery Road, Dunlaoghaire, Co. Dublin and it can be found in the call book section of the IRTS website at www.irts.ie Sean's e-mail address for further enquiries is "ei7cd at gofree dot indigo dot ie".

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to news at irts dot ie for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sundays bulletin.

If you look at the numbers on a "by state" basis, Alaska has the
largest per-capita density of hams, at about 4.8 hams per thousand.
New York and Louisiana are least dense with about 1.4 hams per
thousand.

The Northwest seems for some reason to be popular for hams. My home
state of Oregon has 3.6 hams per thousand, and all the other W7 states
except Arizona have over 3 hams per thousand, while the national
average is significanly lower at 2.1 hams per thousand.

We've had a ground-swell of interest in Ham radio here in Pahrump, NV. A lot of people heard of ham radio due to the publicity it got during Hurricane Katrina. Last December, in conjunction with the local LDS church (Mormons), we held a one-day "ham cram" session: Study the Technician questions in the morning, followed by an exam session in the afternoon. We had 14 students/candidates, and 13 passed. Two weeks ago, one of them got his General. Several of them have joined our local ARES/RACES unit and repeater club.

The LDS church preaches self-sufficiency and not depending on government to ride out a crisis. Each family must keep a couple of weeks worth of food and water stored in their house. Ham radio fits in with their self-help philosophy.

Three weeks ago, I talked to a ham-to-be in Las Vegas. He said that his Bishop asked him to get a ham license. I asked, "Are you LDS?" and he replied "Yes." BTW, he passed the exam.

Two weeks ago, at the license exam session which I run, we had 10 candidates, where we usually have one or two. Most of these were going for upgrades to General. Last year, we had several sessions with zero candidates. The publicity from Katrina, plus the dropping of the code requirement, has re-invigorated ham radio.

The numbers say otherwise. And they have for many years.

Note that the 1930s, which were dominated by the Great Depression, saw an enormous rise in the number of US hams and the popularity of amateur radio. Yet the 1960s, a time of prosperity, saw almost no growth and an actual decline in popularity.

Some might blame the 1960s numbers on "incentive licensing", but those changes didn't go into effect until very late in that decade (November 1968). And the growth came back in the 1970s and 1980s, when those changes had their greatest effect.

But something apparently has gone horribly wrong. Your numbers
indicate that in the past 7 years we have lost all the gains of the
90's and are apparently sliding backwards into the 1980's hams-per-
Americans ratios.

QRZ.com says that there are "more than 500" hams in Fairbanks. It
wouldn't give me an exact number and would only display the first 300.

I imagine that having a nationally syndicated talkshow host who's also
a ham doesn't hurt, either, right? I don't listen to Bell's show, but
I used to have a neighbor who chatted with Bell and other hams after
the show was over, and I got the impression that he mentioned amateur
radio on his show quite often. So does he talk it up around town, too?

This is to be expected, the big intake of the 1950s is now dying off.

Not just 'my' numbers but any reliable numbers you look at.

What has happened in the past 7 years is this:

>From 2000 to 2003, the number of US hams rose, but since 2003 the numbers have been slowly declining, as expirations exceeded new licenses.The recent rules changes seem to have stopped the decline in numbers but they are only a few months old.

We can speculate on what's going on, but it's only speculation. So here are some speculations:

1) In 1984 the FCC doubled the license term from 5 to 10 years. Which meant that from 1989 to 1994 there were no US amateur license expirations at all. That period is long gone now.

2) There are three basic reasons to become a ham: First, to legally operate 2-way radios as an end in itself, second, to do technical things with 2-way radios that aren't allowed in other radio services, and third, to use low-cost electronic communication.

The first two reasons are pretty much unchanged. But the third has changed radically in the past 10-20 years or so. Email, the internet, cell phones and many other options have made amateur radio just one of many ways that people can use low-cost electronic communication.

For example, back in the 1970s, 1980s and 1990s, we experienced a steady stream of new hams who wanted to use the various repeater/ autopatch systems in this area for personal noncommercial communications, particularly while mobile. Whole families would show up at classes and VE sessions, and the repeaters were busy with their activities. The term 'honeydo hams' entered the jargon. Some of them became interested in other facets of amateur radio, some did not. Nothing wrong with that, either way.

Then came inexpensive cell phones. They went from being a luxury to a near-necessity in a decade or so. Inexpensive, long distance mobile communications went from something unusual and exotic to ubiquitous - and we lost that source of new hams. Very few people get amateur radio licenses today in order to coordinate who is picking up the dry cleaning on the way home and who has soccer practice carpool. In the 1980s it was common.

3) The percentage of residences with antenna restrictions keeps rising. In many areas you have to look really hard to find an affordable newer home where you can put up something as innocuous as a G5RV or a vertical.

4) The nature of free time has changed for many Americans. It's not that people don't have free time, it's that their free time is less predictable and comes in odd chunks. Many American families are juggling two careers, child and elder care, and the expectation of being available most of the time. Activities that requires solid pieces of time, like amateur radio, aren't going to be as popular in such an environment.

There are lots more, but I'm out of time!

Actually, Bell is quite reclusive. He doesn't belong to any of the ham
organizations in town. I've lived here since 1999, and I only saw him once, at
a gas station, and have never spoken to him.

Does it really mean something has gone horribly wrong? An activity like ham radio is going to have its ups and downs. It will ebb and flow. These variations can last several years so are hard to evaluate.

Ham radio can't expect to forever increase as a percentage of the population as there is only going to be a certain percentage interested no matter how diligently one "sells" it.

According to the figures that the OP posted here and in other threads (no reason to doubt them) ham radio has had steady "ups" with no "downs" to a high in 2003. Then in just the past 4 years (2003-2007) the number of "hams/1000 population" has fallen to BELOW the ratio of 1990. In other words, after //many\\ UNBROKEN DECADES of rising popularity, in just //4 years since 2003\\ we have shed the gains of the previous 13 years and continue to head south. Calling that "ebb and flow" is, in my opinion, a bad case of 'whistling past the grave yard'.

The fellow in another thread talking about the 'last generation' may be onto something.

I didn't know the term "honey-do ham" existed until seeing in
these newsgroups. :-) In knowing many licensed radio
amateurs in the southwestern USA, their spouses and/or
offspring got licenses for the purpose of amateur radio
participation, not for picking up dry cleaning or coordinating
soccer practice carpools. While it has been common for
some spouses to call the other spouse to pick up something
on the way home, that has been routinely done by the POTS
here from 1960 to the present time. <shrug>

>3) The percentage of residences with antenna restrictions keeps
>rising. In many areas you have to look really hard to find an
>affordable newer home where you can put up something as innocuous as a
>G5RV or a vertical.

I keep hearing about all that "trouble" and have yet to see it
around here in existing neighborhoods of the eastern San
Fernando Valley area of L.A. (SFV population about 1.5
million). The average home residence plot is 1/4 to 1/3 acre
in the majority; in the majority of those with antennas other
than K-band TV satellite service are the CB and scanner
antennas. The off-center-fed dipole (G5RV type) is more
noticeable than a CB or external scanner antenna or TV dish.
A beam antenna, even one that can be lowered to near
ground level will stick out like a sore thumb in a neighborhood
which doesn't have anyone else with such a structure.

Yes, I know such residential areas exist, but I say those are
still in the minority among the millions of residence units in
the USA.

In the common residence without any restrictions on large,
ungainly structures, hams have to face the very real
problem of some neighbors simply not tolerating
uncommon, highly-visible structures such as ham

antennas. Amateur radio is simply not their thing and
they consider their home as a home, not a small-scale
radio station. To get along with neighbors, hams have to
"sell" themselves to neighbors and completely damp any
indignation that neighbors don't like the idea of (to them)
ungly structures in the air next door. There's no way that
one can legislate away bad feeling that neighbors may
have about ugly (to them) ham antennas; it is their
neighborhood also.

Being always older than the FCC, I just can't accept the above
excuse for "times changing." Every year for the last 50 or so
I've heard variations on that rationalization and every time it
has appeared always applied the "current generation." :-)
No generation owns that excuse nor has it "earned" it.

In every year I've observed human society in this country for
the last half century or so, those that wanted to do what they
wanted made the time. The motion picture industry made its
big business push during the Great Depression...when folks
didn't have much income. They wanted to be entertained,
didn't have TV, few had radios to listen to the a-borning
broadcast networks. Elder-care homes were not close to as
numerous as they are now and families were stuck with
providing for their aging relatives with no extra financial help,
no Medi-Care or (in CA) Medi-Cal. Wives kept up the homes
and took care of the children (if there were any) while
husbands worked (if they had jobs...28% didn't have steady
work at the peak of the Great Depression). Somehow most
survived that ordeal as they had for centuries past. Most of
my high school class of 1951 managed to show up at our
2001 Reunion even though some had to travel 1 to 2 thousand
miles to do so. Most of us looked like we could make it to
our 60th Reunion in 2011. :-)

Amateur radio is really a niche activity in American society
when viewed in the entirety of all activities available. Of course,
the downside of that same society is a divorce rate that has
continually increased since the end of WWII...which is oddly
(but not so much so) coincident with the fantastic rise in
availability of mass media advertising plus the escapist fare
of TV and motion picture entertainment. I won't bother to
mention the increased new-home foreclosures or the rising

debt from easy credit card spending. ["credit cards" didn't exist a half century ago] Like it or not, advertising space sales make it possible for amateur radio publications to exist even if just to break even for membership organizations. Those ads are bought by producers of goods and services for the amateur radio market, producers hoping to sell things even to those who already have radios and some services. Everyone needs to honestly ask themselves a number of questions:

Do you really HAVE to trade up to a new, bigger home in order for more antenna space? Do you really HAVE to get a new transceiver to replace the one you've used for ten years? Do you HAVE to spend all that time on the hobby at the expense of time with family and friends? If you have a spouse, does she/he HAVE to work to help support your hobby? Do you HAVE to use ham radio to communicate with others or can you possibly use another form of communications?

Those questions are all individual. Insert any hobby's name in those questions, same thing there. Amateur radio is a voluntary activity, not a basic necessity of life. The USA as a nation won't collapse if a ham misses a contest or can't make a Field Day "readiness exercise." Let's put it all into a proper perspective of viewing amateur radio as a whole, not just from an individual-experience viewpoint.

I've been an amateur operator for a little over a year now and one of my favorite parts of the hobby is soaking up stories from previous decades. One of the things I'm curious about is professional HF work. I've heard it mentioned in passing that when the early trans-Atlantic cables went down they would shift to HF circuits as available to try and pick up the slack.

So, what else is out there. I know the military has always been heavily invested in radio gear, but what else was (and is?) there? I'd love to hear from anyone who ever brought home a paycheck for working the airwaves.

When I licensed back in 1992, the majority of the people in the class and at the various test sessions as I went up the ladder were these "honey-do" hams and the family group communications types. This type of use was heavily promoted to non-hams by hams of the day. I heard a lot of chit chat on the repeaters, including discussions on errands etc, between family members as they traveled around town. While there is no issue with this, the downside was that many became inactive as they got cell phones. Only a few seemed to carry forward into other areas of ham radio activity.

Commercial shipping and aviation, press (AP, UPI, Reuters, etc.),
weather stations, outback schools in Austrailia and Canada, shortwave
broadcasters, rural telephone systems (an HF radio link existed into a
South Dakota Indian reservation into the 1970's), government
communications in large countries such as China and Russia, public
marine telephone, and more. Pick up a copy of a "SWL Directory" and
you'll be amazed!

When I was stationed at Camp Drake, Japan, some time after Len left,
we were still using HF circuits to ship data (60 Baud TTY, 2400 Baud
"high speed data", and other stuff slower than 2400 Baud) to various
places around the world. I was there 2 years, starting in Jan '68. The
TX and RX sites were in Kashiwa and Owada, though I can't remember
which was which.

We also used HF circuits at Osan AB, ROK, and some other places where
I was stationed. Never a hint of Morse, though; it was all TTY and
synchronous data.

You do know about the Coastie CW op's pages at
<http://www.radiomarine.org/tales.html>? These are gripping, and in
one case I found them hair-raising.

I, too, would love to hear from non-military, non-amateur HF users.

Kashiwa was the transmitter site built on an old WWII airfield with
about two square miles of mostly wire antennas (lots of rhombics),
NE of Tokyo. Owada (for Camp Owada) originally was a shared
USA-USAF receiver site with maybe twice the antenna field size
scattered over numerous small farms NNW of Tokyo. Army built
most of it and control was transferred to USAF in 1963. In 1978
nearly everything was given back to the Japanese government.
Parts of "Owada" receiving site was still active a decade later but
under control of the US Intelligence Agencies as an intercept site.
[no public info on such work :-)]

>We also used HF circuits at Osan AB, ROK, and some other places where

True. Even during WWII the teleprinter was the majority
communications medium for the military, regardless of the stories
that have circulated on morse code use from that War. The center
for Army worldwide communications was Fort Detrick, MD, or radio
callsign WAR (Washington Army Radio). :-) There were separate
transmitter (Woodbridge, VA) and receiver (La Plata, MD) sites with
the control center at Ft. Detrick being primarily a TTY tape relay
unit feeding the Pentagon and 70-odd TTY trunk circuits to major

communications centers worldwide. Tape relay folks used the
network identifier rather than radio callsign. WAR had "RUEP" at
Fort Detrick while Far East Command HQ in Tokyo had "RUAP."
[TTY node IDs always began with "R" but I never found out why...]

TTY was much preferred for several reasons: It was fast, 60 or
100 words per minute with electromechanical terminals; it would
have a printed record at both Tx and Rx relay nodes; it could be
on punched paper tape with printing, ideal for human relaying to
other terminals; it could be encrypted-decrypted on-line or off-line,
vital during hostile times such as the Cold War. Note: The USA
rolling-key encryption system used from WWII until the capture
of the USS Pueblo was never known to have been broken by any
foreign intelligence service. TTYs never needed bathroom breaks,
were "fed" only when paper and ribbons reached their end, and
could work 24 hours a day. The USA, USN, and USAF operated
their parts of the Defense Communications System 24/7...and
there were trade-offs between all branches on the HF circuits,
each branch helping the other out of local problem situations.

Between the end of WWII and towards the beginning of the
1980s the worldwide military radio communications networks
were immense, larger than the combined resources of all USA
civilian radio communications networks. The Army's networks
in Europe, primarily Germany, are illustrated on the excellent
historical site (1945 to 1989) www.usarmygermany.com by
Walter Elkins. In the Far East of 1962 the Signal Corps had

http://sujan.hallikainen.org/BroadcastHistory/uploads/AlphabetSoup.pdf

By 1970 the US military had a better overall organization and
new kinds of equipment. Troposcatter (on low microwaves) was
replacing short-haul (under 400 miles) HF radio circuits. LOS
microwave links were replacing more and more land wire circuits.
AUTOVON (automatic voice) and AUTODIN (automatic digital)
circuits came into being, integrated with civilian communications
infrastructure. By 1980 the military satellites were beginning to
take over the really long-haul HF circuits, offering huge bandwidth
capability and thus very fast throughput. Add to that the buried
and underwater fiber-optic cables of civilian companies leasing
space to the government and military, available throughputs into
the GigaBit region. HF radio was relegated to a standby/back-up
role where it remains to this day. Radiation-hardened comm sats
are the medium of choice for the US military now.

The Defense Switched Network (DSN) was formed out of the old
AUTOVON and AUTODIN with the Internet protocols and became
the "government's own Internet" with the added capability of very
robust encryption and the ability to tie in directly with the existing
communications infrastructure or be used directly with comm sats.
That eliminated the old HF torn-tape message system and
subsequent delays of manual relaying of p-tape. In addition, all

DSN nodes can be alerted with "Flash" priority warnings or
messages, all at the same time, something not possible with the
older HF relay system.

One could go to the more affluent private boat owners who do
deep-water sailing. They use HF SSB away from harbors. Not
much radio-related "hair raising" stuff there, except maybe
what is shown on "CSI: Miami." :-)

The first chapter of the "Collins Sideband Book" by Pappenfus,
Bruene, and Schoenike shows an AT&T SSB map with direct
and switched links to worldwide locations, circa 1960. I count
about 122 stations on that map worldwide. Considering that each
commercial SSB circuit of the time could carry two voice and
eight TTY channels simultaneously, that's fairly large. On the
other hand the service was 24/7 and rather routine, not much
emotion-raising (except to the users of such services).

HF use today, other than amateur, CB, and government, is
relegated to maritime radio on deep water routes (SSB voice
and data), air carrier long-route-over-water communications
(SSB voice), BC (AM and digital voice-music), some comms
services that haven't upgraded to sats or fiber-optics, and
RF ID stations in stores. It's a changed radio world
compared to a half century ago.

Well, I was curious about that, wondering if it was some kind of
local or regional thing. Here in the populous southwestern corner
of the USA there didn't seem to be too much of that. In the
Greater Los Angeles area (population roughly 8 million and spread
out over a large area), the LOS repeaters were carrying lots of
club activities with those clubs involved in amateur radio doings
rather than the "honey-do" kind of thing.

For the first time in the history of Radio Amateurs of Canada, plans
are underway for the RAC ARES/NTS to be on the air simultaneously in
every Section of the RAC Field Organization using their respective
official RAC call sign. This "first" will take place during the annual
RAC Canada Day Contest on July 1, 2007, and RAC Field Services members
are invited to participate. For further information see the May/June
issue of The Canadian Amateur magazine or contact your Section
Manager.

Not a great deal of it is publicized so it is hard to say. Most of
the government and military HF stations have changed from
massive terminals to much smaller ones for specific agencies.
Those can be seen in websites carrying SHARES information.
The government conversion to ALE techniques has changed
the nature of stations' operations and reduced the need for
large stations with fixed wire antennas.

The commercial communications world has gone over to
(largely) fiber-optic, extremely broadband carriers for
thousands of voice circuits, hundreds of data circuits, and
dozens of video-audio circuits on one routing...plus the
communications satellite transponder relay services. Note:
at present - and for several years - all the available slots in
the geosynchronous orbit have been filled by commsats.
Note: Much of the underwater cable service has been or
will be soon replaced by "pumped" (self-amplifying) fiber-
optic cable.

Communications such as ARINC stations for relaying HF
from air carriers on long routes still exist in the same number.
So do the private-boat, commercial boat HF relay services.
The availability of HF communications for small stations in
commercial work has caused a shift from reliance on the
bigger mass-communications carriers to individual company
stations.

Yes, one can still hear "other" radio signals outside of the ham bands. There still exist the strange hum-roar of 12 KHz commercial SSB here and there on HF but those are far less numerous than they were three to four decades ago. There's lots more 'new' sounds of all the various TORs that "others" use on HF and, once in a while, a rare CW signal. :-)

Thousands of old HF stations for non-ham use have been closed down worldwide and equipment dismantled or just junked. Some of the USA transcontinental microwave (FM) long-distance relay system are still in use and up (visible to anyone driving cross-country) but fiber-optics and very high-speed digital time-multiplexed carrier services carry much of the long-distance telephone signals if not relayed via commsats. Such is longer-lived and more reliable.

It's difficult for many to reconcile the changes that have happened in communications in just a half century but that's how it went down. On a more consumer-oriented basis, the broadcasting industry is generally wondering what will become of all those old analog TV transmitters after the transition to HDTV in the USA. There's no easy answer for that, either.

864. [DXNL] DXNL 1518 (May 9, 2007)

Newsgroup: rec.radio.amateur.moderated
Date: 2007-05-09 21:11:25 UTC
From: RDWeaver <weaver5511@mypacks.net>
Message-ID: <1178745041.995857.72640@y5g2000hsa.googlegroups.com>
Source record: 4569

DXNL 1518 - May 9, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

BS7 - SCARBOROUGH REEF, AS-116
BS7H went QRT after nearly 45.000 QSOs on May 6 around 0000 UTC. They were able to put up even a fourth station, the pile-ups were tremendous
and the demand was still huge when they finished. Though the 2007 BS7H activity was not able to satisfy everyone's needs at least their wish to do so should be acknowledged highly. They kept running two stations simultaneously in CW and SSB on 20m all the time and the other two stations were taking care of all other bands. Using a wider listening spectrum increased the chances of the little pistols - as long as they stuck to the HAM rules. Many people hoping for a RTTY QSO with BS7H were disappointed, impossible from Europe. Many HAMs were disturbing others in a very annoying way which probably is a late result of the liberalization of the license exams? A few years ago 45.000 QSOs would have been a great effort (and it still is) but the HAM spirit back then
was much bigger!

D2 - ANGOLA
Steve,SO5AS, has been in Angola lately and received his license D2AS. He is planning his next stay (date not known yet) now with his amateur radio equipment. More information will be published later.

KH0 - NORTHERN MARIANAS, OC-086 / KH2 - GUAM, OC-026
Toshi,JP1IOF, will be QRV as KH0WW from Saipan (OC-086) from May 10-13.
His next stop will be Guam (OC-026) from where he will hit the airwaves
as WH7P/KH2 until May 15. He will run 500 watts in CW/SSB on all bands.
QSLs via his homecall JP1IOF, direct or via bureau.

ST - SUDAN
On Apr 17 Slavko,S57DX, shut his logs with more than 18.000 QSOs as ST2R in 14 weeks. All QSOs (most of them on the lowbands) were made with 100 watts and a simple wire antenna. The QSLs are at the printer already and their mailing will start soon. All those who enclosed old IRCs or no postage at all will receive their QSL via the bureau.

TF - ICELAND, EU-168
Jeff,TF4/G4ELZ/p, and Steve,TF4/G4EDG/p, plan to show up from Flatey Island (EU-168) from May 17-23. Operation will take place mainly
in CW on 80-17m with 100 watts and wires. QSLs direct to G4ELZ or LotW.

TI - COSTA RICA
TI6/K9KEJ and TI6/K5YG will be QRV in SSB on 40m/20m from the jungle on
the east coast of Costa Rica starting on May 15.

VP9 - BERMUDA ISLANDS, NA-005
VP9KF will be the callsign of Paul,G4BKI, from May 15 until Jun 5. Paul will work in CW only on all bands and also plans to take part in the CQ WPX Contest. Please send your QSLs direct to his US address: Paul Evans, 6809 River Rd, Tampa, FL 33615, USA.

4K - AZERBAIJAN
Several members of the 4K7Z radio club in Baku are working as 4KP7Z and 4K1V until May 14 to celebrate the victory in WW2. QSL via UA3FDX.

4W - EAST TIMOR, OC-148
Geoff,VK3ZGW, is working in the capital Dili and showed up on the bands as 4W6AAD. The length of his stay is not known. QSL via VK3ZGW.

9N - NEPAL
Nob,JA2AAU, Yoshi,JA2AIC, and Iku,JA2ATE, will be QRV from the Nepalese
capital Kathmandu from May 10-15. 9N7AU (via JA2AAU),9N7IC (via JA2AIC)
and 9N7TE (via JA2ATE) will work in SSB/CW/RTTY/PSK31 on 40-10m.
If you like to send your QSLs direct please use following addresses:
JA2AAU, No-boru Kanno, Shikata 1785-61, Kitanagoya, 481-0004 Japan;
JA2ATE, Seiji Morishima, Tonomachi 1-8, Ichinomiya, 491-0848 Japan;
JA2AIC,Yoshiyasu Iwata,Minamiaoki 30,Sotowarida,Kisogawa,493-0007 Japan

9U - BURUNDI
9U0VB is now the call of Vlad,UA4WHX, who is travelling through Africa for months now. Nobody knows where and when he will go next.

UNITED KINGDOM/USA, SPECIAL EVENT STATIONS
The first permanent settlement of the British in America was founded in Jamestown, Virginia, 400 years ago. Special event stations will honour this historic event in both countries:
GB400AA (AA stands for "Anniversary of America") is QRV from May 11-13

and during the WPX CW Contest. QSL via G0SBW.
Their website is: http://www.gb400aa.net

W4J is a special event station operated in the US by the "Williamsburg Area ARC" (QSL via KU4FP) from May 4-25. K4J will be used by the "Dominion DX Group" from May 11-13. QSL via KS4RX. Find more info at: http://www.arrlva.us/arrlva/va400/va400_index.html

FINLAND, SPECIAL EVENT STATION
The "Eurovision Song Contest" will take place in Helsinki on May 12. The special event station OH2EURO with the two YLs Annika,OH2HSJ, and Anne,OH2YL, will be QRV on all bands during this event from May 11-13. They will work mainly in SSB and a little CW. QSL via bureau to OH2HSJ.

FRANCE, SPECIAL EVENT STATION
The special event station TM1VDM celebrates the 100th birthday of the author Maxence Van der Meersch from May 14-28. QSL via bureau to F6KTN.

RUSSIA, SPECIAL EVENT STATION
RP3YGA/p is working in CW/SSB/digital modes on 10-160m from May 9-13 (including the CQ-MIR-Contest). They are remembering the Russian pilots
who left their lives in WW2. Unfortunately QSL only direct via MM0DFV.

US POSTAGE RATES INCREASED
All those who prefer enclosing US stamps to their direct QSLs have to be aware of the new postage rates in the United States. Starting on May 14 an international standard envelope will cost 90 US Cent.

Current SOTA activities (Summits On The Air) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

UPCOMING CONTESTS

May 12/13: Alessandro Volta DX Contest and CQ-MIR-Contest

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
AF-019, I, Lampedusa Island: Giuseppe,IG9/I2AZ, is working with QRP in

CW
on 3560, 7030, 14060, 21060 and 28060 kHz from May 5-21.

AS-026, AS-060, AS-081, AS-085, HL, several: Jean-Pierre,F5AHO, member
of
the German IOTA/LH chapter will stay in South Korea from May 12-20 and
plans follwoing activies during that time:
HL5/F5AHO, Kadok-Do, AS-081,
HL4/F5AHO, Cholla-Namdo Prov.Grp., AS-060,
HL4/F5AHO, Soan Islands, AS-085,
HL4/F5AHO, Cheju-Do, AS-026. All QSLs via his homecall F5AHO (b/d).

EU-032, F, Aix Island: Jean-Philippe,F4EEK, Eric,F5LOW, Laurent,F5MNK,
Fabrice,F5NBQ, and Bertrand,F6HKA, will sign TM0A from Ile d'Aix from
May 12-19. They will work with three stations in CW/SSB/digi modes
mainly on the lowbands. QSLs direct or via bureau to F5OIU.

EU-043, SM, North Koster Island: Nine Swedish OMs will sign 8S6KOS in
SSB
on 80/40/20m from May 11-13. QSL via bureau to SM6YOU or via LotW.

EU-110, 9A, Brijuni Island: 9A/IK4ALM, 9A/IK4XCL, 9A/IZ4DYQ, 9A/IZ4HVM
will be QRV in CW and SSB from May 11-13.

EU-123, GM, Inchcolm Island: Michael,GM0PHW/p, will be QRV again from
here
on 10/15/20/40m offering a new chance to work this island on May
11/12.
Michael prefers confirming his QSL cards direct but also via bureau.
For more details check out: http://www.hamcall.co.uk

NA-183, XE3, Guerrero State Group: A few Mexican HAMs plan to become
active
as 4A3IH from Roqueta Island from May 14-19 and after that also from
Ixtapa Island from May 21-26. QSLs for both activities via IT9EJW.
More information can be found at: http://www.mdxc.org/4a3ih

Lighthouse activities:
UE1CDX/p and/or RZ1CXO/p will be the callsign of an activity from the
Ustinskiy Lighthouse (ARLHS ERU-143, RLHA RLE-072) on May 12.
QSL via RN1CW, direct or via bureau.

In 44 years and a half dozen call signs I have to say I've never heard the term either.

I'm wondering if it is something that was invented on the Internet, sort of like the current popular practice of capitalizing HAM as though it were some kind of an acronym.

Not exactly.

In the mid 1960s the growth stalled while the US population grew
rapidly. The percentage of the population that were hams went *down*
during the decade of the 1960s.

Compare 1960 to 1970 in terms of hams-per-1000 and see.

If you look at the annual numbers from 1965 to 1975 the total went
down some years and up others.

> Then in just the past 4 years (2003-2007)

Yup. Think about *why* that would happen, even though the license
requirements were reduced in 2000 and again in 2007.

>In other words, after //many\\ UNBROKEN DECADES of rising
> popularity, in just //4 years since 2003\\ we have shed the gains of

Not really. The 1960s were a down decade. That means 3 decades of
rising popularity (1970s/1980s/1990s)

> Calling that "ebb
> and flow" is, in my opinion, a bad case of 'whistling past the grave
> yard'.

Well, what do you think is really happening?

> The fellow in another thread talking about the 'last generation' may
> be onto something.
>

One thing that has changed greatly in my 40 years as a ham is the age of a typical newcomer. I'm not saying that's good or bad, just that it happened.

In the 1960s, when I became a ham, and well into the 1970s, most of the newcomers I encountered were teenagers or twentysomethings.

But as the 70s went on, more and more new amateurs were in their 30s, 40s, and older.

In particular, during those decades I saw more and more people taking up amateur radio as a retirement or empty-nest activity.

There were still plenty of teenagers and even preteens becoming hams then - and still are. But the percentages shifted.

When I was a new ham in 1967, it was a safe bet that if I met an amateur who was 10 or more years older, that amateur had been a ham longer than me. But by 1980 I often encountered hams who were older than me but hadn't been licensed nearly as long.

One of the great things about amateur radio is that it's about as close to a life-long activity as you can get, and people of almost all ages can become hams. But as more and more people are first-licensed later in life, their time as amateurs grows shorter, and the turnover increases.

That's just one factor of many. The change in license term, changes in the typical American family, changes in where people live and work, and many other factors all combine to change the numbers.

In a previous post I wrote of the "honeydew hams" (which may be an East Coast term) who got licenses for personal-communications purposes in the days before cell phones were inexpensive and ubiquitous. Whatever you call them, there were lots of 'em entering ham radio 30, 20, even 15 years ago. Today there are almost none - cell phones do the job 99% of the time.

Plenty of other examples.

None of that means amateur radio is dying or that we are the last generation. Rather it means amateur radio is changing - as it always has. Most of the reason to become a ham today is because someone is interested in 'radio for its own sake' - an end in itself, not a means to another end.

I heard it first in 1992. The internet was not a significant factor then.

It was a term usually used in a pejorative manner to imply that the licensees (often married couples) didn't get their licenses for the 'right' reasons and weren't 'real' Amateurs. My spouse got her license in that era (early 90's) and even though she is a General and we collaborate in many 'real' amateur activies like contesting (see our two Divisional multi-op Championships in SS CW Iin 03 and 06 at K0RT), one of our local 'influential' hams recently commented that she got into Amateur Radio 'as one of those honey-do hams'.

Then it's a regional thing, because here in EPA, and in other areas
where I've heard the term used, I never heard
it used in a pejorative manner. It was simply a descriptive,
similar to "DX'er" or "contester" or "ragchewer".

Well, people say all sorts of things, true or not.....

Besides, it's common for amateurs to get their license for
one reason or set of reasons but then branch out into other
areas.

Word meanings sometimes change over time. Like the word "handle"....

Interesting. I've been wondering about the same things!

I was licensed around the same time as you ('63, I think it was) and I also had never heard of the "honey-do" term before seeing it here. Same thing with capitalizing HAM.

My excuse is that I've been inactive for years so I haven't kept up.

My great uncle was a professional morse operator originally in the RAF but
then as a civilian on weather research aircraft that monitored clouds and
weather for weather forecasting. He used to send the reports to the ground
via HF.
Then he did some time with the civilian search and rescue service manning a
base station which was also on HF (coordinating the rescue helicopters and
aircraft).

872. Bandwidth of a top band dipole?

Newsgroup: rec.radio.amateur.moderated
Date: 2007-05-10 12:01:42 UTC

Never having had a 160m dipole I don't know what sort of bandwidth to
expect.
Does anyone have any direct experience of a single band 160m dipole?

I just measured the garden at 60m long but taking into account the width I
could bend in a full size dipole without it getting too silly looking.
Maybe just need to bend back five metres on each end.

Must be an individual preference thing. I've been licensed almost 50
years, and have been saying "The handle here is Hans" all that time.
Learned it from my elders way-back-when and old habits are hard to
break I guess.

The bandwidth mainly depends on the height and the wire diameter
of the dipole. Some examples, a quick simulation with MMANA:
(The bandwidth is the SWR < 2 bandwidth, with reference to the
impedance at resonance. Note that it is very low at low dipole
heights. For example at 10m height and resonance, the input
impedance of the dipole is about 8 Ohms only. The given bandwidth
assumes that you somehow match that to your transmitter.)

Straight 160m Dipole over average ground, no losses, SWR<2 BW in kHz

height
diam 10m 15m 20m
1mm 9 23 37
2mm 10 24 40
4mm 11 25 43
8mm 12 27 46

This sounds pretty narrow, now the same with copper wire:

height
diam 10m 15m 20m
1mm 17 29 44
4mm 14 28 46

This first surprised me: The bandwidth of the 1mm diameter dipole
is higher than the 4mm diameter dipole. Only at a height of 20m,
the thicker dipole has a better bandwidth. The reason is, that
the low dipoles with a low radiation resistance have mich higher
currents on them, and by P = I^2*R, the copper losses are higher
for the thinner wire. More losses = less Q = more bandwidth.

(The above measurements don't take into account that the
resonance frequency varied with the height and the diameter of
the dipole. All BW figures with respect to resonance frequency.)

So, as you see, there is not one easy answer to your question...

Ok Hans, I can understand that, but just out of curiosity, *why* do you say "handle" instead of "name" - it's not at all obvious to me.

Perhaps you don't know, tell me..! For my part, I don't know why it irritates me, it just does..! But then I don't know why for a lot of things..! Someone once asked me why I always put two dots before an exclamation or a question mark, I don't know why, I just do ;-)

>

The meaning of that word hasn't changed. In amateur radio usage it is still generally accepted to mean "name". In popular CB usage it is used to denote a pseudonym or aptronym, but even that usage is commonly found in amateur radio. For example, an MD might use the aptronym "Doc", or my old friend W3UBM (sk) who used the aptronym "Sparky" --- he was a radio officer in the merchant marine.

A rose by any other handle would smell as sweet.

Probably mostly from ingrained habit. When I got into amateur radio
as a teen it was what "the oldtimers" did, and newcomers wanting
nothing more than to be perceived as "insiders", adopt the mannerisms
of those they heard on the air.

Many vocations and avocations have a "lingo" which, while it may
strike outsiders as "quaint" or "affected", identifies you to your
peers as "one of them".

73, de Hans

(For another example, why do we say "73" on phone, when it was
originally meant as Morse shorthand for some long flowery phrase like
"All the very best wishes, fair winds, following seas, and I hope you
get lucky with the fair maid who is the object of your humble but
earnest desire.")

Handle: Some etymologists trace that back to the Old West
of the USA prior to 1900 as "cowboy talk" or "rancher talk."
Some of you easterners just don't appreciate the old west. :-)

I once had a wonderful sports car, a 1953 Austin-Healey. Naturally
the trunk (as we say it) was called a "boot." The hood (as we say
it, particularly the hinged cover over the engine) was called a
"bonnet" in the owner's manual. In old motor cars the engine
compartment did indeed resemble a pre-1900 woman's bonnet.
By the end of WWII cars were a lot more streamlined and the
"bonnet" didn't even look like a woman's hat. :-)

BTW, that Healey's aluminum body made a great mobile
ground plane for my CB. [just to keep this on radio subjects]

Why is the (supposed) laugh on voice expressed as "HI HI."
And in a flat voice at that? :-) I've heard that all over HF
along with flat, emotionless voice expressions. Do radio
waves blank out emotions? :-)

Why do some "sign" messages with the "de" before a call sign?
The message originator on newsgroups is already identified in
the message header as to whom it is from. Questions,
questions. :-)

Just as a quick, rough comparison, the bandwidth of a lower-
frequency dipole is the inverse of the ratio of higher frequency
to lower frequency. Not absolutely accurate but close enough.

If I might respectfully offer a little perspective for us all....

Not everyone speaks as we do. There are different customs in different
areas.

I for one cringe every time that I hear someone speaking "HI HI" on
phone. To my way of thinking, if something is funny, I will laugh.

However, I realize that my personal dislike of that particular phrase
is MY problem, not the person who is saying the words that irritate me.

So unless the other person's words are obscene or suggestive, I'll just
avoid imposing my opinions on them.

We're at the absolute bottom of the trough for the solar minimum lately. Several weeks went by recently with hardly a single sunspot. I read an article recently on the ARRL site that said on contest days, hams are injecting enough energy into the ionosphere to get some propagation going. You're likely going to have to wait a little longer for natural openings on 10 meters, or just be standing by on the next big contest day.

For the same reason that hams give "59" signal reports instead of saying "you're loud and clear", for the same reason that they say "73" instead of "best wishes", and for the same reason that they say "QSL" instead of "I got that". These, and "hi hi", are carryovers of CW "shorthand" and have survived as a natural sort of "insiders lingo". As a newer ham you may find them unnatural or awkward to use, and the good news is that everyone will still be happy to snag your prefix in WPX, even if you don't say TKS ES GL OM HI HI..

It seems that "monitoring" has fallen out of favor, at least with folks I know. If you want to talk to someone, you might say something like:

"Anyone around? <callsign>"

or even actually call CQ.

"Monitoring" tells me you are listening, but does not imply that you are actively soliciting a contact, just that your radio is on.

Amateur Radio Newsline(tm) Report 1552 - May 11, 2007

NOTICE TO LIST SUBSCRIBERS: Due to our staff
being away next week at the Dayton Hamvention,
the mailout of the script print version of
Newscast 1553 via this mailing list will be
delayed until about 3 a.m. EDT on Monday, May
21. Those in need of the print edition before
that will be able to obtain it from our website at www.arnewsline.org.

Thank you
ARNewsline, Inc.

Amateur Radio Newsline report number 1552 with a
release date of Friday, April May 11th, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio aids
residents of a Kansas town destroyed by a killer
tornado, Motorola leaves the Access B-P-L
business and some big news about the Roy Neal,
K6DUE, Amateur Radio Mentoring Program. Find out
the details on Amateur Radio Newsline(tm) report
number 1552 coming your way right now.

RESCUE RADIO: HAMS ON THE SCENE AFTER GREENSBERG TORNADO

Ham radio is once again a communications
lifeline. This, after an strong tornado tore
apart the town of Greensburg, Kansas on Friday
night, May 4th. Fred Vobbe, W8HDU, reports:

--

The storm has been classified by the National
Weather Service as an F-5 which is the most
severe on the Enhanced Fujita Scale. The twister
cut a 22 mile long track that was one-point-seven
miles wide. Winds were estimated at 205 miles
per hour. Authorities say about 95 percent of
Greensburg was destroyed and at least 8 people lost their lives.

According to news reports, all wire-line and cellular telephone communications into the southwestern Kansas town of 1500 was destroyed by the twister. A group of ham radio operators identified as being from the Radio Amateur Civil Emergency Service were sent into the area early on Saturday May 5th to set up an emergency communications network. Media stories did not identify the hams by name but did praise their efforts while noting that they were entering an area of total devastation. A later report posted to the ARRL website said the team was under the direction of District 6 Emergency Coordinator Godfrey Flax, KC0AUH.

What they found when they arrived was an area of total devastation. More than 90 percent of Greensburg was destroyed or heavily damaged. Most buildings were blown off their foundations and blown away. The ARRL says that other hams involved in disaster relief were monitoring 3.920 MHz early Saturday morning in case there was a need for them to act.

Meantime President Bush has declared all Kiowa County, Kansas, a major disaster area, making federal aid available to residents affected by the storm.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU, reporting from Lima, Ohio.

--

The last tornado of that strength was in Oklahoma City on May 3, 1999. That twister killed 36 people and left several hundred without homes. (ARNewsline(tm), ARRL, others)

**

THE BPL FIGHT: MOTOROLA SUSPENDS POWERLINE LV BPL DEVELOPMENT

Less than two years after announcing its Powerline LV Access B-P-L product, Motorola has decided to suspend development and to devote its resources to more promising markets. Motorola reportedly has decided to focus on a product called Powerline MU, which is for use within multiple-unit dwellings.

According to the ARRL Letter, the decision to stop work on its Access BPL product reflects declining interest in residential broadband service delivery among utilities. This, coupled with the more immediate demand for in-building BPL systems would provide Motorola a more lucrative market.

Powerline LV united Motorola's Canopy wireless broadband Internet platform with enhanced ham band-notching HomePlug technology, drastically reducing BPL interference potential. This, by restricting the application of high-frequency RF to the low-voltage side of the power transformers serving customers' homes, not the medium-voltage wires that line many residential streets. As a result, Powerline LV avoided the system architecture that poses the greatest risk of BPL interference to radio communication -- radiation from the medium-voltage power lines. Measurements and subjective listening tests on the ham bands showed that Powerline LV was Amateur Radio-friendly.

Powerline LV was developed by Motorola researcher Richard Illman, AH6EZ of St. Charles, Illinois. As a result he was selected for the Dayton Hamvention 2006 Technical Excellence Award. (ARRL)

**

HAM RADIOS DIGITAL FUTURE: IRA FIELDS DIGITAL MIGRATION PLAN FOR REPEATERS

The Illinois Repeater Association now has a proposed digital repeater plan. Titled "The Digital Migration - A Proposed Path," the strategy was developed by Robert Shepard, KA9FLX, who serves as the organizations Technical Committee Chairman.

Shepard indicates that the plan was crafted so as to serve the needs of tomorrows digital relay systems in such a way as to minimize impact on to existing analog systems. It also takes into account how to integrate digital systems into the existing analog environment, utilize spectrum efficiently and plan for the future. In other words, nobody will be displaced when and if its implemented. Rather, its goal is to make it possible for analog and digital to share opectrum with minimal impact on one another.

This is believed to be the very first analog to digital repeater bandplan developed anywhere in the world. Shepard has posted it on the Illinois Repeater Associations website as both a .pdf file as well as a full Power Point presentation. You can find it on-line at www.ira.net. (Via e-mail)

**

HAM RADIOS DIGITAL FUTURE: NEW VERSION OF WSJT RELEASED

Still with digital ram radio news, word that a new version of WSJT program designated version 5.9.7 has been developed by Joe Taylor K1JT. This new rendition contains 8 updates from the latest past release version that appear to make the program a bit more friendly to use.

For those not aware, WSJT is a computer program for VHF and UHF communication using state of the art digital techniques. It can decode fraction-of-a-second signals reflected from ionized meteor trails, as well as steady signals more than 10 dB weaker than those required for conventional C-W. One of its operating modes is particularly well optimized for amateur Earth-Moon-Earth communications.

WSJT is open source software licensed under the GNU General Public License and is free for any ham to use. You can download it at: http://physics.princeton.edu/pulsar/K1JT/WSJT597.EXE (VHF Reflector)

**

ENFORCEMENT: STOP USING THAT ANTENNA

A northern California resident has been issued an Official Citation by the FCC. This, for using one of those self oscillating Weingard amplified TV antennas that we have reported on in the past.

The FCC claims that an investigation by the Enforcement Bureau's San Francisco Office revealed that on April 3, 2007, one William Cooley of Yuba City, California operated a defective Winegard antenna, which caused interference to the licensee of station KZF952.

The San Francisco Office says that it received the complaint of interference on several frequencies used by the Sutter County Sheriff Department communications system. On April 3rd, an FCC investigator confirmed that a radio signal was drifting around 459.28 MHz was coming from a Winegard antenna mounted to a motor home parked in the side yard of Cooley's Yuba City residence. The agent conducted an on-off test of the antenna's power supply to verify the source of interference.

The FCC citation to Cooley notes that these Winegard antenna amplifiers have been the source of radio frequency interference in a number of cases. As a result of this interference, Winegard has agreed to replace the defective units at no charge.

Cooley was advised to contact Weingard to make
the exchange. He was also requested to send the
defective antenna to the FCC for inspection. (FCC)

HAM RADIO EDUCATION: QCWA TO CO SPONSOR ROY
NEAL, K6DUE, AMATEUR RADIO MENTORING PROGRAM

The Roy Neal, K6DUE, Amateur Radio Mentoring
Program is expanding with the potential of up to
10,000 new teachers. This as the Quarter Century
Wireless Association's Board of Directors votes
to have that organization become a co-sponsor of
the three year old post licensing educational
program created by Amateur Radio Newsline. David
Black, KB4KCH, is at our South-East bureau with the details:

--

In a joint statement issued by the leadership of
Quarter Century Wireless Association and that of
the Amateur Radio Newsline, the two have
announced that QCWA has become a co-sponsor of
the Newsline created Roy Neal, K6DUE, Amateur
Radio Mentoring Program. This is a post-licensing
educational service created by Amateur Radio
Newsline in January 2004 and designed to pair new
hams with veteran amateurs in hopes that some of
the established ham operator skills can be passed down to new generations.

The program is loosely based on a similar program
created by Broadway choreographer and performer
Ann Reinking through her own educational
foundation, the Broadway Theater Project. This
is a Florida based training program connecting
students with seasoned theater professionals. If we may quote Ms. Reinking:

"Its sort of an un-written law or rule in the
world of dance that you pass on what you know.
This particular craft is at its best when its
passed from one person's hands to the next."

According to ARNewsline Producer Bill Pasternak,
WA6ITF, what Ann Reinking says about "dance"

applies equally to the world of Amateur Radio:

--

Pasternak: That's true and maybe more so for all
of us... That's because, for decades the
knowledge and tradition of our hobby/service was
passed down from seasoned operators to newcomers,
one on one. I know that's how I got my start
thanks to the late K2IXN at his TV repair store back in Brooklyn."

--

According to Pasternak, the success of the
program has been such that the number of people
seeking post licensing assistance has risen far
faster than the number of available mentors. This
has meant long delays for some who have placed
requests. The addition of the member base of the
QCWA makes available close to 10,000 highly
skilled radio amateurs as potential mentors, each
with a minimum of twenty-five years of experience in the hobby.

--

"This is a good deal for all of Amateur Radio,"
says Q-C-W-A President John B. Johnston, W3BE.

--

Johnston, a retired career FCC employee and
Dayton Radio Amateur of the Year award winner
believes that it is important to keep ham radio
traditions alive. He says that we in the QCWA
are the elder statesmen and stateswomen of
Amateur Radio. That they are the people who have
spent a sizeable chunk of our lives learning the
artistry that goes with being a radio amateur. We
know how a radio works. We know how an antenna
works. He says that most of all they know that
Amateur Radio can only survive if it passes its
combined knowledge on to the next generation of radio amateurs.

Under the agreement, ARNewsline(tm) will continue to
solicit those looking for assistance and maintain
the database that matches those desiring
assistance with a mentor willing to assist.
Willing members of the QCWA will be asked to
register by e-mail to mentor@arnewsline.org
stating their name, call, location, contact
information and area of expertise. As request for
assistance are received the person asking will be
referred to the person closest to him/her who

holds the qualifications and knowledge to assist. John Johnston believes this to be a program that all in QCWA should be a part of:

QCWA President Johnston says that:

--

"This is a chance for each of us to leave our own personal legacy within ham radio. If we do so, we assure the service of another generation of skilled and caring operators who will be a true asset to the service. I urge all of you to sign on."

--

Two large pools of Amateurs are needed to make mentoring work. First, there must be a group of volunteers who have a skill and are willing to share their time. The second group is made up of the large number of beginners who want to learn.

Newsline and QCWA are now seeking applicants for both groups. To sign up, send an e-mail mentor@arnewsline.org. Tell us your name, call letters, address with zipcode, phone number, when we can call and whether you want to be a student or a mentor. Again, that e-mail address is mentor@arnewsline.org and I'm David Black, KB4KCH, at the South-East Bureau in Birmingham, Alabama.

--

The project's namesake, Roy Neal, K6DUE, was himself a prominent mentor. Aside from being the dean of aerospace commentators for the Nation Broadcasting Company, K6DUE is generally credited with bringing manned Amateur Radio into space. This by convincing NASA to let astronaut hams take their gear on shuttle flights and to the International Space Station through the SAREX and ARISS educational programs. He also produced a half dozen ham radio educational videos dealing with Amateur Radio and manned ham radio on-orbit. More about the Roy Neal, K6DUE, Amateur Radio Mentoring Program is on-line at www.arnrewsline.org (ARNewsline(tm))

RESCUE RADIO: A NEW GENERATOR FOR EMCOMMS

Hutchinson, Minnesota Crow River Area Amateur Radio Club of has acquired a portable generator

from Cummins Power Generation of
Minneapolis. The generator, valued at almost
$3,000, will be modified to support emergency
communications by local Amateur Radio operators
in times of disaster and to assist in McLeod
County Skywarn operations. The first full
demonstration of how the generator will be
integrated into the club's emergency
communications capability will take place Field
Day weekend June 23 and 24 at the Hutchinson
Municipal Airport. (Hutchinson-Leader)

**

RADIO SAFETY: LOWER YOUR POWER PLEASE

A Seattle radio station has lowered its transmit
power after it was discovered that its new
location was a possible safety hazard to a near-by oil refinery.

After losing its lease on a transmitter site on
Harbor Island, KKOL AM which is operated by Salem
Communications spent several years broadcasting
from a ship moored off-shore with a low-power
signal that hindered its reach across the
region. Eventually it found a new site and had
signed a 10-year lease with the Port of Tacoma.

Late last year it announced it had gone to full
power. That prompted U.S. Oil & Refining Co. to
file a complaint with the FCC claiming that
KKOL's transmitter has created a series of
problems at its refinery less than a mile
away. Of particular concern, U.S. Oil claims
that an electrical charge produced by the
transmitter creates a safety hazard at the
refinery's docks when crude oil is unloaded from
tankers. The Coast Guard has also weighed in,
calling for the FCC to order KKOL to change
operations to eliminate the risk of a spark causing an explosion.

Salem, which operates its Seattle stations as
Inspiration Media proposed lowering its power to
47,000 watts at times when U.S. Oil is unloading
oil tanker ships. The FCC in turn asked that
KKOL operate at 25,000 watts during the day and
47,000 at night until the issue is
resolved. Late word is that Salem said it has
voluntarily complied with that request. (CGC, SEATTLE POST)

NAMES IN THE NEWS: NY HAMS HONORED FOR PUBLIC SERVICE

Members of New Yorks' Oswego County Emergency Communicators were recently honored by the Oswego County Legislature's Public Safety and Emergency Services Committee and County Emergency Management Office staff. This, when Emergency Management Director Patricia Egan presented the first-ever RACES Service Award to Brien Mathews, KA2AON.

Mathews is Oswego County's Skywarn coordinator. He has also been a member of the Oswego County Emergency Communicators group since 1980. Public Safety Committee chair Tom Bullard, District 14, and vice chairman Milferd Potter, District 2, joined Egan in congratulating Mathews and presented a certificate of appreciation to RACES Radio Officer John Darling, K2QQY. (Palladium-Times.com)

**

NAMES IN THE NEWS: G3STG AWARDED RSGB RAYNET CUP

The Radio Society of Great Britain's Raynet Cup has been presented to Geoff Griffiths, G3STG. Griffiths joined United Kingdom emergency communications service in 1957 and received the award in recognition of his long-standing service to RAYNET. In his 50 years working with the group he has served as chairman of both the RSGB National RAYNET Committee and the Network's Committee of Management. (GB2RS)

COMMUNICATIONS RESEARCH: NYC SUBWAY RIDERS PERIL HEARING

Riding the New York City subway system can adversely affect your long term hearing. That's the just of a new report by researchers who have been looking at hearing loss among those who use the rapid transit system to get around the city.

In a new survey of noise levels throughout the system, researchers at Columbia University's Mailman School of Public Health found that exposure to noise levels in subways have the potential to exceed recommended guidelines of the World Health Organization and the U.S. Environmental Protection Agency. According to the research, as little as 30 minutes of exposure to decibel levels measured in the New York City transit system per day has the potential to result in hearing loss.

The findings were published in the September issue of the Journal of Urban Health. This is a publication of the New York Academy of Medicine. (Journal of Urban Health)

HAM RADIO IN SPACE: KD5PLA TO REPLACE KD5PLB ON THE ISS

NASA has announced that astronaut Clay Anderson, KD5PLA, will succeed Suni Williams, KD5PLB, as International Space Station Expedition 15 Flight Engineer later this spring. According to NASA News, Anderson will arrive aboard the ISS aboard the shuttle Atlantis which is set to launch on 8th June. The same shuttle mission will carry Williams back to Earth.

Suni Williams has been in space since early December. During her ISS stay, she set a record for spacewalks by a female astronaut, conducting four excursions for a total of 29 hours and 17 minutes. Upon her return, she will have accumulated more time in space than any other woman. She has also logged numerous school contacts during her on-orbit stay. (ARISS)

**

HAM RADIO IN SPACE: SSETI-ESO LAUNCH DELAYED A YEAR

The launch date for SSeti ESEO, a European Space Agency led student satellite project intended for geostationary transfer orbit has been delayed by approximately one year. It had originally been hoped that this satellite would be a secondary payload on Ariane launch in late November of 2008 but it now seems that opportunity will not be available. (ANS)

**

RADIO IN SPACE: EU RADIO FROM SPACE

An advanced in-car multimedia system that could use recycled television satellites coming to the end of their working lives has been unveiled in Europe.

The prototype system was developed by the
European Space Agency. It is Said to offer
high-quality radio, video and data. If
commercialized, the system would offer the first
in-car satellite radio service available to Europeans. (Southgate)

WORLDBEAT - IRELAND: ON THE AIR CELEBRATING FLIGHT

Irelands Limerick Radio Club has been invited by
the Foynes Flying Boat Museum to operate a
special Amateur Radio Station. This, in
conjunction with the commemorative Transatlantic
Re-Enactment Flight 1937 from Newfoundland Canada to Foynes Ireland.

The special event callsign has been issued to the
club to operate as EI70FOY. The station will be
on the air from the July 6th to the 8th. On the
High Frequency bands operation will be on 80
through 10 meters. EI70FOY will also operate on VHF / UHF as well.

A special QSL card, commemorating the flight
reenactment will be sent to all stations worked
over the three-day event. All inbound QSL cards
should be sent to the Club's QSL Manager Alan
Cronin E-I-8-E-M at his callbook address. More
is on-line at www.qsl.net/ei4lrc. (IRTS)

**

DX

In D-X, A52SW will be on the air from Thimpu,
Bhutan, from May 17th to the 22nd. The operator
is Steve Herman, W7VOA who will be on 80 through
6 meters using CW, SSB and, possibly, PSK, as
well as 10-meter FM. Steve is a news
correspondent based in India covering South
Asia. He says this will be the first of numerous
trips he plans to make to Bhutan over the next several years as
A52SW. The QSL manager for A52SW will be K2AU.

Also, word that DB5YB will be active as portable
OZ from Bornholm Island, through the 18th
May. He plans to operate SSB on 20, 17 and 15 meters. QSL via his home
call.

And Special event station IR1ALP will be active
from Cuneo, Italy through May 31st. A special
postage stamp will be affixed on the cards
confirming QSOs made on 12th and 13th May, during
the 80th Italian Alpine troops gathering. QSL via QSL via IK1AAS.

Also, special event station ON50EU is active
until December 31st. This, to celebrate the 50th
anniversary of the Treaty of Rome. QSL as directed on the air.

Lastly, some DX from space. WA7IRW says that he
will be operating from the British Virgin Islands
as VP2V and WA7IRW through May 18th. He expects
to try AO-51 ops typically in the afternoon
and evening hours passes using an FT857 and an
aArrow antenna from the sail boat. QSL direct to WA7IRW.

(Above from various DX news sources)

**

THAT FINAL ITEM: CB DOWN UNDER

And finally this week, we all know the story of
how Class D, C-B at 27 MHz in the United States
was created from the old 11 meter ham band. But
other nations have their story of how C-B came
about and in some cases the tale is very
similar. Only the timeline differs. Jim Linton, VK3PC, reports:

--

Rewind, a look back at history

On a recent ABC radio program quiz segment this
question was put: 'In what year was Citizens Band
Radio legalized in Australia?"

It was 1977, in fact July the 1st of that year
after a Federal Government inquiry that received
a large number of submissions in favor of the
move, and intense lobbying by a number of CB radio groups.

Initially CB was 18 channels at 27MHz, requiring
operators to have a government issued callsign,
pay an annual license fee and use type-approved equipment.

The big plan was that 27MHz, the amateur 11 meter
band, was only to be a temporary allocation and
all CB'ers would move to UHF in five years.

However, 27MHz was retained and expanded in 1982,
and the UHF band continues today. Gone has the
licensing requirement too, with CB radio now
covered in 2002 by a fee-free Radiocommunications
Citizen Band Radio Stations Class License.

So radio amateurs can commemorate the loss of
their 11 meter band, while CB operators can mark
the 30th or Pearl anniversary of legalized CB in Australia.

I'm Jim Linton VK3PC for the Amateur Radio Newsline.

--

Sounds like a rather familiar story, but this
time that's a big 10-4 from down-under. (WIA News)

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the
CGC Communicator, CQ Magazine, the FCC, the Ohio
Penn DX Bulletin, Radio Netherlands, Rain, the
RSGB, the Southgate News and Australia's W-I-A
News, that's all from the Amateur Radio
Newsline(tm). Our e-mail address is
newsline@arnewsline.org. More information is
available at Amateur Radio Newsline's(tm) only
official website located at
www.arnewsline.org. You can also write to us or
support us at Amateur Radio Newsline(tm), P.O. Box
660937, Arcadia, California 91066.

Two reminders before we go. First we have a new
poll for the month of May. This one asks the
question now that the Morse exam is part of ham
radio history, do you plan to upgrade or remain
the license class you are right now. Of coarse
this is unfair to Extra class licensees because
they cannot go any higher so this poll kind of
leaves them out in the cold. To compensate, we
added a third possible answer, but you will have
to go to our website at www.arnewsline.org to see what it is.

Also, the nominating season for this years
Amateur Radio Newsline Young Ham of the Year
Award closes on May 30th. That's less than 3
weeks away. Any nominations received after that
date will not qualify for this years award program.

The Young Ham of the Year Award is open to any
radio amateur age 18 or younger residing in all
50 United States, plus Puerto Rico and all 13
Canadian Provinces can qualify. Full details and
nominating forms are on our special website at
www,yhoty.org. Also see the Vertex-Standard
sponsored ad on page 8 of the March issue of QST Magazine.

For now, with Bill Pasternak, WA6ITF, at the
editors desk, I'm Jim Damron, N8TMW and I'm Jeff
Clark, K8JAC, saying 73 and we thank you for listening.

How old is the term "Elmer"?

I was licensed in 1973 or 74, and remained active until abt. 1980. I can't remember the term "Elmer" from then. This was in Norway, of course, but I did read QST and the ARRL books. The first mention of "Elmer" I can remember was on the internet - slashdot.org - in the nineties. (I didn't find my way back into radio until 2004.)

Did I just miss "Elmer" in the seventies, or is the term more recent?

Much older than you think. I was licensed in '63 and I had an Elmer, who I think was known as such back then. I think the term goes way back before that.

see: http://en.wikipedia.org/wiki/Elmer

The term "Elmer"--meaning someone who provides personal guidance and assistance to would-be hams--first appeared in QST in a March 1971 "How's DX" column by Rod Newkirk, W9BRD (now also VA3ZBB).

""From Norm K1AA " The term "Elmer" was invented in the early 1970s (1971
, I
think) by Rod Newkirk, W9BRD" W9BRD was a radio dispatcher with the Illin
ois
State Police. One of his co-workers was Elmer "Bud" Frohardt, W9GFF, now
W9DY. I've only met W9BRD once, but I've known W9DY since 1968. Bud was v
ery
well known locally for his involvement with the RAMS (Radio Amateur
Megacycle Society) radio club, and he was always helping newcomers to the

hobby. So when Rod Newkirk started writing about Elmer in the "How's DX"
column in QST, he was writing about his friend Bud. I saw Bud quite recen
tly
and asked him to re-confirm my recollection that he was the inspiration f
or
Elmer, and he did." From From Norm K1AA

I refer you to the ARRL Page at URL:
http://www.arrl.org/tis/info/pdf/repeater1.pdf

It sez"
"Making your first transmission on a repeater is as simple as signing your
call. If the repeater is quiet, just say "N1GZO" or "N1GZO listening" -- to
attract someone's attention."

Further it states "

"Don't call CQ to initiate a conversation on a repeater. It takes longer to complete a CQ than to transmit your call sign. (In some areas, a solitary "CQ" is permissible.) Efficient communication is the goal. You are not on HF, trying to attract the attention of someone who is casually tuning across the band. In the FM mode, stations are either monitoring their favorite frequency or not."

At one time "monitoring " was for control operators, but now a days in So Calif, you will here "Listening" or "Monitoring" Calling CQ on a repeater will get you 10 guys replying "We don't use CQ on repeaters" and a big argument about it. Travelling across country, the same protocol is generally used IMHO.

>> Why is the (supposed) laugh on voice expressed as "HI HI."

It is the telegraphic laugh.
"hi hi" is the Morse equivalent of a laugh as in Morse it sounds like someone chuckling ("hehhehhehheh hehheh"). That is ditditditdit dit it --- or dot dot dot dot dot dot. You really have to listen to it sent in Morse to appreciate its laugh like sound. It is most commonly used in CW (Morse Code), but has carried over to voice as well. Many CW expressions have carried over to voice -- such as 73 (Best Regards) and 88 (love and Kisses), etc. The origin probably dates back before radio to the telegraph days. And since Hams used Morse long before voice became practical-- the sound of the Morse characters HI HI was used to resemble a laugh sound. In some sense it is equivalent of a smiley. It's onomatopoeic -- that is the naming of a thing or action by a vocal imitation of the sound associated with it (as buzz, hiss) The definitive answer might be found in the "Dodge's The Telegraph Instructor Manual" circa 1850 to 1900..So that is my best guess -- based on what old time telegraphers have told me.

Another use of HI HI is sending a greeting to a fellow Ham when vehicles pass -- four short horn beeps followed by two short horn beeps. Since many Hams have Ham License plates -- a fellow Ham is easily spotted as well as the seeing the mobile antennas.

Jon,

An interesting discussion here:

http://www.arrl.org/FandES/field/club/mentor/

I was licensed in 1964, and neither had an Elmer, nor recall that term being in use at the time when I finally located a radio club. Of course, it may well have been in use elsewhere.

These 'radio cops' exist on all bands, not just repeaters. I once wrote a parody/satire humor piece about them, too funny to be posted here, but you can view a copy at http://lists.contesting.com/_cq-contest/2005-12/msg00393.html

Around my area, pretty much everything goes... (what's legal anyway). The repeater users are all pretty laid back folks with a lot of tolerance. All the "repeater cops" pretty much left 2 meters some time ago.

As long as it's legal, that ought to be the test.

What ever happened to the old FCC Official Observer program? These were licensed volunteers (hams just like you and me) who passed some screening exam, and then cruised the bands looking for problems. As I recall they had no 'police' power but could issue you a 'friendly reminder', backed up by "chapter and verse" if you were afoul of the rules. This reminder didn't go on any record, but was intended to take a load off the FCC monitoring stations. I suppose that 'frequent offenders' were referred upstairs, but I never heard of it.

I disagree a bit there, having listened to lots of voice
"conversations" and compared them to in-person conversations
without radios. The majority of amateur radio activity is done
solo by a ham using voice, CW, RTTY, data, etc. As such,
many just don't have the direct personal coupling to others
unless they are personal friends. A result of that is the flat,
rather emotionless speech patterns one can hear. They seem
to be talking to other radios, not other human beings.

Other radios don't laugh or cry or express emotions. People do
that. Some people in amateur radio want to emulate the
professionals and assume that pros talk only in flat, emotion-
less manner. That's not always the case when you get beyond
the "data reporting" communications kind of things on
commercial radio. Ahem, I've already been "chewed out" by
an unidentified Radio Kop on HF for daring to express some
slight emotion in my voice. <shrug>

There seems to be a difference in speech patterns in ham bands
above 30 MHz versus those below. The VHF and up folk tend to
sound more human and have been heard to actually express a
tiny bit of emotion! :-) Maybe that's just here in the southwest;
I haven't taken any scanner with me on cross-country (2K mile)
auto trips in the USA.

>These, and "hi hi", are carryovers of
>CW "shorthand" and have survived as a natural sort of "insiders
>lingo".

Yes, yes, I think I know some of that... :-) I've already adapted
to several kinds of different radio service lingo. My only difficulty
on any of those was at around 2000 feet in a two-place single
engine aircraft with the (bad alternate) instructor hollering in my
right ear on flying the aircraft properly. "Clik, clik," the pilot's
"roger" using the PTT switch...which I "wasn't supposed to know"

according to the instructor. :-)

>As a newer ham you may find them unnatural or awkward to
>use, and the good news is that everyone will still be happy to snag
>your prefix in WPX, even if you don't say TKS ES GL OM HI HI..

TNX, FB OM and roger that. :-) When I figure out how to
pronounce those capitalized letters, I'll use them. HI HI. :-)

Similar thing here. In the UK, it's generally frowned on to call CQ on a repeater, but you often hear new licensees doing it. I usually just say something like "G6URP listening GB3xx" (repeater calls all start GB3 here).

I do the same.

I think this whole "anti-CQ on repeaters" movement came from the days where repeaters were a new and strange phenomenon. And possibly some used their 80m and 40m CQ calling techniques. You know what I mean- "CQ CQ CQ CQ CQ, this is ????? CQ CQ CQ etc etc blah blah". Now doing THAT on a repeater would annoy the life out of everyone so must be discouraged. And this has developed into an intolerance to hearing the letters C and Q together.

After all, what's the difference between.

VK2CJC listening for any calls.
and
VK2CJC calling CQ.

Keep it short. Keep it clear. And who cares what terminology is used :o)

In *that*, nothing. But it rarely works out like that..!

> "Hello CQ 2. Hello CQ 2 metres. This is M0WWS listening
> GB3BT and 'by for any calls" is my usual patter. Care to
> tell me what exactly is wrong with this Ivor?

Absolutely nothing. But *nobody* around here ever calls CQ like that. They
usually go:

CQ CQ CQ CQ CQ CQ CQ CQ CQ
CQ CQ CQ CQ de G6URP G6URP G6URP
CQ CQ CQ DE G6URP G6URP located in Birmingham, central England

repeated six times over without pausing for breath..!!!

(Note *I* never do that, I just used my own call as an example, ok..?!)

The fact that it first appeared in QST in 1971 doesn't mean it wasn't used before then. The fact that W9BRD picked the name "Elmer" in his QST text "Too frequently one hears a sad story in this little nutshell: 'Oh, I almost got a ticket, too, but Elmer, W9XYZ, moved away and I kind of lost interest.'" may indicate that "Elmer" was already in common use. After all, "Elmer" isn't a very common name that would have sprung to his mind.

I *think* that "Elmer" was a term that I used when I was first licensed in the 60's . . . but maybe I am remembering the 70's instead of the 60's.

Although it's referred to as the "Amateur Auxillary of the FCC", the OO program is primarily an ARRL field appointment, and it's still alive and well. See http://www.arrl.org/FandES/field/org/am_aux.html and http://www.arrl.org/FandES/field/org/oo.html

I received my share of OO citations back in the 60's. They helped me understand the wonders of harmonics of the 80-meter novice band and how well they propagated.

I think that the OO contingent has also been used to help document recent malicious interference situations, but they're hams like you and me, not FCC employees. An analogy is Skywarn . . . spotters are trained and treated differently than the general public, but they're not official NWS employees.

My "Elmer" W9MZ at that time, began to school me in Amateur Radio in 1975
while I was 16 years old . I remember referring to Bill as my Elmer .

My appointment as an Official Observer in the FCC Field Operations
Bureau Amateur Auxiliary was in March 1989. At that time to become an
Official Observer you must have held a Technician class or higher license
for at least 5 years and pass a rigorous test of FCC part 97 rules
questions. After being appointed the ARRL provided me with a free copy of
"The FCC Rule Book".
If an OO notice didn't get the desired result the next step was a "Heavy
Duty" notice from a FCC monitoring station. That would usually get the job
done.

AT&T High Seas Radiotelephone Service could be used by any ship with high-frequency single side band radiotelephone service. Worldwide in scope, the service provided two-way voice communication between ships on the high seas and telephones on land, at sea or in the air.

While I was employed at A.T.&T. I was given a tour of their international operating center in Pittsburg PA in the early 1990's. Being a ham I most enjoyed watching the operators at the High Seas Bureau taking calls from and to ships at sea.

Staffed 24-hours a day, 365-days per year, AT&T operators at Pittsburg PA provided mainland telephone connection to ships at sea. In many circumstances, operators handled distress calls. The operations staff was trained for all emergency situations and alerted the Coast Guard of pending crises.

AT&T High Seas Radiotelephone Facility - was the only facility of its kind in the world, provided lifesaving, two way voice radio-telephone service communication between ships at sea, or aircraft, and telephones on land, sea, or in the air.

WOO was the radio call sign of the now-defunct AT&T High Seas Service. The radiotelephone transmitter station was in Ocean Gate, NJ (39°55'38?N, 74°06'55?W) and the receiver station was in Navesink, New Jersey, USA.

Before satellite communication systems were widely available, the only way ships at sea had to communicate with the rest of the world was via HF SSB connections to land stations.

The AT&T high seas service consisted of WOO Ocean Gate, New Jersey and her sister stations WOM Pennsuco, Florida (Miami, Florida) and KMI Dixon, California (Point Reyes, California). A vessel at sea would make radio contact with one of those stations, and the operator would patch the radio connection though to a telephone call made over the PSTN. The charges were typically settled by making the landline connection a collect call. Larger vessels maintained accounts with AT&T.

In the years prior to regular telephone service being available in Mexican towns such as La Paz, Cabo San Lucas and Puerto Vallarta, KMI provided

service to certain hotels and resorts in those locations. Sometimes a hotel would register a land based transmitter as a yacht, and give it a fictitious name in order to provide phone service to their customers.

AT&T shut down all three stations on November 9, 1999. It is believed that the only remaining commercial sources of high seas high frequency radiotelephone service are WLO in Mobile, Alabama and KLB in Seattle, Washington. AT&T now uses "Mobile Satellite Services".

To use the High Seas Radiotelephone Service, each ship's radio officer would select a channel to call one of AT&T's Coast Stations. A technician at the Coast Station will then pass the call to an AT&T operator in Pittsburg PA . The person at sea would tell the operator the number he or she was trying to reach and the call was connected. People on land would call 1-800-Sea-Call and tell the operator in Pittsburg PA the name and callsign of the vessel they wanted to call.

Alright then Elmer is an English surname derived from "the Old English
aethel (noble) and maer (famous). It was first adopted as a given name in
the 19th Century, most popularly in the United States".

Noble and Famous sounds about right.

Good morning, Ivor.

What in the world is the benefit of getting irritated over something as
innocuous as that?

I have to say that if that's the worst thing I have to get irritated
about, I am a very lucky man indeed.

Yes, WAY back before that.

I was also first licensed in 1963, and "Elmer" was a popular and
often-used term at the time. My elmer was my father, now a silent key,
who was first licensed in 1921, and he often spoke of HIS elmer from those
days. Whether the actual term "elmer" was used in 1921 I obviously can't
say from first hand experience, but I am QUITE certain that the term dates
back at least to the 50's or 40's.

==>ARRL EXPO 2007 AT DAYTON HAMVENTIONï¿½ TO SHOWCASE LEAGUE, HAM RADIO

In less than a week, all eyes in the Amateur Radio community -- well, most
of them, anyway -- will be on Dayton, Ohio. The 56th Dayton Hamventionï¿½
<http://www.hamvention.org> gets under way Friday, May 18, at Hara Arena and
continues through Sunday, May 20. ARRL EXPO will return for a third year in
the Ballarena Hall, showcasing the League's activities and membership
```

services as well as topics of interest to the Amateur Radio community. ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, says ARRL EXPO is akin to taking the entire organization to Dayton.

"Attending ARRL EXPO is a great way to become familiar with many of the programs, services, staff and volunteers that comprise ARRL," Inderbitzen said. "Besides having a fun time, many hams use the opportunity to learn more about the ARRL and about Amateur Radio."

On Friday, May 18, International Space Station Expedition 12 Commander Bill McArthur, KC5ACR -- the most active ham-astronaut ever to live aboard the space station and the first to work all states from space -- will be the League's honored guest. McArthur will be on hand at the ARRL EXPO area to meet and greet visitors.

A veteran of four spaceflights and spacewalks, McArthur also established a yet-to-be surpassed milestone of 37 ARISS school contacts. In addition, he put 130 DXCC entities into the NA1SS log. He and Expedition 12 Flight Engineer Valery Tokarev released SuitSat-1 into orbit.

Live presentations -- mini forums -- on the ARRL Stage at ARRL EXPO 2007 will offer plenty of opportunities to enhance and extend your knowledge of various facets of Amateur Radio. Presentations will take place every half hour. Topics this year will run the gamut from ARRL's Logbook of the World (LoTW) to HF digital voice techniques and protocols, radio frequency interference, broadband over power line (BPL), going mobile, clubs, ham radio instruction techniques, Amateur Radio rules and regulations, contesting, public relations, good operating practices and more.

McArthur will take the ARRL Stage to discuss his six-month duty tour aboard the ISS, among other things telling how he managed to rack up more than 1800 VHF and UHF contacts from space. He'll also be featured during the Ham Radio Aboard the International Space Station Forum, Friday, 10:15 AM, in Room 3.

ARRL staff members and officers also will take part in Hamvention forums throughout the weekend. The ARRL Membership Forum takes place Saturday at noon in Room 2. The complete ARRL Exhibit & Activities Guide is available on the ARRL EXPO 2007 Web site <http://www.arrl.org/announce/nc/2007/2007-ARRL-EXPO-Exhibit-Activities-Guide.pdf>.

The popular ARRL Passport scavenger hunt will be back again this year, with an expanded list of possible prizes. Passports are limited to the first 5000 visitors. Also returning is the ARRL Internet Cafï¿½, which will feature free wireless Internet access.

Of course, ARRL EXPO 2007 at Dayton Hamvention will feature a huge retail area where the League's most popular products and publications will be on sale. While there, visitors can renew their League memberships or join for the first time.

Younger hams and prospective hams will find lots to do. Seventeen-year-old Goldfarb Scholarship winner and youth editor Andrea Hartlage, KG4IUM, will

head the team organizing youth activities and hosting the Youth Lounge, as well as the third annual ARRL Dayton Youth Dinner on Saturday evening. Come to the Youth Lounge for the free snacks, stay for the fun activities and to just hang out.

In August, ARRL EXPO 2007 will return during the League's National Convention, held in conjunction with the Huntsville Hamfest in Alabama <http://www.arrl.org/announce/nc/2007/huntsville.html>. Preparations are in high gear for this year's national, August 18-19, at Huntsville's Von Braun Center.

==>AMATEUR RADIO VOLUNTEERS SERVE THOSE DISRUPTED BY KANSAS TWISTERS

Amateur Radio volunteers responded after an EF5 magnitude tornado with winds exceeding 200 MPH swept through southwestern Kansas over the May 5-6 weekend, essentially wiping out the town of Greensburg. The town, population 1500, lost its hospital, schools, churches and all of its business and infrastructure. A National Weather Service meteorologist called the tornado "one of the most destructive tornadoes in the last 10 years."

A team of Amateur Radio volunteers entered the area Saturday morning and began setting up communication, according to District 6 Emergency Coordinator Godfrey Flax, KC0AUH. District 5 Emergency Coordinator Robert Hanke, WG0Q, activated ARES in Pratt, Stafford, Reno and Barton Counties. Hams deployed to Greensburg and Haviland, and net control operations were established in Pratt.

According to ARRL Kansas Section Manager Ron Cowan, KB0DTI, repeaters that remained on the air were some distance from the affected area. He and other hams were monitoring 3.920 MHz Saturday in case there was HF.

The Salvation Army Team Emergency Radio Network (SATERN) was conducting logistical nets at 9 AM, 3 PM and 9 PM each day on 3.920 MHz, and HF and 2 meter operations were been established in Haviland. Kansas and Western Missouri SATERN Coordinator June Jeffers, KB0WEQ, says SATERN members will be utilized in Kiowa County to support Salvation Army canteens and the service center in Haviland.

Twelve people died as a result of the severe weather, 10 of them from Greensburg, which is located some 45 miles east of Dodge City in Kiowa County.

The entire town evacuated Friday night, and more than 400 people took refuge in shelters in Haviland and Pratt. The Salvation Army dispatched canteen units from Dodge City and Hutchinson. A shelter was also opened in Mullinville. On Sunday night, the Red Cross requested radio operators to provide communications between the hospital in Pratt and the shelter in Haviland.

President Bush declared Kiowa County a major disaster area, making federal aid available to people and communities affected by the storm. "Our hearts are heavy for the loss of life in Greensburg, Kansas," the president said Sunday. "It's going to take a long time for the community to recover."

==>HAM RADIO INSTRUMENTAL IN PACIFIC MARITIME RESCUE

Amateur Radio played a critical role May 4 and 5 in rescuing two people from a foundering sailboat that had been en route to Colombia. Members of the Maritime Mobile Service Net (MMSN) and Intercontinental Net on 14.300 MHz were involved in getting the man and woman aboard the 35-foot s/v Sailabout to safety after they ran into trouble some 700 nautical miles southwest of the Galapagos Islands in the South Pacific.

The couple, identified as Gunnar Hansen and Grethe Haraldsen, both Norwegian nationals and neither an amateur licensee, put out a Mayday call on the Intercon/MMSN 14.300 MHz frequency the morning of May 4 after Sailabout sustained damage to its bow -- possibly as a result of losing a forestay, which helps to keep the mast upright -- and started taking on water. Thanks to its efficient pumps, the sailboat remained afloat.

The main concern was for the mast, which supported the antenna for the vessel's HF radio. Fortunately, it remained standing. The conversation on the MMSN reportedly was widely monitored by others in the sailing and cruising communities. The Sailabout had only recently been equipped with an HF SSB transceiver.

According to an account Assistant MMSN Manager Tom Job, VE3II, posted on the net's Web site <http://www.mmsn.org/events/sailabout.html>, handling the incident involved multiple stations and relays to contend with problematic propagation. Sonny Sides, N5OTB, on s/v Valentina, and Doug Reinthal, W7DUG, relayed the Sailabout's Mayday on 14.300 MHz to Intercon Net Control Station Wes Mullenax, KI0A, in Texas. Because of poor propagation, however, KI0A had rough copy on the vessel's signal, so he turned the frequency over to Fletcher Henderson, KA4BPR, in Alabama. Another report credits Ernie Polack, 6Y5RP, in Jamaica with intercepting the Mayday and assisting via intermittent radio contacts and relays during the first few hours of the event to get information to the Coast Guard. Compounding the urgency of the situation were six to eight-foot seas and winds of 16 to 18 knots.

Amateur Radio relays alerted the US Coast Guard at Alameda, California, to the Sailabout's predicament. At the Coast Guard's request, relayed via ham radio, Hansen set off the vessel's Emergency Position Indicating Radio Beacon (EPIRB). Job says Henderson -- assisted by several other stations -- passed critical information to the Coast Guard. The Coast Guard contacted and attempted to divert two vessels to the Sailabout's assistance, although only one, m/v Belnor -- a Norwegian freighter -- eventually reached the distressed vessel.

Another boat, s/v Damarri, reported some 50 miles distant, learned of the situation. MMSN says Sailabout was able to get under way and changed its course toward Damarri, which was sailing into the weather in an effort to rendezvous with Sailabout. Once on scene, the Damarri's crew kept watch through the night from a safe distance to avoid collision in the rough seas but did not attempt to take Hansen and Haraldsen aboard. At the time, the distressed vessel was contending with 14-foot seas and 25-knot winds. When outside radio contact essentially became impossible, the MMSN secured for the night.

The m/v Belnor arrived the next morning and took the couple aboard, while Damarri's crew confirmed the rescue via radio. The couple was reported to be in good health and spirits but had to abandon their vessel. The Belnor was believed headed for Panama.

Throughout the ordeal, various Amateur Radio stations -- some of which simply stood by if needed -- made themselves available to update the Coast Guard, which never had direct contact with Sailabout.

SOURCES: MMSN/Intercon Net; Jack Richards, W4QVA; SailboatOwners.com, Aftenposten, S/V Sailabout Web site

==>YOUNGSTERS IN EUROPE, US GET FRONT-ROW SEATS TO SPACE VIA HAM RADIO

Now part of the ISS Expedition 15 crew, US astronaut Suni Williams, KD5PLB, has continued her run of successful Amateur Radio on the International Space Station (ARISS) school contacts. In late April, she enlightened youngsters in Italy, Germany, Virginia and Illinois about what it's like to live aboard the ISS. Williams has been in space since December and is scheduled to return home next month via the space shuttle that will bring her replacement. During the first of two ham radio conversations on April 23 with students at the Scuola Europea Varese in Varese, Italy, Williams allowed that she's growing tired of space meals.

"They were tasty for the first couple of months, but now it's getting a little bit old, because the menu sort of repeats," Williams responded. "It's about a 10-day cycle, and then you start eating the same things over and over again, so I try to be creative and mix new things with each other."

Shane Lynd, VK4KHZ, served as the Earth station for the event. Students at the school spent about three months learning about the ISS. An audience of about 300 looked on during the contact, which attracted media coverage from newspapers and television. Verizon Conferencing provided a teleconferencing link between Australia and Italy.

A few hours later, youngsters at Kingston Elementary School in Virginia Beach, Virginia, spoke with Williams during a direct VHF contact between NA1SS and control op Ed Williams, KN4KL. Thirteen Kingston third through fifth graders participated, while the rest of the school's nearly 600 students watched via closed-circuit TV. Julia, whose father had graduated from the US Naval Academy with Suni Williams, wanted to know how long it took to prepare for a space walk.

"Well, it takes a little while," Williams explained. "It's sort of like when you're going diving. We're going to breathe 100 percent oxygen, and so we have to make sure that we get all the nitrogen out of our system. So that's the longest preparation time, and then we have to get the spacesuits ready." She said it typically takes four to five hours before the astronauts are ready to open the hatch and go out into space.

Members of the Virginia Beach Amateur Radio Club (VBARC) provided the ground station and support for the ARISS event, which was the subject of a newspaper article in the Virginian Pilot. (The ARRL Virginia Section Web site <http://aresva.org/arrlva/news/20070428.ariss_va_beach.html> has a copy

of the article and additional information.)

Two days later, about a dozen youngsters attending Christian Life Elementary School in Rockford, Illinois, had their "day in space." Youngsters there chatted with Williams at the helm of NA1SS via Earth station control operator Shari Harlan, N9SH. Williams told one questioner that she believes the next step for the human spaceflight program is to return to the moon.

"We've got a lot that we can learn from living in a different type of gravity environment if we want to explore further, potentially go out to Mars or some other part of the universe," she said. "If we're only at the moon, we'll have only a small delay in communication -- maybe a two-second delay -- and we need to learn how to work autonomously without always [having] the help of the ground. It would be nice to have a moon base to see how that would work and see if we can still survive there."

Upward of 1000 students looked on during the ARISS QSO, and audio and video were fed live to a local Amateur TV repeater.

On April 28, Williams fielded more questions from students at the Samuel von Pufendorf Gymnasium, a middle and high school of some 675 students in Floeha, Germany. The direct contact was between NA1SS and the school's Amateur Radio club station DL0GYM, with Harald Schoenwitz, DL2HSC, as the control operator. All of the students who took part in the event had obtained their Amateur Radio licenses in advance of the contact.

Williams told the students she wished the ISS had Internet access. "It really would be helpful," she remarked. She noted the crew does have access to e-mail, however. She also said that the crew can see the northern lights from above, and on one occasion, an aurora occurred during a space walk. "It was a little creepy to see the green lights flashing," she said.

About 50 people plus news media looked on as the approximately 10-minute contact progressed flawlessly. Five newspapers, three radio stations and the regional TV channel reported on the event. The von Pufendorf contact was the 290th since the ARISS program began coordinating ham radio events for schools when the first space station crew came aboard in November 2000.

ARISS is an international educational outreach with US participation by ARRL, AMSAT and NASA.

==>THREE STATES SET SIGHTS ON AMATEUR RADIO ANTENNA LEGISLATION

North Carolina, Pennsylvania and Oklahoma have -- or soon will have -- Amateur Radio antenna legislation in play. Radio amateurs in all three states are hoping to have the essence of the limited federal preemption known as PRB-1 <http://www.arrl.org/FandES/field/regulations/PRB-1_Pkg/prb-1.pdf> incorporated into their states' statutes. The North Carolina bill, H 1340, is on the fastest track at this point. The measure was reported favorably out of the House Ways and Means Committee on May 3, and unanimously approved by the full House on May 8. ARRL North Carolina Section Manager Tim Slay, N4IB, says the bill has been referred to the Senate.

"Thanks to all of you who contacted your state representative," Slay said. "None of us imagined this would happen so quickly! We will need you to make the same great effort to build support with your state Senator as soon as a number is assigned for the companion bill."

Slay also expressed appreciation to the bill's sponsor Rep Danny McComas (R-New Hanover) and to former Wilmington Mayor Hamilton "Ham" Hicks, KB4BR, for shepherding the bill through the House "with overwhelming success."

H 1340 calls on municipalities to require ordinances based on health, safety, or aesthetic considerations regulating placement, screening or height of Amateur Radio antennas or antenna support structures "must reasonably accommodate Amateur Radio communications and must represent the minimum practicable regulation necessary to accomplish the purpose" of the city or county. In addition, the measure would establish a minimum regulatory height of 90 feet "unless the restriction is necessary to achieve a clearly defined health, safety, or aesthetic objective" of the city or county.

Elsewhere ARRL Eastern Pennsylvania Section Manager Eric Olena, WB3FPL, has alerted members in his section to a pending piece of legislation in the works for that state. At this point, the measure has not been introduced. Radio amateurs are hoping their proposal may be integrated into an update of municipal codes now under way in the General Assembly. The proposed bill would restrict municipalities from adopting "an ordinance, regulation or plan or take any other action that precludes Amateur Service communications" or that fails to comply with PRB-1.

Meanwhile, radio amateurs in Oklahoma are still trying to get PRB-1 language on the books in that state. House Bill 1037 (HB 1037) moved out of the General Government and Transportation Committee with a "do pass" recommendation, but it failed to make the House calendar for a vote.

ARRL Oklahoma SM John Thomason, WB5SYT, tells ARRL that the language of HB 1037 has been attached to a Senate Bill, SB 426, which involves municipal annexations. SB 426 now is in a conference committee for action, and Thomason says one of the committee members is a radio amateur. Eddie Manley, K5EMS, who tracks FCC and governmental actions for the Oklahoma Section, has suggested that Oklahoma radio amateurs contact the authors of both the House and Senate bills as well as members of the conference committee considering SB 426.

To date, 23 states <http://www.arrl.org/field/regulations/statutes.htm> have adopted PRB-1 legislation. While PRB-1 requires reasonable accommodation, it does not specify a minimum height below which local governments may not regulate. Four states -- Alaska, Wyoming, Virginia and Oregon -- have legislation in place that specifies antenna support structure heights, below which municipalities may not regulate.

==>ARRL SENIOR NEWS EDITOR RICK LINDQUIST, N1RL, TO RETIRE

ARRL Senior News Editor Rick Lindquist, N1RL, will retire from the Headquarters staff on Friday, June 1. Assistant Editor Khrystyne Keane, K1SFA, has been named ARRL News Editor, effective May 1. Lindquist, who

turns 62 this month, came to the League from The Roanoke Times in Southwest Virginia 12 years ago. He began his Headquarters tenure as QST "Product Review" editor while juggling News Bureau duties on the side. A couple of years later, he shifted to covering Amateur Radio news fulltime as part of the League's initiative to feature news and features on its Web site.

"It's been a great ride, and -- thanks to the great folks on staff -- I've learned a lot, but it's time to throttle back, shift into the slow lane and coast a bit," said Lindquist, who lives with his wife Jean Collier, N1MJC, in Feeding Hills, Massachusetts. "For starters, I hope to get on the air more frequently and attend to our somewhat neglected clock collection."

A radio amateur for 49 years, he's also is a mobile CW, contesting, vintage radio and boating enthusiast.

During his time at League Headquarters, Lindquist has prepared and edited the "Happenings" news column for QST plus most of the news items and announcements appearing on the ARRL Web site. In addition, he has compiled and edited The ARRL Letter. The former radio and TV broadcaster also has voiced, edited and produced ARRL Audio News, a Web/podcast he launched in 1997, and he has edited the Web site youth, QRP, "The Amateur Amateur" and the Amateur Radio Direction Finding columns.

ARRL Chief Operating Officer Harold Kramer, WJ1B, said it's been his privilege to work with Lindquist. "Rick has been our news editor and reporter through many of the major events in Amateur Radio, including 9/11, Katrina, and the elimination of the Morse code requirement," Kramer noted. "He has been the print and audio voice of the ARRL both during these events and he has reported them accurately, incisively and engagingly."

Added ARRL CEO David Sumner, K1ZZ: "Rick's newspaper experience, writing talent and longtime Amateur Radio involvement combine to give him a great ability to grasp what's important and communicate it to readers. We're fortunate that we will be able to continue to call on him."

After June 1, Lindquist will continue his association with the ARRL as a freelance writer/editor. He will also take over from Keane as Managing Editor of National Contest Journal (NCJ).

An ARRL Life Member, Keane joined the Headquarters staff a little over a year ago, arriving at the ARRL by way of Texas, California and Chile. She and her husband, Michael, K1MK, live in Watertown, Connecticut, and she has served as Public Information Coordinator for the Section. Keane passed her General class exam earlier this year.

A graduate of Stephen F. Austin State University in Nacogdoches, Texas (hence the call sign!), Keane majored in journalism, history and English, with a minor in photography. She has previously led political campaigns in Connecticut, worked for the Boy Scouts of America and headed up the news department for her local newspaper.

At ARRL Headquarters, Keane prepares and edits feature articles for the ARRL Web site, including "Surfin'," as well as for QST and for NCJ. She also has

been serving as Managing Editor for NCJ and is a contributor to ARRL Audio News, which she'll be taking over on a regular basis.

A mother of two, Keane is a member and chapter officer of the Order of the Eastern Star. She enjoys reading and needlepoint.

"I am honored that I was chosen to fill Rick's shoes," Keane remarked. "His help and the guidance of the editorial staff here definitely will make a challenging job easier."

==>SOLAR UPDATE

Astral aficionado Tad "Walking on the Sun" Cook, K7RA, Seattle, Washington, reports: Over the past week, sunspot activity has again declined, with average daily sunspot number down by more than 7 points to 18. Geomagnetic activity has been much more stable this week, with the planetary and mid-latitude A indexes less than half what they were the week before. The mid-latitude A index was actually down to zero on both weekend days, May 5-6. The next period of higher geomagnetic activity is expected around May 25-27. Geophysical Institute Prague projects quiet conditions for May 11-12, quiet to unsettled May 13, unsettled May 14-15, and quiet again on May 16-17. For May 11-17, the US Air Force expects planetary A indices of 5, 5, 8, 8, 10, 10 and 5, a slightly different scenario.

April 30 through May 3 saw sunspot numbers ranging from 32-38, more than 20 points higher than the usual daily readings of late. Several readers reported better propagation on those dates.

Sunspot numbers for May 3 through 9 were 33, 19, 18, 14, 12, 12 and 18, with a mean of 18. 10.7 cm flux was 83.1, 82.5, 81, 78.1, 75.7, 73.4, and 72.1, with a mean of 78. Estimated planetary A indices were 4, 2, 3, 2, 18, 14 and 5, with a mean of 6.9. Estimated mid-latitude A indices were 2, 1, 0, 0, 11, 11 and 3, with a mean of 4.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: The Military/Amateur Radio Communications Tests to celebrate Armed Forces Day and the Nevada Mustang Roundup are May 12. The SBMS 2 GHz and Up WW Club Contest, the VK/Trans-Tasman 80-Meter Contest (phone), the CQ-M International DX Contest, the VOLTA WW RTTY Contest, the Mid-Atlantic QSO Party, the FISTS Spring Sprint, the EACW International Contest, the 50 MHz Spring Sprint are the May 12-13 weekend. The RSGB 80-Meter Club Championship (Data) is May 16. The NAQCC Straight Key/Bug Sprint and the QRP Minimal Art Session are May 17. The NCCC Sprint Ladder is May 18. JUST AHEAD: The US Counties QSO Party (SSB), His Majesty the King of Spain Contest (CW), the EU PSK DX Contest, the Manchester Mineira All America Contest and the Baltic Contest are the May 19-20 weekend. The Run

for the Bacon QRP Contest is May 21. The RSGB 80-Meter Club Championship (CW) is May 24. The CQ World Wide WPX Contest (CW) is May 26-27 weekend. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday, May 22, for these ARRL Certification and Continuing Education (CCE) online courses beginning Friday June 1: The ARRL Ham Radio License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). These courses will also open for registration Friday, May 18, for classes beginning Friday, July 6. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the CCE Department <cce@arrl.org>.

* ARRL HQ seeks Assistant Editor: The ARRL is accepting applications for the position of Assistant Editor. The successful candidate for this full-time position at ARRL HQ in Newington, Connecticut, will prepare material for publication in QST, other print publications and the ARRL Web site, and will write material for publication. Paid work experience and a college degree in a related field preferred. Ham radio license and on-the-air experience required. Send resume and cover letter to LouAnn Campanello, c/o ARRL HQ, 225 Main St, Newington, CT 06111, <lcampanello@arrl.org>. ARRL is an Equal Opportunity Employer.

* AMSAT 2007 Space Symposium and General Meeting set: The 2007 AMSAT-NA Space Symposium and General Meeting will take place Friday through Sunday, October 26-28, in Pittsburgh, Pennsylvania <http://www.amsat.org/amsat-new/symposium/2007/index.php>. The Wireless Association of South Hills Amateur Radio Club will serve as the host for this year's event. The 2007 Space Symposium will attempt to attract local middle and high schoolers to the Saturday sessions and is offering programs by local educators. In connection with this initiative, a fully operational satellite station will be available on site. -- AMSAT News Service

* Steven Pituch, W2MY, wins April QST Cover Plaque Award: The winner of the QST Cover Plaque Award for April is Steven Pituch, W2MY, for his article "A Portable Equipment Support Frame." Congratulations, Steven! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the May issue by Thursday, May 31.

* ARRL congratulates centenarian member: The ARRL has extended its congratulations to League member Harvey Baalke, W9HNX, of Sheboygan, Wisconsin, who celebrated his 100th birthday March 23. Wrote ARRL CEO David Sumner, K1ZZ, on the League's behalf: "I seldom have the privilege of writing to an ARRL member on the occasion of their 100th birthday! Please accept belated congratulations on behalf of the Board, staff and your fellow

members of the ARRL. I know you have seen many changes since you were first licensed. One thing that has not changed is the unique camaraderie among radio amateurs of different generations and cultures. Best wishes from the worldwide Amateur Radio community. Sincere 73." Baalke first joined the ARRL in 1936.

* DXCC Desk approves operation for DXCC credit: The ARRL DXCC Desk has approved the BS7H Scarborough Reef 2007 operations for DXCC credit. For more information, visit the DXCC Web page <http://www.arrl.org/awards/dxcc>.

* JARL operating award checking available at Hamvention: A representative of the Japan Amateur Radio League (JARL) will be available at Dayton Hamvention May 18-20 to check applications for JARL awards and to issue certificates for certain awards. Former JARL executive director and renowned DXer Masa Ebisawa, JA1DM, will be at Booth 483 in the Ballarena of Hara Arena, near ARRL EXPO 2007. Applications for other JARL awards can be checked at the JARL booth. Masa also will answer questions on JARL activities as well as reciprocal licensing in Japan.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association For Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including

delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 13 MAY 2007

You are listening to Amateur Radio Station ZS6SRL of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is broadcast every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. This broadcast can also be heard on Echolink by connecting to ZS6FCS. To listen to a web stream go to www.sarl.org.za, click on ARMI and follow the links. This, and previous bulletins, can be downloaded from the web site of the SARL i.e. www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other news readers please change to suit).

In the news today:

SUMBANDILASAT ON ITS WAY TO RUSSIA

RADIO TECHNOLOGY IN ACTION EVENT IN PORT ELIZABETH WILL BREAK NEW GROUND

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

SUMBANDILASAT ON ITS WAY TO RUSSIA - AMATEUR RADIO BEACON SOUNDS GOOD

SumbandilaSat was given an official sent off on Friday from Sunspace in Stellenbosch enroute to Russia where it will be taken to the Russian Naval base at Murmansk for integration with the launch vehicle. From there it will be loaded on the submarine off the coast of Russia for launch into a 500 km polar orbit. The launch campaign is between 18 and 25 June, much dependent on weather conditions. Once in orbit SumbandilaSat will pass over South Africa mid morning and mid evening.

"The amateur radio beacon and parrot repeater are operating well", Hendrik Burger, project engineer at SunSpace told SA AMSAT. " It was good to hear the satellite responding to "hello SumbandilaSat " by repeating the greeting loud and clear. It gave us a warm feeling when the beacon transmitted the message recorded by Anton Coetzee, a learner at the Kimberley Technical High School who won the competition for the launch beacon message.

111 CANDIDATES TO SIT THE RAE ON THURSDAY

On Thursday May 17, 111 candidates will sit the Radio Amateur Examination at 17 examination centres around South Africa The examination is set and administered by the South African Radio League, the national body for amateur radio in South Africa. 32 Candidates will write the entry level examination for a ZU license while 79 will tackle the class A examination. The single largest number of entry level license candidates comes from the John Vorster Technical High school in Pretoria where the Magalies Radio-Amateurklub recently launched a radio club.

The South African Radio league wishes all candidates success in the examination and looks forward to hearing them on the air soon.

Examination numbers were mailed to candidates and are also available on the SARL web at www.sarl.org.za. Candidates are reminded that each candidate must complete a license application form which was mailed with the examination details.

RADIO TECHNOLOGY IN ACTION EVENT IN PORT ELIZABETH WILL BREAK NEW GROUND

The SARL radio technology in action programme to be held in Port Elizabeth next Saturday, 19 June, will break new ground with a presentation and demonstration by Chris Scarr, ZS2AAW, of the proposed PEARS WiFi network. The initiative will provide far reaching benefits to the Port Elizabeth amateur radio community and is expected to draw the attention of IT professionals which may well be encouraged to join the amateur radio fraternity.

All the presentations are touching on cutting edge technologies and activities and should not be missed. The SARL has issued an open invitation to all persons interested in communication technologies to attend the RTA, which will be held at the Nelson Mandela Metropolitan University. Entrance fee is R20, which includes entry into the attendance draw. Learners and students attend free. The full programme is available on www.sarl.org.za, scroll down to RTA at the bottom left hand side of the home page.

SPACE GURU MARK SHUTTLEWORTH WILL ANSWER QUESTIONS FROM LEARNERS ON YOUTH DAY

Help local youth to ask questions from space guru, Mark Shuttleworth, when he joins an Intecnet type setup on 16 June 2007 from 10:00 - 11:30 by setting up an amateur radio station at a school, scout hall or a shopping mall.

Clubs are asked to book a link to the conference facility this week so that the necessary arrangements can be made. Various other competitions are being worked on and details will be announced in the near future. The basis of the competitions is for participating amateur radio stations that have young people operating under the supervision of licensed amateurs to make as many QSO's as possible, before and after

the Mark Shuttleworth link up.

To book the link send a mail to armi@sarl.org.za giving details of the telephone number and repeater information. Send also details of the public event you are staging so that it can be included in the publicity campaign kicking off on 21 May.

CALLING ALL CLUB CHAIRMEN

Recently the Itchen Valley Radio Club has made three bursaries available for students under the age of 25 to become radio amateurs. The bursaries are each valued at R650 and will assist students to enter the October 2007 Class A Radio Amateur Examination. The bursaries are known as the Itchen Valley Radio Club YARP 2007 Bursaries and cover the examination enrolment fee and one year's junior membership of the SARL upon passing the examination and R150 towards tuition costs levied by local clubs teaching the RAE.

Club Chairmen are encouraged to identify young students and to assist them in completing the application form available on www.amateurradio.org.za.

NATIONAL SCIENCE WEEK

As part of the Department of Science and Technology's National Science Week the Hermanus Magnetic Observatory (HMO) will in conjunction with the Overberg Amateur Radio Club (ZS1OAR) be be hosting two open days at the observatory to highlight amateur radio to the public in general and the youth in particular. You are invited to tune up on Saturday 19 May in the morning and participate with calls to the local club and answering any CQ's originating in Hermanus. Special commemorative QSL cards will be sent to all stations logged.

ZS1HELL FEEDBACK

The 12 members of the team that manned the special events station, ZS1HELL, during the weekend of 28 April to 1 May, in "Die Hell" in Gamakaskloof, would like to thank all amateurs who made contact with them. In their attempt to obtain the WAZS-certificate, the team made 343 contacts with South African stations during the 60 hour period.

Within 48 hours after the complete logsheet had been loaded onto the e-QSL web page of the SARL, all the necessary contacts for Divisions 1,2,3 and 4 had confirmed. There are, unfortunately, still quite a number of stations in Divisions 5 and 6 who have not yet confirmed their QSL's. The team is making an appeal to all amateurs who contacted ZS1HELL to confirm their contact either via e-QSL via the SARL web page or per ordinary post. The postal address is P O Box 273, STRAND, 7140.

INTERNATIONAL MUSEUMS DAY 18th MAY 2007

The Zululand Amateur Radio Club will be operating as ZS5ZLB from the Fort Nongqayi Museum Village, Eshowe on Friday, 18th May 2007 from 08:00 to 15:00 - mainly on 40 metres.

This unique event will be covering a programme in recognition of our universal heritage of the various cultural groups involved in the history of our region. Only one Museum in Kwazulu-Natal is selected each year to host a function of this nature. QSL cards will be sent to all amateurs who work our station.

SUMMITS ON THE AIR (SOTA)

Do you want to participate in the SOTA program but can't mount a mountain? You can be part of the fun by contacting Sid, ZS5AYC, Tom, ZS6TMO, Detlev, ZS6BAB or Lucas, ZS6ACT on Saturday 19 May on 145,500 MHz, 14,165 MHz and 7,065 MHz. Weather permitting, these guys intend to activate Mount-Aux-Sources, SOTA reference ZS/KN-009. They will be active from 11:30 CAT (09:30 UTC). Please give them a contact and also earn a few points for yourself.

SOTA is an international program that encourages amateur radio operation from the summits of hills and mountains. Activators are people who transmit from the summits and chasers are those who contact the activators from the comfort of their shack. SWL's can also participate by logging the QSO's between activators and chasers. For each of the 3 groups there are guidelines and awards. There are more than 300 qualifying summits in the RSA. This information can be found at www.sota.org.uk and the RSA specific information at www.qsl.net/sotasa or contact Lucas at (+27) 084 509 1477.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will continue at very low levels. The geomagnetic field is expected to range from unsettled to active levels on 21 till 23 May. The expected Effective Sun Spot number for the coming week will be less than 5.

20 m and 15 m will provide best opportunities for DX. There is a possibility of 15 and 20 m openings towards India from about 06:00 and again at 12:00 CAT. 40 m may open towards Australia from 22:00.

>From about 14:00, there may be good 15 and 20 m openings towards Europe. Contacts to the USA are going to be very challenging. For the CW and digital enthusiasts it may also be worth monitoring 10 MHz.

Although the DX predictions may not be too enthusiastic, HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Local conditions are going to be excellent and now is the chance to work towards the Worked All ZS award.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

15 May - Closing date for applications for Itchen Valley bursaries; 18 May - Museum Day with ZS5ZLB on the air; 19 May - Summits on the Air; 19 May - Hermanus Magnetic Observatory open day; 19 May - ERC Fox hunt;

16 June - SARL Youth day; 30 June - Closing date for updating of SA DX Survey.

SARL News depends on clubs and individuals for news items of importance and interest to radio amateurs. The one and only way to ensure that your contribution will reach the SARL News team, is to place it in www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date. It will be appreciated if you will do it in both Afrikaans and English.

The SARL also invites all listeners to listen to the program Amateur Radio Mirror International this Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. Audio is also streamed on www.zs6mrk.org and on Echolink from ZS6FCS as for this bulletin. A repeat transmission takes place on Mondays at 21:00 on 3 215 kHz. Telkom and Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

You have been listening to a news bulletin by the South African Radio League, which was compiled by Gustav, ZS6BWN.

A prosperous week to all, 73.

/EX

928. WIANEWS for week commencing MAY 13 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-05-12 15:35:03 UTC
From: nationalnews@wia.org.au
Message-ID: <200705121534.l4CFY8l00283@panix2.panix.com>
Source record: 4533
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing MAY 13 2007

The WIA Board has adopted Regulations to govern the Advisory Committees that will be created this year. This is described in detail in the "Comment" in April Amateur Radio.

There will be an Advisory Committee for each State and the Northern Territory.

Each Advisory Committee will consist of four people, three elected by the WIA members in the area of the Committee and one nominated by the WIA, called t he Nominated Member.

The WIA Board is very pleased that the following people have agreed to be Nomi nated Members.

New South Wales, Owen Holmwood VK2AEJ
Victoria, Bryan Pliatsios VK3HXR
Queensland, Don Wilschefski VK4BY
South Australia, David Box VK5OV
Western Australia, Neil Husk VK6BDO
Tasmania, David Potter VK7YUM
Northern Territory, Garry Woods VK8GW

VK3KRB TALKS TECH

Tomorrow, Monday the 14th of May at 8pm, WIA Director Robert Broomhead will be appearing as a guest live in the studio of Melbournes 94.1 3WBC FM on the stations "Tech Talk Radio" program.

Robert will be discussing with the shows hosts, Andrew McColm and Dr Ron, the many facets of our hobby of Ham Radio with a particular focus on the renewed interest the hobby has seen since the dropping of morse and introduction of the Foundation License.

Tech Talk radio can be heard at 8:00pm on 94.1 3WBC FM and streaming live to the web and available in MP3 format to download to your IPOD.

For full details checkout Tech Talk Radio's website
www.techtalkradio.com.au/

Tech Talk is also heard in the North West of VK7 on repeaters thanks to Tony VK7AX, which reminds me....

" The next general meeting of the North West Tasmanian Amateur Radio Interest Group is scheduled for Saturday 26 of May at the normal venue of the Lions Club Facility, West Ulverstone."

PEDESTRIAN MOBILE

VK2FWGJ has posted a much simplified sked arrangement for those wishing to contact his brother Jeff, VK4XJJ, as Jeff walks across Australia raising funds and awareness for the Deafblind.

To keep skeds simple ....1730 EST 7.045 MHz.

VK4XJJ Jeff has passed on a big thankyou to this the WIA National News for the great response it has generated. ABC Radio's "Macca on Sunday" interview with Jeff went well, often new callers mention hearing about the walk on Ham Radio.

As this newscast was being prepared, VK4XJJ was camped at Arkaroola.

WIA's Spring VHF-UHF Field Day - November 2007

For everyone who likes to plan ahead - please note the dates for this year's Spring VHF-UHF Field Day. It will be held on November 17/18, a week later than usual. This will prevent a clash with club activities in two states.
(vk7news)

WIA AGM REPORT - WIA DIRECTOR ROBER BROOMHEAD VK3KRB

Last weekend was the WIA AGM at Parkes NSW. Now this is the first time that the WIA has combined the AGM with a full weekend of activities and to some extent it was an experiment with the hope that we could get a few people along to the AGM by arranging a series of activities over the weekend that would be of interest to Radio Amateurs.

Well, despite concerns by some that the weekend would be a total fizzer on the grounds that people just wouldnt want to travel the distance Parkes, we infact had 139 people attend, which was 39 more than the upper limit of 100 we had originally planned for. And three weeks before the weekend with 139 people booked in we had no option but to close off registrations for a number of activities.

We were absolutely amazed at the enthusiasm people showed for the weekend and certainly look forward to organizing an equally interesting AGM weekend for 200 8.

All the various planned activities went off without a hitch and from all accoun ts
people enjoyed them thoroughly, however it was also a weekend of much socializi ng,
I caught up with Bob Tait VK3XP after the weekend..

(Interview with Bob Tait)

Of course the main purpose of the weekend was the AGM and open Forum meetings, I spoke with our President Michael Owen VK3KI for his thoughts and comments on the weekend

Michael Owen

The WIAs Annual General Meeting was held at the Leagues Club, Parkes, New South Wales,
on Saturday 5 May 2007.

Before the meeting, many of those attending participated in a barbeque in a nea rby park.

Highlight of the Annual General Meeting, which is conducted very much as a form ality,
was the submission of audited accounts showing a surplus of $8,000. Glenn Duns tan VK4DU
who had been a Director since the restructure of the WIA to a national body in May 2004
retired, receiving warm tributes for his contribution. Peter Young VK3MV, who had been
elected by the postal ballot of members, was welcomed as a director.

It was followed immediately by the Open Forum, where reports covering all aspec ts of the
WIAs activities were submitted and discussed. Topics covered included examinat ions,
awards, the bookshop, BPL, clubs, contests, emergency communications, history, the ITU
and WRC 07, IARU, the news service, the National Technical Advisory Committee, publications, QSLs, repeaters and standards.

Secretary Ken Fuller VK4FU had organised the written reports into a handsome bo ok.

A copy was given to each participant on registration.

In presenting a report on behalf of the Board, the President Michael Owen VK3KI stressed
the growth in total amateur licence numbers, which had been slowly declining ea ch year
since at least 2001. Despite the steady decline, there were now more amateur l icences
on issue than there were in 2001. In addition, WIA membership is now some 21% higher
than it was in mid 2005.

A highlight of the Open forum was the presentation of awards to members.

The first award to a Foundation licensee was the award of a Presidents Commenda tion
to Haydon McManus, VK3FRST, the Scouts Australia Coordinator of VI3JAM at the 21st Australian Jamboree, so successfully promoting amateur radio.

Justin Giles-Clark VK7TW, President of the Radio and Electronics Association of Southern Tasmania, was awarded the Ron Wilkinson Award for all he has done in r esponse
to the major BPL trials in Hobart.

The first Chris Jones Award was presented to Mal Johnson, VK6LC, the WIA Awards Manager
since 2001, and who has modernized the award application process, introduced new,
attractive and innovative awards and managed the transformation of the awards from
a federal structure to a national structure.

Around 130 people attended the dinner on Saturday night, watching the Australian film,
The Dish afterwards.

Sunday was time for visiting the dish.

In total some 139 people were registered for various activities.

The weather was perfect, and the weekend was undoubtedly a success.

Those who predicted that holding the AGM and associated activities so far from a
capital city would doom the weekend to failure were completely discredited.

However, the WIA now faces one really serious problem.

How on earth can we do better next year? Or even do the equal?

In one sense the Drawcard for the weekend was the visit to the Radio Telescope,

and we really do give our sincere thanks to John Reynolds OIC, John Smith Visitors
Center Manager, John Sarkissian Operations Scientist and in particular
Brett Dawson VK2CBD, second in charge of the Telescope who helped in so many ways
with the planning of the weekend.

Back to Robert VK3KRB

I caught up with our AR editor Peter Freeman who as many will know is passionate
about microwave and UHF communications

(Interview with Peter Freeman VK3KI)

Some pictures of the weekend activities have already been posted on the WIA web site
as part of the news report on the AGM weekend and Im sure there will be quite a
few more appearing in next months AR magazine

In finishing this WIA report, I thought I would have a talk to someone who attended
the weekend who is relatively new to the hobby to see what they thought

(Interview with Ross Sargent VK3ERS)

BPL INTERFERENCE - THE BATTLE CONTINUES - JUSTIN VK7TW REPORTS

MOTOROLA SUSPENDS POWERLINE LV BPL DEVELOPMENT

Less than two years after announcing its Powerline LV Access BPL product, Motorola has decided to suspend product development and to devote its resources to more promising markets, industry sources say. Motorola reportedly has decided to focus on a product called Powerline MU, which is for use within multiple-unit dwellings. The decision to stop work on its Access BPL product reflects declining interest in residential broadband service delivery among utilities coupled with more immediate demand for in-building BPL systems. Motorola has indicated that it's not scrapping Powerline LV altogether, however.

Powerline LV united Motorola's Canopy wireless broadband Internet platform with enhanced ham band-notching HomePlug technology, drastically reducing BPL interference potential by restricting the application of high-frequency RF to the low-voltage side of the power transformers serving customers' homes, not the medium-voltage wires that line many residential streets. As a result, Powerline LV avoided the system architecture that poses the greatest risk of BPL interference to radio communication -- radiation from the medium-voltage power lines.

ARRL Chief Executive Officer David Sumner, K1ZZ, expressed appreciation for Motorola's approach to the thorny issue of radio interference from BPL systems. In an effort to minimize interference, particularly to the Amateur Radio bands, Motorola designed its Powerline LV system in close cooperation with the League's technical staff, Sumner noted. A test stand Access BPL system was in operation briefly at ARRL Headquarters. Measurements and subjective listening tests on the ham bands showed that Powerline LV was Amateur Radio-friendly.

"As one would expect from a company with such a distinguished record in the field of radio communication, Motorola acknowledged at the outset the seriousness of the interference problem," he said. "Motorola's system architecture influenced other vendors, raised industry awareness of the interference issue, and demonstrated the value of working with the ARRL to find positive solutions."
(arrl letter)

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Participating clubs keep this site up to date and post the latest information for all to see.

Also check the text edition of each news edition, where we do keep a secondary listing.

On the audio broadcast we will continue to give new information when it is received, along with a final reminder, come "hurry up".

This such as Canberra's weekend next week where the C.R.A.R.C. will be undertaking another Foundation Licence course.

Also running Standard and Advanced Licence Examinations
and Assessments on the Saturday (19th) for those who wish to sit.
contact Alan Hawes telephone 02 6258 2568.

And over here in the west, the foundation course for May is next weekend
the 19/20th with the assessment on the 26th.
Contact Neil VK6BDO.

Foundation Licence course, and Standard / Advanced assessments .....

The CRARC will be undertaking another Foundation Licence course on
the weekend 19th & 20th of MAY.
Also running Standard and Advanced Licence Examinations
and Assessments on the Saturday (19th May) for those who wish to sit.

If you wish to sit either the examinations, or do the F.L. Course,
please contact Alan Hawes VK1WX via email to education@vk1.wia.ampr.org
or by phone (after hours) to 02 6258 2568. Please note that all monies
are to be paid by May 7th 2007 !

At Bendigo classes and licence assessments are conducted by Ross Pittard
VK3FCE who can be contacted via email vk3fce@internode.on.net

The Central Goldfields Amateur Radio Club, Maryborough regularly holds
classes. Contact Peter Rafferty VK3CC on 5460 4387 or email
majorca49@hotmail.com

On the Gold Coast and want to talk to the world through their IRLP and
EchoLink systems? Or already licensed and wish to upgrade Foundation
to Standard? Well classes are held at the Nerang Clubhouse of the
GCARS, ring Roy VK4IG on 5539 3530 Exams can be taken at a time
to suit you.

TARC WIA Exams Information
Exam sessions are held on demand with WIA Assessors and assessment packs
available for all 3 levels of licensing.
Contact theTARCinc WIA Exams Regional Co-ordinator Roger/VK4CD 0417 638366.
www.tarc.org.au/tarcexam.htm

VK5
Adelaide Hills Amateur Radio Society will run Foundation licence's
at the Aviation Museum, 56 Lipson Street Port Adelaide, 2 weekends
August 4th and 5th then November 3rd and 4th.
Contact the course convenor, Sasi Nayar on 0417 858 547

FURTHER FROM VK6
Foundation course:-
21st & 22nd of July course with exam on the 28th of July.
VK6 Exams for Standard and Advancedare on June 30th.
Contact Neil VK6BDO.

CONGRATULATIONS - RESULTS

Another letter in this week I'd like to read, it's from Jon, VK5 FIZZ,
and I quote...

"I'm 10 years old and in grade 5 in South Australia. I'm also a Cub Scout.

At the end of March, I did my Foundation License with the South Australian Scout Radio Activities Group.

They said I am the first Youth Member to do a license course with them.

It was really good to beat my Mum (VK5FZZZ) in the exam!

I am looking forward to being able to use my own callsign at JOTA and having my amateur radio badge on my uniform but most of all to talking to lots of different people and learning more about radio.

In the future I hope to get my full call.

I am going to join the Elizabeth Club and they think I am probably the youngest in South Australia to have a license.

I've got a 2m handheld and an old 80m rig too, so I hope to be on the air a lot more!

Thanks to everybody that has helped me out, especially VK5PH and VK5FISH for running the course".

Always good to get 'good news stories' remember you can contact us by email, nationalnews@wia.org.au

I'm Kylie VK6FXYL and from VK1WIA this is the National News Service -

Tune in today...Focus on Tomorrow

INTERNATIONAL NEWS FROM ARNEWSLINE

HAM RADIO IN SPACE: SATGATE CLOSES DO TO LACK OF USE

AMSAT's Satgate is going away. After many years of packet message forwarding via UO-22, GO-32 and AO-51 the Satgate System will close due to a lack of traffic being handled.

Using Satgate, traffic was automatically accepted from the terrestrial packet networks and routed to the satellites. It was trhen downloaded from the satellite and routed into another packet network untouched by human hands.

A total of thirty five worldwide stations were in the system a few years ago. This has dwindled due to this lack of traffic, maintenance problems, change of location of command stations and users who have become Silent Keys.

Another reason for its going away was not stated. That being packet mesaging being replaced by electronic mail over the Internet. That lead to a major loss of interest in traditional packet by the worlds ham community with the lone exception of A-P-R-S. More ham radio space related items later on in this weeks Amateur Radio Newsline report.

ICOM IC-R3 MINI-TV RECEIVER IS AN ENDANGERED SPECIES

The Icom IC-R3, a small handheld receiver with a 2" T-F-T color display has been popular with ATV'ers involved in Emergency Communications for mobile reception of TV pictures may soon go extinct. Icom announced on april 26th that the IC-R3-26, blocked version for the United States market is currently on backorder with the delay is due to the FCC's Part 15.112 rules change. This ruling states that all TV receivers imported into the United States, after March 1, 2007, must be DTV compatible. As the IC-R3 is analog only, so it will no longer be imported for domestic sales. When existing stocks are gone, that's all there will ever be.

GREECE: NEW 4 METER BEACON ON 70.040 MHZ

A new 4 meter beacon is on the air from Greece on 70.040 MHz..

4 meters, which was once a United Kingdom only ham radio allocation is gaining favor across Europe. The latest offering is the new SV1FOUR beacon operation located in Athens that started operation on April 24th.

SV1DH is the beacon keeper. He reports over the Four Meter website that the beacon is licensed for 5 watts output to 5-element yagi antenna beaming 315 degrees toward the UK.

At the moment SV1FOUR is only running at about 1 watt out and transmits its callsign followed by several dashes and locator KM27AW in Morse. More is on-line at www.70mhz.org (Southgate)

SEPTEMBER 21-23
North Queensland Amateur Radio Convention
Happening in twin cities of Thuringowa and Townsville.

REWIND - A LOOK BACK IN HISTORY
(Will McGhie VK6UU is WIA National Historian)

How long ago did mans exploration of microwave communications technology
begin? Was is post World War II, or even more recent than that?

No, its origins date back to the 1890s when Sir Jagadis Chandra Bose
carried out research in Calcutta India.

He described to the Royal Institution in London in 1897 his research using waveguides, horn antennas, dielectric lenses, various polarisers and even semiconductors at frequencies as high as 60 GHz.

Educated in Britain he returned to India to take up a position of professor at the Presidency College in Calcutta.

There he carried out experiments involving refraction, diffraction and polarisation, developed galena crystals for making receivers for short wavelength radio waves, white and ultraviolet light.

Having anticipated the existence of P-type and N-type semiconductors, Sir Jagadis Chandra Bose was once described as being at least 60 years ahead of his time.

Much of his original equipment still exists and is being conserved by the Bose Institute in Calcutta.

Im Jim Linton VK3PC and youve been listening to VK1WIA.

1 GB2RS NEWS Sunday 13 May

The news headlines

* The Queen visits NASA for space link up

* RAIBC expresses gratitude at money raised

* GOAKI to visit the National Space Centre Amateur Radio Society

Queen Elizabeth II and Prince Philip visited NASA's Goddard Space Flight Centre in Greenbelt, Maryland on Tuesday. NASA astronaut Michael Foale, KB5UAC, introduced the Queen to the crew of the international space station as they orbited Earth. Her majesty was greeted by the three astronauts, Commander Fyodor Yurchikin, RN3FI and flight engineers Oleg Kotov and Suni Williams, KD5PLB, who spoke to the Queen using a live video link up.

The crew members each spoke briefly to the Queen describing life on the space station and the importance of human space flight. Later the Royal couple attended the visitor's centre and the Queen talked with students at a NASA Explorer School Workshop. Before they left, the Queen planted a commemorative dogwood tree on the grounds of the visitor's centre.

The tour of Goddard took place near the end of the Queen's visit to commemorate the 400th anniversary of the Jamestown settlement in Virginia.

The Radio Amateur Invalid and Blind Club, RAIBC, would like to thank the all individuals for their donations of equipment and funds. The Worked All Britain Group generously donated #200 to the club. This money will be used to fund the Reading Rattle group which produces Radial, PW, RadCom, Radio user in audio formats for RAIBC members.

A new RAIBC contest is to run the week of 30 July to 5 August. The contest is open to all members of the RAIBC and will run for one hour a day. All frequencies and modes are permitted, with extra points available for working with the other RAIBC members.

On Tuesday 15 May the National Space Centre Amateur Radio Society will be having a visit from Carlos Eavis, G0AKI, talking about space contacts from GB4FUN. The meeting commences at 7pm and members and visitors should enter by the main entrance promptly otherwise they may not be able to gain admission. The following Sunday the National Space Centre Amateur Radio Society's newly rebuilt station will be operational for demonstrations to visitors. For more information

contact Geoff, G4AFJ, on 0779 649 2146.

Burton upon Trent Amateur Radio Club will be at the Coors Visitor Centre on the weekend of the 16 and 17 June to celebrate International Museums Weekend. This will be the first special event of the recently reformed amateur radio club. The club were active in 1919 and is one of the UK's oldest radio clubs.

The aim of the day is for members of the public to find out more about amateur radio and learn more about the hobby, try the amateur radio experience and speak to people around the world. Licensed operators are also welcome to operate the equipment. There will also be a vintage radio display and CW Morse display. HF, VHF and UHF bands will be in operation over the weekend.

2 A special event is to be held on the August bank holiday called "Pumping Stations on the Air". You or your club, along with your local pumping station are invited to take part in the first International Pumping Stations on the Air weekend. This will take place on Sunday 26 and Monday 27 August from 10am to 5pm. The intention of the event is to set up amateur radio special event stations at as many of the pumping stations as possible throughout the whole world. The scope of your station is entirely up to you, as is the choice of pumping station. Burton upon Trent Amateur Radio Club will be at the Claymills Pumping Station on that weekend. For more information on how to register visit the Burton upon Trent ARC Website at www.burtonarc.co.uk/pump.htm. Now the rallies and events for the coming week [Note to newsreaders: as usual, exercise your judgement about reading the Sunday 6 May event]. On Sunday 13 May the MARS Rally takes place from 10am at Alderbrook School, Solihull. Details from Norman, G8BHE, on 0121 422 9787, or on the web at www.midamradio.co.uk. On Sunday 20 May the Magnum rally takes place at from 10am at the Magnum Leisure Centre, Harbourside, Irvine, Ayrshire, KA12 8PP. Details form Helen on 07776 3895247, or on the web at www.magnumrally.co.uk. On Sunday 20 May the Dunstable Downs national amateur radio car boot sale takes place from 9am at Stockwood Park, Luton, near junction 10 of the M1. Details on the web at www.ddrcbootsale.org.

More details of these and future events can be found on pages 88 and 89 of the May edition of RadCom.

Now for the news of the special events Three clubs in East Anglia; Clacton Radio Club, Felixstowe and District Amateur Radio Club and Harwich Amateur Radio Interest Group have joined forces to operate the GB400AA special event station. The station will commemorate the founding of Jamestown, Virginia 400 years ago. GB400AA will be operated at the Mayflower Museum on the Halfpenny Pier at Harwich where The Harwich Society will have an exhibition showing the local area's connections with the inaugural voyages. It will operate on 25 May. Hornsea ARC is having a boat trip on the river Humber on Saturday 26 May. They hope to operate G4EKT/MM on HF SSB and possibly G6EKT/MM on VHF and UHF FM. From 25 May to 6 June Mike Bryant, GW6NLP, and Colin

Kenton, MW0JNI, will be running special event station GB100TT in association with Scarlett Point amateur radio society, to celebrate the 100th anniversary of the TT races. It will be based at Scarlett Point Tower in Castletown. For more information log onto www.qsl.net/wars or www.scarlettpoint.com. And now the HF DX news compiled 425 DX News, the Ohio-Penn DX Bulletin and other sources. Special event station 3A7JO will be active on all bands and modes from Monaco on 2 to 10 June for the twelfth edition of the Games of the Small States of Europe. Activity will take place on all bands and modes. All of the QSOs will be confirmed automatically via the bureau. Direct requests should be sent to the ARM, Association des Radio amateurs de Monaco, QSL Bureau, B.P. 2, and MC 98001, Monaco Cedex.

3 Michael, ON4CAQ, Maurice, ON7KS, Francois, ON6VP, Herman, ON7FH, Dominic, ON7UZ, Jempi, ON8JP and Cois, ON6KN, from UBA section Diest, ON4DST), will be active as 9A8DST from Losinj Island, EU-136 on 17 to 24 May. They also plan to go and operate from the nearby islands of Male Srakane, EU-136, CI062, and Vele Srakane, EU-136, CI-138. QSL via ON4DST, bureau or ON4AMM, direct. Steve, W7VOA, will be active as A52SW from Thimpu on 17 to 22 May. He will operate on 80-6 metres CW, SSB and, possibly, PSK, as well as on 10 metres FM. Steve is a news correspondent based in India covering South Asia and says this will be the first of numerous trips he plans to make to Bhutan over the next several years. QSL via K2AU. Jean-Philippe, F4EEK, Eric, F5LOW, Laurent, F5MNK, Fabrice, F5NBQ and Bertrand, F6HKA will operate as TM0A from Aix Island, EU-032, and DIFM AT-023 on 12 to 19 May. They will have three stations with a variety of antennas, and will operate SSB, CW and digital modes on all bands, with an emphasis on the low bands. QSL via F5OIU, direct or bureau. Special station TM1VDM will be active on 14 to 28 May to celebrate the 100th anniversary of the birth of the writer Maxence Van der Meersch in 1907. QSL via bureau to F6KTN. Giuseppe, I2AZ will be active as IG9/I2AZ from Lampedusa Island, AF-019, IIA AG-001, on 5 to 21 May. Expect him to operate QRP CW on +/- 3560, 7030, 14060, 21060 and 28060 kHz. Davide, IW9GUR, Angelo, IW9HLM, Andrea, IW9HQP and Andrea, IT9RKR plan to be active on 10 to 40 metres SSB from Scoglio delle Sirene, IOTA EU-025, IIA ME-040, on 19 May. QSL via IW9HLM. A group of German radio scouts will be active again as OZ1RDP from Romo Island, EU-125, DIA NS-001, on 26 to 29 May. They plan to operate SSB and CW, and possibly PSK31 and RTTY as well, on 160-10 metres. QSL via DL9BCP. Jeff, G4ELZ and Steve, G4EDG will be active from Flatey Island, EU-168 on 17 to 23 May. They plan to operate as TF4/G4ELZ/P and TF4, G4EDG/P on 80 to 17 metres mainly CW, with 100 watts to wire antennas. QSL direct to G4ELZ. Logs will be uploaded to Log Of The World. Starting 15 May, K9KEJ and K5YG will once again operate from the jungle on Costa Rica's east coast. Calls will be TI6, K9KEJ and TI6, K5YG, and they will operate on 40 and 20 metres SSB. [Note to newsreader: in the following item, `Pohnpei' is pronounced `Ponapay'] JA7HMZ, V63DX, JA7AGO, V63GO and JA7ZP, V63Z will be active on all bands and modes from Pohnpei, OC to 010, Micronesia on 21 to 26 May. QSL via home calls. Jurgen, DB5YB will be active as OZ/DB5YB from

Bornholm Island, EU 030 on 5 to 18 May. He plans to operate SSB on 20, 17 and 15 metres. QSL via home call. Celebrating the 100th anniversary of the Fenerbahce Sports Club, TA1HZ and TA2RX will operate as TC100FB from Istanbul on 1 to 31 May. QSL via TA1HZ. TA1CM will operate as TA100FB on 13 to 27 May from Tekirdag. QSL via TA1CM

4 Special station LZ07KM will be active on 1 to 31 May to celebrate St Kiril and Methodius' Day. QSL via LZ1PJ direct, or bureau requests can be sent to lz1pj@qsl.net. Special event station IR1ALP will be active from Cuneo, Italy on 1 to 31 May. A special postage stamp will be affixed on the cards confirming QSOs made on 12 and 13 May, during the 80th Italian Alpine troops gathering. QSL via QSL via IK1AAS.

Now the contest news

The RSGB 80m Club Championship contest takes place between 1900 to 2030 on 16 May on the 3.5MHz band using data modes. The exchange takes the form of RST and serial number. The EU PSK contest takes place between 1200 on 19 May to 1200 on 20 May on the 3.5 and 28MHz bands using PSK. The exchange takes the form of RST, serial number and EU Area code. His Majesty King of Spain contest takes place between 1200 on 19 May to 1200 on 20 May on the 1.8MHz to 28MHz bands using CW. The exchange takes the form RST and serial number. The RSGB 1.3GHz and 2.3GHz activity evening takes place between 2000 to 2230 local on 15 May on all modes. The exchange takes the form of RST, serial number and locator. The RSGB 144MHz contest takes place between 1400 on 19 May to 1400 on 20 May on the 144MHz band, all modes. The exchange takes the form of RST, serial number, locator and postcode. The RSGB 144MHz Backpackers contest takes place between 1100 and 1500 on 20 May on the 144MHz band, all modes. The exchange takes the form of RST, serial number, locator and postcode. Now the solar factual data for the period from 29 April to 6 May compiled by Neil Clarke, G0CAS.

Solar activity increased to low on the 2nd, 5th and the 6th, the remaining days activity was very low. The largest solar flare of the period was a C8 on the 2nd. This was the largest solar flare so far this year but it had very little effect on propagation. Solar flux levels declined from 87 units on the 30th to 78 by the 6th. During this time the large sunspot group gradually decreased in size. The average was 84 units. On the 6th the 90 day solar flux average remained at the same level as last week at 74 units. X-ray flux levels averaged A3.3 units and declined from A5.4 units on the 30th to A2.5 by the 6th. Geomagnetic activity on the 30th was unsettled with an Ap index of 20 units. This was due to a coronal hole disturbance. The rest of the period activity was quiet. The average was Ap 6 units. The ACE spacecraft saw solar wind speeds decline from 700 kilometres per second on the 30th to 260 by the 6th. Particle densities were low throughout the period. Bz varied between minus and plus 6 nanoTeslas on the 30th and between minus and plus 2 nanoTeslas on the quiet days. While HF propagation was slightly degraded during the periods of heightened geomagnetic activity, by the end of the week 14MHz was providing good

openings to the BS7H expedition around breakfast time and the early evening. Seasonal changes meant that the band remained open until after 2230UTC on most days. The first strong sporadic-E on 50MHz was reported on the 1st and 2nd. VHF aurora occurred on the29th and the 30th, though openings appear to have favoured North America. And many areas of the UK enjoyed enhanced VHF and UHF propagation, related to the extended period of warm weather.

5 And finally the solar forecast. This week the quiet side of the Sun is expected to be looking our way. Solar activity should be very low as the Sun could be spotless on some days. Solar flux levels are expected to be in the high 60's for most of the week. Geomagnetic activity should be at quiet levels everyday, however, next weekend a small coronal hole disturbance could take place. MUFs during daylight hours at equal latitudes should be about 18MHz for the south and 15MHz for the north. The darkness hour lows should be around 10MHz. Paths this week to Japan should have a maximum usable frequency with a 50 per cent success rate of about 18MHz. The optimum working frequency with a 90 per cent success rate will be around 14MHz. The best time to try this path will be between 1000 and 1300 hours UTC. Sporadic-E is expected to take place on some days. And that's all for this week from the propagation team.

6 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 13 May Chesham and District Amateur Radio Society is running its Advanced Licence course. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Sunday 13 May Felixstowe and District Amateur Radio Society is operating GB2WTM from Woodbridge Tide Mill as part of National Mills day. Contact Paul, G4YQC, by email to paul.whiting@bt.com.

On Sunday 13 May Cray Valley Radio Society will be running special event station GB4VLX in memory of Deryck Buckley, G3VLX, who passed away on 1 April. The station will use Deryck's equipment, which has been donated to the Cray Valley society. GB4VLX will be active on HF, 40 and 80m, and possibly on 30m. Special QSL cards will be available via Owen G4DFI.

On Monday 14 May Basingstoke Amateur Radio Club is having a talk on the joy of QRP by G3YMC. Contact Frank, M0AEU, by email to barc@2lo.info.

On Monday 14 May Coulsdon Amateur Transmitting Society is having a visit to the British Vintage Wireless and Television Museum at Dulwich. Contact Andy, G8JAC, on g8jac@btinternet.com.

On Monday 14 May Surrey Radio Contact Club is having a construction evening. Contact Ray, G4FFY, on 020 8644 7589.

On Tuesday 15 May Maidenhead and District Amateur Radio Club is preparing for HF Field Day. Contact John, G8RYW, on 01628 628 463, or by email to g8ryw@tesco.net.

On Tuesday 15 May Stevenage and District Amateur Radio Society is having a talk from a pilot on his experiences flying Concorde. Contact Neil, M0ARH, on 01438 217 077.

On Wednesday 16 May Chesham and District Amateur Radio Society is planning for its boot sale. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 16 May Cray Valley Radio Society is taking part in the 80m data club championship. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Wednesday 16 May Dover Radio Club is having a natter and operating night. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 16 May Fareham and District Amateur Radio Club is having a talk on Q meters and GDO's by Chris, G8JFJ. Contact Jim, M1JJN.

On Wednesday 16 May Hastings Electronics and Radio Club is having a construction evening. Contact Gordon, 01424 431 909, or by email to gordon@gsweet.fsnet.co.uk.

On Wednesday 16 May Ridgeway Repeater Group is having its AGM. Contact Robert, G4XUT, or look on the web at www.rrg.org.uk.

7 On Wednesday 16 May Worthing and District Amateur Radio Club is having a technical topics evening. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 17 May Chesham and District Amateur Radio Society is running an Advanced Licence Exam from 6.30pm to 8.30pm. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Thursday 17 May Cray Valley Radio Society is having a talk on Crusty's Travel by G3SXE. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Thursday 17 May Shefford and District Amateur Radio Society is having a talk explaining EBAY by Mike, G3EWE. Contact David, G8UOD, on 01234 742 757.

On Thursday 17 May Sutton and Cheam Radio Society is having its AGM and construction contest. Contact John, G0BWV, on 020 8644 9945, or by email to info@scrs.org.uk.

On Friday 18 May Mid-Sussex Amateur Radio Society Radio night and Table Top Sale. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 18 May Torbay Amateur Radio Society is having an illustrated talk on DX by Jan Verduyn. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Friday 18 May Wey Valley Amateur Radio Group is having a magnetic loop construction evening. Details on the web at www.weyvalleyarg.org.uk.

On Saturday 19 May Basingstoke Amateur Radio Club is having a foxhunt weekend in the New Forest. Contact Frank, M0AEU, by email to barc@2lo.info.

On Saturday 19 May Mid-Sussex Amateur Radio Society is having a trip to the Martin Lynch emporium, organised by Alan, G8YKV. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Sunday 20 May Chesham and District Amateur Radio Society is visiting Dunstable Boot Sale at Stockwood Park, Luton. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Sunday 20 May the Vintage and Military Amateur Radio Society is having its annual open day at the Norfolk and Suffolk Aviation Museum, Flixton. Contact Peter Walker, on 01438 871 350, or by email to g4plw@btinternet.com.

Who knows..? It wasn't exactly a conscious decision..! Is there ever a
benefit to being irritated..? I honestly don't know why it annoys me, it
just does. Isn't there any silly little thing that annoys you..?

> I have to say that if that's the worst thing I have to
> get irritated about, I am a very lucky man indeed.

Well if it *is* the worst thing you have to get irritated about, you
certainly are :-)

I think "handle" and "name" have different meanings.

"Handle" refers to a person's "radio name" or identification on the radio which can be different from his/her actual name. Nowadays, though, the two are almost always the same. But the term "handle" initially had that specific meaning; hence the unique word to describe it.

Good evening, George.

I would have to disagree. Since 1963 when I was first licensed, "handle"
and "name" have always meant the same thing. CB'ers took to using
"handle" to mean "radio name", but hams ... except for those that came
from originally being CB'ers ... always used "handle" to mean "name".

Rick (my name AND my handle)

I do suppose a lot of it has to do with what is common practice in each
area. Some repeater crowds are more formal, whereas some are less formal,
and will allow more "variety". CQ is rarely heard on repeaters or simplex
for that matter (on UHF and VHF); but when it does occur, no one has any
issues.

Here you go pick one -- maybe 1 or 99
In 1859, Western Union standardized on the "92 code" in which the numbers
from 1 to 92 were assigned meanings.

1 Wait a moment
2 Important Business
3 What time is it?
4 Where shall I go ahead?
5 Have you business for me?
6 I am ready
7 Are you ready?
8 Close your key; circuit is busy
9 Close your key for priority business (Wire chief, dispatcher, etc)
10 Keep this circuit closed
12 Do you understand?
13 I understand
14 What is the weather?
15 For you and other to copy
17 Lightning here
18 What is the trouble?
19 Form 19 train order
21 Stop for a meal
22 Wire test
23 All copy
24 Repeat this back

944. IRTS Radio News Bulletin, Sunday May 13th 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-05-13 22:00:26 UTC
From: news at irts dot ie <devnull@panix.com>
Message-ID: <200705132200.l4DM0Ar29701@panix2.panix.com>
Source record: 4449
Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

Irish Radio Transmitters Society
Radio News Bulletin

Sunday May 13th 2007

News from the IRTS

Ger McNamara EI4GSB has been appointed to fill the vacancy as Regional Representative for Region 4 on the retirement of Paddy Maher EI3AV. The region covers the counties Tipperary, Limerick, Clare and Kerry.

Contact details for Ger are available on the Society's web page. As we welcome Ger to the team we would like to thank Paddy for all the work he has done for society over many years and wish him a speedy return to full health.

International Museums Weekend

The International Museums Weekend takes place on the 16th and 17th of June. This amateur radio special event has grown in popularity since the first event was held in 2002.

Among past participants are The Tower of London, HMS Belfast and the US battleship New Jersey. The Howth Martello Radio Group will be participating again this year, operating from the Vintage Radio Museum in Howth. Visitors are welcome to call and operate the station over the weekend. The museum web site is www.qsl.net/ei5em/museum.html. A full list of participating museums and further information of the event is available from the organiser's web site www.ukradioamateur.co.uk/imw/.

Rallies

Mayo Rally Director Padraic Baynes, EI9JA, told the May meeting of the club that the date of November the 18th had been set for the 2007 Rally. The venue is the Belmont Hotel, Knock and full details will be announced soon.

The Mid Ulster Amateur Radio Club Rally will take place on Sunday the 20th of May 2007 at the Discovery Centre, Oxford Island, Lough Neagh, Lurgan. Doors open at mid-day and talk-in is on 145.525 MHz.

Galtee Walking Festival

There are just 3 weeks to go to the 2 days of activity in the Galtees on the Saturday and Sunday of the June Bank Holiday weekend. John Ronan EI7IG is event Coordinator and he is being assisted by John EI2JB and other members of the Tipperary Amateur radio Group. Preparations are at an advanced stage but there are still radio positions to be filled on Saturday and Sunday. Newcomers are welcome and training will be provided by AREN each morning. Please contact John EI7IG on 086 8167310 or John EI2JB at QTHR.

Ladies Mini Marathon

The 2007 Flora Ladies Mini Marathon takes place on Bank Holiday Monday the 4th of June at 3.00 pm. It starts from Fitzwilliam Square, and finishes in Stephens Green Dublin 2. Sadly this year's event will happen without the familiar voice of Donnchadh O'Shea who traditionally operated the net control station. This year's public service event will be dedicated to his memory. The co-ordinator for the event again this year will be George Adjaye who may be contacted by phone on 086 2586103 or Fax 01 4908546 or email 'george_adjayeg at dcu.ie'.

Comeragh Cycle Race

There are just 7 weeks to go to the national under 23 road racing championship in Waterford on the 1st of July. Richie EI9HR is event Co-ordinator and he is being assisted by John EI8JA. This year's race will be on a greater scale with over 160 riders taking part. The Civil Defence have come on board this year to help with marshalling and RTE will be filming the event. AREN will provide the communications for safe traffic management and accident reporting. There will be more radio reporting points and mobile stations than last year so more radio operators are required. Again newcomers are welcome and training will be provided on the morning of the race. This is an excellent opportunity for operators to put their radio skills to good use in a very enjoyable and rewarding way for the

benefit of the Community. All operators irrespective of experience are welcome.

Please contact Richie on mobile 085-1465465 or evenings on 051-854315. You can also contact Richie by e-mail at "ei9hr at yahoo dot com".

Limerick Radio Club

Limerick Radio Club has been invited by the Foynes Flying-Boat Museum to operate a special Amateur Radio Station in conjunction with the commemorative Transatlantic Re-Enactment Flight 1937 from Newfoundland Canada to Foynes Ireland. A special call-sign has been allocated to the station EI-70-FOY. The station will be on the air from the 6th to the 8th of July 2007. On HF the station will operate from 80 to 10 metres. It will also operate on VHF / UHF using the EI70FOY call-sign.

A special QSL card, commemorating the Re-Enactment Flight, will be sent to all stations worked over the three-day event. All QSL cards should be sent to the Club's QSL Manager Alan Cronin EI8EM at QTHR. Limerick Radio Club can be contacted at "ei4lrc at eircom dot net" or at www.qsl.net/ei4lrc.

Theory Examination

The next Theory Examination for the Experimenters Licence will be held on Thursday the 28th of June next. Places for the examination are limited and will be allocated on a "first come first served" basis. Intending candidates should forward the appropriate fee to Se"n Nolan EI7CD, 12 Little Meadow, Pottery Road Dunlaoghaire, Co. Dublin. The fee is 50 Euro or 25 Euro for full time registered students, those who are retired, are unemployed or have a disability. In addition to the exam centre at the ComReg offices in Dublin an examination will be held on the same date and with the same paper at the Community Centre, Carrigtwohill, Co. Cork.

The closing date for the examination is the 16th of June and it will be strictly adhered to. Sean's e-mail address for further enquiries is "ei7cd at gofree dot indigo dot ie".

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to &#65533;news at irts dot ie&#65533; for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday&#65533;s bulletin.

XU,
YB, YI, YK, YL, YN, YO, YU, YV, Z2, Z3, ZA, ZB, ZC4, ZD7, ZD9, ZF,

ZK1/n, ZK1/s, ZL, ZP, ZS

* PLEASE NOTE: The report "could" contain "Pirate/SLIM" operations or more likely a "BUSTED CALLSIGN". As always, you never know - "Work First Worry Later" (WFWL).

3X, GUINEA. QSL Manager Dennis, PA7FM, informs OPDX that Michael, PA5M, is now here and active as 3XY5M. He will remain in Guinea until early June before returning back home. He is there working for the UN's World Food Programme (WFP), but will be active during his spare time between his work there. His callsign 3XY5M has been already approved for DXCC. Activity will be on all bands 160-6 meters (depending on his free time and propagation) using only wire antennas and 100W. Over the past week, Michael was heard on the following frquencies between 1815-1930z: 18155-18160, 14254 and 28435 kHz. QSL via PA7FM direct to: Dennis Robbemond, Loggerhof 11, 3181NS Rozenburg, The Netherland (Please, remember 1 USD does not cover postage anymore. Look for updates and an online log search at: http://www.pa7fm.nl

8Q, MALDIVES (AS-013). Andrew, G7COD, will be active again for the third time as 8Q7AK from the Island of Embudu, South Male Atoll, during the first half of October 2007. Exact dates of operation, frequencies, ...etc, will be announced (probably in September) closer to his activation. Duration of his operation will be approximately 2 weeks. For QSL information and further updates, check QRZ.com. ADDED NOTE FROM G7COD: He reports that all QSLs received from the last 2 activations of 8Q7AK in October 2006 and January/February 2007 have now been mailed direct if IRC or Green Stamps were included. If not included, they have been sent via the Bureau. All QSLs received via the Bureau will be returned the same way. All EQSLs have been responded to.

9U, BURUNDI. Vlad, UA4WHX, is now active as 9U0VB (as May 1st). As always, the length of his stay is unknown. Activity over the past weekend was on 30/20/17/12/10 meters CW/SSB. QSL via his home callsign, direct or by the bureau. It is recommend to send direct cards after his travels.

ANTARCTIC CHALLENGE UPDATE. Gil, F5NOD, informs OPDX that the Antarctic Challenge scores are up-to-date at: http://f6kdf.ath.cx/f5nod/index.htm

BS7, SCARBOROUGH REEF. Members of the BS7H team are reportedly all back

home now. It seems that the team travelled from Scarborough Reef to Manila, The Philippines, and not Hong Kong as first thought. All the international operators were dropped off there, but the six Chinese operators continued on aboard the ship heading back to Hong Kong. This past week details of band statistics were released. Here are the QSOs per band: Band SSB CW RTTY

160m	0	54	0
80m	117	217	0
40m	509	3039	0
30m	0	3374	0
20m	10370	11434	54
17m	3277	3497	0
15m	3803	1986	268
12m	402	474	0
10m	841	724	0
Total	19319	24799	322

Don, N1DG, reported that there were NO QSOs made with NA on 160, 80 and
10 meters. Online logs and two batches of pictures also became available
this week at the following Web pages:
Logs http://www.scarboroughreef.com/srlog.html
http://dx.qsl.net/logs/index.html
Photos http://www.scarboroughreef.com/srphotos.html
http://picasaweb.google.com/paul.pescitelli/K4UJScarboroughReef
PLEASE NOTE WHEN QSLING TO KU9C. Remember postage in the U.S. will be going up on May 14th (First Class Stamp will be 41 cents).
DXCC NEWS: Bill Moore, NC1L, ARRL DXCC Manager, announced that the "BS7H Scarborough Reef 2007 operation" has been approved for DXCC credit.

C4, CYPRUS. Marios, 5B4WN, will be active as C4W during the CQ WW WPX CW Contest (May 26-27th) as Single-Op/All-Band entry. QSL is via the LoTW. QSLs via the Bureau is also available via the "self-QSL" button on: http://www.5b4wn.com

DAYTON ACTIVITIES.....
FROM THE ARRL LETTER - "JARL operating award checking available at Hamvention": A representative of the Japan Amateur Radio League (JARL) will be available at Dayton Hamvention May 18-20th to check applications for JARL awards and to issue certificates for certain awards. Former JARL executive director and renowned DXer Masa Ebisawa, JA1DM, will be at Booth 483 in the Ballarena of Hara Arena, near ARRL EXPO 2007. Applications for other JARL awards can be checked at the JARL booth. Masa also will answer questions on JARL activities as well as reciprocal licensing in Japan.

DXCC Dayton Hamvention Card Checking (Just A Reminder!) - Bill Moore,
NC1L, ARRL DXCC Manager, reports: "DXCC staff and approved card checkers will be checking cards at the Dayton Hamvention from May 18-20th. Checking will be done during all operating hours of the convention. Following these simple steps will help make processing go
quick and easy:
There is a 120 card limit per applicant. Larger applications may be checked as time is available after all other applications are finished. (No larger applications will be checked on Sunday). If some cards cause the application to exceed 120 QSOs, this is OK.

Cards MUST be sorted first by band, then by mode. Cards with more than one QSO should be placed together at the end of the application. Do not sort cards alphanumerically. Applications not properly sorted may be returned for proper sorting.

Prepare all paperwork ahead of time. The record sheet is required when submitting cards at Dayton. Use the latest application form available at www.arrl.org/awards/dxcc. Fill in ALL fields on the record sheet.

Write clearly and concisely.

Do not use forms with fields other than those that appear on the standard ARRL form.

There are no restrictions on what can be checked. (Cards for 160 meters and deleted entities are OK.)

DXCC will not bring applications with cards back to ARRL HQ. All cards must be checked and claimed in Dayton.

For those submitting a hybrid application (LoTW and paper credits combined), the LoTW application must be in the LoTW system by 7:30 AM Monday morning, May 21st. If you do a hybrid application, you must note on the LoTW application that a paper application is being made. You must also note on your paper application that you will be submitting a LoTW application by checking the appropriate box.

Applications for other ARRL awards, such as WAS, VUCC, WAC, can be
checked.

When you arrive at the booth, please take a number and stay near the booth. When your number is called go to the next available checker. Your cards will be checked while you wait and they will be immediately returned to you.

If you need a personal copy of the application and record sheets please handle this before you arrive. DXCC cannot make copies for you on site.

Please see rule 15 for the latest fees. Acceptable payment methods
are: Major credit card, check (by USA bank only), money order (both USA and international), cash (US dollars only). DXCC cannot bill you.

Following these steps will allow us to process your application quickly and in minimal time. Contact Bill Moore, NC1L at dxcc@arrl.org with questions."

DX HOSPITALITY SUITE. The Northern Ohio DX Association (along with Janeen Hire, W8ZET) will once again sponsor a Hospitality Suite at this year's Dayton Hamvention. It will be in Suite 1011 on the 10th Club Floor of the Crowne Plaza Hotel (old Stouffers) on Thursday, Friday and Saturday evenings (Look for signs!). All DXers/Contesters are welcome. Munchies and refreshments will be avaialble. Come and meet the members and friends of NODXA.

DR5, GERMANY. Operators DK3QZ, DL1EKC, DL3QQ, DL3HAH and PA0R will be active as DR5L during the CQ WPX CW Contest (May 26-27th) as a Multi-2 entry. QSL via DK3QZ.

DR80, GERMANY. Look for operators DK3DM and DJ2QV to be active as DR80AMA during the CQ WPX CW Contest (May 26-27th) as a Multi-Single entry. Activity is to celebrate SES's 80 years of DL ham radio. QSL via DK3DM by the Bureau.

E51/N, NORTH COOK ISLANDS. Sailing couples Mike/KM9D (E51QMA) and Jan/KF4TUG (E51TUG), are now active from Suwarrow Atoll (OC-080), Northern Cook Islands. Operator was heard saying they would be active until May 21st. Most of the activity seems to be on 20/17 meters. QSL via OM2SA.

EE8, CANARY ISLANDS (AF-004). Operators Girts/YL2KL, Oleg/YL3DW, Andy/YL2GQT and Tom/YL2PP will be active as EE8A during the CQ WW WPX CW Contest (May 26-27th) as a Multi-? entry. QSL via YL2KL.

GP3/GP8, GUERNSEY (EU-114). Chris, M0DOL, will be active from the Island of Guernsey (in and around the island) using the special callsigns GP8LED/P and GP3GWB starting on May 26th for one week. Operators Trevour/M3PNQ, Tom/2E0TSW and some members of the Northampton Radio Club will be joining him. Activity is expected to be mainly on 2, 4 and 6 meters.

HAM-COM DX DINNER BANQUET. In assocation with the Ham-Com Hamfest (see http://www.hamcom.org), the Lone Star DX Association DX dinner will be Friday, June 8th at 6:30 p.m., at the Southfork Hotel at 1600 North Central Expressway (U.S. Highway 75) in Plano, Texas. Their featured speaker will be Dr. Glen Johnson, W0GJ, who will present an Audio/Visual program on the VU7RG/VU7MY DXpedition to the Lakshadweep Islands
earlier this year (http://www.vu7.in). Bharathi Prasad, VU2RBI, and her daughter, Ms. D.S. Mahathi, VU3DSM, who both operated from VU7MY, will be special guests at the dinner. The tickets are 36 USDs/person and are available online at www.hamcom.org or may be purchased by

sending a check or money order to: Jim Bass, K5KQI, 2709 Monarch Dr., Arlington, TX 76006. The chances of winning a major door prize are quite good because they have thousands of dollars worth of prizes from many vendors including Kenwood, Yaesu, ICOM, Alpha Power, Tennadyne, W2IHY Technologies, Heil Sound, Texas Towers, The Southfork Hotel, and many many others. Act now!!! Ticket sales end on June 1st.

HP2/3E2, PANAMA (IOTA Op?). Two members of the Uruguay DX Group, Bert/CX3AN and Mario/CX4CR, will be traveling to Panama, June 22-28th. Operators will sign as HP2/homecall (or possibly as 3E2/homecall) from San Blas Archipielago (NA-170). Activity will be on 80-6 meters CW/SSB using 500w into a vertical/wires antennas. They informed OPDX that this
Caribbean DXpedition is to celebrate Bert becoming "DXCC NUMBER ONE" after working BS7H. This will be their 15th country from five different
continents they activated over past 20 years.

IOTA NEWS.....
AS-043. Operators JA1UNS, JI1PLF, 7N1GMK, 7L4PVR and 7N4VPS will be active as homecall/1 from Hachijo Island (JIIA AS-043-004, WLOTA LH-0446), JA1 South Izu Group, May 25-28th. Activity will be on the HF bands, 6m, CW and SSB. QSL via their home callsigns, direct or by the bureau.

EU-060. Operators SV2FPU, SV2HNZ, SV2HOB, SV2HPP, SV2HPY, SV2HRT, SV2HSV and SV2GNQ will be active as SY8WT from Skyros Island
between June 16-22nd. This is the 4th most wanted European island. QSL via SV2HPP, by the Bureau or direct.

EU-108. Operator Jim, MM0BQI, will be active as MM0BQI/p from the Isle of Lunga, Treshnish Isles (IOSA NH-17, SCOTIA DI-09), September 1-3rd. Activity will be on 80-15 meters, mainly SSB. QSL via his home callsign (QRZ.com).

EU-112. Operators Alan/G0RCI, Gordon/G3USR and possibly other members of the Grantham ARS will be active as GC0GRC/p and GS0GRC/p from Eilean an Tighe (House Island), Shiant Islands
(IOSA OH-18, SCOTIA DI-24), July 10-13th. They plan to have 2 stations on the air on all bands 80-6 meters, SSB only. QSL is 100% via the bureau.

EU-120. Members of the Wakefield & District Radio Society will be activating Holy Island Lindisfarne from Saturday, July 21st to Sunday, July 22nd, 24 hours special dispensation from the
National Trust only. The callsigns will be GB1HI and GB5HI. Contacts will also count for "Holy Island Guille Lighthouse"
(Ref.no. ENG-224 and Admiralty number A2816.5). The Worked

All Britain (WAB) reference is NU-23 Northumberland. The
IARU Locator is IO95CQ. QSLs for ALL contacts are via
Charles, M3ZYZ, direct (QRZ.com) or by the Bureau. E-mail
Bureau requests are welcome (see QRZ.com).

EU-145. Francois, ON4LO, will be active from Faro Island (AL-006
for
the Portuguese Islands Award), June 14-27th. Activity will
be on 40/20/15/10 meters SSB and PSK. QSL via his home
callsign, bureau preferred.

OC-177. Five members of the Organisasi Radio Amatir Republik
Indonesia (ORARI) will be participating in 2007 CQWW WPX CW
Contest (May 26-27th) from Ayer Island in the Jakarta Bay.
Operators mentioned are: Pri/YB0ECT, Dudy/YB0DPO, Jo/
YC0LOW,
Andry/YB1TX and Ray/YD0NQW. Activity will be on 160/80/40
meters, 80m and 160m bands, as a Single-Operator category.
This IOTA reference is very seldom activated for IOTA
chasers. Look for RTTY and PSK31 activity on high bands.
The
operators will be signing with their home callsigns with a
specific designator "/0", example: YB0ECT/0. Please send
QSL
cards to the Orari Bureau and/or direct.

LX, LUXEMBOURG. Operators Lars/DF1LON, Carsten/DL1EFD, Hein/DL2OBF,
Jurgen/DL4SDW, Bernd/DL8SCG and Philippe/LX2A will be active as LX7I
during the CQ WW WPX CW Contest (May 26-27th) as a Multi-2 entry. QSL
via LX2A.

MX0, ENGLAND (CASHOTA Activity). Members of the Craven Radio Amateur
Group (CRAG), from the Yorkshire Dales, UK, will be taking part in a
CASHOTA (Castles and Stately Homes On the Air) activation on May 20th
between 0900-1600z. They will be operating from the prestigious
Broughton Hall, near Skipton (Locator IO83WW, WAB Square SD95YSN),
using the callsign MX0BCQ/P on HF and VHF. For QSL information, please
check QRZ.com. Visit the CASHOTA Web page at: http://www.cashota.org/

OX, GREENLAND (6/2 meters, EME). Operators Ole/OZ7OX (OX3OX) and
Bo/OZ1DJJ (OX3LX) are planning a combined work and vacation DXpedition
to here and want to activate grids squares GP47TA and GP36DW. Activity
will be on 6/2m EME. They plan to use their OX callsign or maybe OX2A
or XP1AB. Activity is to take place in July (possibly July 7-25th).
More details are forthcoming.

QSL INFO AND NEWS.....................
3 STEVES QSL CARDS/CERTIFICATES STATUS. Steve, KF2TI, informs that
the QSL cards and certificates for the "3 Steves" operation from
St. Croix, USVI, last year are now starting to go out in the mail.
The callsigns were N2IFA/KP2, KB2ENF/KP2 and KF2TI/KP2.

CN3A AND 5D5A QSL STATUS. Bob, I2WIJ, reports that as of May 11th, the backlog of all direct QSL requests for CN3A and 5D5A have been fully cleared. He states, "Thanks to my wife for her 'outstanding' help as secretary, with a major help in keeping everything clean and ordered.

VU7RG/VU7MY QSLS. Bob Schenck, N2OO, states, "...be patient folks. It'll probably be a few weeks or more yet." This is because the 3 QSL Managers for the VU7RG/VU7MY operation will still have to "process" the cards when they DO arrive from the printer.

QSLS VIA LOTW: 4X4PP, 4Z1JS, CT1DJE, DF2LH, DJ1YFK, DR1A, EA1CUB, EA1NE, FP/G3SXW, FY/F5IRO, G4DJJ, HK6PSG, JH8SLS, KP4SAT, MM0BSM, OH6NIO, PJ4/OE2VEL, TF4M, TO5A and UA3TCJ

QSLS RECEIVED VIA MAIL: 3B9/G3TXF, 5W0RE, 9M4SDX, BX5AA, C56NN, EF8M,
HC8N, HH4/K4QD, HH7/N3BNA, J5UAR, JX9NOA, KH0/K3UY, PJ7/DL1VWR, PZ5ZY, S92FM, SV5/DJ7RJ, V63UA, VK9DNX, YK1BA, YL7X and ZK3RE

SPECIAL EVENT. Members of the Indianapolis Motor Speedway Amateur Radio Club will be signing W9IMS to celebrate the 91st running of the Indianapolis 500, between May 24-28th (1500-0300z). Activity will be on
the following suggested frequencies: 21340, 14240, 7240 and 3840 kHz. A certificate and QSL are available. For information, please visit: http://www.w9ims.com

SPECIAL EVENT. Members of the Boeing Employees AR Operators North Society will be active using the special callsign W7FLY to celebrate the rollout of the Boeing 787 Dreamliner, July 8-9th. Activity will be on CW 7050 and 14050, and on SSB 7240 and 14240 kHz. QSL via KN7T: Mark McLauchlin, 2625 176th St SE, Bothell, WA 98012. More information can be found at: http://www.w0ma.org

TI6, COSTA RICA. Operators Orrin/K9KEJ and Bill/K5YG will once again be active from the east coast of Costa Rica as TI6/K9KEJ and TI6/K5YG. Activity will be limited because they are there on a fishing trip. Activity will be on 40/20 meters SSB. QSL via their home callsigns.

UK SIX METRE GROUP CELEBRATES 25 YEARS. The UK Six Metre Group (UKSMG) is happy to announce its 25th birthday. It will be celebrated with a series of special callsigns in several different countries. It will start in the Netherlands with the special callsign PA25UKSMG between May 19th and June 3rd. Activity will be active on all bands from 160-2 meters, including an entry in the CQ WPX CW Contest (May 26-27th). Also, look for several special callsigns to be active during the UKSMG 6m Contest during the first weekend of June. Working them will give you
extra bonus points during that contest. Furthermore there will be a special 25 years anniversary award. Also, look for TM6MG to be active starting June 1st for 2 weeks from France on several bands, but the focus will be on 6m. There will be a few other callsigns to be

announced later, but they have not yet been confirmed. QSL all of these
special callsigns to PA7FM. More information can be found on the UKSMG
eb page at: http:/www.uksmg.org
Online logs for these operations will be available at the following Web
page once they start: http://www.pa7fm.nl

VF0, CANADA (Zone 2 and IOTA Op). Operators Pete/VE3IKV and Bill/W4TAA will be activating the Belcher Islands (NA-196) in CQ Zone 2, VY0 Nunavut Territory, using the special callsign VF0X (authorized by Industry Canada) between June 29th and July 4th. Activity will be on the HF bands and 6 meters, CW and SSB. QSL via VE3IKV direct (quick) or by the bureau (slow).

VP9, BERMUDA (NA-005). Paul, G4BKI, will be active as VP9KF from Hamilton Parish, from May 15th to June 5th. Activity will be CW only, but will include the CQ WW WPX CW Contest (May 26-27th). QSL via W4/VP9KF: Paul Evans, 6809 River Road, Tampa, FL 33615. Visit his Web page at: http://vp9kf.com/

VQ97, CHAGOS ISLANDS (Attention PFX Hunters!). OPDX was informed by Jim, VQ9JC (ND9M), that he has received written permission to use the special callsign "VQ97JC" from May 23rd through June 5th. The special indicator "7" added to the prefix simply reflects the number seven in the year 2007. Jim was informed by Harmon (a.k.a. Dale), W4QM/VQ9QM, who was "Mr. VQ9" for 15 years, this is the first time a special prefix
was authorized to be used there. Look for Jim to use this special prefix as much as possible during those two weeks. He states, "I am on a work assignment while at Diego Garcia, and as such I can only be on the air after work which normally means 1200-1730z. That said, I'm hoping to make the VQ97 prefix available at least 10 evenings during that period; with luck, there may be more. My work schedule includes weekends, so a pretty big bite is already taken out of the CQ WPX Contest timeframe. But I'm expecting to stay overnight at the shack both nights during the contest so that I can put in some time around the local sunrise (2300-0100Z) as well. I'll be SOAB during the contest." QSL via ND9M, direct or by the bureau. QSL cards will not be printed at least until after his return home to Florida in August.

YCCC CELEBRATES 30th ANNIVERSARY. Members of the Yankee Clipper Contest
Club (YCCC) will celebrate its 30th anniversary by signing their call-sign/30. Activity is a way to positively promote the YCCC on the air. A
special certificate will be available after confirming contacts with at
least 10 members. For more details, visit the YCCC Web page at: http://www.yccc.org/Articles/30th%20Anniversary/index.htm

947. Radial laying methods

Newsgroup: rec.radio.amateur.moderated
Date: 2007-05-14 15:28:37 UTC
From: Michael Coslo <mjc5@psu.edu>
Message-ID: <f29uui$1210$1@f04n12.cac.psu.edu>
Source record: 4452

Vertical antennas have some interesting features, but the radials required for them are a nuisance to install.

Ideally, we would like approximately 1 gazillion radials for a vertical. In reality, we often settle for less. Much less.

When installing my Butternut HF6V, I ended up laying as many radials as my poor aching hockey damaged back could handle, then the next weekend repeated the process. I eventually stumbled upon a method that was fast and painless. Well-as long as everything went well...

So what are you vertical users radial trenching secrets, anyhow? I'll relay mine after things get started.

For trenching, a gas-powered lawn edger does a fine job with a dull blade. PROVIDED...you have all the buried PVC water sprinkler lines (if you have them) located; if you don't, that edger will slice right through PVC pipe with little effort. :-(

Note: Edger blade rotation should be tossing excess towards the front for safety. Anyone with lots of rocks just below the soil (as I do) can get injured if the blade tosses things backward.

What I need is a way of getting under a sidewalk AND lots of mature roots from tall cypresses. "Trenchless" line-laying with a pipe and pointy nozzle to hydraulically bore into soil is one way and will cost about $400 to $500 from a plumbing service that does that kind of thing. [estimate] Not good. Manual digging with a shovel for one such pass-through takes as much effort as manual hoe-trenching a couple dozen radials.

BTW, radials themselves can be #14 solid THHN (nylon-jacketed PVC insulation) electrical wiring according to many who have used that. The insulation will preserve the copper longer and reportedly has little effect on final VSWR. Best prices for that seem to be (locally) Home Depot in 500 foot spools.

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
promoting or defending unlawful activities, etc. Crossposts of regular
discussion articles between rec.radio.amateur.moderated and other
```

discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness,
suitability and/or readiness of any individual (or members of any group)
to be an amateur radio operator are unacceptable in this newsgroup. If
an individual chooses to post asking for advice on when or whether to
obtain an amateur radio license, or to participate in any type of lawful
activity in the Amateur Radio Service, respondents should be careful to
address their comments only to the original poster and not explicitly
generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur
radio licenses, or certain members of national amateur radio societies
(e.g., American Radio Relay League, Radio Amateurs of Canada, Radio
Society of Great Britain, Wireless Institute of Australia, etc.), to be
more or less worthy than others, are not permitted. Posts that politely
encourage individuals to join their local amateur radio society, or to
upgrade to higher classes of amateur radio license in order to enjoy
greater operating privileges, are permitted, however. Posts that
contain reasoned, civil, and fact-based discussion of the activities and
internal politics of national amateur radio societies are also
permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on
rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created
for this purpose, and should be used instead. All such articles will be
rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or
other public relations campaigns will not be permitted. Relatively
unbiased announcements or reviews of new amateur radio-related products
or services may be permitted at the discretion of the moderators. Such
posters are asked to disclose their financial or professional interest,
if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

(Adapted, with permission, from the misc.kids.moderated Posting Guidelines.)

For AM broadcast they are normally run in with a modified plow, with a guide tube for the wire on the trailing edge of the blade. Not practical on a residential lot, but if you are in the country a little welding could probably rig up a usable plow if you have access to a small (but bigger than lawn size) tractor. I used to like to then silver-solder the wire to a copper bus ring around the tower base.

In any event, a non-trivial task.

I use Logger32 as my general purpose logging program. I can mark Q's which I want to QSL, and I can then export those marked Q's to an ADIF file. I'd like a program which could import that ADIF file and the output would be a print to a standard Avery label format.

Anyone know of a Windows product which can do that?

> So what are you vertical users radial trenching secrets,
anyhow?

Here are a couple of methods:

The first method is to get a gardening spade with a straight (flat) blade. Hold it with the blade vertical and push with your foot so it makes a straight slit in the turf. Move it one blade-width and repeat.

Push the wire into the slit with a garden weed puller (long rod with a forked end.

The second method requires a special homemade tool. Get a linoleum knife (the kind with a curved blade) and sharpen the outside edge. Take a piece of ~1/4" copper tubing, bend it to a curve, and solder or epoxy it to the side of the blade.

The radial wire is fed through the tubing. The knife is pushed into the ground and pulled along, making a slit and burying the wire at the same time. Requires soft soil!

--

My favorite trick is to not bury the radials at all.

At my old house on RadioTelegraph Hill, I had a nice homebrew 20 meter vertical mounted on the garage. The bottom of the radiator (16 feet of half-inch EMT) was 10 feet up, and very inconspicuous. The radials went over the roof and yard, and were of fine wire so that they were almost invisible. Homemade insulators of clear plexiglas did the job at the far end.

Whole thing cost me maybe $10. I made thousands of QSOs with that antenna.

<some snippage>

I came up with a pretty quick method which I'll describe here:

Before I go into this, the standard disclaimers apply -

I don't suggest anyone do this. It is a potentially dangerous
operation, and involves using sharp instruments that are capable of
causing serious injury or death. Don't even think of doing this. You
have been warned!

I found many of the suggested ways of laying radials either painful
from crouching over the work, too mind numbingly slow, or unsatisfactory
in general - such as laying the radials on the ground and not burying.
The XYL particularly hated the last one.

I thought to myself "There must be a method of doing this that isn't
going to take the whole day and is reasonably automated".

So I set off on a quest. First I looked for an edger. Unfortunately the
least expensive one I could find was around a hundred dollars. To make
matters worse, I wouldn't have much use for it afterwards.

So I did what any other nut would have done, I bought a small electric chainsaw. for something like 39 dollars.

In use, I stood part way to the side of the cut, starting at the antenna base. Then pulled the saw back with me to cut the shallow trench. I found it worked even better if I turned the saw on. I had not one kickback, although the occasional spark is to be expected when hitting a rock or pebble.

Then I laid the radial wire in the trench, walked over the cut to compact and stabilize the buried radial, then attached the radial to my ground ring.

This was quick, allowed me to install a lot more radials before my back hurt too much, and only scared the neighbors a little bit.

One other caveat - don't expect the chain to be very sharp after this bit of abuse. I needed to get another chain to restore the saw to it's proper wood cutting use.

And of course, this isn't going to work if you live in a place like New Hampshire, where the soil tends to be made of solid granite.

Like I said before, this is only something I did. In no way is it to be construed as a suggestion. Don't do it.

Well . . . there's a bit of difference between a ditch witch, which is made for digging ditches and offers the operator reasonable protection from flying debris, and using a chain saw that is designed for cutting wood.

As Michael warns several times in his article, this "is a potentially dangerous operation, and involves using sharp instruments that are capable of causing serious injury or death. Don't even think of doing this. You have been warned!" I have the utmost respect for a chain saw, even when used in its intended application of cutting wood. (And I use one regularly.) I'd certainly be very aprehensive about using it to part the Red Dirt. Or black dirt, depending on your part of the country.

Having some experience with chainsaws-

Contacting the blade with dirt will ruin the blade (as stated above), but don't do this with an expensive saw thinking that the blade can be changed later. It'll also ruin the guide wheels and clutch too. In fact, it is widely known among chainsaw operators that dirt = death to chainsaws. It mixes with the oil and becomes a grinding compound.

Trench cutting has to be seen as an old saws dying gasp.

It is also extremely risky. If you unwittingly hit something solid, the saw could bounce or kick back. It happens sometimes when you're cutting wood. Its bound to happen when you are cutting into something when you don't know what it consists of.

Having said all that, I cant decided if my advise would be- be careful, OR- just don't do it.

I like to do radials a different way: rather than cut a trench for each radial, I scrape the topsoil, lay out the radials and concentrics, bond them, and then cover the whole grid up again. Believe it or not, this is actually quicker, given proper preparation - for an 80 meter vertical with 64 radials, it can be done by four hams in one day - although it is definitely best done when the XYL is visiting her folks. ;-)

After that, I put down lots of fertilizer and new grass seed, and blamed the operation on grubs. Worked like a charm.

Bill W1AC
P.S. This method assumes you are really good friends with an experienced bulldozer operator who has a job in the next block over, but not that you actually do have a grub problem.

Some of the ideas presented represent some of the most labor
intensive, dangerous methods I've run across.

Cut some #12 or #14 galvanized steel wire into six or eight inch
lengths. Fold them in half to form a hairpin. Lay out your radial
wires along the surface of your yard. Use a steel hairpin every three
or four feet to hold the wire to the earth. Within several weeks of
the grass growing and cutting cycle, the radials will disappear
beneath the surface of the grass, never to be seen again. I'm now up
to over 6,000 feet of vinyl insulated #12 and #14 radials for my 160m
inverted L using this method. There are no whirring metallic objects,
no chain saws. There's no digging and very little effort.

Dave K8MN

When I read what Dave had written, it struck me that it's an illustration of a trait that I have observed often in our hobby: It has to be done *exactly* the right way. A 1.2:1 SWR isn't good enough. Radials have to be *buried* since obviously they won't be as effective if they're just laid on the ground. Yeah, several hours of back breaking work and possibly risking your life might gain you 1 db that no one will be able to detect . . . or maybe not even that. We need to be a bit more forgiving of non-optimum solutions and do a bit more cost/benefit analysis on the work it takes to convert them to optimum solutions.

An illustration comes to mind. When I was working in Mississippi in the Katrina aftermath, the Red Cross asked the hams to provide their feeding vehicles (ERVs) with communications while they were on station. ["ERV" stands for "emergency response vehicle".] An HT was insufficient to hit the local repeater system. We had mobile 2m tranceivers to put one in each ERV, but the mag mount antennas were useless because ERVs aren't magnetic (fiberglass and aluminium). When I suggested using the existing antenna that was already mounted on the side of the ERV for the Red Cross radio, the response was "Oh, no, we can't do that -- it won't match for 2 meters." And sure enough, it didn't . . . but it was plenty good enough to do the job, and modern transmitter circuity is perfectly capable of coping with a huge mismatch.

What I'm trying to say is that "good enough" works fine in many cases, and the incremental effort to move to "perfect" often isn't justified.

I've a different view on several points.

I didn't see Dave's message as "has to be done *exactly* right", but simply a different way of securing the radials, WITHOUT "have to be *buried*.

But given the amount of copper he's laid down, obviously he's intent on getting the best performance he can muster on 160. Nothing wrong with that, and that 1 db may be just the amount needed to snag that last Z for WAZ Top Band, or break through the east coast curtain to log a multiplier in the Stu Perry Challenge.

Your anecdote about the Red Cross van is well taken, but I think it illustrates a point.

There are times when we readily accept "get 'er done" as "good enough", such as during a disaster like Katrina, or for a temporary setup like Field Day, or a demonstration station at the local high school.

But when we engineer our home station (especially if we're serious about DXing or contesting) we go to all reasonable (and yes, even sometimes unreasonable) lengths to get the best performance we can squeeze out. A couple db better front-to-back, another microvolt to the receiver, more KC between the 2:1 spots on the VSWR curve, an easier way to reduce ground losses under a Battle Creek Special, or a better ergonomic chair for those long contests. In that regard, many of us have no "forgiveness of non-optimum".

==>ARRL SUBMITS PLAN TO MITIGATE REPEATER INTERFERENCE TO MILITARY RADARS

The ARRL has submitted an interference mitigation plan to the US Department
of Defense (DoD) as part of an effort to resolve reported interference from
dozens of 70 cm amateur repeaters to US military radar systems on both
coasts. Since Amateur Radio is secondary to government users from 420 to 450
MHz, hams must not interfere with primary users and, under the rules, can be
forced to cease operation. Earlier this year, the US Air Force asked the FCC
to order dozens of repeater systems to either eliminate interference to its
"PAVE PAWS" missile and satellite detection and tracking radars in
```

Massachusetts and California or shut down.

"We are waiting the response of the DoD representative to the proposal and will continue to provide information as to its status when it becomes available," commented ARRL Regulatory Information Specialist Dan Henderson, N1ND. The interference mitigation plan has four primary steps.

* All repeaters the DoD has identified as potential interference sources will immediately and temporarily reduce transmitter power output (TPO) to 5 W.

* The ARRL will conduct Longley-Rice studies on each repeater system to determine what further mitigation techniques might apply to individual repeaters. These could include relocating the system, the use of directional antenna systems to create nulls towards the PAVE PAWS site, permanent power reductions or a combination of these techniques.

* The DoD will review ARRL's studies to determine if the proposals will meet DoD's unspecified field strength requirements to mitigate the potential interference satisfactorily.

* Once the DoD reviews and approves the proposals, the ARRL will provide the recommendations to respective repeater frequency coordinating groups and the FCC.

The situation affects 15 repeaters within less than 100 miles of Otis Air Force Base on Cape Cod, Massachusetts, and more than 100 repeaters within some 140 miles of Beale Air Force Base near Sacramento, California. PAVE PAWS facilities occupy essentially the entire 70 cm band -- one factor that makes mitigation difficult. Feeding upward of 1800 active antenna elements, the broadband radar transmitters emit an average power output of more than 145 kW.

Henderson says repeater owners and trustees ultimately would be responsible for implementing the mitigation proposals or for developing alternatives that protect the radar systems to the same extent.

Cooperation will be the key to a successful resolution of the situation, Henderson says. "Although ARRL has no means to compel compliance with the mitigation strategies, each repeater is absolutely obligated not to interfere with these radars," he emphasized. "Failure to implement the mitigation strategy or otherwise eliminate interference attributed to an individual repeater will result in immediate FCC action."

Henderson points out that the FCC is aware of and monitoring this situation and will act as necessary to protect the radars from interference. He stresses, however, that the US military is aware of the critical role Amateur Radio repeaters play in disasters and emergencies, and a wholesale shutdown of US 70 cm Amateur Radio activity is not under consideration.

A US Air Force contractor identified the allegedly problematic repeater systems last summer, but the situation didn't become critical until the Air Force contacted the FCC in March. ARRL officials met with Defense Department

representatives later that month to discuss alleged interference to the PAVE PAWS radar sites, and last month Henderson contacted Amateur Radio frequency coordinating organizations in both affected areas -- the Northern Amateur Relay Council of California (NARCC) and the New England Spectrum Management Council (NESMC).

Contact Dan Henderson, N1ND <n1nd@arrl.org>; (860-594-0236), with specific questions or issues associated with this situation.

==>EMERGENCY COMMUNICATION LEADS IARU ADMINISTRATIVE COUNCIL AGENDA

The Administrative Council of the International Amateur Radio Union (IARU) <http://www.iaru.org> held its annual meeting May 14-15 in Boston, Massachusetts. Topping the agenda was the IARU's upcoming participation in the Global Amateur Radio Emergency Communications Conference, GAREC-07. The international gathering will take place in Huntsville, Alabama, in mid-August -- just prior to the ARRL National Convention there <http://www.arrl.org/announce/nc/2007/huntsville.html>. The Administrative Council's primary goal is to enhance the coordination and promotion of Amateur Radio's worldwide disaster response capabilities.

During the Boston gathering, the Council received a draft strategy paper from IARU International Coordinator for Emergency Communications Hans Zimmermann, HB9AQS/F5VKP. The body will seek additional information from member-societies on the national regulatory position of the Amateur Service in preparing for and providing emergency communications, with an eye toward identifying problem areas and developing solutions.

The Administrative Council meeting took place earlier in the year than usual in order to complete the review of preparations for the International Telecommunication Union (ITU) World Radiocommunication Conference (WRC-07) in Geneva this fall.

The Council also received reports of the other IARU international coordinators and advisers: International Beacon Project Coordinator Peter Jennings, AB6WM/VE3SUN; Satellite Adviser Hans van de Groenendaal, ZS6AKV; Electromagnetic Compatibility (EMC) Adviser Christian Verholt, OZ8CY, and Interim Monitoring System International Coordinator Chuck Skolaut, K0BOG. Coordinators and advisers were reappointed for three-year terms.

A further progress report was received from an ad hoc committee investigating the IARU's future role and structure. The Council resolved that the work to date represents an appropriate direction for planning, and it requested that the committee continue its work to address remaining open issues, including consultation with member-societies.

The Council recognized a need for greater international coordination on EMC matters, and it adopted conclusions and recommendations arising from a study of how to accomplish this objective.

Continuing the strategic planning initiative begun in 2003, the Council reviewed and renewed progress on a three-year plan for the development of support for Amateur Radio frequency allocations for 2008 through 2011. Some

details are pending until after WRC-07.

The Council identified ITU meetings that will require IARU representation over the coming year, and it reviewed plans for representation. The principal focus continues to be on WRC-07 preparations.

A report on the status of the IARU member-society in Bosnia and Herzegovina was received from the Region 1 representatives. The Council determined that it requires additional information to clarify whether the member-society is able to adequately represent the interests of all radio amateurs of Bosnia and Herzegovina in the IARU.

The Council reviewed the budget for 2008-2010 as presented by the International Secretariat (ARRL). The budget includes provision for financial contributions from the three regional organizations to defray a portion of the expenses, in accordance with previously adopted policy.

A working document describing the requirements for radio spectrum allocations to the amateur and amateur-satellite services was reviewed. Council members will take a comprehensive look at the document following WRC-07.

In other business, the IARU Administrative Council:

* reviewed and endorsed a plan to revitalize the IARU Worked All Continents (WAC) award program.

* selected "Amateur Radio: A Foundation for Technical Knowledge" as the theme for the next World Amateur Radio Day, April 18, 2008.

* received and discussed reports from each of the three IARU regional organizations.

The next regional conference will be Region 2's in Brasilia in mid-September. The next scheduled Administrative Council meeting will be in Germany in June 2008.

Attending the Boston meeting were IARU President Larry Price, W4RA; Vice President Tim Ellam, VE6SH/G4HUA; Secretary David Sumner, K1ZZ; regional representatives Ole Garpestad, LA2RR, Don Beattie, G3BJ, Hans Blondeel Timmerman, PB2T, Rod Stafford, W6ROD, Reinaldo Leandro, YV5AMH, Daniel Lamoureux, VE2KA, Michael Owen, VK3KI, Joong-Geun Rhee, HL1AQQ, ARRL President Joel Harrison, W5ZN, on behalf of the International Secretariat, and recording secretary Paul Rinaldo, W4RI.

==>BS7H SCARBOROUGH REEF DXPEDITION LOGS AVAILABLE ONLINE

The BS7H Scarborough Reef DXpedition team reports it logged 45,830 QSOs during its weeklong stay on the South Pacific rocks. All BS7H logs now are available online <http://www.scarboroughreef.com/srlog.html>. The DXpedition to the world's most-wanted DXCC entity, which got under way April 29 and concluded May 5, has been approved for DXCC credit. The Daily DX <http://www.dailydx.com> says if you don't find your call sign in the online log search but are confident you had a solid QSO, send a QSL card to Steve

Wheatley, KU9C, PO Box 31, Morristown, NJ 07963-0031 (or via the QSL Bureau). Attach a brief explanatory note. KU9C will search the logs to see if an error occurred, Daily DX Editor Bernie McClenny, W3UR, says. Do not e-mail KU9C. The BS7H logs have not yet been uploaded to ARRL's Logbook of the World.

As might be expected, 20 meters was the bread-and-butter band, with 21,858 contacts on CW, SSB and RTTY completed. BS7H logged just 54 contacts on 160 meters and 334 on 80 meters, since weather conditions prevented deploying a weather balloon-supported wire until the last few hours. The team netted 3548 QSOs on 40 meters, 3374 on 30 meters, 6774 on 17 meters, 6057 on 15 meters, 876 on 12 meters and 1565 on 10 meters. In all, 19,319 BS7H contacts occurred on SSB, 24,799 on CW and 322 on RTTY. Complete statistics are available on the BS7H Web page <http://www.scarboroughreef.com/srstats.html>.

The DXpedition operators worked long shifts from stations set up on tiny platforms that rose just above each of the four Scarborough Reef rocks that are exposed during high tide. Once they shut down, the BS7H DXpedition team rapidly dismantled the gear and platforms and soon were en route by ship back to Hong Kong.

Team member Mike Mraz, N6MZ, will be at Dayton Hamvention <http://www.hamvention.org> and will deliver a presentation on the BS7H DXpedition during the DX Forum Saturday afternoon. No QSL cards are expected to be available at Hamvention, however. The Daily DX reports that team member James Brooks, 9V1YC, will be producing a video on the DXpedition, available later this year.

QSL BS7H via KU9C. US stations are reminded to include 41 cents first class postage on the return envelope. To expedite your BS7H card, include separate SASEs when requesting cards from other DX stations that KU9C manages.

Scarborough Reef's status as the top most-wanted DXCC entity prompted some ops to go to extremes, such as erecting new antennas, just to work the DXpedition. The Daily DX says Frank Letton, W6JTI, "qualifies as a true-blue DXer" by going the extra mile, as it were. As things turned out, he'd already finalized plans for a three-week trip to visit his mother in San Antonio, Texas, during the period the DXpedition was to be on the air.

Undeterred, Letton shipped a transceiver, accessories and a two-element 20-meter Yagi ahead. Once there, he erected the Yagi on a 35-foot TV mast he purchased locally, and strung up a dipole beneath the beam. The Daily DX reports W6JTI snagged BS7H on both 40 and 20 CW.

According to The Daily DX, W6JTI needs four more entities: Palestine, Montenegro, Yemen and North Korea. He's worked 333 current entities while running just 100 W.

Additional photos of the DXpedition are available on the BS7H Web site <http://www.scarboroughreef.com/srphotos.html>.

==>LOSS OF AMATEUR RADIO LICENSE IS PART OF SETTLEMENT WITH FCC

An Indiana radio amateur will have to surrender his General ticket under the terms of a Settlement Agreement reached with the FCC stemming from alleged corporate and personal misdeeds. In addition, Timothy M. Doty, WB9MCD, of W Terre Haute, will have to yield his General Radiotelephone Operator License, and Commercial Radio Service (CRS) Inc, in which he's an equal partner with his brother, Gary, will have to surrender its Land Mobile Service licenses. In a Memorandum Opinion and Order (MO&O) <http://www.fcc.gov/eb/revocations/files/FCC-07M-12.pdf> in EB Docket 06-168, released April 26, the FCC said the settlement spares all parties from a lengthy legal proceeding, although according to its terms, neither the Dotys nor CRS admit to any violation of the Communications Act of 1934 or FCC rules.

"Suffice it to say, approval of the Agreement will obviate the need for a protracted hearing, thereby conserving the resources of the Commission and the private parties," the FCC said in its MO&O. "In addition, approval of the Agreement will provide for a fair and equitable resolution of this proceeding."

The agreement stipulates that neither Doty will be able to apply for or hold "any attributable interest in any Commission license or authorization" for five years. CRS and the Dotys also will make a "voluntary donation" of $10,000 to the US Treasury. If the matter had gone to hearing, CRS could have been liable for fines approaching $100,000.

In an Order to Show Cause last August, the FCC ordered Timothy Doty and CRS to show cause why their respective Commission licenses should not be revoked. The FCC cited information it had received suggesting that CRS may not have properly disclosed information about Timothy Doty's felony convictions in applications the company filed with the Commission.

In several proceedings in recent years, the FCC has considered a licensee's or applicant's character among factors it takes into account when determining whether an individual possesses the requisite qualifications to be a Commission licensee.

As the agreement recites, in 1991 Doty was convicted in federal court of a felony that involved manufacture and possession of unauthorized satellite TV descrambling devices. He received three years' probation and a $2000 fine. In 2001, Doty was found guilty in state court on a felony count of possessing a controlled substance and sentenced to 18 months incarceration with all but 30 days suspended.

"It appears, therefore, that the concerns raised by the Commission in its order designating this case for hearing will have been resolved," the FCC concluded. The Settlement Agreement is on the FCC's Web site <<http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6519409544>.

==>FCC'S TERMINATION OF PROCEEDINGS A MIXED BLESSING FOR HAM RADIO

The FCC's recent termination of two aging proceedings has some favorable and less-than-favorable implications for Amateur Radio. As part of a recent effort to clear the decks of languishing proceedings, the FCC closed out a

Notice of Inquiry and Notice of Proposed Rule Making (NOI and NPRM) in ET Docket 03-237 <http://www.arrl.org/announce/regulatory/et03-237/>, aimed at establishing an "interference temperature metric" as a model for managing interference and "to expand available unlicensed operation" in certain bands. ARRL CEO David Sumner, K1ZZ, referred to the interference temperature model as "a flawed concept" and said the May 4 termination Order <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-07-78A1.pdf> is good news. The FCC appeared to agree.

"Commenting parties generally argued that the interference temperature approach is not a workable concept and would result in increased interference in the frequency bands where it would be used," the Commission said in its termination Order. "While there was some support in the record for adopting an interference temperature approach, no parties provided information on specific technical rules that we could adopt to implement it."

The Commission further conceded that "with the passage of time" the November 2003 NOI and NPRM and the record in the proceeding "have become outdated." The termination was "without prejudice," suggesting the Commission could resurrect the concept later.

The FCC asserted four years ago that the new metric "could represent a fundamental paradigm shift" in its spectrum management approach by using a standard that takes into account "the cumulative effects of all undesired RF energy" at a given instant. It initially wanted to implement the concept in two microwave bands, suggesting that it the interference temperature limit for a band "would serve as an upper bound or 'cap' on the potential RF energy that could be introduced into the band."

When the ARRL filed comments <http://www.arrl.org/announce/regulatory/et03-237/> in the proceeding in 2004, it called the interference temperature concept "highly premature" and said it should not go forward. The ARRL contended that the FCC didn't have enough information to put such a model into place, and it should not try to take a shortcut, as it did in the broadband over power line proceeding.

In a second Order <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-07-79A1.pdf> released May 4, the FCC also terminated its inquiry, in ET Docket 03-65, into whether it should "incorporate receiver interference immunity performance specifications into spectrum policy decisions on a broad basis." Sumner commented that immunity standards for consumer electronics devices, including receivers, have long been an ARRL objective. The Commission again asserted that "the passage of time" had rendered out of date its Notice of Inquiry <http://hraunfoss.fcc.gov/edocs_public/attachmatch/FCC-03-54A6.doc> and record in the proceeding.

"Further, to the extent receiver interference immunity performance specifications are desirable, they may be addressed in proceedings that are frequency band or service specific," the Commission remarked in the Order. The FCC also left the door open to consider the issue again down the road.

In its July 2003 comments <http://www.arrl.org/announce/regulatory/et03-65/ARRL-ET-03-65-cmts.pdf> in ET Docket 03-65, the ARRL told the FCC that improved interference standards for consumer electronic devices is the most-pressing need as the Commission considers the interference immunity performance of receivers. While recommending "either mandatory receiver immunity standards or at least guidelines" in most other services, the ARRL said no receiver immunity standards are necessary or practical in the "essentially experimental" Amateur Service.

"With the current explosion of consumer electronics and unlicensed devices," the League said, "the Commission must establish interference rejection standards for unlicensed home electronic equipment and systems."

==>SOLAR UPDATE

Ra the Sun god Tad "Sunshine, Sunset" Cook, K7RA, Seattle, Washington, reports: This week saw a rise in sunspot numbers, with the average daily value up by more than 11 points to 29.3. On May 16, the daily sunspot number was 56, the highest daily reading since last December 5, when it was 59. This week's average sunspot number was the highest since the January 4-10, 2007, reporting week.

Keep in mind that a tremendous day-to-day variation in sunspot numbers is normal, so this should not be viewed as an indicator that sunspot trends have turned around, and weï¿½re already into Cycle 24. Of course, increased activity may follow; this just isn't an indicator that higher sunspot numbers are due in the very near term.

The bottom of the cycle, late last year predicted for the past couple of months, has moved out as far as a year in the most recent general consensus of the scientific community. With predictions revised so often, it would be useful to keep an eye on each week's release of the Preliminary Report of Solar and Geophysical Data <http://www.sec.noaa.gov/weekly/>.

For the near term, weï¿½ll probably see sunspot numbers higher than the recent periods when it was 0 or 12, but declining a bit, with the next probable peak around May 25-30. Unsettled to active geomagnetic conditions are forecast for the beginning of that period, and we may see some mildly unsettled activity around May 20.

Sunspot numbers for May 10 through 16 were 20, 24, 21, 18, 29, 37 and 56, with a mean of 29.3. The 10.7 cm flux was 71.2, 71.5, 71.4, 73.5, 72.9, 76.9, and 77.1, with a mean of 73.5. Estimated planetary A indices were 3, 2, 3, 3, 3, 6 and 4, with a mean of 3.4. Estimated mid-latitude A indices were 2, 2, 2, 2, 1, 4 and 3, with a mean of 2.3.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: The US Counties QSO Party (SSB), His Majesty the King of Spain Contest (CW), the EU PSK DX Contest, the Manchester Mineira All America Contest and the Baltic Contest are the May 19-20 weekend. JUST AHEAD: The Run for the Bacon QRP Contest is May 21. The RSGB 80-Meter Club Championship (CW) is May 24. The CQ World Wide WPX Contest (CW) is May 26-27 weekend. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday, June 3, for these ARRL Certification and Continuing Education (CCE) online courses beginning Friday, June 15: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008) and Radio Frequency Propagation (EC-011). These courses will also open for registration Friday, June 1, for classes beginning Friday July 20. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the CCE Department <cce@arrl.org>.

* ARRL reprising Dayton Hamvention blog: The ARRL again has a Dayton Hamvention blog <http://www.arrl.org/blog/Dayton%20and%20ARRL%20Expo>. ARRL Publications Manager and QST Editor Steve Ford, WB8IMY, says his "ramblings" for the 2007 Dayton and ARRL Expo Weblog begin where last year's ended. The 2006 blog, which remains on the site, was extremely successful, he said. "We had more than 6000 individuals reading the blog throughout the event," Ford noted. "This year's effort will be much the same, possibly with a new wrinkle or two." The League's Dayton and ARRL Expo Weblog, part of an effort to add personal touch to the Hamvention experience, will chronicle news and impressions of Dayton Hamvention and ARRL EXPO 2007. Hamvention annually attracts upward of 25,000 visitors.

* ITU okays Montenegro, Serbia call sign prefix agreement: Although it became a country -- and a DXCC entity -- in its own right last June, Montenegro has not had an Amateur Radio call sign block to call its own until this month. According to The Daily DX, the International Telecommunications Union (ITU) did not want to give Montenegro an entirely new prefix, so it required the states of Montenegro and Serbia to agree upon one or two prefixes from the five (4N, 4O, YT, YU and YZ) assigned to the former Serbia-Montenegro. An agreement was reached May 11, and the ITU now lists 4O (that's "four Oscar") as Montenegro's prefix. This means Montenegro stations may use 4O0 through 4O9, while Serbia stations will continue to use YT and YU prefixes for all call districts, 0 through 9. The ITU has taken back the former 4N and YZ prefixes for future reassignment. The ITU reportedly wants the two nations to complete the transition to new call sign blocks as soon as possible. The Daily DX Editor Bernie McClenny, W3UR, recommends that DXers update their logging software carefully to reflect the changes.

* AMSAT issues first call for Symposium papers: AMSAT has announced its first call for papers for the 2007 AMSAT Space Symposium and Annual Meeting,

October 25-28 in Pittsburgh, Pennsylvania
<http://www.amsat.org/amsat-new/symposium/2007/index.php>. The organization solicits proposals for papers, symposium presentations and poster presentations on any topic of interest to the Amateur Satellite community. An emphasis this year is an educational outreach to middle and high school students. In particular, papers are sought on students and education, the Amateur Radio on the International Space Station (ARISS) program, AO-51, Phase 3E, the Eagle project and other satellite-related topics. A one-page abstract is due by June 1. Camera-ready copy on paper or in electronic form is due by September 1 for inclusion in the symposium Proceedings. Send abstracts and papers to Daniel Schultz, N8FGV <n8fgv@amsat.org>.

* KD5PLA to succeed KD5PLB aboard ISS: NASA has announced that US astronaut Clay Anderson, KD5PLA, will succeed Suni Williams, KD5PLB, as International Space Station Expedition 15 Flight Engineer later this spring. Anderson will arrive aboard the ISS aboard the shuttle Atlantis, set to launch June 8. The same shuttle mission, STS-117, will carry Williams back to Earth after several months aboard the space outpost. NASA originally planned the astro-swap for the STS-118 shuttle mission, first set to fly in June but now targeted for an August launch. Unexpected hail damage to Atlantis' external fuel tank forced the change in plans, and NASA managers approved the revised crew rotation April 26, after determining that it would have no impact on space station operations or future shuttle mission objectives. A Massachusetts native, Williams has been in space since early December. During her ISS stay, she's set a record for spacewalks by a female astronaut, conducting four excursions for a total of 29 hours, 17 minutes. Upon her return, she will have accumulated more time in space than any other woman. She's also logged 20 Amateur Radio on the International Space Station (ARISS) school contacts so far. Anderson, a Nebraska native, is making his first spaceflight. He'll return home next October.

* QCWA, Newsline to collaborate in mentoring program: The Quarter Century Wireless Association (QCWA) <http://www.qcwa.org> and Amateur Radio Newsline (ARNewsline) <http://www.arnewsline.org> have joined forces in cosponsoring the Roy Neal, K6DUE, Amateur Radio Mentoring Program. ARNewsline launched the post-licensing educational service in 2004. It's designed to pair newcomers with veteran radio amateurs who can share their skill and experience. "Amateur Radio is a tremendously complex arena", says Newsline Executive Producer Bill Pasternak, WA6ITF. "We have hams who are truly experts in numerous fields [and] we want to take advantage of that talent pool to help educate the next generation of operators and generations to follow." The collaboration with QCWA makes thousands of veteran radio amateurs available as potential mentors -- each with at least 25 years of experience in the hobby. QCWA President John B. Johnston, W3BE, called the arrangement "a good deal for all of Amateur Radio." A retired FCC employee and Dayton Radio Amateur of the Year, Johnston says he believes that it is important to keep ham radio traditions alive. ARNewsline and the QCWA are now seeking both new radio amateurs and potential QCWA mentors -- or Elmers. E-mail <mentor@arnewsline.org> your name, call sign, address with ZIP code, telephone number and a convenient time to call.

* "Strange Antenna Challenge," special event set: Operation over Memorial Day weekend, May 26-28, by special event station K0S will highlight the 2007 Strange Antenna Challenge. Sponsors say K0S will employ out-of-the-ordinary antennas to promote Amateur Radio and making do with what might be available during an emergency. Individuals and clubs may participate as "satellite stations" by using anything but wire or pipe for a radiating element and adding "/K0S" to their call signs. Details are on the Kï¿½S, Strange Antenna Challenge Web site <http://www.n0ew.org/k0s/>. Strange antennas used in past events, dating back to 2002, have included folding chairs, paint easels, ladders, tape measures, dog kennels, fences, cots and chicken wire (photo) with a trampoline as an apparent ground plane. "More people share in the fun each year," says Erik Weaver, N0EW, a Strange Antenna Challenge founder. "I hope you give me a call this year with your very own strange antenna. Now let's play radio!"

* We stand corrected: A paragraph in the story "Ham Radio Instrumental in Pacific Maritime Rescue," in The ARRL Letter, Vol 26, No 19, contained incorrect information. It should have said: "Another report credits MMSN Net Controller Rooney Polack, 6Y5RP, in Jamaica with intercepting the Mayday and assisting via intermittent radio contacts and relays during the first few hours of the event to get information to the Coast Guard. (Polack is the Amateur Radio Emergency Coordinator for Jamaica and works closely with both emergency management and the weather service there.)

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association For Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail

delivery:
ARRL members first must register on the Members Only Web Site
<http://www.arrl.org/members/>. You'll have an opportunity during
registration to sign up for e-mail delivery of The ARRL Letter, W1AW
bulletins, and other material. To change these selections--including
delivery of The ARRL Letter--registered members should click on the "Member
Data Page" link (in the Members Only box). Click on "Modify membership
data," check or uncheck the appropriate boxes and/or change your e-mail
address if necessary. (Check "Temporarily disable all automatically sent
email" to temporarily stop all e-mail deliveries.) Then, click on "Submit
modification" to make selections effective. (NOTE: HQ staff members cannot
change your e-mail delivery address. You must do this yourself via the
Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these
sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be
posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio
Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL
cannot assist subscribers who receive The ARRL Letter via this listserver.)

Im getting my shack started and need some input on a good sturdy mobile for 2 meter. Ive looked at several alinco ones and like what I see. Also what does everyone think of the icom v82 ht? Also is a 7 amp power supply enough to run a mobile?

I'd recommend you consider a dual-bander for mobile work. There are many very rugged designs out there (my favorite is Icom 2720 or their newer 2820). The reason I recommend a dual bander is because 2M activity has dropped off a lot in many areas, while 440 is very active.

Can't comment on the V82.

For mobile work, you won't need a power supply. If you're using the rig as a base station, then a good well filtered and regulated 7 amp supply should cover you, but my experience is the supplies that small are often cheaply built. What brand/model is it?

If the radio puts out 50 watts, you will need a power supply that can supply
at least 10 amps.

I have an Icom V82, I have the UHF U82 as well and they're great radios. The only complaints I have about them are cosmetic; firstly the keypad is not backlit, so it's hard to see what buttons you're pressing in the dark, also the keypad is not arranged in the normal layout, the * 0 and # keys are to the right of the numbers not underneath as with phones and other equipment. But performance wise they're fine.

Power supplies, 7A is a little small, I'd go for at least 15A. As to mobile recommendations, I have the Icom IC2725 which is great. The front panel is removable so you can put the main body under a seat and just clip the front panel to the dash, but of course if you just want it for the shack this is less important.

I concur with the other's recommendation.

I use a Yaesu FT8800 and like the dual band (simultaneous reception and
linking) capabilities.
I could use a 440 low power ht to key the mobile and transmit at higher
power on 2 meters.

Because FM requires continuous power, I recommend that you have a power
supply capable of 15 amperes ICS if you plan to use it in your shack. If
you want to use it to power a 100 watt transceiver as well plus some
additional accessories, get a 50 amp supply, but in either
case, be certain to evaluate how much rf interference a switching supply
puts out.

50 amps is not necessary for a 100w transceiver. (Was that a typo, Ed?) I think the most I've so far ever seen recommended by a radio manufacturer for 100w is 22 amps. For example, my Astron 20A (20 amp - duh) supply powers my IC-735 just fine. I understand what you mean, though, about 2m being continuous, as opposed to CW and SSB being intermittent on transmit.

A 20 amp supply would be what I'd recommend for the 2m 50w radio in the shack.

Howard N7SO

As for power supplies, you should consider a 12-volt Absorbent Glass Mat (AGM) battery with a maintenance charger (the kind that shuts itself off when the battery is fully charged). That will give you pretty much whatever surge current you need, and if your power fails your station stays up.

AGM batteries are sealed, can be used indoors, and can be mounted in any position (e.g. on their sides or even upside down, so they claim). They are readily available (I get mine from Batteries Plus). I have a 105-amp-hour AGM battery for my motorhome, and a 33-amp-hour AGM battery for my ARES "go kit".

I'm told that the so-called "gel cell" batteries are actually AGM batteries.

I strongly agree. These are a great back-up for power failures or for field operations. I work the OKC Marathon every year, running my Yaesu FT-857D and FT-897D from Power Battery Company 91-Ampere-Hour AGM batteries given me when we got rid of our Muckin' Huge UPS at work. When they're not in use, I keep them charged, so that I can run the station during our all-too-frequent power outages. One of them will run a Yaesu FT-*97D for about 8 hours, I've found, in my typical usage pattern, which is listen-mostly.

Warning: these are HEAVY! Sulfuric acid and lead both are very dense.

The 91AH batteries weigh about 77 pounds each; you want them rigged with some sort of carrying harness if you have to move them, or use a dolly of some sort. If you're putting them on a table, shelf, or other support, it needs to be strong enough, and if they're going in a vehicle or trailer, they need to be secured so that side loads don't cause them to fall.

There are lots of sources. Your Yellow Pages will be a great help here.

Seems to be the case.

I'd agree with that. I have a thing here called a "Wizard Power Cube"
which I bought at a rally some years ago. It contains a 20AH dryfit
lead-acid sealed battery, a maintenance charger and also an input for a
solar panel so you can use it when out portable on a contest for example,
using the solar panel to get some charge into the battery. I don't recall
the make, but I think the guy selling them made them himself.

Even a very good 7A powersupply would be marginal at best. I'd
recommend 15A as a minimum.

I am working on a new television series for HGTV called Man Land. It
is
about places in the home that men carve out for themselves such as
the
shed, basement, attic or garage in order to house their passion
project - in
the case of your members, their Ham Radios.

Can you help me to get the word out to your members? I am looking for
guys who have outfitted the ultimate uber-ham radio station in their
homes to appear on our show.

Please have any interested members contact me at 8183824312 or write
me at this email address.

----> rberkeley@lmnotv.com

Thanks so much for your help.

hi

also check you local hamfests, many SLA batteries from
computer data center ups systems recent pulls.
Most of the time they are in service 3 years and then
pulled and replaced with new. these are under constant float
charge and can provide several years of service life for
ham radio use.

I don't see the Elecraft K2 anywhere in that photo. :-)

But, if some are going on TV, I might arrange a mass
purchase of Factor Suntan #4. It's an easy drive down
Highland Blvd into Hollywood for me. [Max Factor, that
is] :-)

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 20 MAY 2007

You are listening to Amateur Radio Station ZS6SRL of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is broadcast every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. This broadcast can also be heard on Echolink by connecting to ZS6FCS. To listen to a web stream go to www.sarl.org.za, click on ARMI and follow the links. This, and previous bulletins, can be downloaded from the web site of the SARL i.e. www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other news readers please change to suit).

SILENT KEYS

It is with regret that we announce passing of Hellie Claassen, ZS4GV, on the 16th of May. Our sincere condolences go to his family and friends, especially from the Sasolburg Radio Club and all his other amateur friends in the Vaal Triangle.

According to a newspaper report Ted Broome, ZS6KA, 81, and his wife Norma, ZS6KN, 83, were brutally assaulted in their house in Brakpan, apparently on Tuesday afternoon, 16th May. Norma passed away and Ted is recovering in hospital. To Ted a speedy and complete recovery and to him, his relatives and friends our deepest sympathies and strength.

(PAUSE)

In the news today:

INTECNET NEXT SUNDAY TO FEATURE A DISCUSSION ON APRS

SARL ANNOUNCES EXCITING NEW TECHNOLOGY PROJECT

THREE RADIO AMATEURS RECEIVE AWARDS FOR THEIR CONTRIBUTION TO AMATEUR RADIO, COMMUNITY SERVICE AND TECHNOLOGY

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

INTECNET NEXT SUNDAY TO FEATURE A DISCUSSION ON APRS

In next Sunday's SARL Intecnet Dick Stratford, ZS6RO, will discuss APRS and attempt to answer questions like "What is APRS? How does it work? What can I do with APRS?

Make a date to join Dick at 20:00 CAT on a repeater near you or on the web. A few days before the presentation, Dick will make a PowerPoint presentation available for download or viewing on the web a few days before the event. Visit www.sarl.org.za and click on ARMI. Clubs wishing to link their repeater to the network should send an e-mail to armi@sarl.org.za before Sunday with details of the telephone number to be connected.

SARL ANNOUNCES EXCITING NEW TECHNOLOGY PROJECT

Council has approved a project to design an HF transceiver that is suitable for use by new amateurs and that will provide a cost-effective entry point into the hobby.

The first phase of the project will be a feasibility study to determine the specifications and architecture of the transceiver and whether it could be supplied cost-effectively. If the feasibility study is promising, then the project will proceed to design, industrialize and build a prototype of the transceiver.

Initial funding for the project will be from an anonymous donation that was made by a generous SARL member specifically for this purpose.

This is not a competition, but rather a co-operative project that will harness the energy and expertise of SARL members to create a world-class design. The project will be managed by the SARL technology councillor, Andrew Roos, ZS6AA. Members wishing to contribute to and be involved in the project are requested to email him at andrew.roos@mweb.co.za.

Further details will be posted on the SARL web site shortly.

THREE RADIO AMATEURS RECEIVE AWARDS FOR THEIR CONTRIBUTION TO AMATEUR RADIO, COMMUNITY SERVICE AND TECHNOLOGY

Three radio amateurs received awards for their contribution to the promotion of Amateur Radio, Community Service and Technology at an Awards function hosted by the South African Amateur Radio Development Trust on Tuesday last week.

Dave Reece, ZS1DFR, was awarded the Siemens Radio Amateur of the Year Award (Operational) for his development activity amongst the youth. Dave spends his spare time to involve learners at Cape Maths and Science in amateur radio and has arranged tuition for interested learners to pass the radio amateur examination. He also arranges on-the-air events where learners have an opportunity to get experience in the operational side of the hobby. His other passion is to encourage Radio Amateurs to embrace new technologies and is actively promoting APRS. This system was developed by an US Radio Amateur, Bob Bruninga, for tracking and digital communications with mobile GPS equipped

stations with two-way radio. In the 10 years since its introduction, it has grown to encompass just about every aspect of Amateur Radio. Dave is also chairman of the Cape Town Amateur Radio Centre.

Hannes Coetzee, ZS6BZP, received the Siemens Radio Amateur of the Year Award (Technology) for his contribution to the promotion of new technologies and home construction of radio equipment. He was instrumental in building the prototypes of the SA AMSAT equipment that will fly on South Africa's second Satellite, SumbandilaSat. This involved building and testing two versions and integrating the design and software developed by amateur Andrew Roos, ZS6AA, into a working system. The equipment was recently fully tested by SunSpace with excellent results. The system will provide radio amateurs with a satellite communications link, a parrot repeater and an audio beacon. With the magic of space connected to this, the parrot repeater will find good use in the classroom teaching learners the importantce of speaking clearly.

The third award, the Siemens Amateur Radio Community Service Award was presented to Davy Smeda, ZR1FR, a Cape Town Radio Amateur whose passion it is to provide communication for rallies and sporting events. He was an important link during the 1985 Laingsburg disaster when Radio Amateurs set up radio channels between Laingsburg and the Cape Town emergency centre and provided disaster relief communication for several days when other channels were down. It is often said that today we have cell phones, but practice has shown that when there is a disaster the cell system gets overloaded and crashes.

EMERGENCY COMMUNICATIONS HEADS IARU ADMINISTRATIVE COUNCIL AGENDA

The Administrative Council of the International Amateur Radio Union (IARU) held its annual meeting on 14-15 May 2007 in Boston, Massachusetts, USA. The meeting was held earlier in the year than usual in order to complete the review of preparations for the International Telecommunication Union World Radio Communication Conference (WRC-07) in Geneva later this year.

IARU participation in the Global Amateur Radio Emergency Communications Conference, GAREC-07, to be held in Huntsville, Alabama, in mid-August, was discussed. The Adminstrative Council is determined to seek ways to enhance the co-ordination and promotion of the disaster response capabilities of the amateur service worldwide. A draft strategy paper was received from the IARU International Co-ordinator for Emergency Communications, Hans Zimmermann, HB9AQS/F5VKP. The Council will seek additional information from member-societies on the national regulatory position of the amateur service in preparing for and providing emergency communications, in order to identify problem areas and develop solutions.

Reports of the other IARU international co-ordinators and advisers were received. They are International Beacon Project Coordinator Peter Jennings, AB6WM/VE3SUN, Satellite Adviser Hans van de Groenendaal,

ZS6AKV, EMC Adviser Christian Verholt, OZ8CY, and Interim Monitoring System International Co-ordinator Chuck Skolaut, K0BOG. Co-ordinators and advisers were re-appointed.

Congratulations to Han, ZS6AKV, on his re-appointment.

The Council discussed many other important issues. SARL News over the next few weeks will cover the outcome of the meeting in greater detail.

ARE YOU USING FREQUENCY 439,050 MHz IN DIV 6?

The Division 6 Band Planning Group wishes to allocate this frequency for a new repeater in the Pretoria area, and needs to confirm that it is not already in use.

If you are aware of this frequency being used please would you contact Peter Hers, ZS6PHD, at 083 445 4634, or by email to zs6phd@mweb.co.za.

CLUB NEWS

ZS1HELL ACCOMPLISHMENT

The ZS1HELL team announces, with pride, that the number of QSL-cards needed to be taken into consideration for a TOP BAND certificate has been reached on the e-QSL service of the SARL web. This is proof that the electronic QSL service works well.

The ZS1HELL team, which consisted of 12 members of the Boland Amateur Club wishes to thank all stations who have already answered their QSL electronically.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will continue at very low levels. The geomagnetic field is expected to range from quiet to unsettled levels on 21 till 23 May. The expected Effective Sun Spot number for the coming week will be less than 5.

20 m and 15 m will provide best opportunities for DX. There is a possibility of 15 and 20 m openings towards India from about 06:00 and again at 14:00 CAT. 40 m may open towards Australia from 22:00. From about 14:00, there may be good 15 and 20 m openings towards Europe. Contacts to the USA are going to be very challenging. For the CW and digital enthusiasts it may also be worth monitoring 10 MHz.

Although the DX predictions may currently not be too enthusiastic, the latest predictions are that the next Solar Cycle will start in March next year. Remember that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

27 May - Intecnet; 16 June - SARL Youth day; 30 June - Closing date for updating of SA DX Survey.

SARL News depends on clubs and individuals for news items of importance and interest to radio amateurs. The one and only way to ensure that your contribution will reach the SARL News team, is to place it in www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date. It will be appreciated if you will do it in both Afrikaans and English.

The SARL also invites all listeners to listen to the program Amateur Radio Mirror International this Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. Audio is also streamed on www.zs6mrk.org and on Echolink from ZS6FCS as for this bulletin. A repeat transmission takes place on Mondays at 21:00 on 3 215 kHz. Telkom and Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

You have been listening to a news bulletin by the South African Radio League, which was compiled by Gustav, ZS6BWN.

A prosperous week to all, 73.

/EX

This is WIANEWS for week commencing MAY 20 2007

Last Monday the 14th, WIA Director Robert Broomhead appeared as a guest in the studio of Melbourne's 94.1 3WBC FM on the stations "Tech Talk Radio" progr am.

By all accounts the interview on Melbourne's Tech Talk Radio show appeared to go off quite well. Andrew commented that their streaming servers seemed to have significantly more connections than ever before !@! (well we did promote it via the WIA news broadcast)

Heres the link to the Tech Talk Radio website
http://www.techtalkradio.com.au/

Here's the direct link to listen to an MP3 file of the show.
www.techtalkradio.com.au/download.asp?file=http://www.australianpodcast.com/TTR /20-2007.mp3

Tech Talk radio can be heard at 8:00pm on 94.1 3WBC FM and streaming live to the web and available in MP3 format to download to your IPOD.

Library and Information Week

This coming week, the 21st to 27th of May is Library and Information Week, so what better time to see what your library has relating to Amateur Radio.

Some public libraries hold Amateur Radio manuals and antenna building books. University libraries are generally open to the public, and many hold both Amateur Radio and professional communications journals. For those looking for back-issues of Australian radio and electronics hobby magazines, the National Library, or your State Library, or the Northern Territory Library should be able to help.

The National Library runs a website called Libraries Australia. It allows you to search for material in over 800 Australian libraries at once. Google "librariesaustralia" as one word. It can also help you locate nearby libraries.

If your local library does not hold an item, they can generally obtain it through Inter-Library Loan. If your library is weak in the radio field, you can suggest they purchase relevant material, or you or your club could donate something.

Linking people with ideas @ your library
http://librariesaustralia.nla.gov.au

For WIA National News, this is Julian Sortland, VK2YJS.

AMATEUR RADIO - HOME OF THE GOOD GUYS

IOTA (Islands of the Air) chasers of the last 15 years will know of the enormou
s contribution that
Kadek, YC9BU has made to the program in both activating rare Indonesian islands
and acting as
qsl manager for about 26 other such operations around Indonesia.

Just last month, Kadek suffered a devastating house fire which destroyed his ho
use, shack and all
his belongings. Fortunately his family are all safe.

A number of amateurs from around the world who have benefited greatly from Kade
k's enormous
contribution to IOTA chasing feel that some "Ham Spirit" should prevail and ha
ve arranged for a
collection to be made to assist Kadek in getting back on air to something like
before.

Naturally, Kadek is very down at the moment and Amateur Radio, and in particula
r IOTA chasing,
are going to be very low on his priorities, as he tries to re-establish his you
ng family.

A web site link has been produced at www.mdxc.org/yb9bu which details the a
ppeal, has a glowing
reference from Roger, G3KMA, RSGB IOTA Manager and shows some pictures of the t
otal devastation he
has suffered.

Donations can be made directly to the website or if you wish donations will be
collected in the
Australasian region by Peter Forbes VK3QI.

All donations will be acknowledged on the website (unless anonymous) and to fac
ilitate an early
positive outcome, a cut-off date of July 1 has been set, however later donation
s will be accepted.
(Peter Forbes VK3QI prforbes@bigpond.net.au)

AROUND VK in 80 Seconds.

VK1

Mt Ginini Repeater Site

Last Sunday Steve VK2FHMC, Mark VK1HMS and Alan VK1WX installed the new
outer door. The frame and door are fabricated out of 4MM steel with
concealed fixings, padlock shields and awning.

MAY MEETING
Monday 28th
Dick Elliott VK2KDE will give us a presentation on solar panels their
installation, uses and pitfalls. The QSL cards will be available as usual
and after our guest speaker the meeting will be opened to general business.

Foundation Licence Course

This weekend we are running another foundation licence course for which we have nine candidates. In addition we will be running assessments for two candidates to upgrade to advanced level.

Events Calendar....

Remember to have a look at the EVENTS page on the CRARC Website for a listing of most activities !

VK2

Frank VK2FJL bows out, as "the KEG" rolls in.

At the recent Westlake's AGM the club noted "It was very pleasing to see a bumper turn out for this meeting. It was doubly pleasing to find the nominations for committee far exceeding the available positions.

This is the first time in many years that the club has experienced that number of members wishing to commit and become involved in the day to day management of Westlake's ARC, which augers well for the future of the club.

The successful nominees are:
President: Russell VK2KEG
Vice President: Barry VK2BZ
Secretary: Barry VK2BZ
Treasurer: Les VK2ZPA

Immediate Past President of Westlakes, Frank VK2FJL as the weekly news editor and we at WIA National News are looking forward to a long association with the new President and News Reader/Compiler.

And a BIG thank you to Frank for a job "well done".

VK4

North Queensland Amateur Radio Convention

The 2007 North Queensland Amateur Radio Convention
will be happening in twin cities of Thuringowa and Townsville from
Friday 21st to Sunday 23rd September.

If your going to find yourself in Townsville September then plan to visit!

For an electronic copy of the Venue and Events notes and a
Registration Form send a message to the TARC email address
vk4wit@wia.org.au

VK7

The next meeting of the North West Tasmanian Amateur Radio Interest Group is scheduled for Saturday 26 th. May at the normal venue of the Lions Club Facility, West Ulverstone. That date again... Saturday 26th.

That's it, so back to our "action central newsroom".

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

The Wireless Institute of Australia's Foundation Licence Manual is a full colour manual consisting of 95 pages of information for those studying, or those who would just like a reference book for Foundation Licence Operators.

The manual contains the all relevant information you will need to know to successfully complete a training course to obtain our foundation licence.

It also contains a wealth of information a Foundation Licence operator will need. Items like Band Plans, Electrical Safety information, operating procedures such as the Q code, how to contact you local radio club, the WIA and much more.

For more information on obtaining the foundation licence manual please visit wia.org.au
(Alan VK4YAR)

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Participating clubs keep this site up to date and post the latest information for all to see.

Also check the text edition of each news edition, where we do keep a secondary listing.

On the audio broadcast we will continue to give new information when it is received, but just in case you miss it one week, you can always access our text

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then encourage them to enrol in a Foundation Licence training course.

Next Foundation Licence course, and Standard / Advanced assessments .....

VICTORIA

At Bendigo classes and licence assessments are conducted by Ross Pittard VK3FCE who can be contacted via email vk3fce@internode.on.net

The Central Goldfields Amateur Radio Club, Maryborough regularly holds classes. Contact Peter Rafferty VK3CC on 5460 4387 or email majorca49@hotmail.com

QUEENSLAND

On the Gold Coast and want to talk to the world through their IRLP and
EchoLink systems? Or already licensed and wish to upgrade Foundation
to Standard? Well classes are held at the Nerang Clubhouse of the
GCARS, ring Roy VK4IG on 5539 3530 Exams can be taken at a time
to suit you.

TARC WIA Exams Information
Exam sessions are held on demand with WIA Assessors and assessment packs
available for all 3 levels of licensing.

Radio and Electronics Association of Southern Tasmania

REAST Education & Assessments

Next examination Sessions will be Tomorrow May 21 at 7pm at
the Domain clubrooms and,

Saturday May 26 there will be a Foundation Training and
examination from 9am.

Please note that the "Intro to the Standard Licence" session for
Saturday the 26th has been cancelled.

For more information or enrol please contact Reg Emmett VK7KK by
emailing regemm@ozemail.com.au or calling 0417 391 607 at least 3
days before to book a place.

Please Note: It unlikely that examination sessions will be available
in June, the next session would be late July.

And remember Foundation Licence Manuals and CD's are available for
purchase at McCann's Model World in Elizabeth St. Hobart at $20.

Intro to Standard Licence Sessions

http://reast.asn.au/events.php#Intro2StandardLicence

A quick reminder about "Intro to the Standard Licence" sessions
on a Saturday afternoons from 1:00 to 4:00pm in the Domain clubrooms.

These sessions are an introduction to the standard licences and
attempt to de-mystify the upgrading process.

The most important segment is the 2-3pm learning time where there is
white boarding and demonstrating concepts and amateur radio problems
that people bring along including running through sample exam
questions.

These sessions lead into and prepared candidates for the standard and
advanced licences in preparation for the Standard licence training
and assessment sessions that Reg VK7KK and Ian VK7QF.

See you there.

(Ken VK7DY/Reg, VK7KK)

Tune in today...Focus on Tomorrow

INTERNATIONAL NEWS

The ARRL has submitted an interference mitigation plan to the US Department
of Defence (DoD) as part of an effort to resolve reported interference from
dozens of 70 cm amateur repeaters to US military radar systems on both coasts.

Earlier this year, the US Air Force asked the FCC to order dozens of repeater
systems to either eliminate interference to its "PAVE PAWS" missile and
satellite detection and tracking radars or shut down.

"We are waiting the response of the DoD representative to the proposal and will

continue to provide information as to its status when it becomes available,"
commented ARRL Regulatory Information Specialist Dan Henderson, N1ND.

The situation affects 15 repeaters within less than 100 miles of Otis Air Force

Base on Cape Cod, Massachusetts, and more than 100 repeaters within some 140
miles of Beale Air Force Base near Sacramento, California.

PAVE PAWS facilities occupy essentially the entire 70 cm band -- one factor
that makes mitigation difficult. Feeding upward of 1800 active antenna elements
,
the broadband radar transmitters emit an average power output of more than 145
kW.

NEWS FROM ARNEWSLINE

KD5PLA TO REPLACE KD5PLB ON THE ISS

NASA has announced that astronaut Clay Anderson, KD5PLA, will succeed Suni Williams, KD5PLB, as International Space Station Expedition 15 Flight Engineer later this spring. According to NASA News, Anderson will arrive aboard the ISS aboard the shuttle Atlantis which is set to launch on 8th June. The same shuttle mission will carry Williams back to Earth.

Suni Williams has been in space since early December. During her ISS stay, she set a record for spacewalks by a female astronaut, conducting four excursions for a total of 29 hours and 17 minutes. Upon her return, she will have accumulated more time in space than any other woman. She has also logged numerous school contacts during her on-orbit stay.

SSETI-ESO LAUNCH DELAYED A YEAR

The launch date for SSeti ESEO, a European Space Agency led student satellite project intended for geostationary transfer orbit has been delayed by approximately one year. It had originally been hoped that this satellite would be a secondary payload on Ariane launch in late November of 2008 but it now seems that opportunity will not be available.

RADIO IN SPACE: EU RADIO FROM SPACE

An advanced in-car multimedia system that could use recycled television satellites coming to the end of their working lives has been unveiled in Europe.

The prototype system was developed by the European Space Agency. It is Said to offer high-quality radio, video and data. If commercialised, the system would offer the first in-car satellite radio service available to Europeans.

IRELAND: ON THE AIR CELEBRATING FLIGHT

Irelands Limerick Radio Club has been invited by the Foynes Flying Boat Museum to operate a special Amateur Radio Station. This, in conjunction with the commemorative Transatlantic Re-Enactment Flight 1937 from Newfoundland Canada to Foynes Ireland.

The special event call sign has been issued to the club to operate as EI70FOY.

The station will be on the air from the July 6th to the 8th. On the High Frequency bands operation will be on 80 through 10 meters. EI70FOY will also operate on VHF / UHF as well.

A special QSL card, commemorating the flight re-enactment will be sent to all stations worked over the three-day event. All inbound QSL cards should be sent to the
Club's QSL Manager Alan Cronin E-I-8-E-M at his callbook address
More is on-line at www.qsl.net/ei4lrc.

NEWS SOURCED TO THE RSGB NEWS SERVICE AND READ BY G4NJH GB2RS NEWS

The Queen visits NASA for space link up

Queen Elizabeth II and Prince Philip visited NASA's Goddard Space Flight Centre in Greenbelt, Maryland on Tuesday week past.

NASA astronaut Michael Foale, KB5UAC, introduced the Queen to the crew of the international space station as they orbited Earth. Her majesty was greeted by the three astronauts, Commander Fyodor Yurchikin, RN3FI and flight engineers Oleg Kotov and Suni Williams, KD5PLB, who spoke to the Queen using a live video link up.

The crew members each spoke briefly to the Queen describing life on the space station and the importance of human space flight. Later the Royal couple attended the visitor's centre and the Queen talked with students at a NASA Explorer School Workshop. Before they left, the Queen planted a commemorative dogwood tree on the grounds of the visitor's centre.

The tour of Goddard took place near the end of the Queen's visit to commemorate the 400th anniversary of the Jamestown settlement in Virginia.

International Pumping Stations on the Air

A special event is to be held on the UK August bank holiday called "Pumping Stations on the Air".

You or your club, along with your local pumping station are invited to take part in the first International Pumping Stations on the Air weekend. This will take place on Sunday 26th and Monday 7th August from 10.00 to 17.00.

The intention of the event is to set up amateur radio special event stations at as many of the pumping stations as possible throughout the whole world. The scope of your station is entirely up to you, as is the choice of pumping station.

Burton upon Trent Amateur Radio Club will be at the Claymills Pumping Station on that weekend. For more information on how to register visit the Burton upon Trent ARC Website at www.burtonarc.co.uk/pump.htm.

in two states.

CONTEST STORIES

We trust that you are making preparation for the Westlake's Cup Contest. If so
please be advised that the designer of the VK Contest Logger Programme, Mike,
VK3AVV has been doing more work improving the programme.

In the latest version the special call signs (Bonuses and Clubs) can now be en
tered
by merely listing the call as, for example VK2ATZ/C instead of having to type
VK2ATZ/Club

Don't get caught, download the latest version of VKCL and take advantage of
Mikes' hard work on our behalf. While you're at it check out the details and
rules
for the contest at westlakesarc.org.au and link to Contests.

RAC Canada Day Contest

For the first time in the history of Radio Amateurs of Canada, plans are
underway for the RAC ARES/NTS to be on the air simultaneously in every
Section of the RAC Field Organization using their respective official
RAC call sign.

This "first" will take place during the annual RAC Canada Day Contest on
July 1, 2007.

SPECIAL EVENTS, BEACON AND NET ADVICE
VK's longest continual net;
The Southern Cross DX Net has been running for 43 years, operates
7 days a week - propagation permitting - on a frequency
of 14.238.5MHz at 1215 zulu.

The seventh International Museums Weekend special event will take
place on 16th and 17th June 2007.

VK4MIK Mike reports that preparations for the International
Lighthouse and Lightship Weekend at Cooktown in August are
well advanced and all necessary approvals have been received.
The call sign VK4GHL (Grassy Hill Lighthouse, where the Cooktown

light is situated) has been granted and will be much sought after again this year.

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUPS --- ATV (Every pixel tells a story)

ATV over internet in US

On Tuesday the 8th of May, the ATV group in Rockford, IL exchanged video and audio with the group of ATV'ers based in California, all being part of the Amateur Television Network (ATN). Tuesday night is ATV Net night in the Los Angeles area at 8 PM (10 PM in Illinois). During the net, video and audio was transmitted from Don Hill, KE6BXT, who is located in Mission Viejo, CA over the Internet using a Slingbox, picked up on my computer, using the video out to give a full screen picture that was then re-broadcast over the local W9ATN ATV repeater here in Rockford, IL.

Likewise, when it was our turn to transmit, we used another Slingbox at our QTH in Rockford to transmit video received from myself (WB9MMM), John, KA9SOG, and Mikayla, KC9HVQ to the group of ATV repeaters that are all linked together. So, we were all able to see each other checking into the ATV net across the country.

Many of you have heard of IRLP, and I would like to suggest that this might be working towards ITVLP (not my term, someone else thought of it), but I need to clarify that this was all done manually where IRLP you can dial in using DTMF. Will we get there some day. I bet we will!

Will others that have ATV repeaters join in on Tuesday nights. I hope so. It was a lot of fun.

Invitation from ATN - everyone can watch and check in via keyboard:

Take a look at the email and internet editions of this broadcast for the website address to check out these ATV activities.

www.ac6rb.com

The latest issue of Amateur Television Quarterly has a good article about all the California, Nevada, and Arizona (with plans for NM) ATV repeaters that are linked and how it can be done (not using the Internet).

(Gene Harlan, WB9MMM via the HAM-ATV Mailing list via vk7news)

WW SPECIAL INTEREST GROUPS --- RADIO AMATEUR OLD-TIMERS
http://www.raotc.org.au

ARRL congratulates centenarian member:

The ARRL has extended its congratulations to League member Harvey Baalke, W9HNX, of Sheboygan, Wisconsin, who celebrated his 100th birthday March 23.

Wrote ARRL CEO David Sumner, K1ZZ, on the League's behalf:

"I seldom have the privilege of writing to an ARRL member on the occasion of their 100th birthday! Please accept belated congratulations on behalf of the Board, staff and your fellow members of the ARRL. I know you have seen many changes since you were first licensed. One thing that has not changed is the unique camaraderie among radio amateurs of different generations and cultures. Best wishes from the worldwide Amateur Radio community.
Sincere 73."

Baalke first joined the ARRL in 1936.

WW SPECIAL INTEREST GROUPS --- RESCUE RADIO

EMERGENCY FREQUENCIES REGION ONE
21.360 - 18.160 - 14.300 - 7.060 - 3.760 MHz.

Amateur Radio played a critical role May 4 and 5 in rescuing two people from a foundering sailboat that had been en route to Colombia.

Members of the Maritime Mobile Service Net (MMSN) and Intercontinental Net on 14.300 MHz were involved in getting the man and woman aboard the 35-foot

s/v Sailboat to safety after they ran into trouble some 700 nautical miles southwest of the Galapagos Islands in the South Pacific.

The couple, identified as Gunnar Hansen and Grethe Haraldsen, both Norwegian nationals and neither an amateur licensee, put out a Mayday call on the Intercon/MMSN 14.300 MHz frequency the morning of May 4 after Sailabout sustained damage to its bow -- possibly as a result of losing a forestay, which helps to keep the mast upright -- and started taking on water. Thanks to its
efficient pumps, the sailboat remained afloat.

The main concern was for the mast, which supported the antenna for the vessel's

HF radio. Fortunately, it remained standing. The conversation on the MMSN reportedly was widely monitored by others in the sailing and cruising communities. The Sailabout had only recently been equipped with an HF SSB transceiver.

Amateur Radio relays alerted the US Coast Guard at Alameda, California, to the Sailabout's predicament. At the Coast Guard's request, relayed via ham radio, Hansen set off the vessel's Emergency Position Indicating Radio Beacon (EPIRB).

Throughout the ordeal, various Amateur Radio stations were instrumental in updating the Coast Guard, which never had direct contact with Sailabout.

BB's DIARY ROOM - THE FUTURE, IN AMATEUR RADIO

Happening in twin cities of Thuringowa and Townsville.

REWIND - A LOOK BACK IN HISTORY
(Will McGhie VK6UU is WIA National Historian)

Beechworth - Busiest Telegraph Station

The following is sourced to the Border Morning Mail from a story on
the 8th of May 2007 by Brad Worrall about Beechworth being the
busiest telegraph station in the world. It is titled "Beechworth
tappers `busiest in world'"

Beechworth now lays claims to the busiest telegraph station in the world.

In the past 12 months the four-man band of morse code volunteers has
tapped out more than 3800 messages.

Leo Nette, one of the dots and dashes experts, says they are the
busiest in Australia.

"And we are pretty confident we have the southern hemisphere
covered," he said.

"So we put on the internet that we are the busiest in the world and
no one has challenged that."

Mr Nette and his fellow telegraph operators are all former telegram boys.

"It gets in your blood, any old Morse operator can tell you that," he said.

"These days it is a novelty, we have tourists by the bus load wanting
to send a telegram to friends and family."

An informal network of fellow enthusiasts around the globe make sure
the telegrams reach their destination, generally posted to the
address from the nearest telegraph station.

Mr Nette says a message for Prime Minister John Howard was one that
raised eyebrows.

"It wasn't particularly complimentary, but we never received a reply
back," he said.

Mr Nette's group is now looking to the future, in partnership with
Telstra, teaching the elderly to use SMS.

www.bordermail.com.au/news/bm/local/771867.html

(Brad Worrall, Border Mail via the vk7news)

THE FINAL FINAL

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

But he still wants to hear from YOU, and it is these calls in particular
that keep him going!!

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to
VK4XJJ

Now we usually don't give url's as they can be a pain to take down but in this
case very simple go to www.jeffswalk.com

More pictures to come and has a link to the DeafBlind Association (NSW) inc.

So where in the outback is "our Jeff"?

Saturday 12th May....Reached North Mulga Homestead.

Sunday 13th May.... heading for Mullawatana.

Monday 14th May.... Mullawatana, enjoying billy tea, very flat country, ranges
20 Km
away.

2 vehicles passed by.
Some emus,
kangaroos and rabbits.
Ground very rocky not much feed.

Wednesday 16th May....Following pipeline road to Woolatchi Bore then set up
camp just south of Mosquito Creek Bore. Walked 20 Km.

(Bill Johnson VK2FWGJ)

Hi everyone

This is 7J7ACT, Simon Bernard, an American ham operator living in Japan.

I am working as a back country guide for skiers and boarders in the mountains
here. You may have heard of the avalanche that occurred on Valentines day.
It just so happened that the 7 people who hired me as a guide that day were
ski patrol from Thredbo.

We came upon the victims of the avalanche and after alerting the police on my
hand held transceiver, worked for the next 3 hours in blizzard conditions
searching and digging out the buried and giving first aid to keep those alive
until help finally came.

I have been invited to give a speech at the seminar about the rescue and will be in VK country from May 26th to June 4th. I am looking for a local ham near Thredbo/Jindabyne who would allow me to guest operate on a weekday as the weekends will be for the seminar and other emergency training.

If you can help, please contact me at bernard@infoaomori.ne.jp

You can also find my contact info at QRZ.com or on my HP at hakkodapowder.com
Hope to hear everyone on the air. Cheers, Simon

Why not, Hans?

What's wrong with it?

btw, there are no parts from Muntz TVs in there. In fact there are
almost no old-TV parts at all. Lots of WW2 military surplus parts
(swords-into-plowshares and all that), a considerable amount of parts
removed from discarded test equipment, and a lot of hamfest finds.

I think your best bet is to just buy one of the many available CDROM versions.

Some administrations (the FCC is one) do put license data on the web in public
download sites, but I'd guess even if you can find them, each would be in
different format, and a real Chinese fire drill to try to integrate them into
one useful whole.

The Man in the Maze

1 GB2RS NEWS Sunday 20 May

The news headlines

* World war two radio intercept operators stage reunion

* School wins radio station licence

* Solar powered Scouting DXpedition

Surviving WWII radio operators who intercepted the highly secret traffic from the German Secret Service attended a reunion at Bletchley Park on April 29. Hams who attended were previously involved with Ultra, the top secret material which was deciphered at Bletchley Park and disseminated only to those who had direct responsibility for directing the war.

Mike Coleman, G1YVR, gave the group an illuminating history of Direction Finding from before WWI to the present day. Direction Finding was a vital part of the WWII operations and was directed by Major Dick Keen with assistance from G5RV, G6LL, G8LT and G6CJ working on aerial systems and distribution wideband amplifiers. A well-known D/F operator was G2BTO, who unfortunately could not attend the reunion.

Bob Painter, G3BPF, described how he was member of the party given the task of tracking down the illicit transmitters of the Stern Gang and the Voice of Israel, in 1946. This was in extremely dangerous circumstances but he survived to locate the Stern Gang, though not the Voice of Israel, which was perhaps fortunate for him.

The 1,500 hams who became Voluntary Interceptors during the war were recruited by various, sometimes bizarre, means. The RSGB was called upon to help but due to the sensitive nature of the work it could not be advertised in the T&R Bulletin! Interceptors were mostly selected via the Old Boy Network.

A Lothians high school has been awarded a licence by Ofcom, enabling it to be the first in Britain to have its own community radio station. Pupils at Queensferry High are delighted to have won a five-year public service licence for Jubilee FM, which they will run with local volunteers. They will broadcast music, news and entertainment 24 hours a day to North and South Queensferry and parts of Fife. Station director Charles Fletcher commented that they are absolutely thrilled. The plan is to launch on St Andrew's Day. The school is looking to the community radio fund, the National Lottery and other potential sources of funding. It will also be a great way of helping train young

journalists on how to run a radio station.

West Lancashire Scouts Expedition to Renland East Greenland 2007 will be taking place from the 23 July to 20 August. A party of 50 Scouts and Leaders from West Lancashire will be exploring the ice cap and mountains of Renland East Greenland. As well as mountain exploration a number of scientific and wildlife studies and experiments are being carried for various academic bodies. The Expedition will also be operating an amateur radio station for a considerable period of time. Operation will be on the 40m, 30m and 20m bands, SSB, Data and some CW, under the call sign G3WGU/OX.

One of the major issues with operation for this period of time is energy as all the power requirements will come from solar cells. Although there is almost 24hr day light at this time of year, the efficiency so far north is somewhat reduced. The expedition is therefore looking for the loan of a small number of light weight solar panels to ensure operational capability. For more information log on to www.greenland.westlancashirescouts.org.uk.

2 Hams will be helping at the National Under 23 Road Racing Championship in Waterford, Ireland, on 1 July. This year's race will have over 160 riders taking part. This major event will have amateurs and the Civil Defence to help with marshalling, and it will be filmed by RTE. This year there is an even heavier reliance on amateur communications. The Amateur Radio Emergency Network is providing the comms for traffic management and accident reporting. Additional volunteer operators who can attend the event are invited to contact event co-ordinator Richie, EI9HR by e-mail to ei9hr@yahoo.com.

Finningley Amateur Radio Society ran a successful Special Events Station on 6 and 7 May at the 2007 European Festival of the Plough. The event hosted by the Society of Ploughmen at former RAF Lindholme, to the east of Doncaster. It attracted large numbers of visitors from Europe and the UK. Finningley ARS operated HF and VHF shacks, with members operating in shifts. Well over 100 contacts were made by each shack. The HF antenna was a G5RV in an inverted V with the top at about 35 feet, mounted on one of the Club's mobile towers. The VHF antenna was also at the top of the tower.

The launch date for SSeti ESEO, a European Space Agency led student satellite project intended for geostationary transfer orbit has been delayed by approximately one year. It had originally been hoped that this satellite would be a secondary payload on Ariane launch in late November of 2008 but it now seems that opportunity will not be available.

Colchester Radio Amateurs are holding a one day Foundation Licence Assessment day on Sunday 24th June 2007. To enrol or for further information please contact Kevan, 2E0WMG, on 07766543784, or email colchesterradioamateurs@hotmail.co.uk.

A new QSL sub manager has been appointed for the G3 EAA-HZZ series of calls. The new gentleman is Mr E E Murphy, 21 Standard Street, Fenton, Stoke on Trent, ST4 4NG, telephone 07881 647434. Mr Murphy is also the sub manager for G6 three letter calls.

Now the rallies and events for the coming week [Note to newsreaders: please use your judgement on which of these to read out, based on your location and broadcast time. We are not aware of any rallies next weekend.] On Sunday 20 May the Dunstable Downs National Amateur Radio Car Boot Sale takes place from 9am at Stockwood Park, Luton, and it is signposted from M1 junction 10. On Sunday 20 May the Magnum rally takes place from 10.30 at the Magnum Leisure Centre, Harbourside, Irvine, Ayrshire KA12 8PP. Details from Helen on 07776 3895247. On Sunday 20 May the Mid-Ulster Amateur Radio Society rally takes place from 11am at the Discovery Centre in Oxford Island, Craigauon.

Now for the news of the special events Clacton Radio Club, Felixstowe and District Amateur Radio Club and Harwich Amateur Radio Interest Group have joined forces to operate the GB400AA special event station. The station will commemorate the founding of Jamestown, Virginia 400 years ago. It will operate at the Mayflower Museum on the Halfpenny Pier at Harwich where The Harwich Society on 25 May.

3 GB1HYS will be operational from Guides Camp in Scarisbrick, Lancashire, between Friday 25 May and Monday 28 May. The Southport District Scouts have taken over the camp for the weekend to celebrate the centenary together. The station will be manned by members of the Southport & District Amateur Radio Club and will be utilising whatever HF bands are available together with 2m, IRLP and possibly 70cm. They would like to hear from anyone and hope to blitz the Centenary Award, whilst giving as many Scouts as possible a taste of Amateur Radio. Many more scout groups are running special event stations over the weekend 25 to 26 May to mark the Centenary of Scouting. A list of known participants appears in page 89 of the May RadCom. And now the HF DX news compiled 425 DX News, the Ohio-Penn DX Bulletin and other sources. A group of German radio scouts will be active again as OZ1RDP from Romo Island, EU to 125, DIA NS-001, on 26 to 29 May. They plan to operate SSB and CW, and possibly PSK31 and RTTY as well, on 160-10 metres. QSL via DL9BCP. JA7HMZ, V63DX, JA7AGO, V63GO and JA7ZP, V63Z will be active on all bands and modes from Pohnpei, OC-010, Micronesia on 21 to 26 May. QSL via home calls. Celebrating the 100th anniversary of the Fenerbahce Sports Club, TA1HZ and TA2RX will operate as TC100FB from Istanbul on 1 to 31 May. QSL via TA1HZ. TA1CM will operate as TA100FB on 13 to 27 May from Tekirdag. QSL via TA1CM. Special station LZ07KM will be active on 1 to 31 May to celebrate St Kiril and Methodius' Day. QSL via LZ1PJ direct, or bureau requests can be sent to lz1pj@qsl.net. Special callsign PA25UKSMG will be aired from The Netherlands between 19 May and 3 June to celebrate the 25th anniversary of the UK Six Metre Group. Expect activity on 160-2 metres, including an entry in the CQ WW WPX CW Contest. QSL via PA7FM. Several other special call signs are expected to be used from other countries, especially during the UKSMG 6 Metre Contest during the first weekend of June. Celebrating the 750th

anniversary of Krakow's city rights is HF750C, which will be active from 14 May to 30 June. QSL via SP9BRP. Expect also a large number of local operators to use special prefix SN0 during the year. Hans, PA0HOP will be active from Bali Island, OC-022, as YB9AQW and YB9/PA0HOP between 15 May and 20 June. He will operate RTTY, BPSK31 and OLIVIA, 16 tones to 500 Hz, only. QSL via PA0HOP, this applies also to contacts made with YB9AQW during this time frame only. Special station TM1VDM will be active on 14 to 28 May to celebrate the 100th anniversary of the birth of the writer Maxence Van der Meersch in 1907. QSL via bureau to F6KTN. Now the contest news The RSGB 80m Club Championship takes place between 1900 to 2030 on 24 May on the 3.5MHz band using CW. The exchange takes the form of RST and serial number. The CQ WW WPX contest takes place between 0000 on 26 May to 2359 on 27 May on the 1.8 to 28 MHz bands using SSB. The exchange takes the form of RST and serial number.

4 The RSGB 50MHz activity takes place between 2000 to 2230 local on 22 May on the 50 MHz band, all modes. The exchange takes the form of RST, serial number and locator. Now the solar factual data for the period from 7 May to 13 May compiled by Neil Clarke, G0CAS. Only one sunspot group was visible every day. This group produced no solar flares, therefore, solar activity remained at very low throughout. Solar flux levels declined from 76 units on the 7th to 71 by the 12th. The 13th saw an increase to 74 units. The average was 73 units. The 90 day solar flux average on the 13th was 74 units, that's the same level as last week. X-ray flux levels declined from A2.3 on the 8th to below the minimum level by the 9th. The average was A1 units. Geomagnetic activity started at `unsettled' levels with an Ap index of 18 units. This was due to a recurring coronal hole. The rest of the period was very quiet and the average was Ap 7 units. The ACE spacecraft saw solar wind speeds decline from 620 kilometres per second on the 7th to 290 by the 13th. Particle densities peaked at 60 particles per cubic centimetre on the 7th but quickly declined to single figures for the remained of the period. Bz varied between minus 16 and plus 20 nanoTeslas on the 7th, during the disturbance and between minus and plus 3 nanoTeslas on the quiet days. HF MUFs were slightly below expectations for much of the week. Nevertheless, good morning openings to the Pacific occurred on 14MHz and VK6 was reported late in the afternoon. However, the main interest was the arrival of stronger and longer lasting sporadic-E on 28, 50 and 70MHz. One operator commented that, 50MHz sounded at times like 20 metres. The main focus was central and southern Europe; less came on northerly bearings. The best reported DX was ST2A, worked by a number of UK operators on 50MHz. An auroral event on the 7th reached briefly down to the south coast, but not many contacts were reported. And finally the solar forecast. This week the slightly more active side of the Sun is expected to rotate into view. However, solar activity should continue at very low levels with only a small chance of a C class solar flare taking place and increasing activity to low. Solar flux levels should increase and be around the high 70's or the low 80's towards next weekend. Geomagnetic activity is

expected to increase from midweek due to a recurring coronal hole. This disturbance should last till the weekend. MUFs during daylight hours at equal latitudes should be around 17MHz for the south and 14MHz for the north. The darkness hour lows should be about 9MHz. Paths this week to east coast of North America should have a maximum usable frequency with a 50 per cent success rate of around 18MHz. The optimum working frequency with a 90 per cent success rate of about 14MHz. The best time to try this path will be between 1500 and 2200 hours UTC. Expect sporadic-E to take place on some days with openings up to 70MHz taking place. And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 20 May Chesham and District Amateur Radio Society is attending the Dunstable Boot Sale at Stockwood Park, Luton. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Sunday 20 May the Vintage and Military Amateur Radio Society is having its annual open day at the Norfolk and Suffolk Aviation Museum, Flixton. Contact Peter Walker, 01438 871 350, g4plw@btinternet.com.

On Monday 21 May Basingstoke Amateur Radio Club is having a club Night. Contact Frank, M0AEU, by email to barc@2lo.info.

On Monday 21 May Braintree and District Amateur Radio Society is having its AGM. Contact John, M5AJB, on 01787 460 947.

On Monday 21 May Surrey Radio Contact Club is having a fix-it, advice, chin-wag and move-it-on evening. Contact Ray, G4FFY, on 020 8644 7589.

On Tuesday 22 May Horndean and District Amateur Radio Club is having a talk on 'some aspects of propagation' by Robin Bellerby, GM3ZYE. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Tuesday 22 May Stevenage and District Amateur Radio Society is operating on VHF. Contact Neil, M0ARH, on 01438 217 077.

On Wednesday 23 May Dover Radio Club is having a presentation on broadcast band short wave listening by David, G0DQI. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 23 May Fareham and District Amateur Radio Club is doing its final planning for Scout's Centenary Camp. Contact Jim, M1JJN.

On Wednesday 23 May Farnborough and District Radio Society is having a Morse night in preparation for NFD with Derek, G3HEJ. Contact Colin, M3IHS.

On Wednesday 23 May Havering and District Amateur Radio Club is having a bring, show and tell your HF radio night. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 23 May Newbury and District Amateur Radio Society is having its AGM. Contact Richard, G3ZGC, on 01635 46241, richard.jolliffe@vodafone.com.

On Wednesday 23 May Norfolk Amateur Radio Club is having an NFD briefing. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 23 May Worthing and District Amateur Radio Club is having a talk on 'some aspects of propagation' by Robin Bellerby, GM3ZYE. Contact Roy, G4GPX, on 01903 753 893.

6 On Thursday 24 May Cray Valley Radio Society is taking part in the 80m club CW championships. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Thursday 24 May Echelford Amateur Radio Society is preparing for field day. Contact John Osborne, G4GSC, on 01784 451898.

On Thursday 24 May Shefford and District Amateur Radio Society is having a mobile direction finding event. Contact David, G8UOD, on 01234 742 757.

On Friday 25 May Cambridge and District Amateur Radio Club is having a talk on simple yet powerful circuits with five or fewer transistors by Mike, G0BLP. Contact David, G8JKV.

On Friday 25 May Loughton and Epping Forest Amateur Radio Society is having a members' radio comparison night. Contact Marc, G0TOC, on 020 8502 1645, or by email to info@lefars.org.uk.

On Friday 25 May Mid-Sussex Amateur Radio Society is having its construction contest. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 25 May Radio Society Of Harrow is having a talk on amateur television in the Harrow area and the Bushey Heath Amateur Television Repeater GB3BH. Contact Chris, G4AUF, on 01895 621 310, chrisfriel@btinternet.com.

On Friday 25 May Torbay Amateur Radio Society is having an education and training evening. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Friday 25 May Wimbledon and District Amateur Radio Society is having an on the air and construction evening. Contact Jim, M0CON, on 020 8874 7456.

On Saturday 26 May Fareham and District Amateur Radio Club is operating the Scout's Centenary Camp station at Hayling Island. Contact Jim, M1JJN.

On Sunday 27 May Chelmsford Amateur Radio Society is visiting the Waters and Stanton Open Day. Contact Martyn, G1EFL, on 01245 469 008.

NEWS FOR THE SOUTH-WEST

On Monday 21 May Appledore and District Amateur Radio Club is having a talk by Dave, G3YGJ, on a homebrew HF Backpack antenna. Contact Beryl, G1SVP.

On Tuesday 22 May Flight Refuelling Amateur Radio Society is running its Intermediate training course. Contact Tony, G3PFM, on 01202 622 262.

On Wednesday 23 May South Bristol Amateur Radio Club is having its summer table top sale, hosted by G4RZY. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 23 May Thornbury and South Gloucestershire Amateur Radio Club is having a video night. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 24 May Swindon and District Amateur Radio Club is having a talk on software defined radio by Ray Goff, G4FON. Contact Mike, M5CBS, on 01793 826 465.

On Thursday 24 May Yeovil Amateur Radio Club is having a test equipment evening where members are invited to bring along a piece of equipment. Contact Derek, 01935 414 452, or by email to m0wob@tiscali.co.uk.

7 On Friday 25 May Guernsey Amateur Radio Society is having a talk on what to look for in FHFN by GU0SUP. Contact Phil, GU0SUP.

On Sunday 27 May Flight Refuelling Amateur Radio Society is having a talk on microwave EME by John, G0API. Contact Tony, G3PFM, on 01202 622 262.

NEWS FOR THE MIDLANDS

On Monday 21 May Gloucester Amateur Radio and Electronics Society is having a Mini DF hunt. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Monday 21 May Stourbridge and District Amateur Radio Society is having a talk on phone operation on shortwave bands by Bob, G4VPE. Contact John, M1EJG, on 01562 700 513.

On Tuesday 22 May Derby and District Amateur Radio Society is on the air. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 22 May Loughborough and District Amateur Radio Club is having a talk on APRS by Jim Andrews, G1HUL. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 22 May Mid-Warwickshire Amateur Radio Society is having a visit to the motor cycle museum, organised by Rod, G0FBY. Contact Bernard, M1AUK, on 01926 420 913.

On Tuesday 22 May Worcester Radio Amateurs Association is having a quiz night. Request details by email to info@wraa.co.uk.

On Tuesday 22 May Wythall Radio Club is having a visit from Stratford Upon Avon club. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Wednesday 23 May Lincoln Short-Wave Club is having a news and views evening plus a briefing for Scout Camp. Contact John, G1TSL, on 01526 323 153.

On Wednesday 23 May Telford and District Amateur Radio Society is having an amateur radio software evening where members are invited to bring their laptops and demo their favourite programs. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 24 May Salop Amateur Radio Society is having its second Fox hunt. Contact Glenda, G1YJB, on 01939 235 412.

On Friday 25 May Hucknall Rolls-Royce Amateur Radio Club is having an international quiz night. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

On Friday 25 May Lincoln Short-Wave Club is setting up its portable station at Laughterton Scout Camp. Contact John, G1TSL, on 01526 323 153.

On Saturday 26 May Telford and District Amateur Radio Society is visiting the Jodrell Bank Radio Telescope. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

8 NEWS FOR THE NORTH OF ENGLAND

On Sunday 20 May Tyne And Wear Repeater Group is having an auction at the Community Centre, Front Street, Great Lumley. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Sunday 20 May Great Lumley Amateur Radio and Electronics Society is attending the Tyne and Wear Repeater Group Auction. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Monday 21 May Macclesfield and District Radio Society is on the air and having a Club evening. Contact Tom, M1EYP, on 01625 612 916, tommyread@hotmail.com, or on the web at www.gx4mws.com.

On Monday 21 May Sheffield Amateur Radio Club is having a presentation by 2E0DRE on fitting radios into mobiles. Contact Trevor, M0TWS.

On Tuesday 22 May Chester and District Radio Society is having an outside operating night at the Yield, Kelsall, Chester. Details on the web at www.chesterdars.org.uk, info@chesterdars.org.uk.

On Tuesday 22 May Halifax and District Amateur Radio Society is having a members technical evening at Rishworth. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Tuesday 22 May Macclesfield and District Radio Society is operating its special 50th anniversary station GB5OMR from 2 to 5pm. Contact Tom, M1EYP, on 01625 612 916, tommyread@hotmail.com, or on the web at www.gx4mws.com.

On Tuesday 22 May Wakefield and District Amateur Radio Society is having a construction evening. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Wednesday 23 May Great Lumley Amateur Radio and Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Wednesday 23 May Wirral and District Amateur Radio Club is having DF practice. Contact Tom, G4BKF, on 07050 291 850.

On Thursday 24 May Grimsby Amateur Radio Society is taking part in the 80m CW club contest. Contact Brian, G4DXB, on 01472 231 383.

On Friday 25 May South Manchester Radio and Computer Club is having a talk entitled "Computers without Bill". Contact Ron, on 0161 969 3999.

On Friday 25 May Tynemouth Radio Club is having an operating and Morse night. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 26 May Hornsea Amateur Radio Club is having a boat trip on the river Humber, where they hope to operate G4EKT/MM on HF SSB and possibly G6EKT/MM on VHF and UHF FM. Contact Steve, G4GPY, on 01482 860 440, or by email to g4gpy@eddiesplace.karoo.co.uk.

On Saturday 26 May Northwest Amateur Radio Club is operating special event station GB1COS, centenary of scouting, from Bispham Hall Scout Estate between 10am and 4.30pm. Contact Ian Cooper.

On Saturday 26 May Sheffield Amateur Radio Club is having a report on National Science Week at Weston Park, Sheffield. Contact Trevor, M0TWS.

9 NEWS FOR SCOTLAND

On Tuesday 22 May Dundee Amateur Radio Club is having a club night. Contact Martin, MM0DUN, on mm0dun@dundee-amateur-radio.co.uk, or on the web at www.dundee-amateur-radio.co.uk.

On Thursday 24 May Aberdeen Amateur Radio Society is having a VHF fox hunt. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Saturday 26 and Sunday 27 May Dundee Amateur Radio Club is taking part in the Scout Centenary Celebrations. Contact Martin, MM0DUN, on mm0dun@dundee-amateur-radio.co.uk, or on the web at www.dundee-amateur-radio.co.uk.

NEWS FOR WALES

No news items have been received for Wales this week. NEWS FOR NORTHERN IRELAND

On Sunday 20 May Mid-Ulster Amateur Radio Club is operating Gi3VFW during their rally at the Discovery Centre, Oxford Island, doors open at 12.00. Contact John McCabe.

And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

In what must be a tribute to your Nordic roots, your shack is perhaps
the most sterile looking I've ever seen. Where are the backup rigs,
boatanchors, switch boxes, accessory boxes, multiple watt meters?
Where is the six foot rack full of goodies? Where is the clutter?

Dave K8MN

Where is the clutter?? Look at that stretched out coiled cord for his gold D-104!! And, gaak! The telephone handset cord has a twist in it! The black wire behind the white lamp isn't hanging straight down, and the pen is not properly aligned with the paper on the desk! What a slob!!

Irish Radio Transmitters Society
Radio News Bulletin

Sunday May 20th 2007

News from the IRTS

Ger McNamara EI4GXB has been appointed to fill the vacancy as Regional Representative for Region 4 on the retirement of Paddy Maher EI3AV. The region covers the counties Tipperary, Limerick, Clare and Kerry.
Apologies, as we ran Gers callsign incorrectly in last weeks news.

Contact details for Ger are available on the Society's web page. As we welcome Ger to the team we would like to thank Paddy for all the work he has done for society over many years and wish him a speedy return to full health.

International Museums Weekend

The International Museums Weekend takes place on the 16th and 17th of June. This amateur radio special event has grown in popularity since the first event was held in 2002.

Among past participants are The Tower of London, HMS Belfast and the US battleship New Jersey. The Howth Martello Radio Group will be participating again this year, operating from the Vintage Radio Museum in Howth. Visitors are welcome to call and operate the station over the weekend. The museum web site is www.qsl.net/ei5em/museum.html. A full list of participating museums and further information of the event is available from the organiser's web site www.ukradioamateur.co.uk/imw/.

Limerick Radio Club

Limerick Radio Club has been invited by the Foynes Flying-Boat Museum to operate a special Amateur Radio Station in conjunction with the commemorative

Transatlantic Re-Enactment Flight 1937 from Newfoundland Canada to Foynes Ireland. A special call sign has been allocated to the station EI-70-FOY. The station will be on the air from the 6th to the 8th of July 2007. On HF the station will operate from 80 to 10 metres. It will also operate on VHF / UHF using the EI70FOY call sign.

A special QSL card, commemorating the Re-Enactment Flight, will be sent to all stations worked over the three-day event. All QSL cards should be sent to the Club's QSL Manager Alan Cronin EI8EM at QTHR. Limerick Radio Club can be contacted at ei4lrc at eircom dot net or at www.qsl.net/ei4lrc.

South Eastern Amateur Radio Group

There will be no general meeting for the month of May. The next committee meeting will take place on Monday the 4th of June. All committee members are asked to attend.

Please note that all general meetings will now take place on the last Monday of each month.

Foyle and District

To commemorate the 75th anniversary of Amelia Earharts solo Atlantic flight which landed just outside of Derry having flown from Newfoundland, The Foyle and district amateur radio club will hold a live link-up with clubs in Conception Bay and Harbour Grace Newfoundland. The clubs on the Newfoundland side will be using vintage radio equipment at a local museum.

The planned frequencies are 14.220 MHz and 7.060 MHz, allowing slight variation depending on QRM. The planned times of contact are 8 to 9.30 p.m. local time on Sunday the 20th and Monday the 21st of May.

More information can be found at www.mn0aku.org.uk.

Rallies

Bangor & District Amateur Radio Society Rally will take place on Sunday the 17th of June in the Crawfordsburn Country Park, Helen's Bay, Co. Down. The Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel, Blarney, Co. Cork and the Mayo Radio Rally will be on Sunday the 18th of

November in the Belmont Hotel, Knock, Co. Mayo.

A full listing of upcoming rallys is available on www.irts.ie.

Contests

The CW field day will take place in two weeks time on the 2nd and 3rd of June and the VHF/UHF field day will take place on the weekend of the 7th and 8th of July.

The RSGB IOTA contest will be held on the 28th and 29th of July.

Ladies Mini Marathon

The 2007 Flora Ladies Mini Marathon takes place on Bank Holiday Monday the 4th of June at 3.00 pm. It starts from Fitzwilliam Square, and finishes in Stephens Green Dublin 2. Sadly this year's event will happen without the familiar voice of Donnchadh O'Shea who traditionally operated the net control station. This year's public service event will be dedicated to his memory. The co-ordinator for the event again this year will be George Adjaye who may be contacted by phone on 086 2586103 or Fax 01 4908546 or email 'george_adjayeg at dcu.ie'.

Galtee Walking Festival

There are just 3 weeks to go to the 2 days of activity in the Galtees on the Saturday and Sunday of the June Bank Holiday weekend. John Ronan EI7IG is event Coordinator and he is being assisted by John EI2JB and other members of the Tipperary Amateur radio Group. Preparations are at an advanced stage but there are still radio positions to be filled on Saturday and Sunday. Newcomers are welcome and training will be provided by AREN each morning. Please contact John EI7IG on 086 8167310 or John EI2JB at QTHR.

Comeragh Cycle Race

The national under 23 road racing championship will take place in Waterford on the 1st of July. Richie EI9HR is event Co-ordinator and he is being assisted by John EI8JA. This year's race will be on a greater scale with over 160 riders taking part. The Civil Defence have come on board this year to help with marshalling

and RTE will be filming the event. AREN will provide the communications for safe traffic management and accident reporting. There will be more radio reporting points and mobile stations than last year so more radio operators are required. Again newcomers are welcome and training will be provided on the morning of the race. This is an excellent opportunity for operators to put their radio skills to good use in a very enjoyable and rewarding way for the benefit of the Community. All operators irrespective of experience are welcome.

Please contact Richie on mobile 085-1465465 or evenings on 051-854315. You can also contact Richie by e-mail at "ei9hr at yahoo dot com".

Theory Examination

The next Theory Examination for the Experimenters Licence will be held on Thursday the 28th of June next. Places for the examination are limited and will be allocated on a "first come first served" basis. Intending candidates should forward the appropriate fee to Se"n Nolan EI7CD, 12 Little Meadow, Pottery Road Dunlaoghaire, Co. Dublin. The fee is 50 Euro or 25 Euro for full time registered students, those who are retired, are unemployed or have a disability. In addition to the exam centre at the ComReg offices in Dublin an examination will be held on the same date and with the same paper at the Community Centre, Carrigtwohill, Co. Cork.

The closing date for the examination is the 16th of June and it will be strictly adhered to. Sean's e-mail address for further enquiries is "ei7cd at gofree dot indigo dot ie".

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to "news at irts dot ie" for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday"s bulletin.

Dave,

That photo is actually a birthday present for K0CKB. She was going on
a lecture trip over her birthday, so I asked what she wanted when she
got back --- "Clean up the shack and paint it." was her answer. So I
did, and took a picture and sent it to her.

Here's a link to a more recent photo. Extra credit if you can guess
the caliber of the weapon on the table.

That's more like it!

I may offer a shack photo but it could take three days of shoveling
out.

There's not enough rifle showing for me to venture an accurate guess
as to what it is--maybe .270?

OK, that covers the W/K's.

Now for the JA, DL, VK, SM, LA, G, VU, BY, UA, F, EA, AP, SU, ZL, LZ, PY, CE, SP, YU, VR, RA, JY, 4X, 5R calls. Not to mention the GM, EI, I, LY, and YL's. Then, of course, there are the XE's and VE's nearby, and 9Y, CO, C6, TF, and OX's not far off shore. Hmmmmmmmmmmmmmmm!

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate
articles, it was decided to create the group as a moderated newsgroup.
```

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

1004. rec.radio.info Posting Guidelines

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group and to rec.answers/news.answers every month. You are now reading the second article, which explains how to submit something to rec.radio.info, and which answers some Frequently Asked Questions about the submission process. The first article is titled "Welcome to rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post the article to rec.radio.info, as you would do with any other newsgroup. The difference is that the software recognizes the special status of rec.radio.info as a moderated group, and will e-mail your article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the transparency offered by the newsreading software is probably more convenient.

If you have any questions, or wish to deal with some administrivia with the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have to read it first, give it the stamp of approval, and finally send it on to the group. We will attempt to read and decide on all submissions within 72 hours at the very least, though we will probably be able to process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet and Unix, NYC" (Panix), is directly connected to the Internet, and

articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions
rec.radio.shortwave International broadcasting on the 'HF' bands

rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org>

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

Amateur Radio Newsline(tm) Report 1553 - May 18, 2007

Amateur Radio Newsline report number 1553 with a
release date of Friday, April May 18th, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. Hamvention 2007 is
here and we have a preview. Also, the 500
Kilohertz experiment expands in Europe and a 19
year old radio amateur will head Delaware's newly
formed ham radio Communication Corps. Find out
the details on Amateur Radio Newsline(tm) report
number 1553 coming your way right now.

(Billboard Cart Here)

**

Hamvention 2007 is here and we are here too. The
doors at Dayton Ohio's Hara Arena opened on
Friday, May 18th, bringing with them a
celebration of the backbone of Amateur Radio:

--

Nies: "Our theme this year is "Local Radio Clubs,
The Heart Of Ham Radio." We are trying to
recognize that an awful lot of what goes on in
Amateur Radio happens because of the efforts of
the local clubs rather than any national, regional or statewide activity."

--

That's Jim Nies, WX8F, who is this year Dayton
Hamvention General Chairman. And in a recent
interview with the Radio amateur Information
Network, he expanded on some of the ways that the
role of clubs will be celebrated:

--

Nies: "We have a program in the Flea Market to
offer discounted spaces to clubs. We have some
banners inside recognizing the contribution that
local clubs make in terms of getting people
involved, Elmering. Just the kind of support that
local clubs do that brings members in and keep the whole thing going."

--

So what are the major changes this year? Most
appear to be in the area of forums:

--

Nies: "In terms of anything dramatically new, we
have some forums coming in. One of the things
with forums we are trying to do is to shorten
things up a little bit so we have room for more
topics. Software Defined Radio is an up and
coming technology and they're getting some
attention. They were there last year and will be again this year."

--

And will those attending see anything new in the way of radio gear?

--

Nies: "We never really know but we do believe
that several of the inside manufacturers are
going to be showing off some of their new
products this year. They never tell us. We
always ask but they tend to event to keep it
under wraps until the very last minute, but I
noticed in the latest QST that a couple of
different vendors are touting new equipment that
they are going to be showing at Hamvention, and
we are kind of excited about that."

--

And there was some good news this year about
parking. Even with all the construction at one
important lot, the parking remained:

--

Nies: "We will still have parking at the Salem
Mall, which is kind of an interesting
situation. The Salem Mall is under construction
and all of the stores except for a bank and the
Home Depot and Sears have been torn down. The
city of Trotwood is marketing it as a new kind of
a mall with the renovation. Meanwhile though,
the parking spaces are still available to us and
we will be bussing to there as we have done for the past years."

--

The Dayton Hamvention runs May 18th, 19th and
20th. Its truly a fun event but if you cannot be
there in person, you can take part vicariously

over the World Wide Web thanks to Tom Medlin, WA5KUB. Tom will be webcasting many of the Hamvention 2007 highlights. Look for the fun at http://wa5kub.com. Meantime we hope to see some of you at the Hara Arena and Hamvention 2007. (ARNewsline(tm) with audio provided by RAIN)

**

RADIO EXPERIMENTATION: 500 KHZ EXPERIMENTS EXPAND IN EUROPE

In other news, word that the German medium wave radio experiment is expanding. Since the beginning of 2005 the German telecommunication authorities have licensed a propagation study on medium wave bands. The first permit for an experimental station on 440 kHz plus/minus 100 Hz was issued to DJ2LF under the callsign DI2AG. In May 2006, DK8KW got the second license to operate under the callsign DI2BO at his home location in Peine near Hannover.

Now comes word that early in 2007 the experimental radio licenses were extended to a second frequency. Besides 440 kHz the frequency of 505.1 kHz plus or minus 100 Hz is also now being used. This frequency falls into the frequency range being used by the United States experimental radio group with the callsign WD2XSH.

And this just in. Swedish authorities have issued one license for this frequency range. (GB2RS News)

**

RESCUE RADIO: 2 RESCUED AT SEA THANKS TO AMATEUR RADIO

A long established ham radio network was instrumental in a recent rescue at sea.

It took place South-West of the Galapagos Islands starting on on Friday, May 4th. That's when Wes Mullenix, KI0A, the Texas-based net controller on Intercon intercepted a distress call from a damaged 35 foot pleasure craft called the Sail About. As KI0A did not have good a truly readable signal from the emergency request, he handed the communications over to Fletcher Henderson, KA4BPR, in Dolthan, Alabama.

It was KA4BPR obtained the pertinent information through a series of relays. He learned that there were two people on board, that they were

named Gunner and Gretta, that they were from Norway, that the boats bow was damaged and began taking on water. With this information in hand, KA4BPR then called the United States Coast Guard to report the situation.

Soon several vessels had set an intercept course to rendezvous with the Sail About which was slowly headed toward that point under motor power. During that time, members of the Intercon net kept in contact with Gunner and Gretta to assure them that help was on its way.

It took several hours, but finally the Sail About was spotted by the rescue ship S V Damarri. Soon other vessels arrived. Gunnar and Greta were rescued, transferred to M V Belnor and the Sail About was, sadly, abandoned at sea. (W4QVA)

**

MORSE: NEW SUPPORT FOR A POPULAR OLD MODE

Morse may no longer be a licensing requirement in most nations, but the mode is very much alive and well. In fact its gaining favor with more and more hams as witnessed by the large number of clubs that are springing to life dedicated to preserving that very basic mode. The latest of these is the Pro C-W Club based in Romania.

The Pro C-W Club is the brain child of Vasile Giurgiu, YO6EX. The organization is dedicated to the preservation and encouragement of the art of CW communications. There are two classes of membership and hams the world over are welcome to join.

No website yet but more information and the dues structure is available from Vasile Giurgiu, YO6EX, SIBIU-1, RO-550450, Romania. (YO6EX)

PUBLIC SERVICE: HAM RADIO AND THE MINI MARATHON

May in Indianapolis is always a busy time for
Central Indiana amateur radio operators. As
drivers prepared for the 91st running of the
Indianapolis 500 Mile Race, local runners and
amateur radio operators took to the streets of
Indianapolis to set the pace during the annual
Mini-Marathon. Jack Parker W8ISH was at the finish line and filed this
report

--

--

Nat Sound: :N9NIC net control for the Mini-Marathon."

--

Central Indiana hams hit the ground running for
the 32nd annual 500 Festival
Mini-Marathon. This year over 100 hams provided
health and welfare communications around the 13
point one mile marathon. And, that's no easy task.

Thirty-five thousand runners and walkers
crossed the downtown starting line on their trek
out to, and around the famed two and one half
mile oval at the Indianapolis Motor
Speedway. After a slow trip around the track
they headed to the finish line back downtown.

--

Nat Sound: "I need a medical transport at mile marker nine for a diabetic."

--

That much foot traffic kept the amateur radio
operators on their toes during the seven hour
event. Warm morning temperatures and high
humidity took its toll on the runners. According
Net coordinator Mike Palmer, N9FEB, hams posted
the yellow warning flag midway through the event
as runners began to fall by the wayside. Thirty
participants were taken to the hospital for
treatment. Amateur radio operators tracked each
patient and all other runners that failed to make it to the finish line.

Reporting from Indianapolis, this is Jack
Parker, W8ISH for Amateur Radio Newsline.

--

The Amateur radio net had six controllers
utilizing local repeaters and several simplex
frequencies to handle all the health and welfare

traffic. As usual the ham radio operators
finished in first place for a job well done. (W8ISH)

**

RESCUE RADIO: TEEN HAM HEADS UP DELAWARE COMMUNICATIONS CORPS

Delaware's new Communication Corps coordinator is
a 19-year-old college student and ham radio
operator. He also has more experience in
emergency communications than many radio amateurs
twice or three times his age.

The Delaware Emergency Management Agency has
chosen Justin Kates, KB3JUV, to head its newly
formed Communication Corps. Managers say that
Kates, who is a University of Delaware freshman,,
will coordinate Amateur Radio operators across
the state in the event of a terrorist attack,
natural disaster or other emergency.

Kates is believed to be the youngest person in
the nation to hold this level of responsibility
in an emergency response organization. The
Delaware Communication Corps program is funded
by a Department of Homeland Security grant.

More about Justin Kates, KB3JUV, and the role he
is playing in Delaware's emergency preparedness
is on-line at http://kb3juv.blogspot.com/2007/05/nineteen.html (eHam,
others)

**

RESCUE RADIO: CALIFORNIA CITY GETS HAM RADIO EMCOMM GRANT

San Rafael, California has received a $23,000
grant for ham radio operations to help coordinate
an emergency response during times of
disaster. San Rafael received the grant to
establish an amateur radio network that will
swing into action if phone and radio communications fail.

The Marin Independent Journal reports that three
other Bay Area organizations received funds
from California Volunteers as well. This is a
state-run organization meant to get civilians trained in emergency response.

The organizations director is Karen Baker. She
says that these grants will help assist local
communities and nonprofit organizations to better
prepare Californians for the next disaster. A
total of $1 million was handed out across the
state. No specific radio clubs or groups were

named in the California Volunteers press
release. (Marin Independent Journal On-Line)

**

RESCUE RADIO: ON-STAR ADVANCED SAFETY

General Motors has announced that its OnStar
remote vehicle monitoring technology will be
partnered with the Centers for Disease Control
and Prevention. This, to use data from vehicle
crashes to tell paramedics and doctors how badly passengers might be hurt.

On the vehicle, the OnStar sensors will measure
the severity of a crash, where the vehicle was
struck, if airbags deployed and whether the
vehicle has rolled over. Experts will then review
the crash data radioed back from OnStar's
Advanced Automatic Crash Notification technology
and notify first response authorities.

Researchers say that this data could help to save
lives by helping first responders get to people
who are more seriously injured than they seem and
then send them to the nearest trauma
center.

The partnership between OnStar and the Centers
for Disease Control and Prevention is funded by a
$250,000 grant from OnStar and the General Motors Foundation. (GM, CDC)

**

ENFORCEMENT: STATION DINGED $15000 FOR PHONE REBROADCAST

A licensed broadcaster has been dinged for $15000
by the FCC. WMGO Broadcasting Corp., Inc. which
operates WMGO A-M radio in Canton, Mississippi
received the fine for recording a telephone
conversation and later broadcasting it without
first informing the party on the phone of its
intention to do so. Amateur Radio Newsline's Bruce Tennant, K6PZW, reports:

--

According to the FCC, Luke Gordon filed a
complaint alleging that on January 6, 2005, the
station recorded a telephone conversation between
him and newsman Jerry Lousteau without notifying
him of Lousteaus' intention to do so. Gordon
further charged that the WMGO later broadcast
excerpts of the recorded telephone conversation
on January 7th, 10th, and 11th, 2005.

In its defense, the station responded that Lousteau initiated a phone call to the Gordon to interview him. WMGO claims that Lousteau was unsuccessful in contacting the Gordon so there was no need and no opportunity to inform him, in person, of the station's intentions to record and/or broadcast the conversation.

Shortly after the Commission received the stations response, Gordon provided the agency with a recording that contained a portion of the telephone conversation that was aired by WMGO. In light of this development, the FCC issued a follow-up letter to the radio station. It directed WMGO to confirm the authenticity of the content of the recording, and to identify the persons whose voices are heard on the tape. The FCC also instructed the WMGO to review its initial response and make any revisions that it believed were necessary.

In responding, WMGO confirmed the authenticity of the audio recording and identified the two speakers as Lousteau and Gordon. WMGO did not affirmatively respond to the Commission's question as to whether the station had informed the Gordon of its intention to record and/or broadcast the telephone conversation. Instead WMGO stated that because Gordon had participated in previous telephone interviews that were recorded and subsequently broadcast by the station. Therefore it could only surmise that Gordon has always been aware of the taping for broadcast.

But the FCC says that's not good enough. It says that the purpose of Section 73.1206 of its rules is to protect the legitimate expectation of privacy in connection with the broadcast use of telephone conversations. It says that when Gordon returned the phone call to WMGO that same day that the station had a legal obligation to inform him that it intended to record and rebroadcast the conversation but failed to do so. And that says the FCC warrants the imposition of a $15,000 fine which WMGO Broadcasting has been ordered to pay.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

WMGO Broadcasting was given the usual time to pay the fine or to fine an appeal. (FCC)

**

RADIO LAW: CONGRESS MAY ACT TO SAVE INTERNET BROADCASTING

A bill introduced in Congress ton Friday, April 27th, could be the savior for so-called Internet radio station. Called the Internet Radio Equality Act, the measure would nullify the new rates set by the Copyright Royalty Board which advocates say would put webcasters out of business.

The bi-partisan Internet Radio Equality Act legislation was introduced by Washington Democrat Jay Inslee and Republican representative Don Manzullo of Illinois. Its purpose is to curtail the imposition of a highly controversial March 2 decision which forces royalty payments of a .08 cents per song per listener, retroactively from 2006

Web radio advocates have condemned the Copyright Royalty Board ruling. They say that it could raise rates between 300 to 1200 per cent for webcasters and effectively ending the transmission of musical entertainment over the World-Wide-Web. The Copyright Royalty Board defends its decision stating that artists are entitled to a fair share of the profits from the music that they have created.

If passed, Internet Radio Equality Act would set new rates at 7.5 per cent of the webcaster's revenue. That's the same rate paid by satellite radio broadcasters. Alternatively, webcasters could decide to pay 33 cents per hour of sound recordings transmitted to a single user. The bill would also reset royalty rules for non-profit radio such as National Public Radio. Such government funded radio operations would be required present a report to Congress on how it should determine rates for their internet streaming media. (Published reports)

**

HAM HERITAGE: KEYS 2007 - WORKS OF ART

Keys 2007 - Amateur Radio Works of Art is the first in a multi-part series depicting some very unique Morse keys appearing in the May issue of CQ Magazine. In it, author Dave Ingram, K4TWJ, brings you some of the most beautiful C-W generating devices ever created by the mind of man. Included is an incredible Roto-Bug that uses a motor generator system to produce dots and

a paddle key crafted from an old Astatic D-104
microphone. Its true ham radio creativity at its
best and it all begins on page 44 of the May C-Q
that's on newsstands right now. (CQ)

**

NAMES IN THE NEWS: CONGRATS TO LARRY KING - 50 YEARS ON THE AIR

CNN personality Larry King is not a ham, but he
has been on the air a lot longer than most radio
amateurs have been licensed. And this year the
master interviewer celebrates his 50th anniversary as a broadcaster.

The Brooklyn, New York born King began his
broadcasting career in 1957 after changing from
his surname from Zeiger. His first job was as a
disc jockey at Miami's WAHR-AM. The next year, he
began a show originating live from a local
restaurant, where he interviewed whatever folks
as they happened by. Now age 73, King joined CNN
back in 1985 and has been interviewing the famous and not so famous ever
since.

As an aside, King and our producer Bill
Pasternak, WA6ITF, have two things in
common. Not only are they both from Bensonhurst,
Brooklyn. Both also attended Lafayette High
School though King had graduated a few years before Bill arrived.

Kings career has already spanned half a
century. We at Amateur Radio Newsline wish him
many more years of success yet to come. (Published reports)

**

BREAK 2

This is ham radio news for today's radio
amateur. From the United States of America, We
are the Amateur Radio Newsline with links to the
world from our only official website at
www.arnewsline.org and being relayed by the
volunteer services of the following radio amateur:

**

CHANGING OF THE GUARD: WRITER DAVE ROSENTHAL, N6TST, - S.K.

The changing of the guard in Amateur Radio
continues with word of the passing of longtime
Radio Netherland U-S reporter Dave Rosenthal,

N6TST. A longtime resident of Ridgecrest, California, the 58 year old Rosenthal passed away on March 16th after battling a protracted illness.

We at Newsline first met Dave through the former Radio Netherlands Media Network program producer Jonathan Marks, G8WGN. And over the years, Dave was a contributor to a few of our newscasts as well. In more recent days, N6TST, became a very prolific writer. His articles in QST Magazine drew much interest and acclaim including the ARRL Cover Plaque Award for his article, "Polar Bear Portable."

Dave Rosenthal, N6TST, is survived by his wife Donna, KF6ZVE. In lieu of flowers memorial donations in Dave's name should be sent to the Wiseman Cancer Research Foundation, 201 S Alvarado St, Suite 321, Los Angeles, California, 90057. (ARRL)

**

EMERGING TECHNOLOGY: ERROR RATES HIGHER WITH FEMALES USING VOICE RECOGNITION SOFTWARE

Science Daily reports that there is a significantly higher rate of transcription error in women compared to men when using commercial voice recognition applications.

According to a recent study ten radiology residents, five male and five female, were each trained on a commercial speech recognition application. Each was then asked to dictate a standardized set of ten radiology reports containing a total of 2,123 words.

The generated reports were then compared with the original reports and error rates were calculated. The error rate was defined as the sum of the number of word insertions and deletions divided by the total word count for a given report. The results showed error rates in the male population ranged from 0.025 to 0.139 while the error rates in the females ranged from 0.015 to 0.206. (Science Daily)

**

EMERGING TECHNOLOGY: MICROSOFT SUPPORTS ROBOT DESIGNERS

Microsoft has previewed a set of new software tools that aims to give developers a simpler way to design robots and to create and test programs that operate a wide range of machines The

group's first product is called Microsoft Robotics Studio. It is designed for hobbyists, students or commercial developers, who have had to reinvent the wheel each time they use different hardware to build a robot. While the fragmented robotics market is now in its infancy, Microsoft says that forecasts call for the industry to grow into a multibillion-dollar market in the next five to 10 years. (Technology Report)

**

WORLDBEAT - SOUTH AFRICA: CALLBOOK BY APRS

The South African Radio League reports that Dick Stratford, ZS6RO, has set-up a server on APRS which can be used to obtain callbook information from anywhere in the APRS international network.

It works this way. When querying a local South African callsign, the South African Radio League database is used. When a D-X callsign is queried via APRS, the QRZ.COM database is used in real-time. The same databases are used when querying from the packet radio network.

APRS, the acronym for Automatic Position Reporting System, was developed by Bob Bruninga, WB4APR. The system uses amateur radio to transmit position reports, weather reports, and messages between users. (SARL)

**

HAM RADIO IN SPACE: PAPERS SOUGHT FOR AMSAT SPACE SYMPOSIUM

AMSAT has put out a call for papers to be presented at its 2007 AMSAT Space Symposium and Annual Meeting slated for October 25th to the 28th in Pittsburgh, Pennsylvania. Proposals for papers, symposium presentations, and poster presentations are invited on any topic of interest to the amateur satellite program. Emphasis for this year is an educational outreach to middle and high School students with emphasis on papers dealing with several targeted topics. These include but are not limited to Students & Education, Amateur Radio on the International Space Station, satellites AO-51, Phase 3 E and Eagle along with other satellite-related topics.

A one-page abstract is required by June 1st. Camera ready copy on paper or in electronic

form will be due by September 1st for inclusion
in the printed symposium proceedings. Papers
received after this date will not be included in the printed proceedings.

Abstracts and papers should be sent to Daniel
Schultz N8FGV by e-mail to: n8fgv@amsat.org. (AMSAT)

**

WORLDBEAT - UK: TV SHOWS THE EARLY DAYS OF UK EMCOMMS

A television show about the early days of Amateur
Radio emergency communications in England was
recently broadcast on the U-K TV station Channel
4 . This, as a part of the stations ongoing '3 Minute Wonder' series.

The program was called "Preparing for the Worst"
was hosted by Pat Gowen G3IOR. It discussed one
of the first ever mobile emergency communications
operations ever in the U-K. Also in the show is
Terry Owen, G4PSH and references are made to
Rafars & Raynet of the city of Norfolk.

Preparing for the Worst can be seen on the
YouTube video service. Just take your web
browser to www.youtube.com/watch?v=vLfsr-Q3m0o (Southgate)

**

WORLDBEAT - UK: NEW UK HAM RADIO WEBSITE

A new British website at www.RadioDXer.co.uk, has
been launched. This to create an online
community for United Kingdom based amateurs and
other radio enthusiasts where they can
participate in discussion on anything to do with radio as a hobby.

Graeme Stoker, M0EUK, the man behind the new
cyberspace global village. He believes that
there are a number of similar American-based
forums, but until now nothing really with a U-K focus. (Southgate)

**

DX

DL6LAU has informed the OPDX newsletter that
DL8OBQ, DJ8NK and himself will now be active as
PJ2/homecall from the island of Curacao (July
9-16th. They plan to participate in the IARU HF Contest
(July 14-15th) as PJ2HQ, and as a Multi-Multi
entry. QSL via their home callsigns. QSL PJ2HQ via N9AG or LoTW.

IW2NEF, will be active as portable HI7 from
Bayahibe, in the Dominican Republic from June

3-9th. Activity will be limited to no more than 1 or 2 hours a day on HF, on 40-10 meters and VHF 6 meters E-skip. He will use a Yaesu FT-857D w/100 watts max power into a vertical "9M WIRE" for HF and a J pole for the 6M band. QSL via IW2NEF.

(From various DX news sources)

**

THAR FINAL ITEM: THE HILLS ARE ALIVE WITH THE SOUND OF PROTEINS

And finally this week, word that biologists have converted protein sequences into another form of communications. Classical music. This they say is an attempt to help vision-impaired scientists and boost the popularity of genomic biology.

New research published in the open access journal Genome Biology describes how researchers have found a way to present human proteins as musical notes. Doctors Rie Takahashi and Jeffrey H. Miller from the University of California, Los Angeles, USA, have so far transcribed segments of two human proteins into music. But to make their melodies more pleasing on the ear, they had first to overcome a few problems -- how to incorporate rhythm, and how to cram the 20 standard amino acids into just 13 notes.

Amino acids are the building blocks of proteins. The two researchers focused on codons which are sets of three adjacent bases that code for particular amino acids. They decided to include four different note durations with codons that appear more frequently transcribed into longer notes than those which appear less often. Individual amino acids are expressed as chords, in which similar amino acids are paired. For example, the amino acids tyrosine and phenylalanine are both assigned a G major chord, but they can be distinguished because the notes in the chord are arranged differently. This means the resulting music has a 20 note range spanning over 2 octaves, but with just 13 base notes.

The team find their music more melodic and less 'jumpy' than previous attempts, which have focused on DNA sequences and protein folding, and hence closer to the musical depth of popular compositions. They are currently piloting a computer program, written by a collaborator Frank Pettit, which uses their translation rules to

convert amino acids into music and hope it will speed up the translation of large segments of genomes. (BioMed Central via Science OnLine)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Two reminders before we go. First we have a new poll for the month of May. This one asks the question now that the Morse exam is part of ham radio history, do you plan to upgrade or remain the license class you are right now. Of coarse this is unfair to Extra class licensees because they cannot go any higher so this poll kind of leaves them out in the cold. To compensate, we added a third possible answer, but you will have to go to our website at www.arnewsline.org to see what it is.

Also, the nominating season for this years Amateur Radio Newsline Young Ham of the Year Award closes on May 30th. That's less than 2 weeks away. Any nominations received after that date will not qualify for this years award program.

The Young Ham of the Year Award is open to any radio amateur age 18 or younger residing in all 50 United States, plus Puerto Rico and all 13 Canadian Provinces can qualify. Full details and nominating forms are on our special website at www,yhoty.org. Also see the Vertex-Standard sponsored ad on page 8 of the March issue of QST Magazine.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I'm Don Wilbanks, AE5DW, saying 73 and we thank you for listening.

1006. Three phase transformer

Newsgroup: rec.radio.amateur.moderated
Date: 2007-05-23 01:21:48 UTC
From: Bob Minchin <bob.minchin@OEnewsreader.com>
Message-ID: <arl4i.544$lz3.271@newsfe5-win.ntli.net>
Source record: 4411

I have acquired a big(4kva) three phase transformer. the primary is a star configuration and the secondary a single voltage delta. it is wound on three limbs of an iron core.
I can separate each of the primary and secondary windings to give three pairs each wound on a limb of the core.
I suspect this is perfectly normal - but I've never looked at one before.
Playing (on paper) with the turns ratios, my application of voltage step up from 240 to 415 would be satisified by putting each primary in series across the mains and putting each secondary in series. each winding would get less voltage than originally designed thus not exceeding the original turns per volt.

Provided I connect each winding start to finish in the right order, is there anything to stop me using it in this way?

I've done a bit of a search on three phase transformers but not surprisingly, I've not found anything about using them for single phase applications.

I'd be grateful for any info.

regards

Bob

"why is is that I always want to use things for purposes that they were not designed for??"

I used to run a company in Tanzania that supplied HF radio kit to NGO's
Mines, Aid agencies, Safari companies,Farms, Shipping and transportation
companies. Not much of a mobile phone network away from the cities.
Also we provided a HF email service called Bushmail, similar to Sailmail
using Pactor 3 SCS modems for HF email.

HF kit that we supplied Kenwood TRC 80/TK88, Icom IC-78/IC-718, also some
kit from Codan and Motorola

So, yes there is a business market for HF comms kit in Africa.

Are you sure..? From my (admittedly limited and a long time ago)
experience, it's usually the secondary that's wired in star formation so
you can get three single phases plus a neutral for distribution from a
high voltage source (also usually 3 phase).

Can't help with the rest I',m afraid, my electrical engineering college
days are long behind me..!

Hi Ivor,

I think it must be a special.
The secondary is marked 170v delta
and the primary is 0,200,208,380,415,480 star.

I'll test my application out at low voltage first just in case i let the
smoke out!

Ivor,

In the U.S., it's common to have lighting circuits connected with Delta wiring, and the "Wye" input is consistent with a commercial mains Wye setup.

Using Delta wiring in the lighting plant saves a lot on wiring and equipment: the usual practice is to ground one "corner" of the Delta transformer, thus obviating the need for a separate ground wire as in Wye-connected circuits. In addition, an Engineer can specify "Delta breakers", which are arranged to fuse only the two "hot" legs of the Delta feed: since one leg is grounded, no breaker is required, thus saving 1/3 of the cost in equipment.

FWIW.

Bill

Source record: 4416

Gulf Coastal Software

QSLeCard

Gulf Coastal has up loaded a new freeware QSL card creation program
at the address below. QSLeCard has many options including the
following:

1. Load in a QSL card background of your choice.
2. All data fields on card can be made transparent.
3. Choose to frame card and/or QSO data fields.
4. Choose to archive QSO information.
5. Choice of several fonts, font colors, and font styles.
6. Choice of several data field background colors if not transparent.
7. Output options:
Create GIF and JPG files for emailing QSL card attachments;
Copy card to clipboard; Print the card.

Card data includes -
Call sign
Name/address
73s
Pse QSL
Pse LoTW
Email address
(above field are can be moved around card)

Contact data entries include -
(contact data can be entered thru buttons or typed directly)
Confirming QSO with
Date
Time
(or) current GMT date/time
Frequency
Mode
Power
Signal report

[Note: Gulf Coastal has an enhanced free version of this program
wherein
the card should be ably to be sent directly from the QSLeCard
program. This would eliminate the additional step of starting
an
email client and attaching the JPG to the email. Gulf
Coastal's
internet service provider does not provide pop3/smtp email, so

we have no way of testing the program (we have to use html web
based email). We need one or more volunteers with smtp email
(this is normal email service using an email client) to test
this
direct send feature and give us feedback as to it's success/
failure.
If anyone would be willing to test this enhanced version,
please
send an email to battles@hushmail.com. We will send the
enhanced
version back as an email attachment (quite large attachment +/-
1.3 mb).]

Hey Geep,

Be careful about this QSLeCard, I downloaded it and found an extra
extension.
The file is named QSLeCard.zip.exe - I send it to the virus vault.
The file size is 355.25 kb. and not 1.3 Mb like the author says.
This was at Simtel which sent me to a mirror site.

1014. May 22, 2007 ARS License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2007-05-25 11:14:07 UTC
From: N2EY@AOL.COM
Message-ID: <1180088700.591789.56750@u30g2000hsc.googlegroups.com>
Source record: 4419

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains.

Percentages may not add up to exactly
100.0% due to rounding.

These totals do not include licenses
that have expired but are in the grace
period, nor do they include club, military
and other station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses, so the numbers of those license
classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

On February 23, 2007, the last Morse Code
test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of May 1, 2007:

Novice - 22,183 (3.4%)
Technician - 287,676 (43.9%)
Technician Plus - 28,303 (4.3%)
General - 138,694 (21.2%)
Advanced - 68,166 (10.4%)
Extra - 110,047 (16.8%)

Total Tech/TechPlus - 315,979 (48.2%)

Total all classes - 655,069

As of May 14, 2007:

Novice - 22,111 (3.4%)
Technician - 287,675 (43.9%)
Technician Plus - 27,828 (4.2%)
General - 139,300 (21.3%)
Advanced - 68,036 (10.4%)
Extra - 110,231 (16.8%)

Total Tech/TechPlus - 315,503 (48.2%)

Total all classes - 655,181

As of May 22, 2007:

Novice - 22,026 (3.4%)
Technician - 287,373 (43.9%)
Technician Plus - 27,541 (4.2%)
General - 139,693 (21.3%)
Advanced - 67,922 (10.4%)
Extra - 110,314 (16.8%)

Total Tech/TechPlus - 314,914 (48.1%)

Total all classes - 654,869

Changes:

>From May 14, 2000, to February 22, 2007:

Amateur Radio Newsline(tm) Report 1554 - May 25, 2007

Now, Amateur Radio Newsline report number 1554
with a release date of Friday, May 25th, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. Two mayors say that
the Hamvention will remain in Dayton while
thousands flock to the HARA Arena for three days
of mid-West ham radio fun. Hear more on Amateur
Radio Newsline(tm) report number 1554 coming your way right now.

(Billboard Cart Here)

**
HAMVENTION 2007: TWO MAYORS SAY IT WILL STAY IN THE DAYTON AREA

The Dayton Hamvention will remain in the Dayton,
Ohio, area for a long, long time. This, if two
well respected politicians have anything to say about it.

Speaking at the awards presentation ceremony,
Dayton mayor Rhine McLin and Trotwood, Ohio,
mayor Donald McLaurin, both pledged the support
of their respective cities to keep the Hamvention
at its long time home at the Hara Arena. Mayor
McLaurin made it very clear that the annual ham
radio gathering in a very important to the region and its economy:

--

Mayor McLaurin: "-Our pledge to you all is to
work as hard as we have in the past to keep you
here in the Dayton region. We believe that it is
important for the economy. We believe it is
important for our friends who come in from around
the world. And we want you here."

--

Over the years there have been rumors that the
Hamvention was seeking to move to a new
venue. None of these have ever proven
true. Most of the more recent ones were traced
to the Chicago area, where the trail went
cold. No matter. The Hamvention and the local
political leaders have put the matter to rest

once and for all. And Mayor McLauren had these
words of welcome for all who travel to the Dayton area to attend Hamvention:
--

Mayor McLaurin: "We want you to continue to come
here and talk about this region because we will
love to continue to have you (here). And on
behalf of the City of Trotwood, my colleagues and
the City of Dayton, we welcome you here and we
want you back next year. Thank you so much."

--

So please pay no attention to what you might read
on some Internet rumor blog or hear on the
air. The real word is that the Hamvention is
keeping its home in Dayton, and it likely there to stay. (ARNewsline(tm))

**

HAMVENTION 2007: THE AWARDS CEREMONY

As we said, Mayor McLaurin's remarks regarding
keeping the Hamvention in the Dayton area came at
a banquet held to honor this years award
recipients. It took place on Saturday night, May
19th. This year saw three of the worlds best
known radio amateurs receiving accolades for
their personal contributions to Amateur
Radio. First up was Technical Achievement award
winner David Cameron, VE7LTD. Cameron is the
force behind the Internet Radio Linking Project
better known simply as IRLP. In his acceptance
speech he paid homage to the youth of the hobby:

--

Dave Cameron, VE7LTD: "One thing that really got
to me today was the Youth Forum. I at there and
one of the speakers -- actually the first speaker
whose name was Sam from Syracuse-and he talked to
me about how it was that IRLP got him into ham
radio-and that actually almost brought a tear to
my eye because looking at him at the age of 17
caused me to turn around and look at myself 14
years ago and that's exactly where I would have
been if I had my license at the time. So I was
really glad that we got to him and he had a whole
group of friends - there were about 4 or 5 hams
ranging in age from 14 to 18 that were all there
because of the IRLP and it certainly made me feel
good inside to know that my contribution..my
technical contribution to Amateur Radio albeit

targeted the people I had aimed at being the young."

--

Cameron was followed by Special Achievement Award
winner Ed Hare, W1RFI. Among other things, Hare
was honored for his role in building the case
against permitting Broadband over Powerline
communications to take root in the High Frequency
Amateur bands. Hare, who runs the ARRL lab, said
he was sharing the award with Many hams who were all a part of the B-P-L
fight:

--

Ed Hare, W1RFI: To me this recognizes the
strength of Amateur Radio. Many who helped are
just as deserving if not more so. I think of the
hams who went out every day and checked out the
BPL systems and listening. They did not have a
boss telling them 'hey-you done good' when they
went out and did it. They went out. They did
what they did and they gave of themselves for no
more than their love of Amateur Radio."

--

The love of Amateur Radio was something also
quite evident in the remarks of the 2007 Radio
Amateur of the Year, Jim Haynie, W5JBP. In his
acceptance speech, Haynie, a former president of
the American Radio Relay League, paused to relate
a story detailing the success of the ARRL's
Amateur Radio Educational and Technology program
better known as the Big Project. A big project that helped to create:

--

Jim Haynie, W5JBP: "The day that Colonel
McArthur made a contact from the space station I
sat out in the audience with the families. They
did not know who I was nor what I had to do with
it. They had no clue. But what I heard them say
was hoe excited they were that their kids were getting interested in
science.

Now I know that some of you know K1JT, Joe
Taylor, a Nobel Prize winner in Physics. If our
work at the League can inspire one Joe Taylor
every 10 years, then its been a success and I would be extremely happy."

--

All three winners received a rounds of applause
along with a special surprise from Dayton Mayor, Rhine Lin:

--

Mayor Lin: "At this time I would like to take
mayoral privileges and I would like to have the 3
honorees come up because I have Mayors
Greetings for them and then I would like to have
a picture taken with all three of these gentlemen. (audience laughter)."

--

All in all, its likely an evening that neither
Dave Cameron, VE7LTD, Ed Hare, W1RFI nor Jim
Haynie, W5JBP, will ever forget. (ARNewsline(tm))

**

HAMVENTION 2007: THE SHOW

While it will be a few weeks before the official
Hamvention attendance figures are in, nobody is complaining.

--

Carl Simonow WA6JOW/7: "I haven't been here in 5
or 6 years and its just a great as ever."

--

That's Carl Siminow, WA6JOW, who traveled all the
way from Coos Bay, Oregon to attend Hamvention
2007. Another ham who flew many miles was
Californian Dick Mc Kay, K6VGP. McKay has
attended many of the Dayton shows over the
years. He says that this year was at least as
good as 2006 and the great weather outside may
have made for less crowding indoors:

--

Dick Mc Kay, K6VGP: "Its about the same as last
year. The weather is better and there's a few
new toys. Possibly one or two less vendors but it is a good show."

--

Yes, Mother Nature smiled on Dayton this year
with three days of sunshine and comfortable
temperatures. This got many to go outside and
visit the Flea Market making for more room for
those prowling for bargains among the inside
exhibitors. Hamvention attendee Charlie
Gilliland, WA0KDC of Hiawatha, Kansas is a 35
year veteran attendee and he says that less crowding was fine with him:

--

Charlie Gilliland, WA0KDC: "I would say that it
appear to have a few less people and it is a
little less crowded than it has been because they
have spread it out a little bit. So its kind of
hard to tell but I like it a little more elbow room."

--

But the size of a crowd is really relative to
where you are at any given time. And if your
name happens to be Chip Margelli, your callsign
K7JA and you are working at the Heil Sound booth,
you get a completely different perspective:

--

Chip Margelli, K7JA: "Its actually been an
incredible weekend so far. Its now Saturday
afternoon and the crowd has been significantly
improved over recent years. We have seen a lot
of interest in new products and we have quite a
few new items coming out. But overall, there's
just been more excitement this year than I have
seen in a lot of years and I think this bodes
well for the future of Amateur Radio.

--

More on Hamvention 2007 after this. Right now
its time for you to identify your station. (ARNewsline(tm))

DAYTON HAMVENTION: NEW PRODUCTS

What about this years hot new products. Over the
next several weeks Newsline's Fred Vobbe, W8HDU,
will be highlighting a number of them. One of
the first to catch his eye was at the Vertex
Standard booth. The folks who make Yaesu brand products:

--

Fred Vobbe, W8HDU: Were here at the Yaesu booth
with Dennis. Tell us, what is the new hot
product that Yaesu has come out with this year?,

Dennis Motschenbacher, K7BV: "We have two very
interesting products and both are very
unique. Its been quite a while since we had a
good HF radio for entry level and we have
developed our FT-450 which a radio with a goal
being to be in (priced) at under $1000, weigh
under 10 pounds with 100 watts. It came out to
be a really good radio because we had the
learning curve from the FT-2000 and we were able
to drop that IF DSP into that radio. O, in a
very small package that only weighs 8 pounds,
it's a heck of a (good) receiver and its going to
be a good radio for the desktop as well as being
able to go mobile." (ARNewsline(tm))

--

HAMVENTION 2007: THE FORUMS

More product release news next week, but right
now we turn our attention to the forums. And
according to Forums Chair Ron Moorefield, W8ILC,
this may have been a record year for people who attended the sessions:

--

Ron Moorefield, W8ILC: "Last year we had about
4700 people attend the forums. I think that by
midday on Saturday we were up almost to that
point. So were are probably well above 5000."

--

One of the forums that's always packed solid is
that of the FCC. This year was no exception with
the probable reason being the man that many came
to hear -- the chief rules enforcer Riley
Hollingsworth, K-4-Zed-D-H. His message this
year seemed to be one of our all needing to
respect one another, no matter what mode we choose to operate:

--

Riley Hollingsworth, K4ZDH: To the Nets: Just
because you have been on the same frequency for
75 years that doesn't mean you own it. All
frequencies are shared. If you vary your
frequency, or even if you don't have a net one
night, the radio world isn't going to end.

To the widebanders: If you want to be a Broadcaster, apply for a broadcast license. Using extraordinarily wide bandwidth on crowded frequencies at peak operating time is rude and selfish and inconsiderate.

To the contesters: Be more courteous. You are responsible for the frequency you are operating on and realize that's true even when you operate split. All frequencies are shared.

To those who don't like contesters: Lighten up!! Contests are short lived. Use the WARC bands. Wash the car. Cut the grass.

Learn from the contesters and this applies to you Traffic net folks too learn from the contesters they pass information a lot faster and more efficiently than you do. Contesters are some of the best radio operators on planet Earth. If the contesters operated at the same pace as some of the emergency traffic nets, the contest would be over after the first few dozen signal strengths were exchanged!

To repeater owners: Just because you are coordinated doesn't mean you own the frequency. Coordination is a recommendation, not a frequency assignment. Nobody asked you to start a repeater. If you shut it down tomorrow, what would happen? People would use OTHER repeaters!

It's no different than leaving your den door open, if that's where your station happens to be. If you let people in and they misuse it, lock the door! Don't ask us to be baby-sitters: That's what control operators are for.

--

The bottom line to Hollingsworth's message: We all share one world of Amateur Radio and it is up to all of us to make it a fun place to be. (ARNewsline(tm) with Hollingsworth audio supplied by RAIN)

**

HAMVENTION 2007 - THE RAIN PROMO

There's lots more to cover in regard to Hamvention 2007, and we will have all that for you, next week. But if you cant wait to hear more with Riley Hollingsworth, all you need to do is to tune into this weeks RAIN Report. That's

because Part 1 of Riley's Hamvention presentation
is now on-line at www.therainreport.com. Or if
you prefer, you can dial it up on the phone at
area code 773-249-0720. Its definitely a talk
that all of you will want to hear. (ARNewsline(tm))

REGULATORY NEWS: ARRL SUBMITS INTERFERENCE MITIGATION PLAN

The ARRL says that it has submitted a radio
interference mitigation plan to the US Department
of Defense. This, as part of an effort to
resolve reported interference from dozens of 70
cm amateur repeaters to a pair of U-S military
radar systems on the East and West coasts.

As reported in the ARRL Letter a few weeks ago,
earlier this year, the Air Force asked the FCC to
order dozens of repeater systems to either
eliminate interference to its "PAVE PAWS" missile
and satellite detection and tracking radar
installations, or to shut them all down.

The situation affects 15 repeaters within less
than 100 miles of Otis Air Force Base on Cape
Cod, Massachusetts, and more than 100 repeaters
within some 140 miles of Beale Air Force Base near Sacramento, California.

PAVE PAWS radar occupy essentially the entire 70
cm band and is one factor that makes mitigation
difficult. Feeding upward of 1800 active antenna
elements, the broadband radar transmitters emit
an average power output of more than 145 kilowatts.

ARRL Regulatory Information Specialist Dan
Henderson, N1ND, says that the League is waiting
for a response of the Department of Defense
representative to its proposal. Henderson also
says that the ARRL will continue to provide
information as to its status when it becomes available. (ARRL)
**

ENFORCEMENT NEWS: PRETEXTING OUTLAWED

The FCC has approved new privacy rules that
require telephone customers to provide a password
before they can get account information. This, in
a move against pretexting, which is the practice
of impersonating a phone customer to gain access to his or her phone
records.

Pretexting first came to light last year when Hewlett-Packard executives were accused of hiring private detectives to investigate board members. The move by the Federal Communications Commission comes months after President Bush signed a law criminalizing pretexting and imposing prison sentences and other penalties. (FCC)

PUBLIC SERVICE: HAM RADIO AND IRELAND'S ROAD RACING CHAMPIONSHIPS

Hams will be helping at the National Under-23 Road Racing Championship. This event is scheduled to be held in Waterford, Ireland, on July 1st.

The race will feature over 160 riders taking part. Radio amateurs and Civil Defense volunteers will help with marshalling and numerous other event related duties including communications.

This year there will be an even heavier reliance on Amateur Radio networks than in the past. As a result, Ireland's Amateur Radio Emergency Network is also providing the communications for traffic management and accident reporting. (Southgate)

**

RADIO POLITICS: SM ELECTION RESULTS ANNOUNCED

Back in the U-S-An and on in the only contested ARRL Section Manager race in the spring election cycle, Sterling Eanes, AK1K, has been re-elected to a second term as ARRL New Hampshire Section Manager. Eanes received 277 votes, while challenger Russell Santos, K1TSV, polled 236 votes. Ballots were counted May 22 at ARRL Headquarters.
.
Elsewhere, John Dyer, AE5B, will be returning to the West Texas Section Manager's post he once held when he succeeds outgoing S-M Bill Lawless, W5WRL, who did not run for a new term. Dyer, who ran unopposed in the current election cycle, served as West Texas Section Manager from October 2002 through June 2005.

Several incumbent SMs faced no opposition in their bids for new terms and were declared elected. They include Bob Beaudet, W1YRC, in Rhode Island; Jim Cross, WI3N, for Maryland-DC; Dick Flanagan, K7VC, of Nevada; Charles McConnell, W6DPD, of California's San Joaquin Valley; and Mel Parkes, NM7P, representing Utah.

Terms for all successful candidates in the current election cycle begin July 1st. A re-solicitation for nominations for Section Manager in Northern New Jersey will be announced in July and August editions of QST magazine. (ARRL)

**

NAMES IN THE NEWS: CQ ANNOUNCES HALL OF FAME INDUCTEES

CQ Amateur Radio magazine has announced this year's inductees into its CQ Amateur Radio, CQ Contest and CQ DX Halls of Fame.

This year there are 15 inductees into the Amateur Radio Hall of Fame. We do not have time to list all of them, but there are several that will be easily recognizable. These include such well known hams as NASA Administrator Michael Griffin, NR3A, Swan Electronics founder Herb Johnson W6QKI, along with S-S-T-V pioneers Copthorne MacDonald, VY2CM, Don Miller W9NTP and Farrell Winder, W8ZCF.

Also being honored this year is ARRL Senior News Editor Rick Lindquist, N1RL. Maybe best known as the voice of the ARRL Audio News, Lindquist has also been responsible the past decade for keeping the amateur community updated on new developments, via the ARRL Letter and the ARRL Web news pages. The honor comes at a very special time since Rick will retire from the Headquarters staff on Friday, June 1. We at Amateur Radio Newsline wish him well along with a lot of good D-X in the days, months and years ahead.

There are three new inductees this year into the CQ DX Hall of Fame. Roger Western, G3SXW, and Nigel Cawthorne, G3TXF, were nominated together. Both are avid DXpeditioners and have activated many rare locations with their two-man, CW-only, expeditions. Also inducted was Mauro Pregliasco, I1JQJ, the co-editor of Europes 425 DX News.

The CQ Contest Hall of Fame inducts three new members this year as well. They are Fred Capossela, K6SSS, Tom Taormina, K5RC, and the late Phil Goetz, N6ZZ.

The announcement of this years lists of inductees was made public at the Dayton Hamvention on Saturday, May 19th. Check www.cq-amateur-radio.com for more. (CQ, ARNewsline(tm))

HAM HISTORY: WW2 HAM SURVIVORS MEET IN THE U-K
Surviving World War II radio operators who intercepted the highly secret traffic from the German Secret Service attended a reunion at the Bletchley Park monitoring post in the United Kingdom on April 29th. Hams who attended were previously involved with Ultra, the top secret operation which was deciphered at Bletchley Park and disseminated only to those who had direct responsibility for directing the war.Mike Coleman, G1YVR, gave the group an illuminating history of Direction Finding from before WWI to the present day. Direction Finding was a vital part of the WW II operations and was directed by Major Dick Keen with assistance from G5RV, G6LL, G8LT and G6CJ working on aerial systems and distribution wideband amplifiers. Another well-known Direction Finding operator was G2BTO, who unfortunately could not attend the reunion. The 1,500 hams who became Voluntary Interceptors during the war were recruited by various, sometimes bizarre, means. The RSGB was called upon to help but due to the sensitive nature of the work it could not be advertised. The T-hunters who came to Bletchley Park were mostly selected via the word of mouth old boys network. (GB2RS)

**
EMERGING TECHNOLOGY: AGREEMENT ON DTV CONVERTERS

In a rare alliance, the National Association of Broadcasters, the Association for Maximum Service Television and the Consumer Electronics Association have actually agreed on something. The three have filed joint comments with the National Telecommunications and Information Administration regarding the $1.5 billion federal program under which consumers will get coupons for low-cost converter boxes that will display DTV programming on their current analog sets.

The move was described as groundbreaking by members of both industries. This is particularly true since the comments include recommended receiver-performance standards for the digital-to-analog converter boxes. That is something the manufacturing community has opposed for full-fledged D-T-V sets.

Until now, broadcasters and consumer electronics manufacturers have often been at odds in regard to the total digitalization of broadcasting. But the two industries have now found common ground in the challenge of how an estimated 70 million sets will continue to receive TV when analog broadcasts cease on Feb. 17,th of 2009. That's the date that all television in the United States goes digital and analog is relegated to the scrap heap. (Technology OnLine)

HAM RADIO IN SPACE: AMSAT SYMPOSIUM SEEKS PAPERS

A first call has gone out for papers to be presented at the 2007 AMSAT Space Symposium and Annual Meeting. Its slated for October 25th to the 28th in Pittsburgh, Pennsylvania.

Proposals for papers, symposium presentations, and poster presentations are invited on any topic of interest to the amateur satellite program. An emphasis for this year is an educational outreach to middle and high School students.

AMSAT does request a one-page abstract to be submitted by June 1st. Camera ready copy on paper or in electronic form will be due by September 1st for inclusion in the printed symposium proceedings. Abstracts and papers should be sent to Daniel Schultz by e-mail to n8fgv@amsat.org. (ANS)

**

HAM RADIO IN SPACE: OSCAR 11 RECEPTION REPORTS REQUESTED!

OSCAR-11 might switch itself on between now and the 8th or 9th of June. However, due to solar eclipses the satellite is likely to switch itself off, almost immediately. Probably after less that one orbit. This brief period of activity could occur when the satellite is over any part of the world. As such AMSAT is requesting anyone hearing the bird to report its presence. Send reports via the AMSAT Bulletin Board or direct to G3CWV. (ANS)

**

WORLDBEAT - AUSTRALIA: BIG SHOW PLANNED DOWN-UNDER

While Dayton may be the big show here in America, another is getting ready foe a fall opening. The 2007 North Queensland Amateur Radio Convention will be taking place in twin cities of Thuringowa and Townsville from Friday 21st to Sunday 23rd of September. For an electronic copy of the Venue and Events notes and a Registration Form send a message to mailto:vk4wit@wia.org.au (WIA News)

**

DX

In DX, word that the West Lancashire Scouts' Expedition to Renland, East Greenland will be taking place from the 23rd July to 20th August. A party of 50 Scouts and Leaders from West Lancashire in the U-K will be exploring the ice cap and mountains of Renland. As well as mountain exploration a number of scientific and wildlife studies and experiments are being carried for various academic bodies. The Expedition will also be operating an amateur radio station for a considerable period of time. Operation will be on the 40, 30 and 20 meter bands using SSB, data and some CW, under the call sign G3WGU portable OX. QSL as directed on the air.Special station LZ07KM will be active on 1st to 31st May to celebrate Sts. Kiril and Methodius' Day. QSL via LZ1PJ direct, or bureau requests can be sent to mailto:lz1pj@qsl.net.
Lastly, HF750C, which will be active through the 30th of June. This, to celebrate the 750th anniversary of Krakow Poland's city rights. QSL via SP9BRP. Also, you can expect also a large number of local operators to use special prefix SN0 during the year.

(Above from various DX news sources)
**

THAT FINAL ITEM: MORSE A HIT A HAMVENTION 2007

And finally this week, we return to the 2007 for a story about the Morse code. Not a sad story of how hams are mourning its demise as a test element. Rather it's the good news we received from Nancy Kott, W-Zed-8-C of the FISTS Morse preservation society. She says that the code is now growing in popularity as almost never before:

--

Nancy Kott, WZ8C: "Its been wonderful! People have been coming through like crazy and I think the interest in code has absolutely skyrocketed. Its just amazing. People are seeing it as a challenge now, rather than an obstacle and we have been very busy."

ARNewsline: "So the doom-sayers were wring?"

Kott: "Absolutely."

--

Needless to say that Nancy Kott and many other Morse aficionados are rather elated with this turn of events. So, the only question left: Now that Morse is rapidly growing in popularity, what will all of the hams without radios who live only on Internet chat rooms have to argue about now? Well, I guess they will find something. They also do. (ARNewsline(tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Two reminders before we go. First about our on-line poll regarding upgrading now that Morse is no longer an issue. To take part, take your web browser to www.arnewsline.org. Scroll down and watch for the word "Polls" on the left hand side of the page. Then click on the box that is closest to your view. As soon as you cast your vote you will see the current results.

Also, this is the very last call to nominate a youngster for this years Amateur Radio Newsline Young Ham of the Year Award. The cutoff date is midnight on May 30th. That's only a few days

away. If the Award Judging Committee does not
have a nomination in hand by midnight on May 30th its to late.

By way of background, any radio amateur age 18 or
younger residing in all 50 United States, plus
Puerto Rico and all 13 Canadian Provinces can
qualify. Full details and nominating forms are
on our special website at www,yhoty.org. Also
see the Vertex-Standard sponsored ad on page 8
of the March issue of QST Magazine.

For now, with Bill Pasternak, WA6ITF, at the
editors desk, I'm Don Wilbanks, AE5DW, saying 73
and we thank you for listening.

This is a reply from Gulf Coastal Software

Simtel.net has just started using some kind of new download program
that is required
to be executed to get software from their site. I have not tested it
yet, so I don't know
what it does myself. It apparently executes a sub program that
subsequently downloads
the QSLeCard.zip. Simtel (owned by Digital River) is a reputable site
that virus scans
all software before placing them out for downloading. You shouldn't
have any problems
with software/freeware from Simtel.

Hmm. Maybe not, but any site that requires me to use an executable to download from it is rather worrying in my view. Why should this be necessary..? I have a perfectly good ftp client (which I paid good money for, incidentally), what's wrong with that..?

DXCC COUNTRY/ENTITY REPORT: According to the AR-Cluster Network for the week of Friday, 18th/May, through Friday, 25th/May there were 215 countries active. Countries available: 3A, 3B8, 3D2, 3V, 3W, 3X, 4J, 4L, 4O, 4S, 4W, 4X, 5B, 5H, 5N, 5R, 5W, 5X, 5Z, 6W, 6Y, 7X, 8P, 8R, 9A, 9H, 9J, 9K, 9L, 9M2, 9M6, 9Q, 9U, 9V, 9Y, A3, A4, A5, A6, A7, A9, AP, BV, BY, C3, C6, CE, CE9, CM, CN, CP, CT, CT3, CU, CX, D4, DL, DU, E5/n, E5/s, EA, EA6, EA8, EA9, EI, EK, EL, EP, ER, ES, ET, EU, EX, EY, F, FG, FJ, FK, FM, FO, FR, FY, G, GD, GI, GJ, GM, GU, GW, HA, HB, HB0, HC, HC8, HH, HI, HK, HL, HP, HR, HS, HV, HZ, I, IS, J2, J3, J5, J6, J7, JA, JD/o, JT, JW, JX, JY, K, KG4, KH0, KH2, KH6, KL, KP2, KP4, LA, LU, LX, LY, LZ, OA, OD, OE, OH, OH0, OK, OM, ON, OX, OY, OZ, P2, P4, PA, PJ2, PJ7, PY, PY0F, PZ, R1FJ, S5, S9, SM, SP, ST, SU, SV, SV/a, SV5, SV9, T7, T8, T9, TA, TF, TG, TI, TJ, TK, TL, TR, TT, TU, UA, UA2, UA9, UK, UN, UR, V3, V4, V6, V7, V8, VE, VK, VK9N, VP2E, VP2V, VP5, VP6, VP8, VP9, VQ9, VR, VU, XE, XU, XW, YB, YI, YL, YN, YO, YU, YV, Z2, Z3, Z7,

ZA, ZB, ZD7, ZD8, ZL, ZP, ZS

* PLEASE NOTE: The report "could" contain "Pirate/SLIM" operations or more likely a "BUSTED CALLSIGN". As always, you never know - "Work First Worry Later" (WFWL).

3B6, AGALEGA ISLANDS (DXpedition Update). Team leader, Witek, SP9MRO, announced in a press release that the Polish DXpedition to Agalega Island, which was rescheduled to take place between June 6-18th, has received the new callsign 3B6DX for their operation. The DXpedition schedule has also been announced. Here are the details:
* The main group will start the trip at Okecie airport in Warsaw on Monday morning, May 28th at 8:30 AM.
* They will be landing in Mauritius on Tuesday morning at 6:10 AM, May 29th.
* Tuesday through Friday - The team will be busy in Mauritius.
* Early Saturday morning, the team will start their trip to Agalega Islands by boat.
* They are expecting to see Agalega's land on Tuesday, June 5th
* Just after their arrival on Agalega, they will start building their antennas.
* They expect to be active from 3B6 the morning of June 6th at the latest.
* They will start to head back to Mauritius on Monday, June 18th.
* The team will have a flight on Sunday evening back to Poland.
* The DXpedition team will be back at Okecie airport in Warsaw on Monday, June 25th at 14:15.

Witek, SP9MRO, states, "We would like to thank all of you who donated to us once again. All of those who would like to support the DXpedition are kindly asked for their generosity. Postponing the expedition let us solve 90% of the problems that aroused before, but we still have more problems ahead of us. That is why all, even the littlest, donations are very important for us, and we would like to thank you for all of them!" For more details and updated, visit: http://3b6.godx.eu/

3V, TUNISIA. Alex, GM0DHZ, informs that he will be here for a 5 week holiday starting November 19th. He will be active with operators from 3V8SS. This will be a holiday-style operation with activity on 80-10 meters and possibly 160m, CW and SSB. QSL via info on QRZ.com.

4L, GEORGIA. Vaho, 4L8A, will be active during the CQWW WPX CW Contest (May 26-27th) as a Single-Op/Single-Band (20m)/High-Power entry. QSL via DJ1CW, by the Bureau or direct.

4L, GEORGIA. Mamuka , 4L2M, will be active during the CQWW WPX CW Contest (May 26-27th) as a Single-Op/Single-Band (40m)/Low-Power entry. QSL via EA7FTR.

4O, MONTENEGRO (ITU Assigns A Prefix). Montenegro became a new country (DXCC entity) last June, and has been waiting for the ITU to assign an Amateur Radio callsign block since then. The International Tele-

communications Union (ITU) did not want to give Montenegro an entirely new prefix, so it required the states of Montenegro and Serbia to agree upon one or two prefixes from the five existing prefixes (4N, 4O, YT, YU and YZ) assigned to the former Serbia-Montenegro. An agreement was reached on May 11th, and the prefix "4O" is now listed as Montenegro's prefix. Montenegro stations will be using the prefix block 4O0 through 4O9. Serbia stations will continue to use YT and YU prefixes, but the ITU has taken 4N and YZ prefixes for future reassignment. DXers are reminded to please update their logging programs.

5B, CYPRUS. Nick, G3RWF, will be active as 5B/G3RWF near Polis, June 2-30th. This will be a holiday operation, so he will operate SSB, RTTY and PSK during his spare time.

5D, MOROCCO. Operators Stefano/IK2QEI, Ahmed/CN8WK, Bacha/CN8WW and Andy/YO3JR will be active with the special callsign 5D5A during the CQ WW WPX CW Contest (March 26-27th) as a Multi-? entry. QSL via I2WIJ.

7X, ALGERIA. Look for 7X0RY to be active during the CQ WW WPX CW Contest,(May 26-27th) as Single-Op/Single-Band (80m) entry. QSL via the QRZ.com address.

9M2/9M4, WEST MALAYSIA (Special Event, Contest and IOTA Op). Tex, 9M2TO, informs OPDX that members of the Malaysian Amateur Radio Transmitter Society (MARTS) will use their special contest callsign 9M4DXX during the CQ WW WPX CW Contest (May 26-27th) as a Multi-Op/ Single-TX entry. The MARTS contest team will be active from Penang Island (AS-015). QSL via the 9M2 Bureau or direct to 9M2TO. Visit their Web page at: http://9m4dxx.marts.org.my

CQ PRESS RELEASE. The following is a NEWS RELEASE came from Richard Moseson, W2VU, Editor of CQ Amateur Radio:
EMBARGOED FOR RELEASE: Saturday, May 19, 2007
CQ Announces Hall of Fame Inductees for 2007 (Dayton, Ohio - May 19, 2007) - CQ Amateur Radio magazine today announced this year's inductees into the CQ Amateur Radio Hall of Fame and the CQ Contest and DX Halls of Fame. There are 15 inductees into the Amateur Radio Hall of Fame and three new members each of the DX Hall of Fame and the Contest Hall of Fame.

CQ Amateur Radio Hall of Fame
The CQ Amateur Radio Hall of Fame honors individuals who: 1) Whether licensed hams or not, who have made significant contributions to amateur radio; and/or 2) As licensed amateurs, have made significant contributions either to amateur radio, to their professional careers or to some other aspect of life on our planet. This year's inductees are, in alphabetical order:

Catona, Phillip W2JAV (SK) - RTTY pioneer, inventor of the modern-day terminal unit
Flaherty, Paul N9FZX (SK) - co-inventor of Alta Vista search engine
Geloso, John I1JGM, Italian amateur radio manufacturer

Griffin, Michael, NR3A - NASA Administrator
Hillier, James ex-VE3SH (SK) - co-inventor of scanning electron microscope; former head of RCA Labs
Johnson, Herb W6KQI (ex-W7GRA) - Founder of Swan Electronics
Lewallen, Roy W7EL - Developer of EZ-NEC antenna modeling software
Lindquist, Rick N1RL - As ARRL Senior News Editor, he has been responsible for the past decade for keeping the amateur community updated on new developments, via the ARRL Letter and the ARRLWeb news pages.
MacDonald, Copthorne VY2CM - Developer of slow-scan TV (SSTV), author, philosopher
McArthur, Bill KC5ACR - Astronaut who set various ham radio operating records from the International Space Station, including being the first person to complete WAS (Worked All States), WAC (Worked All Continents) and DXCC (DX Century Club) from orbit.
Miller, Don W9NTP - SSTV pioneer; developed (with KB9VAK) first high-definition digital SSTV protocol and program.
Tristao, Louis KG6VY (SK) - Inventor of crank-up tower
Tucker, Durward J., W5VU (SK) - Helped promote and popularize RTTY in the 1950s; oilman and Managing Director of WRR Radio, Dallas
Weiss, Adrian (Ade) W0RSP (ex-K8EEG) - leading proponent and promoter of QRP (low-power communications) in the 1970s and 80s
Winder, Farrell, W8ZCF - Transmitted first SSTV signals to MIR space station. Active with MAREX (MIR Amateur Radio EXperiment) and Suitsat-1 planning teams

CQ DX Hall of Fame
There are three new inductees this year into the CQ DX Hall of Fame:

Roger Western, G3SXW, and Nigel Cawthorne, G3TXF, were nominated together. Roger and Nigel are avid DXpeditioners and have activated many rare locations with their two-man, CW-only, expeditions. To date, Nigel has operated from 44 DX locations, while Roger has been on the air from 37. Nigel owns what may be the world's largest collection of QSL cards. In fact, he recently completed an addition to his home solely to house his QSL collection! In addition to his trips with Nigel, Roger is a founding member of the "Voodudes" contest DXpedition group, a member of the CQ Contest Hall of Fame, and an international adviser to the CQ World Wide DX Contest Committee. He has also authored two books, Up Two: Adventures of a DXpeditioner and Contesting in Africa: Multi-Multi on the Equator.

Mauro Pregliasco, I1JQJ, is co-editor (with his wife, Valeria, IK1ADH) of 425 DX News, the leading DX bulletin in Europe and one of the most popular in the world. The newsletter is published online in both Italian and English, with some 15,000 subscribers to the English version alone. Mauro is also a very active DXer, holding most of the

major DX awards, sits on the Radio Society of Great Britain's IOTA committee, and is Vice Secretary General and HF Award Manager for ARI, the Italian national amateur radio association.

CQ Contest Hall of Fame
The CQ Contest Hall of Fame inducts three new members this year as well:

Fred Capossela, K6SSS, is a past CQ World Wide DX Contest Director and, for the past 40 years, has maintained and annually updated the CQWW All-Time Records List. It was under Fred's direction that the CQWW became the world's most popular and most professionally-run amateur radio contest. The first contester to run the contest, Fred introduced the rigorous verification standards for contacts and multipliers, developed the All-Time Records List, set the current contest dates and introduced the Band-by-Band top scorers' matrix. It was Fred's dedication to running the contest in a fair, honest and professional manner that laid the foundation for the CQWW's current stature.

Phil Goetz, N6ZZ (SK), has the distinction of having operated the CQWW DX Contest from each of the world's 40 CQ zones - one of only two amateurs ever to accomplish this feat (Dick Norton, N6AA, is the other) - and missed operating in the CQWW only three times in the 47 years between 1960 and 2006. Phil was a member of the first ARRL Contest Advisory Committee and served three separate times on the CQWW Contest Committee. In addition, he was a judge at every World Radio Teamsport Championship (WRTC) event, except in 2002, when he was a contestant. Phil became a Silent Key earlier this year.

Tom Taormina, K5RC, has been contesting since 1959, when he entered the ARRL Sweepstakes and made a whopping 35 contacts. His scores improved dramatically since then, and he has held several records and won several national and divisional championships. He has also mentored a string of world-class contesters, who have themselves gone on to record-setting performances. Tom helped develop the Multi-Two category in the ARRL DX contests and helped create the North American QSO Party. He is also a past member of the CQ WW Contest Committee and a past Editor of the National Contest Journal. Tom is also active in DXing and public service communications.

DD4, GERMANY. Zik, VE3ZIK, a member of the "Contestgroup IONOSQUEEZERS" (OV Bonn) will be active as DD4B during the CQ WW WPX CW Contest (May 26-27th) as a Single-Op/Single-Band (possibly 20 or 15m) entry. QSL via DL3PS, by the DARC QSL bureau.

EA8, CANARY ISLANDS. Franky, ON7RU, will be active from the Gran Canaria (AF-004) as EA8/OQ7R, June 4-13th. Activity will be on all bands 80-10 meters, CW, SSB and RTTY. He will use a FT990 and wire antennas. QSL via ON7RU, by the bureau or direct. ADDED NOTE: Frank states that QSL cards from last year's SV8/OT0A operation are being processed.

ER0, MOLDOVA. Look for Serge, UR5FEO, to be active as ER0FEO during the CQ WW WPX CW Contest (May 26-27th) as a Single-Op/All-Band entry. QSL via UU0JM.

FO/C, CLIPPERTON ISLANDS. It was announced at the Dayton DX Dinner Banquet by Pete, N0FW, that a team lead by Bob Grimmick, N6OX, would be going to Clipperton Island sometime in early March 2008. More details will be forthcoming via John Kennon, N7CQQ.

G, ENGLAND (Possibly France). Jim, KR1S, will be in the UK for a few weeks, starting possibly this week. He hopes to do some portable QRP operating from Windermere and London, as well as Amsterdam and Paris.

HH, HAITI. Yannick, F6FYD, is now here on business for one year. He has received the callsign HH2FYD and hopes to be active during his free time. QSL via F6FYD.

HZ, SAUDI ARABIA. Thomas, PY2ZXU/SM0CXU, will be active as HZ1EX from HZ1GW East of Medina during the CQ WW WPX CW Contest (May 26-27th) as Single-Op/All-Band entry (80m not allowed!). QSL via SM0BYD.

IOTA NEWS.....
EU-001. Alex, GM0DHZ, will be active as SV5/GM0DHZ from KOS Island for 2 weeks starting June 7th. Activity will be on CW and SSB. This will be a holiday style operation.

EU-060. Members of the White Tower DX team will be active from Skyros Island between June 12-22nd. Operators mentioned are: SV0XAW, SV2FPU (WTDX Team Leader), SV2HNZ, SV2HOB, SV2HPP, SV2HPY, SV2HRT, SV2HSV and SV2GNQ. The DXpedition team will be using the special callsign SY8WT. Activity will be on 160-6 meters on CW, SSB, RTTY and PSK31. QSL via SV2HPP. For more details on this DXpedition, visit the White Tower DX Team Web page at: http://www.whitetowerdxt.com

EU-061. Operators Udo/DL1DWR, Lutz/DG4VX and Olaf/DG0CH will be active as LA/homecall from Tromoy Island between now and May 29th. Activity will be on 160-2 meters, mostly the digital modes, also CW, SSB and FM. QSL via their home callsigns.

EU-067. Operators Theodoros/SV1EJD, Manu/IZ8IYL and Ant/IZ8CCW will be active as J48MDC from Mikonos Island between June 13-18th. Do not expect too much activity from Ant and Manu because they are on a honeymoon trip. Pilot station will be IZ8BGY (iz8bgy@mdxc.org). More info about J48MDC can be found on: http://www.mdxc.org/j48mdc

EU-088. Members of the EDR Silkeborg will be active as OZ8MW/P from Anholt Island (DIA NK-001), July 25-30th. Activity will include an entry in the IOTA Contest (July 28-29th). The activity outside of the contest will be on 80-10 meters using CW and SSB.

EU-174. Laci, HA0HW, will be active as J48HW and SV8/homecall from Thassos Island, Greece (MIA: MG-124, Grid KN20hs), between May 27th and June 5th. Activity will be on the HF bands, mainly 40/30/20/17 meters and 6 meters. Operations will be mainly CW, with some SSB, RTTY and PSK31 as well. QSL via his home callsign, by the HA Bureau or direct.

NA-029. Operators Gregg/VE3ZZ and Noel/VE2BR will operate from Prince Edward Island in eastern Canada from July 25-30th using the VY2TT superstation (Grid Square FN76vs, CISA PE-001). During the July 28-29th IOTA Contest they will operate as VY2Z (QSL to VE3ZZ) and outside of the contest as VE3ZZ/VY2 and VE2BR/VY2 (QSL to their home callsigns direct via the QRZ.com address or via the Bureau).

NA-144. Terry, W6WTG, will be active as W6WTG/p from Anacapa Island (USI CA-002S, WLOTA LH-1300, WW Loc. DM04HA, Ventura County, California) during the RSGB IOTA Contest (July 28-29th). He will be running battery power with a IC-7000 and will be active on 20 meters. QSL via his home callsign.

OC-129. Kaoru, JA7QVK, is active as JA7QVK/DU7 Cebu Island in the Philippines. He has been on Cebu Island since August of 2005 and is there on business. Kaoru is expected to be here until this coming August. He informs OPDX that he will be active during his free time especially on the weekends on 40-6 meters mainly SSB. Equipment is an IC-706MK2G and ATAS-100 which is a mobile whip like a screw driver. QSL via his home callsign, direct w/SAE + 2 green stamps. He will answer after his return to Japan. ONLY JA stations can QSL via the JA Bureau. QSLs can be sent direct via the following Philippines address w/SAE + 1 green stamp: Kaoru Ono, Unit 1204, Park Tower 2 Cebu Business Park, Cebu City, Philippines 6000. SKED can be made via the following E-mail address: kaoru12506@globelines.com.ph
ADDED NOTE: Also, look for DU7/PA0HIP from Mactan Island (OC-129). He is also very active now.

OC-150. Hotang, YC0IEM, will be actived from Lombok Island as YC0IEM/9, June 8-10th. QSL via IZ8CCW, by the bureau or direct.

IS0, SARDINIA. Operator Martin, OL5Y, will be active as IS0N during the CQ WW WPX CW Contest (May 26-27th) as a Single-Op/All-Band/Low-Power entry. QSL via OK1MG.

IS0, SARDINIA. Mauro, IN3QBR, will be active as IS0/K7QB (perhaps IM0/K7QB) during the CQ WW WPX CW Contest (May 26-27th) as a Single-Op/All-Band/Low-Power entry. QSL via IN3QBR.

J7, DOMINICA. Rod, NA9N, will be active as J79RM, June 28th-July 5th. He will mostly be operating HF and will try to work a number of digital modes. QSL to his home callsign, NA9N.

KL7/NL7, ALASKA (IOTA Op). Operators Marvin/KL1YY, Bob/NF7E and Art/NN7A will operate from Ushagat Island, Alaska (IOTA NA-206), from July 12-17th. They will have two stations using 100 watt transceivers with vertical, wire, and kite antennas. Operation will be CW by NN7A/NL7 and SSB by KL1YY and NF7E/KL7 on 160-10 meters with SSB on the 20m and 15m IOTA frequencies as conditions permit. No digital or VHF operations are planned. There are no existing facilities on Ushagat, so operation will be from a camp set up by the operators using battery and generator power. E-mail and log checking will not be possible during the operation. QSL by the bureau or direct to their home callsigns:
KL1YY: Marvin Baur, 4275 Kachemak Way, Homer, AK 99603 USA
NF7E : Bob Wertz, 6315 E. Townsend-Winona Rd, Flagstaff, AZ 86004 USA
NN7A : Art Phillips, P.O. Box 73, Eckert, CO 81418 USA

P4, ARUBA. John, KK9A, will be active as P40A during the CQ WW WPX CW Contest (May 26-27th) as a Single-Op/Single-Band (40m) entry. QSL via WD9DZV.

BS7H QSO/QSL INQUIRIES! QSL Manager Steve, KU9C, sent out the following announcement: "Folks, I have received quite a number of QSO not in logs, I forgot my QSO detail, my dog/significant other/kid/etc trashed my log, etc questions in the last week, so let me help with some ground rules:

I'm not in a position to answer whether you are in or not in the log at the moment. Rather than ask via email, I'd ask you to kindly put the inquiry in a NOTE with your QSL to me. I'll research the log as I work your QSL request, and respond accordingly. If you are NOT IN THE WEB log, don't give up, put down EVERY QSO you believe you had, and I'll do the rest. If the web log shows 20SSB, put down EVERY qso you think you had on 20 SSB, not just the first. Don't be embarassed with dupes, rather, give me all the QSOs you've had, I'll see the dupes anyway, but if you are not in the log the first time, it will save me a lot of time researching. Remember, every researched call takes time from processing other cards. If it's a busted call, I'll use well-established judgement in issuing the card, and may ask you to help confirm that the person's whose call appears did NOT make a QSO.

If you DO NOT HAVE ANY detail besides what is in the web log online, it's impossible for me to give you credit for the card. I need to have SOME supporting detail on your QSO. Give me your best guess from memory, who you heard work BS7H just before or after. Chances are one of your friends was in the hunt at the same time, and can help. Remember, it will be a lot easier to remember it now than a month from now. And, I'm not in a position to issue a QSL to you

'just because' the web log says you're there. Not the way it works.

Don't fret the 39 cent stamp or the 84 cent stamp you sent before the postage increase. I'll cover it.

If I do not respond to your email, please don't take it personally. Please follow the guidelines here. I tend to not answer the emails when they ask the questions above, as each email is roughly equivalent to the time it takes to answer 2-3 QSLs...and I tend to choose to answer the cards first.

I'll let you know when the cards start going out via this forum.

As an aside, if you have a problem with how I do QSLs, how long it takes to get a card from me, etc, please take it up with me directly. I don't appreciate reading it third hand via a reflector, etc. Frankly, if you are kind enough to send me a note, I'll be glad to help research it. In many cases, I may be able to help you understand why the process take so long for your QSL, as I keep pretty good records of those calls that take time, and for what reasons that is the case..... 73 Steve KU9C

NEED A QSL MANAGER? Petr, OK1DOT, is willing to offer his services to a station in need. He will provide all the QSL printing and cards to stations he manages at no charge. Petr is currently QSL Manager to: 9V1GO, YB5AQB, ZS6CCY, YB1JZS, WP3F, XV9DT, 3W22S, XV1X, NL7G, TG9AKH, NH6P, 3W3W, HK1AR, YI9CC and 9K2/KY0C. For details, visit his Web page at: http://www.qrz.com/ok1dot
His address is:Petr Gustab, P.O. Box 52, CESKY BROD 282 01, Czech Republic.

Nilay, TA3YJ, sent out QSL cards for TA3J, TA3J/0 (AS115), TA3J/4 LH, TA3J/60, TA3YJ, TC2K4J, YM125ATA, YM125ATA/4 and YM3ATA to the QSL Bureaus of Spain (R) and Turkey direct on May 21, 2007.
(R: Registered Mail)

VP5/PY2XB QSL STATUS. Fred, PY2XB, informs that he is still receiving many QSL requests for his recent operation as VP5/PY2XB, despite the announcements in all DX Bulletins and DX lists that he has a QSL Manager. Fred will forward any requests received via direct to his QSL Manager PT7WA, but of course, it will delay the process of QSLing. For those sending bureau cards: Please be sure to write "VIA PT7WA!" so the Central Bureau will correctly send it to the PT7 Bureau instead of the PY2 bureau.

XT2C QSL STATUS. Bernard, F9IE, informs us that he has put in the mail all direct QSL request from DXers and SWLs received up to May 16th.

QSLS VIA LOTW: 4X4PP, 5H9PD, 5P5V, BD7KLO, DJ0QN, DL0TS, E21EIC, F4DZY, FY5KE, GM4WZL, HB9TSU, RA9AC, RN3QO, UR5MID, UV5U and VE3SY

QSLS RECEIVED VIA MAIL: 4O3T, 4O3ZZ, 4O6T, 4W6MM, 5N8NDP, 6W/DM2AYO, 8P1A, 9Q1EK, A71EM, BX5AA, C6AGN, C6DX, C91Z, CE1/K7CA, CM6CAC, DQ2006Y, EA9EU, ES1QD, FK/FO5RK, GM4KGK, H44MS, J5B, LZ13ARDF, LZ2TU, MD4K, MI0SRR, MN1SWL, T77C, TA3D, TM5CI, TT8HA, V31FG/P, VU7LD, VU7RG, XU7MDY, YS1JBL, ZA/DL3OCH and ZF2BI

SPECIAL EVENT. Look for special event station TM1VDM to be active until May 28th to celebrate the 100th anniversary of the birth of the writer Maxence Van der Meersch (1907-1951). QSL via F6KTN. Two other stations will also be active. Look for TV2VDM to be active from June 1-15th by the Radio Club F5KDB, and FV5VDM will be active from July 1-15th by the Radio Club F6KDM.

SPECIAL EVENT. Members of the REF83 will activate the special callsign TM2RHC during the Air show taking place at LE LUC ARMY AIR BASE from June 10-24th. Activity will be on 160-10 meters on all modes. QSL via F4EUN (see QRZ.com). For more info, visit the following Web pages at:
http://meeting-leluc.fr
http://www.ref83.free.fr

SPECIAL EVENT. Look for the Ukrainian special event station EO20R to be active between May 28th and June 3rd. Activity is to celebrate the 20th anniversary of Slavutych, the city built after the Chernobyl nuclear disaster to host the survivors who had to be relocated from the evacuation zone around the reactor. QSL via UY2RO.

SRT'S WORLD-WIDE DXPEDITION TROPHY. Oreste, IZ8EDJ, S.R.T. Founder and Team Coordinator, annnounced that the members of the Strange Radio Team (SRT) are once again taking their annual survey for DXpedition of the year. The SRT World-Wide DXpedition Trophy will go to the DXpedition that receives the most votes. This year's DXpedition list is: 1A4A, 3B7C, 3C0M, 4O3T, 5A7A, 9M4SDX, BS7H, DX0JP, J20RR & J20MM, KH8SI, N8S, OH10TA, VU7LD, VU7RG/VU7MY, XF4DL, XT2C, YU6AO, YW0DX and ZL8R. Cast your vote at: http://www.strangeradioteam.com/wwdxt/index.asp
ADDED NOTE: The SRT now has a SRT-DX mailing list. To subscribe and receive messages about DX News, IOTA Notices and other HamRadio information, go to: http://www.strangeradioteam.com/reflector.asp

TO3, MARTINIQUE (NA-117). Alex, VE3KF, will be active as TO3T between now and May 31st. Activity will include the CQ WPX CW Contest (May 25-26th). QSL via his home callsign, direct or by the bureau.

V2, ANTIGUA AND BARBUDA. Horward, WB4WXE, will be heading back here and will be active as V26HS between June 9-24th. He will be putting an emphasis on 6 meters but will also be active on 2 meter and HF.

VP5, TURKS AND CAICOS ISLANDS. Maciek, WQ7X, will be active as VP5/WQ7X, between now and June 5th. Activity will be on 80-10 meters CW and SSB. QSL via his home callsign.

VP6/D, DUCIE ISLAND. Eric/K3NA and Carsten/DL6LAU announced at the Dayton DX forum that a multi-national team of 13 operators will be going to Ducie Island in February 2008. The landing permissions and licenses are granted and a suitable charter vessel is secured. They

are planning to stay 13 days on the atoll. Current list of operators are: Carsten/DL6LAU (Team Leader), Eric/K3NA (Co-Leader), Dietmar/ DL3DXX, Andy/DL8LAS, Martti/OH2BH, Robin/WA6CDR and Krassimir/K1LZ. For more information, updates and details on how to help support this operation, please visit the VP6DX Web site at: http://www.vp6dx.com

YB, INDONESIA (Help Kadek!). It has been reported that Kadek, YB9BU, has lost all his radio equipment following a fire that destroyed his house in early April. A fund called "Help Kadek" has been set up to help Kadek rebuild his radio shack and bring him back on the air. If you would like to help, please visit the following Web page at: http://www.mdxc.org/yb9bu

YM3, TURKEY. Mill, LX1CC, will be vacationing in the city of Selcuk between June 7-21st. He will be using the special callsign YM3CC. His activity will be on 80-10 meters, WARC bands included, on SSB. QSL via his home callsign, direct, by the bureau or e-QSL.

YO, ROMANIA. Jean Michel, F6AJA, is currently active again for the 14th time as YO/F6AJA from Suceava (450 Km north of Bucarest) until May 26th. During his free time Jean Michel will visit his friend Silviu, YO8FZ.

ZF2, CAYMAN ISLANDS. David, K2DBK, will be operating from Grand Cayman (NA-016) from July 22-29th, as ZF2DK. This is a "vacation style" operation; operating during his spare time. David will be able to operate on all bands from 40-6 meters, but he expects to spend most of his time on 20m, conditions permitting. However, he will see what bands are open when he is there and operate accordingly. He does plan to try a little 6m if the band is open. David will primarily be operating SSB and he may operate a little PSK as well. Most likely, he will be hanging out around the IOTA frequencies. QSL either direct (SASE or SAE + 1 GS please) or via the bureau to his home callsign (K2DBK). He plans to upload the logs to LoTW. Updated information will be available at his Web site (http://k2dbk.com) or on QRZ.com.

Excellent work! In just a few minutes of playing with it, I'm impressed. One of the best freeware programs I've seen in some time. The SIMTEL download site was a little cranky, but I Googled up this download site which was easier to use.

http://shareware.pcmag.com/product.php%5Bid%5D102053%5BSiteID%5Dpcmag

One quick question ..... what is the proper size of the .BMP background. I could tinker around and find out, but a little info like that in the help file would be nice (unless a overlooked it).

Thanks for your work on this.

According to the group's charter it is open to all. The ARRL makes
all those numbers available free to all, derived from the FCC license
database. US license numbers can be seen also at www.hamdata.com.

DXNL 1520 - May 23, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

E51 - SOUTH COOK ISLANDS, OC-013
Gary,ZL2IFB, is spending his holidays with his family on Rarotonga from where he intends to work as E51IFB. He also plans to take part in the upcoming WPX Contest (May 26/27) either in the QRP or the low power class. Gary will be QRV only in CW mainly on 40m/30m from May 24-28. He is also looking for a good QTH for future activities. Please send your QSLs direct to ZL2IFB or via LotW.

FM - MARTINIQUE, NA-107
We expect Alex,VE3KF, to show up as TO3T in SSB/CW from May 23-31 and also in the WPX Contest. QSLs direct or via bureau to his homecall.

GD - ISLE OF MAN, EU-116
The Isle of Man is known for its motorcycle race, the Tourist Trophy, held since 1907. Two members of the Wrexham ARS Colin,MW0JNI, and Mike,GW6NLP, will be active from Scarlett Point (EU-116, WLOTA LH 0449) signing GB100TT on all HF bands and GT4WXM/p on UHF between May 25 and Jun 5. QSL via MW0JNI.
Check also: http://www.qsl.net/wars and http://www.scarlettpoint.com

GU - GUERNSEY, EU-114
Chris,M0DOL, Trevour,M3PNQ, and Tom,2E0TSW, will activate two new prefixes from Guernsey (EU-114) using GP8LED/p and GP3GWB all HF bands plus 6m/4m/2m for one week starting on May 26.

HB0 - LIECHTENSTEIN
David,HB0/DL1GDS, Michael,HB0/DO1ARS, Eddy,HB0/DK4SFW, Klaus,HB0/DL5ZL, Reinhard,HB0/DL5ZA, and Karl,HB0/DM3BJ, will be active mainly in SSB/CW and digital modes on 160m-10m, 6m and 70cm from May 26-30.
QSLs via the operator's homecalls, via bureau or direct.
The website of the HB0 DX Team is: http://www.do1ars.de/hb0team.htm
An online log will be published there after the activity but skeds can be arranged also via packet radio.

HH - HAITI, NA-096
Yannick,F6FYD, is working in Haiti for one year and already hit the
airwaves as HH2FYD. QSLs via homecall.

PJ2 - NETHERLAND ANTILLES, CURACAO, SA-006
Jim,WI9WI, is QRV as PJ2T (QSL via N9AG) from the Signal Point Station
from May 21-29. He plans to participate in the WPX Contest in the
single op/allband/high power category.

VP5 - TURKS AND CAICOS ISLANDS
Maciek,WQ7X, is working in CW/SSB on 80-10m from May 24 until Jun 5.
QSL via homecall.

VQ9 - CHAGOS ARCHIPELAGO, AF-006
Jim,VQ9JC, is active on the air using the special prefix VQ97JC between
May 23 and Jun 5. This is a must for all WPX hunters because this
prefix has never been used before. Jim hits the airwaves after the end
of his daily work usually from 1200-1730 UTC. During the WPX Contest
(single OP/allband) he will stay in the shack over night.
QSLs via his homecall ND9M. He will answer all direct and bureau QSLs
after he returned home to Florida in August.

4W - EAST TIMOR, OC-148
Four members of the "Korea DX Club" Kim,6K5YPW, Lee,DS2BGV,Choi,HL5FUA,
and Yoon,6K2AVL, will hit the airwaves as 4W6AAV or with a two-digit
suffix from May 30 until Jun 4. The team will be QRV in CW/SSB/digital
modes on 10-160m from the capital Dili (OC-148) using two amplifiers,
verticals and beams. These frequencies were announced (in MHz):
band CW SSB digital

160m 1.822 -- --
(QSX 1.824)
80m 3.515 3.795 --
40m 7.015 7.095 --
30m 10.115 -- --
20m 14.015 14.195 14.082
17m 18.075 18.130 --
15m 21.015 21.295 21.082
12m 24.895 24.950 --
10m 28.015 28.460 28.100
The QSL manager is HL5FUA. Direct QSLs will be answered first, bureau
cards will be processed later. Online logs can be found at:
http://dxpedition.co.kr

PREFIX FOR MONTENEGRO
4O is now officially the new prefix for Montenegro. YZ and 4N which
were assigned to Serbia are falling back to the ITU. More information
can be found on the ITU homepage at:
http://www.itu.int/cgi-bin/htsh/glad/cga_callsign.sh?lng=E
This is an excerpt:
callsign block assigned to date

FRANCE, SPECIAL EVENT STATIONS
TM1VDM remembers the writer Maxence van der Meersch (1907-1951) on the
air until May 28. QSL via F6KTN. Two more stations celebrating this
100th birthday will be active as TV2VDM (QSL via F5KDB) from Jun 1-15
and as FV5VDM from Jul 1-15. These QSLs are managed by F6KDM.

USA, SPECIAL EVENT STATIONS
Several members of the "Indianapolis Motor Speedway Amateur Radio Club"
will be active from the 91th Indianapolis 500 Mile Race signing W9IMS
from May 24-28 on following QRGs: 21.340, 14.240, 7.240 and 3.840 MHz.
Find more information including also an award at: http://www.w9ims.com

LINKS: Tanja,DL2YOU, spent much time in finishing the official WAEDC and WAG
Contests result booklet which has been published on the DARC website:
http://www.darc.de/referate/dx/archives/waedc_wag_magazin_2006.pdf
---
Your votes for the "World wide DXpedition Trophy" are welcome at the
"Strange Radio Team" homepage at: http://www.strangeradioteam.com/wwdxt
Last year the trophy was awarded to 3Y0X.

Current SOTA activities are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

DXPEDITION OF THE YEAR

VU7RG/VU7MY was awarded the DXpedition of the Year at the HamVention in
Dayton. Congratulations to all participants for this terrific effort!

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
AS-043, JA, South Izu Group, WLOTA LH-0446: JA1UNS/1, JI1PLF/1, 7N1GMK/1,
7L4PVR/1 and 7N4VPS/1 will be QRV in CW/SSB on all bands plus 6m from
May 25-28. QSLs via the operator's homecalls, direct or via bureau.

EU-031, I, Ischia, IIA NA-001: The Wave Master Team members Giovanni,IK1WEG,
Sergio,IW1FSQ, Veronica,IZ1KFF, Gianfranco,IT9SPB, Rosario,IC8FEM,
Marco,IZ1BWO, Jerry,IZ1DSH, Carlo,IZ1GCZ, and Marco,IS0KEB, will use
the callsign IC8TO in SSB/CW/RTTY on 15-160m and 2/6m from May 25-27.
QSL via bureau to IZ1GCZ. The homepage of the Wave Master Team can be
found at: http://www.wavemasterteam.com/IC8TO/ic8to.htm

EU-125, OZ, Island Romo, DIA NS-001: A German scout group plans to become
active in SSB/CW and perhaps also RTTY and PSK on 10-160m signing
OZ1RDP (http://www.oz1rdp.de) from May 26-29. QSL via DL9BCP.

EU-174, SV, Island Thassos, MIA MG-124: Laci,HA0HW, will show up either as
J48HW or SV8/HA0HW between May 27 and Jun 5. He is active on all bands
but prefers working in CW on 40/30/20/17m but also in SSB/RTTY/PSK31
and on 6m. QSLs via homecall, bureau or direct. Check out these pages:
http://ha0hw@pannondxc.hu or http://www.c3.hu/~ha0khw/ha0hw.html and
http://www.qrz.com/callsign/ha0hw

Lighthouse activities:
EU-032, F, Oleron, Chassiron Lighthouse (EU-032, ARLHS FRA-234):
Francois,F/ON4LO/p, is very active in SSB and digital modes on 10-40m
from May 23-29.

AFAIK, it's not US only.

I'm not a moderator, but I'd be very interested in seeing amateur
radio license statistics from other countries.

> Is this a US only group or can any coutry join in?

This is absolutely not a US-only group. In fact, I would personally be interested in trends in license statistics in other countries.

> Please can somebody post rec.radio.amateur.moderated's charter to the group.

There is a periodic posting to the group that includes posting guidelines. See message ID <radio/ham-radio/moderated/guidelines-1-1179208801@panix.com> or http://preview.tinyurl.com/3xpvng [same article at Google].

If you want to see the charter, visit http://www.panix.com/~rram/usenet/rram/ and click on the "Charter" link.

Basically, this is a newsgroup that hosts discussion of all aspects of amateur radio, with a few exceptions like commercial or for-sale articles.

==>ARRL FILES FEDERAL APPEALS COURT BRIEF IN PETITION FOR REVIEW OF BPL
RULES

The ARRL has filed a federal appeals court brief outlining its case and
requesting oral arguments in its petition for review of the FCC's broadband
over power line (BPL) rules. The League has petitioned the US Court of
Appeals for the DC Circuit to review the FCC's October 2004 Report and Order
```

(R&O) in ET Docket 04-37 and its 2006 Memorandum Opinion and Order. In its brief filed May 17, the ARRL contends, among other things, that the FCC's actions in adopting rules to govern unlicensed BPL systems fundamentally alter the longstanding rights of radio spectrum licensees, including Amateur Radio operators.

"For the first time ever, the FCC has permitted new unlicensed devices to operate in spectrum bands already occupied by licensees, even if the unlicensed operations cause harmful interference to the licensees," the League said in stating its case. "The orders under review reverse nearly seven decades of consistent statutory interpretation and upset the settled expectations of licensees without so much as acknowledging the reversal, let alone justifying it."

The ARRL argues that the FCC's approach to adopting rules to govern BPL flies in the face of Section 301 of the Communications Act, which requires that operators of devices that emit radio frequency energy first obtain an FCC license. "For years, the FCC has consistently read Section 301 to apply to unintentional radiators, such as BPL devices, and has expressly embodied that interpretation in its rules," the League's brief recounts.

The Commission then compounded its error by asserting that BPL devices do not fall within Section 301 at all, the League said. "This hail-Mary attempt at justification is another unexplained departure from prior policy that independently requires invalidation of the orders," the ARRL remarked in its brief.

The ARRL contends that the FCC orders under review "jeopardize the license rights of ARRL's members and other license holders by authorizing providers of a new device -- Access Broadband over Power Lines, or 'BPL' -- to send radio signals across the electric grid in the frequencies the license holders occupy, but without having to obtain an FCC license."

The League's brief further asserts that the FCC "has failed to discuss or disclose significant information in the record that potentially contradicts its key interference findings," and seeks to have the FCC produce the information. The ARRL alleges that the Commission not only withheld its internal studies until it was too late to comment but has yet to release portions of studies that may not support its own conclusions. The FCC has claimed that these are "internal communications" that it did not rely upon in reaching its decision to adopt the BPL rules.

"If, as seems more likely, the Commission actually considered and rejected the information contained in the redacted portions of its studies, then it had a duty to disclose the information and reasons for rejecting it. Either way, the FCC acted improperly."

The League also takes issue with what it argues is the FCC's "arbitrary and capricious" adoption of a BPL emission measurement standard that's unsupported by the record in the proceeding and ignores contrary evidence. Additionally, the ARRL says, the FCC rejected a proposed alternative without even considering it.

Said ARRL CEO David Sumner, K1ZZ, in his "It Seems to Us . . ." editorial for July QST: "The Commission's penchant for ignoring contrary evidence is illustrated even more vividly with regard to how quickly RF emissions are assumed to decay as one moves away from the source. This is important because if the signal is assumed to decay more quickly than it really does, the interference potential of the emissions will be underestimated."

As Sumner notes, the FCC has claimed that "many parties" have presented experimental data supporting a 40 dB per decade (10 times increase in distance) rate. "In fact, there is no such evidence in the record -- and empirical evidence supporting a lower number was ignored," he asserts.

The League maintains that the Commission failed to consider the ARRL's sliding-scale alternative that would have avoided what Sumner calls "the logically indefensible situation that now exists in the rules: the extrapolation factor is 20 dB/decade at 30.001 MHz and 40 dB/decade at 29.999 MHz."

In addition, the ARRL wants the court to determine if the FCC was arbitrary and capricious in failing to limit BPL providers "to frequencies where interference was less likely to occur without materially harming BPL deployment." The League argues that the FCC ignored evidence that restricting BPL to the 30-50 MHz frequency range would have obviated interference to long-distance HF communications without causing problems for public safety services.

The ARRL brief asserts that, for the first time ever, the FCC "has authorized the operation of unlicensed devices that it concedes interfere with licensed devices" and has declared that such devices "may continue operating even where proven to cause interference."

The FCC, ARRL contends, has concluded that BPL's acknowledged interference risks are manageable, but it bases that conclusion -- which ARRL calls "the linchpin of the challenged orders" -- on FCC studies the Commission has declined to make public in unedited form.

"It is clear," the ARRL contends in his brief, "that the withheld pages contain information" that is at odds with the FCC's conclusion to adopt the current rules governing BPL deployments.

"ARRL is not trying to stop the deployment of BPL," the League's brief concludes. ARRL and other commenters have provided the FCC with alternative proposals -- ones that have been demonstrated to work in the real world -- that would have allowed BPL to prosper without harm to licenses or to Congress's licensing regime."

"What is perhaps most unfortunate about the FCC's radical actions in this case is that they were entirely unnecessary."

The FCC's response to the League's brief is due July 2.

==>ASTRONAUT, FCC ENFORCER ATTRACT SRO CROWDS AT UPBEAT 2007 HAMVENTION

Enthusiasm was the order of the day at the 56th Dayton Hamventionï¿½ <http://www.hamvention.org>, May 18-20, near Dayton, Ohio. Business was

brisk among the hundreds of vendors in the indoor areas, despite generally excellent weather outside, which tends to draw hordes to the outdoor flea market area.

At ARRL EXPO, the sales staff was kept hopping as visitors from around the US and around the world stopped by to join the ARRL, purchase publications or just say hello.

On the ARRL Stage, the lineup of 15-minute presentations proved to be popular again this year. Highlights were presentations by NASA astronaut and ISS Expedition 12 Commander Bill McArthur, KC5ACR. He packed them in for a talk about his ham radio experiences from space.

Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth also attracted an SRO crowd with his commentary on the state of the Amateur Radio Service.

McArthur, the ARRL's Guest of Honor at Hamvention 2007, also gave an animated and informative talk at the annual Donor Recognition Reception Thursday evening. The variety of questions he was asked following his talk reflected the enthusiasm that greeted his presentation. About 120 donors to various ARRL programs and scholarships attended the dinner, which was sponsored by the ARRL Development Office.

Despite an Internet outage that affected the entire Hara Arena, QST Editor Steve Ford, WB8IMY, uploaded his personal Dayton musings, including his entertaining "alt" observations, photos and videos. Internet access was never restored, so Steve was forced to leave the Arena premises to find WiFi hotspots for uploading to the ARRL Web. His Hamvention blog remains available <http://www.arrl.org/blog/Dayton%20and%20ARRL%20Expo>.

The ARRL EXPO area in the Ballarena featured exhibits that again this year drew many thousands of Hamvention attendees. They included the US Power Squadrons, Section Managers and other section officials, the International Amateur Radio Union, Regulatory Information, National Association of Radio and Telecommunications Engineers (NARTE), TravelPlus for Repeaters software demos, Media and Public Relations, Education Services, the ARRL Development Office and ARRL Foundation, Great Lakes Division officials, the ARRL Volunteer Examiner Coordinator and QST/NCJ/QEX ï¿½ in short, something of practical value to just about every ham.

But wait -- there's more. Other ARRL EXPO booths featured DXCC card checking, Youth Activities and commercial license exams sponsored by NARTE.

In addition, ARRL staff members and officers took part in nine different Hamvention forums throughout the weekend.

At the awards dinner Saturday night, ARRL President Emeritus Jim Haynie, W5JBP, was honored as Ham of the Year, while ARRL Lab Manager Ed Hare, W1RFI, received the Special Achievement Award. The Technical Excellence Award went to David Cameron, VE7LTD.

Perhaps it was partly due to the uncharacteristically pleasant weather, but for whatever reason, visitors to this year's Hamvention seemed as enthusiastic, upbeat and just plain glad to be there, as any Hamvention in recent memory. Hamvention officials have not yet released an official head count.

==>FCC DEMANDS AMBIENT DEMONSTRATE COMPLIANCE WITH BPL LICENSE CONDITIONS

The FCC has called on BPL equipment manufacturer Ambient Corporation to demonstrate that it's complying with all terms of its Part 5 Experimental license or face possible enforcement action. Ambient operates the Briarcliff Manor, New York, BPL pilot program under Experimental license WD2XEQ. In a May 21 letter to Ambient Chief Engineer Yehuda Cern, FCC Spectrum Enforcement Division Chief Kathryn S. Berthot noted that the FCC is investigating ARRL complaints dating back to 2006 that Ambient's Briarcliff Manor BPL system has caused and continues to cause harmful interference to Amateur Radio stations. She said Ambient's most recent six-month report failed to address one condition of its Part 5 license relating to emission measurements to prove compliance.

"Access BPL systems are generally required to meet the pertinent radiated emission requirements specified in Section 15.611(b) of the Commission's rules," Berthot wrote. "However, Ambient's facility, operating under an experimental license, is subject to the operating conditions contained on its license."

Condition 4, Berthot pointed out, requires a progress report six months from the date of grant, which was last August. Condition 5 provides that the progress report "should include, but is not limited to, a description of measurements and results demonstrating compliance" with the radiated emission limits of ï¿½15.109.

Ambient's most recent six-month report indicated that the company had notched out BPL signals on Amateur Radio bands, "demonstrating significant advancements," the FCC noted. Still lacking, the Commission contends, is information to satisfy Condition 5.

Berthot gave Ambient 20 days from the date of this month's letter to submit the results of any measurements it conducted before its most recent progress report to demonstrate compliance with ï¿½15.109. "Any measurements made in the areas addressed in the ARRL complaint should be highlighted," she continued. "If any area included in the ARRL complaint was not previously subject to measurements, measurements must now be taken in that area to test for compliance with ï¿½15.109."

Further, Berthot said, Ambient must note any measurements that reveal any non-compliance with ï¿½15.109, and, in that case, it must include a description of its plans to bring the system into compliance with the conditions of its Experimental license.

"Furthermore," Berthot concluded, "Ambient must submit to the Commission a follow-up report confirming compliance, once it has completed the necessary system modifications. We caution you that failure to respond to this letter may result in enforcement action."

Ambient operates the BPL system on power lines owned and operated by Consolidated Edison, under an experimental FCC authorization. In January 2006, in the wake of continued FCC inaction in response to several previous complaints, the ARRL filed a renewal of its complaint against Ambient's BPL system in Briarcliff Manor.

Without adjudicating ARRL's repeated complaints about interference throughout the amateur 20 meter band, the FCC renewed Ambient's experimental license for an additional term, from August 1, 2005 to August 1, 2007.

==>ARRL SENIOR NEWS EDITOR NAMED TO CQ AMATEUR RADIO HALL OF FAME

ARRL Senior News Editor Rick Lindquist, N1RL, has been inducted into the 2007 CQ Amateur Radio Hall of Fame. CQ magazine, which sponsors the honor, cited Lindquist for keeping the amateur community updated on new developments via The ARRL Letter, ARRL Audio News and the ARRL Web news pages. He will retire June 1.

Commented QST Editor Steve Ford, WB8IMY: "Rick Lindquist started as the ARRL 'Product Review' editor, but he quickly made the transition to news reporting, which was his true calling. In a remarkably short time, Rick became the most recognized name in Amateur Radio journalism."

ARRL Chief Operating Officer Harold Kramer, WJ1B, said, "Rick has been our news editor and reporter through many of the major events in Amateur Radio, including 9/11, Katrina and No-Code Licensing. He has been the print and audio voice of the ARRL during these events and he has reported them accurately, incisively and engagingly."

Kramer said Lindquist is "an active contester and DXer with an encyclopedic knowledge of Amateur Radio. He has been especially effective at writing Product Reviews and both writing and editing articles on all aspects of Amateur Radio."

For his part, Lindquist said he was "very surprised and honored" to be inducted into the CQ Amateur Radio Hall of Fame.

Other 2007 inductees included:

* Roy Lewallen, W7EL, for the development of the EZ-NEC antenna modeling software.

* Don Miller, W9NTP. An SSTV pioneer, he developed (with KB9VAK) the first high-definition digital SSTV protocol and program.

* Durward J. Tucker, W5VU (SK), who helped promote and popularize RTTY in the 1950s.

* Ade Weiss, W0RSP (ex-K8EEG), for being a leading proponent and promoter of QRP (low-power communications) in the 1970s and 80s.

* Farrell Winder, W8ZCF, for sending the first SSTV signals to the Russian Mir space station.

* ISS Expedition 12 commander Bill McArthur, KC5ACR, ARRL's guest of honor at the 2007 Dayton Hamvention and the most active radio amateur aboard the

ISS to date.

* Phillip Catona, W2JAV (SK), an RTTY pioneer and inventor of the modern-day terminal unit.

* Paul Flaherty, N9FZX (SK), co-inventor of Alta Vista search engine.

* John Geloso, I1JGM, an Italian Amateur Radio manufacturer.

* Michael Griffin, NR3A, NASA Administrator.

* James Hillier, ex-VE3SH (SK), co-inventor of scanning electron microscope and former head of RCA Labs.

* Herb Johnson, W6QKI (ex-W7GRA) (SK), founder of Swan Electronics.

* Copthorne MacDonald, VY2CM, author and developer of slow-scan TV (SSTV).

* Louis Tristao, KG6VY (SK), inventor of the crank-up tower.

The CQ Amateur Radio Hall of Fame honors individuals who, whether licensed or not, "have made significant contributions to Amateur Radio" and/or "have made significant contributions either to Amateur Radio, to their professional careers or to some other aspect of life on our planet."

Inducted into the CQ DX Hall of Fame were QST author Roger Western, G3SXW, and Nigel Cawthorne, G3TXF. Both are avid DXpeditioners, activating many rare locations with their two-man, CW-only, expeditions. To date, Cawthorne has operated from 44 DX locations, while Western has been on the air from 37. Western is also a member of the CQ Contest Hall of Fame.

Other CQ DX Hall of Famers include Mauro Pregliasco, I1JQJ. He and his wife Valeria, IK1ADH, are co-editors of 425 DX News. He's also a very active DXer.

The CQ Contest Hall of Fame inducted three new members this year:

Fred Capossela, K6SSS, a past CQ World Wide DX Contest director. For the past 40 years, he has maintained and annually updated the CQWW All-Time Records List.

Phil Goetz, N6ZZ (SK), who held the distinction of having operated the CQ WW DX Contest from each of the world's 40 CQ zones -- one of only two amateurs ever to do so (ARRL Southwestern Division Director Dick Norton, N6AA, is the other).

Tom Taormina, K5RC, has been contesting since 1959 and holds several records and won several national and divisional championships. He has also mentored a string of world-class contesters, who have themselves gone on to record-setting performances.

==>LEGISLATIVE END RUN NETS WIN FOR OKLAHOMA AMATEUR RADIO ANTENNA BILL

An Amateur Radio antenna bill has made it through the Oklahoma legislature and now awaits the signature of Gov Brad Henry. Securing passage of the essence of the limited federal preemption known as PRB-1

<http://www.arrl.org/FandES/field/regulations/PRB-1_Pkg/prb-1.pdf> was no mean feat, however. Proponents of the legislation had to switch to Plan B after House Bill 1037 (HB 1037) failed to make the House calendar for a vote after getting a "do pass" recommendation in the General Government and Transportation Committee. Supporters of the measure were successful, however, in getting the language of HB 1037 attached to Senate Bill 426, which involves municipal annexations. SB 426 passed the Senate 45-2 and the House 90-5.

"We expect Gov Henry to sign the bill soon and are networking with his office to ensure his approval," said ARRL Oklahoma Section Manager John Thomason, WB5SYT. "The Oklahoma Section members really rose to the task to communicate our need to legislators, key community members including emergency managers and the general public who benefit from Amateur Radio emergency communications."

Thomason said the bill's supporters reminded lawmakers that some Oklahoma Section members have been among those supporting emergency communication in Kansas in the wake of the tornado that recently devastated the town of Greensburg.

Thomason expressed particular appreciation to several key players who helped make the antenna bill a reality. They include David Johansson, KA5GLT, who set the legislative process into motion, Joe White, K5BQG, who advised Section leadership, Assistant SM Eddie Manley, K5EMS, who tracked and reported on the bill's progress and initiated a letter-writing campaign, Melinda Jones, KE5IGK, for researching, composing and networking, and Hal Deitz, W5GHZ, for spending "significant hours at the capitol, meeting, greeting and informing" and keeping the SM apprised.

"It's a good day for Amateur Radio in Oklahoma," Deitz told ARRL this week. "We're excited."

Thomason also offered "a special word of thanks" to Oklahoma State Rep Guy Liebmann, K5GL, who provided support and served as a knowledgeable point of contact at the State Capitol. In addition, he thanked ARRL Field Organization Team Leader Steve Ewald , WV1X, for his help and encouragement.

Elsewhere ARRL Eastern Pennsylvania Section Manager Eric Olena, WB3FPL, reports that Amateur Radio antenna legislation, Senate Bill 884, was introduced May 18, but the measure has not yet been posted on the General Assembly's Web site, nor has it been referred to committee, likely to be either the Senate Local Government Committee or the Senate Communications and Technology Committee.

"We are not ready for you to contact your Pennsylvania state Senators and Representatives yet, but we are getting closer," Olena said on the Section's Web page. SB 884 would incorporate language from PRB-1 into the state's statutes.

Olena has credited the efforts of George Brechmann, N3HBT, of Bucks County who has been working with Pennsylvania Sen Stewart Greenleaf, the bill's sponsor. The proposed bill would restrict municipalities from adopting "an

ordinance, regulation or plan or take any other action that precludes Amateur Service communications" or that fails to comply with PRB-1.

In the North Carolina General Assembly, an Amateur Radio antenna bill, House Bill 1340 (H 1340) was reported favorably out of the House Ways and Means Committee and received the unanimous approval of the full House in early May. The measure has moved to the Senate, where it's under consideration by the Senate Committee on Commerce, Small Business and Entrepreneurship.

H 1340 calls on municipalities to require ordinances based on health, safety, or aesthetic considerations regulating placement, screening or height of Amateur Radio antennas or antenna support structures "must reasonably accommodate Amateur Radio communications and must represent the minimum practicable regulation necessary to accomplish the purpose" of the city or county.

Beyond that, however, the measure would establish a minimum regulatory height of 90 feet "unless the restriction is necessary to achieve a clearly defined health, safety, or aesthetic objective" of the city or county.

To date, 23 states have adopted PRB-1 legislation. While PRB-1 requires municipalities to "reasonably accommodate" Amateur Radio communication, it does not specify a minimum height below which local governments may not regulate. Four states -- Alaska, Wyoming, Virginia and Oregon -- have legislation in place that specifies antenna support structure heights, below which municipalities may not regulate.

==>SECTION MANAGER ELECTION RESULTS ANNOUNCED

In the only contested Section Manager race in the spring election cycle, Sterling Eanes, AK1K, has been elected to a second term as ARRL New Hampshire Section Manager. He received 277 votes, while challenger Russell Santos, K1TSV, polled 236 votes. Ballots were counted May 22 at ARRL Headquarters.

Elsewhere, John Dyer, AE5B, of Cisco, Texas, will be returning to the West Texas Section Manager's post he held previously when he succeeds outgoing SM Bill Lawless, W5WRL. Lawless did not run for a new term. Dyer, who ran unopposed in the current election cycle, served as West Texas SM from October 2002 through June 2005.

Several sitting ARRL Section Managers faced no opposition in their bids for new terms and were declared elected. They are: Bob Beaudet, W1YRC, Rhode Island; Jim Cross, WI3N, Maryland-DC; Dick Flanagan, K7VC, Nevada; Charles McConnell, W6DPD, San Joaquin Valley, and Mel Parkes, NM7P, Utah.

Terms for all successful candidates in the current election cycle begin July 1.

The ARRL will re-solicit nominations for Section Manager in Northern New Jersey in the July and August editions of QST.

==>SOLAR UPDATE

Solar Seer Tad "Little Miss Sunshine" Cook, K7RA, Seattle, Washington, reports: This week saw a return to active geomagnetic conditions after a period of relative quiet. The planetary A index reached a high of 42 on Wednesday, May 23, and the mid-latitude A index that day was 28. At the same time, sunspot numbers are dropping -- from a high of 56 on May 16 to 44, 23, 15, 14, 12 and 0 on May 19-24. Currently the interplanetary magnetic field points south, making Earth susceptible to geomagnetic upsets from solar wind. We could see a blank sun through the end of May.

Geomagnetic indices should remain active for the next few days, with predicted planetary A index for May 25-29 at 25, 25, 20, 10 and 5. Geophysical Institute Prague predicts active conditions for May 25-26, unsettled May 27, quiet to unsettled May 28, and quiet May 29-31. During the CQ World Wide WPX CW Contest this weekend, expect no sunspots and declining but still active or unsettled geomagnetic conditions.

Sunspot numbers for May 17 through 23 were 30, 45, 44, 23, 15, 14 and 12, with a mean of 26.1. The 10.7 cm flux was 76.5, 75.8, 74.8, 74.1, 73.2, 72, and 70.1, with a mean of 73.8. Estimated planetary A indices were 6, 18, 12, 6, 6, 11 and 42, with a mean of 14.4. Estimated mid-latitude A indices were 4, 15, 10, 6, 6, 10 and 28, with a mean of 11.3.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: The CQ World Wide WPX Contest (CW), the VK/Trans-Tasman 80-Meter Contest (CW), the SKCC Weekend Sprint, the ARCI Hootowl Sprint and the Michigan QRP Memorial Day CW Sprint are the weekend of May 27-28. JUST AHEAD: The NCCC Sprint Ladder is June 1, the Wake-Up! QRP Sprint is June 2. The SEANET Contest, the RSGB National Field Day, the IARU Region 1 Field Day (CW) and the Alabama QSO Party are the June 2-3 weekend. The RSGB 80-Meter Club Championship (Data) is June 4. The ARS Spartan Sprint is June 5. The NCCC Sprint Ladder is June 8. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday, June 3, for these ARRL Certification and Continuing Education (CCE) online courses beginning Friday, June 15: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008) and Radio Frequency Propagation (EC-011). These courses will also open for registration Friday, June 1, for classes beginning Friday July 20. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the CCE Department <cce@arrl.org>.

* ARRL and MetLifeï¿½ team up for new membership benefits! The ARRL inaugurated a partnership with MetLifeï¿½ at Dayton Hamvention to provide new membership benefits. An announcement to ARRL members went out last week outlining the program, which offers group automobile and home insurance as well as banking products. This program also makes available insurance for renters, boats, condos, recreational vehicles (RVs) and fire. "I am very excited to see this program launched after nearly a year of planning and development," ARRL Membership Manager Katie Breen, W1KRB, said. At Hamvention, MetLife representatives set up at ARRL EXPO where they held a giveaway for a giant Snoopy -- MetLife's marketing mascot -- and handed out nearly 8000 Snoopy toys. All ARRL members are eligible for this new program, which offers a wide range of policies. For a free, no-obligation quote, just call toll-free 800-GET-MET8 (438-6388). When calling, have your ARRL membership number ready, and explain that you're inquiring as a group member.

* ARRL approved as 2007 Combined Federal Campaign participant: The ARRL has once again been approved as a participant in the Combined Federal Campaign (CFC) <http://www.opm.gov/cfc/> for 2007. Similar to the United Way, the CFC encourages contributions from federal government civilian employees, US Postal Service workers and members of the military on behalf of various organizations. By designating the League as the donation's recipient, contributors can support ARRL's efforts to represent its members and all radio amateurs. Last year the CFC attracted more than $22,400 in contributions to the League. The ARRL urges eligible radio amateurs to consider the League when designating CFC donation recipients. To select the ARRL to receive all or part of your payroll deduction, designate organization 10099 (this is a new identifying number!) when completing the 2007 CFC donor form. Donations to ARRL can be designated for Diamond Club contributions, the ARRL Spectrum Defense Fund or the ARRL Education & Technology Program. Or, donors may make unrestricted contributions to the League. One important note: Since the CFC does not provide the ARRL with the names of individual donors, the ARRL Development Office would appreciate a copy of the donor form to ensure that each contribution is applied according to the donor's wishes and the contribution or pledge can be properly acknowledged.

* FCC cites distributor for marketing unauthorized RF device: The FCC has sent an official Citation to Tower Products Inc of Saugerties, New York, for marketing an unauthorized RF device capable of operating on 70 cm Amateur Radio frequencies. The FCC contends that the product in question, the "Laird Telemedia model LTM-WAVE-AG Wireless Monitoring System (LTM-WAVE-AG), requires FCC certification. As an "intentional emitter," the device cannot be operated legally under Part 15 rules. The device is not a Part 97 transmitter, which would not require FCC certification, because it can transmit on spectrum not allocated to the Amateur Radio Service. Additionally, the devices, the FCC said, bore an FCC identification number assigned to another device. The FCC said Tower has acknowledged that the LTM-WAVE-AG is not certified and that it marketed the device in the US, apparently in violation of ï¿½302(b) of the Communications Act of 1934, as amended, and ï¿½2.803(a) of the FCC rules. In addition, the FCC asserts, Tower apparently violated ï¿½2.2304(a) of the rules by importing an RF device that

did not meet one or more of 10 specified import conditions, and ï¿½2.1204(b) by being unable to document compliance with import conditions. The FCC warned Tower that future such violations could lead to fines of up to $11,000 "for each violation or each day of a continuing violation."

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association For Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

The group is of course open to all. On behalf of the moderation team,
welcome :-)

BTW it's good to see another UK callsign here, I was beginning to think I
was on my own <g>

For info, the charter can be found here, along with links to other useful
information:

Ken-

Some zipped files are combined with an un-zip program in order to be
self-extracting. You could try using PKUNZIP, but specifying the entire
filename including the .exe. If it is a self-extracting Zip, that
should unpack it without any danger of infecting your computer.

We've been watching the US statistics because of the recent
elimination of Morse code testing. Most of the world dropped code a few
years ago. Therefore, it is in foreign countries that more conclusive
data might be found. That is, in foreign countries, the results of the
experiment may already be in, so to speak.

WIA -- Learning Facilitator and Learning Organiser. Transcript of radio interview
between WIA Director Robert Broomhead and VK3DAC Fred Swainston

" In recent weeks the WIA have changed the assessment process from where invigilators were being used to assist assessors; to a new role of Learning Facilitators and Learning Organisers. There has been some confusion about this role and I have with me today Fred VK3DAC who will shed some light on the reasons behind the changes and how the changes will impact on the assessment process.

Robert

Good morning Fred

Would you like to tell us why the changes from invigilators was made?

Fred

Good morning Robert and listeners

There are three major of reasons why the change from invigilators was made.

1. the first being that the invigilator system was inherited from the old examination system and as a result the role in the new assessment system had changed

2. secondly the WIA has a responsibility to ensure that when we interact with the public that reasonable steps are taken to ensure the public is safe, so we introduced the requirement of working with children or police check with the Learning Facilitator and Learning Organiser

3. and thirdly some of the invigilators and group leaders had not had an opportunity to receive training in relation to the new assessment system

and as a result did not fully understand how the system functioned which was inadvertently making it difficult for newcomers to enter amateur radio.

Robert

These are very good reasons to make the change; so what does the new role do?

Fred

The invigilator is replaced by the Learning Facilitator who will essentially monitor the quality and the assessment process being undertaken during the assessment while generally assisting the assessor.

The Learning Organiser replaces the Group Leader and is essentially the first point of contact in a club for a person who is seeking to enter amateur radio. Their role is to guide the person into a class or assessment and generally assist the person through the entry process.

Robert

Can Learning Organisers be assessors?

Fred

Yes; in many cases already assessors take on the first point of contact role and they are already qualified to do so.

Robert

Does the Learning Facilitator role impact on Amateur Radio Trainers?

Fred

No Robert it doesn't have any impact on the training role. Amateur Radio trainers provide instruction to prospective candidates whereas the Learning Facilitator assists during the assessment process. They are very different roles

Robert

So Fred how does someone become a Learning Facilitator of Learning Organiser?

Fred

They apply via the WIA Office. The application form is on line at the WIA web site. The course to accredit Learning Facilitators and Learning Organisers is the same course and is available on line.

Robert

What about the name of Learning Facilitator; it seems unusual

Fred

Yes Robert. It is a name that we are not totally happy with but we had difficulty in finding a name that covered the function. We will look at the name again with the view to a possible change during our assessment system

review.

Robert

Is there transition period to the new system?

Fred

There is, and during this time invigilators will be able to continue in their current role. A date for the end of the transition period end has not been set
as yet.

Robert

So Fred where to from here?

Fred

We have always said that the assessment system will evolve and it is. The fine
tuning process will continue. It is important that we recognise that the entry
point into Amateur Radio via the assessment system be robust and beyond reproach and this is our goal.

Robert

Any further comment

Fred

Yes; I would encourage invigilators and group leaders to transition to the new

system.
There contribution to the overall assessment system has been invaluable and I extend to them my thanks."

AROUND VK in 80 Seconds.
(2sky)

VK1

CRARC meet Monday, that's tomorrow the 28th.
Dick Elliott VK2KDE will give a presentation on solar panels,
their installation, uses and pitfalls.

VK2

PORT MACQUARIE FIELD DAY WEEKEND is Saturday and Sunday the 9th and 10th of June.

Members of the Amateur Radio Fraternity and anyone interested in Radio communication, are invited to attend Port Macquarie's annual field day weekend,
to be held at the Sea Scout Hall, Buller Street, Port Macquarie, next door to

the Country Comfort Motor Inn.

Saturday afternoon will be devoted to setting up the venue for the various displays, but early arrivals may wish to drop in to register early, socialize and later join for a snack comprising a sausage or steak sandwich, can of soft

drink or tea or coffee.

There will be a charge of $5 for the snack. There will be practice Fox Hunts during the afternoon and a 2-Metre talk-in Fox Hunt before the evening snack.

On Sunday there will be displays by leading suppliers of Amateur Radio equipment and of course, the usual tables of disposal equipment. There will be

displays of Home Brew equipment and Computer Programs for Amateur Radio use that may be purchased.

A BBQ lunch will be provided for all registered attendees. Tea and Coffee will

be provided free throughout the day and soft drinks will be available on sale at sensible prices.

Registration Fees which Includes Sunday's BBQ Lunch...

The Hunter Radio Group Contesters will be operating in the Trans Tasman 160 meter phone event on July 7th this year at Luskintyre Tiger Moth Airport
There will be some fun type foxhunt also held round the airport.
The group extends a cordial welcome to all operators.
This will be an ideal training event for the up coming RD contest at the same location.
Food, drinks and accommodation will be available.
Accommodation will be on a first to book basis
As in all Hunter Radio Group functions, having fun will be the main objective
For further information, or to confirm your attendance please contact Grahame VK2FA
on 02 49-548-688 before June 24th 2007

VK3

Learn about emerging technology

Software Defined Radio is being hailed as enabling radio amateurs to build their own HF transceiver that at least rivals today's commercial offerings, but at much lower price.

Paul Engler VK3XDE created a lot of interest with this mini-lecture at last month's Centre Victoria RadioFest at Kyneton when he talked about Software Defined Radio technology.

As a follow-on from that, the Midland Amateur Radio Club at Bendigo will have Paul VK3XDE give a presentation on a Direct Digital Synthesis control module, which is the heart of an all HF band transceiver.

What is promising to be an interesting presentation will happened on Saturday the 9th of June, at the Scout Hall in Vine Street, Bendigo from

about 1pm.

More details can be found on the Midland Amateur Radio Club website
www.marc.org.au
(VK3PC)

VK5

Boat Anchor Net

A regular on air gathering of people interested in old commercial amateur transceivers takes place Sunday afternoons.

The VK5 Boat Anchor Net can be heard at 3.30pm Adelaide time or 4pm Australian Eastern Standard Time on 7.064MHz plus or minus QRM.

Get their old radio out of the cupboard, tune it up and give net controller Mark Kilmier VK5EME a call.
(VK3PC)

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

F-Troop net celebrates its 1st birthday

It was on Sunday the 28th of May 2006 that Amateur Radio Victoria launched its F-Troop net as a welcoming, friendly and helpful weekly net particularly for new licensees.

The first net saw 27 call signs including 12 Foundation Licensees taking part. Also joining in was a mix of license assessors, class instructors, and mentoring-inclined experienced radio amateurs.

Foundation Licensees asked questions about the Internet Repeater Linking Project and some useful information was provided on the spot.

The inaugural controller for F-Troop net was Ross Pittard VK3FCE who continues in that role shared by others.

The aim is to provide Foundation Licensees and other less experience radio amateurs an opportunity to participate in and talk about their new hobby.

The F-Troop net can be heard at about 11.40am straight after the Sunday morning broadcast call-backs, and using the wide area coverage Mt Macedon 2-metre repeater VK3RMM 147.250 MHz.

South African Radio League, the S.A.R.L. ANNOUNCES EXCITING NEW TECHNOLOGY PROJECT

This a project to design an HF transceiver that is suitable for use by new amateurs and that will provide a cost-effective entry point into the hobby.

The first phase of the project will be a feasibility study to determine the specifications and architecture of the transceiver and whether it could be supplied cost-effectively. If the feasibility study is promising, then the

project will proceed to design, industrialize and build a prototype of the transceiver.

This is a co-operative project that will harness the energy and expertise of SARL members to create a world-class design. The project will be managed by the SARL technology councillor, Andrew Roos, ZS6AA.

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then encourage them to enrol in a Foundation Licence training course.

Next Foundation Licence course, and Standard / Advanced assessments .....

NEW SOUTH WALES

ARNSW regularly holds Foundation Licence Assessments as well as Exams for Standard and Advanced Licences.
Held on the last weekend of each EVEN numbered month.
The next Assessment will be 30th June & 1st of July.

Waverley Amateur Radio Society (SYDNEY)
They hold Foundation Licence courses regularly, email the club at exams@vk2bv.org
OR visit vk2bv.org or call Simon, VK2UA on 9328 7141.

The Hunter Radio Group
They'll hold their next licence assessments on Saturday 23rd & Sunday the 24th

of June at 9.00 am at the Print Makers Workshop, 27 Popran St Adamstown.

For further information, please contact the Examination Group Leader, Grahame O'Brien VK2FA on 02- 49548688. It is important that Foundation candidates have

a copy of the foundation manual and have studied it before attempting an assessment.
Manuals are available from the Hunter Radio Group.

Some places will be available for candidates wanting to upgrade from foundation
licences to standard or advanced licences and the Hunter Radio Group will be having a sausage sizzle on both days for lunch.

VICTORIA

Amateur Radio Victoria has announced its next two Foundation Licence training and assessment weekends - 23rd and 24th of June and the 21st and 22nd of July.

Held at Box Hill North these classes attracting candidates from Greater Melbourne and Victorian regional areas.

For inquiries or to enrol please contact Barry Robinson VK3JBR 0428 516 001 or arv@amateurradio.com.au

(Amateur Radio Victoria amateurradio.com.au)

At Bendigo classes and licence assessments are conducted by Ross Pittard VK3FCE who can be contacted via email vk3fce@internode.on.net

The Central Goldfields Amateur Radio Club, Maryborough regularly holds classes. Contact Peter Rafferty VK3CC on 5460 4387 or email majorca49@hotmail.com

QUEENSLAND

On the Gold Coast and want to talk to the world through their IRLP and EchoLink systems? Or already licensed and wish to upgrade Foundation to Standard? Well classes are held at the Nerang Clubhouse of the GCARS, ring Roy VK4IG on 5539 3530 Exams can be taken at a time to suit you.

TARC WIA Exams Information
Exam sessions are held on demand with WIA Assessors and assessment packs available for all 3 levels of licensing.
Contact theTARCinc WIA Exams Regional Co-ordinator Roger/VK4CD 0417 638366.
www.tarc.org.au/tarcexam.htm

Tablelands Radio and Electronics Club
TREC WIA Exams Information
TREC will conduct exam sessions as required, at a time to suit the candidate. WIA Assessors and assessment packs are available for all 3 levels of licensing.
Contact the TREC WIA Exams Co-ordinator Dale VK4DMC on 4091 3700 or vk4dmc@wia.org.au for further information.

SOUTH AUSTRALIA
Adelaide Hills Amateur Radio Society will run Foundation licence's at the Aviation Museum, 56 Lipson Street Port Adelaide, 2 weekends August 4th and 5th then November 3rd and 4th.
Contact the course convenor, Sasi Nayar on 0417 858 547

Examinations are hosted by South Coast Amateur Radio Club.
Those interested in sitting for foundation or license upgrades, please contact by email
vk5kbj@internode.on.net

WEST AUSTRALIA
Foundation course:-
21st & 22nd of July course with exam on the 28th of July.
VK6 Exams for Standard and Advanced are on June 30th.
Contact Neil VK6BDO.

TASMANIA

Radio and Electronics Association of Southern Tasmania

For more information or enrol please contact Reg Emmett VK7KK by
emailing regemm@ozemail.com.au or calling 0417 391 607

Please Note: It unlikely that examination sessions will be available
in June, the next session would be late July.

And remember Foundation Licence Manuals and CD's are available for
purchase at McCann's Model World in Elizabeth St. Hobart at $20.

A quick reminder about "Intro to the Standard Licence" sessions
on a Saturday afternoons from 1:00 to 4:00pm in the Domain clubrooms.

These sessions are an introduction to the standard licences and
attempt to de-mystify the upgrading process.
(Ken VK7DY/Reg, VK7KK)

CONGRATULATIONS - RESULTS

INTERNATIONAL NEWS READ BY Felix VK4FUQ

THREE RADIO AMATEURS RECEIVE AWARDS FOR THEIR CONTRIBUTION TO AMATEUR RADIO,
COMMUNITY SERVICE AND TECHNOLOGY

Three South African radio amateurs have received awards for their contribution

at an Awards function hosted by the South African Amateur Radio Development
Trust.

Dave ZS1DFR, was awarded the Siemens Radio Amateur of the Year Award
(Operational) for his development activity amongst the youth.
Dave spends his spare time to involve learners at Cape Maths and Science in
amateur radio and has arranged tuition for interested learners to pass the
radio amateur examination. He also arranges on-the-air events where learners
have an opportunity to get experience in the operational side of the hobby.
His other passion is to encourage Radio Amateurs to embrace new technologies.
Dave is also chairman of the Cape Town Amateur Radio Centre.

Hannes, ZS6BZP, received the Siemens Radio Amateur of the Year Award
(Technology) for his contribution to the promotion of new technologies and
home
construction of radio equipment. He was instrumental in building the
prototypes of the SA AMSAT equipment that will fly on South Africa's second
Satellite.

The equipment was recently fully tested by SunSpace with excellent results.

The third award, the Siemens Amateur Radio Community Service Award was
presented to Davy, ZR1FR, a Cape Town Radio Amateur whose passion it is to
provide communication for rallies and sporting events. He was an important

link during the Laingsburg disaster when Radio Amateurs set up radio channels back to the Cape Town emergency centre and provided disaster relief communication when other channels were down.

It is often said that today we have mobile phones, but practice has shown that

when there is a disaster the system gets overloaded and crashes.

EMERGENCY COMMUNICATIONS HEADS IARU ADMINISTRATIVE COUNCIL AGENDA

The Administrative Council of the International Amateur Radio Union (IARU) held
its annual meeting on 14-15 May 2007 in Boston, Massachusetts, USA.

IARU participation in the Global Amateur Radio Emergency Communications Conference, GAREC-07, to be held in Huntsville, Alabama, in mid-August, was discussed.
The Administrative Council is determined to seek ways to enhance the co-ordination
and promotion of the disaster response capabilities of the amateur service worldwide.
A draft strategy paper was received from the IARU International Co-ordinator for Emergency Communications, Hans Zimmermann, HB9AQS/F5VKP.

The Council will seek additional information from member-societies on the national regulatory position of the amateur service in preparing for and providing emergency communications, in order to identify problem areas and develop solutions.

Reports of the other IARU international co-ordinators and advisers were received.

NEWS FROM ARNEWSLINE

500 KHZ EXPERIMENTS EXPAND IN EUROPE

Word that the German medium wave radio experiment is
expanding. Since the beginning of 2005 the German telecommunication authorities have licensed a propagation study on medium wave bands.
The first permit for an experimental station on 440 kHz plus/minus 100 Hz was issued to DJ2LF under the call sign DI2AG. In May 2006, DK8KW got the second license to operate under the call sign DI2BO at his home location in Peine near Hannover.

Now comes word that early in 2007 the experimental radio licenses were extended to a second frequency. Besides 440 kHz the frequency of 505.1 kHz plus or minus 100 Hz is also now being used. This frequency falls into the frequency range being used by the United States experimental radio group with the call sign WD2XSH.

And this just in. Swedish authorities have issued one license for this frequency range.

RESCUE RADIO: ON-STAR ADVANCED SAFETY

General Motors has announced that its OnStar remote vehicle monitoring technology will be partnered with the Centres for Disease Control and Prevention. This, to use data from vehicle crashes to tell paramedics and doctors how badly passengers might be hurt.

On the vehicle, the OnStar sensors will measure the severity of a crash, where the vehicle was struck, if airbags deployed and whether the vehicle has rolled over. Experts will then review the crash data radioed back from OnStar's Advanced Automatic Crash Notification technology and notify first response authorities.

Researchers say that this data could help to save lives by helping first responders get to people who are more seriously injured than they seem and then send them to the nearest trauma centre.

The partnership between OnStar and the Centres for Disease Control and Prevention is funded by a $250,000 grant from OnStar and the General Motors Foundation.

US CONGRESS MAY ACT TO SAVE INTERNET BROADCASTING

A bill introduced in Congress ton Friday, April 27th, could be the saviour for so-called Internet radio station. Called the Internet Radio Equality Act, the measure would nullify the new rates set by the Copyright Royalty Board which advocates say would put webcasters out of business.

The bi-partisan Internet Radio Equality Act legislation was introduced by Washington Democrat ay Inslee and Republican representative Don Manzullo of Illinois. Its purpose is to curtail the imposition of a highly controversial March 2 decision which forces royalty payments of a .08 cents per song per listener, retroactively from 2006

Web radio advocates have condemned the Copyright Royalty Board ruling. They say that it could raise rates between 300 to 1200 per cent for webcasters and effectively ending the transmission of musical entertainment over the World-Wide-Web. The Copyright Royalty Board defends its decision stating that artists are entitled to a fair share of the profits from the music that they have created.

If passed, Internet Radio Equality Act would set new rates at 7.5 per cent of the webcaster's revenue. That's the same rate paid by satellite radio broadcasters. Alternatively, webcasters could decide to pay 33 cents per hour of sound recordings transmitted to a single user. The bill would also reset royalty rules for non-profit radio such as National Public Radio. Such government funded radio operations would be required present a report to Congress on how it should determine rates for their internet streaming media. (Published reports)

THE HILLS ARE ALIVE WITH THE SOUND OF PROTEINS

And finally this week, word that biologists have converted protein sequences into another form of communications. Classical music. This

they say is an attempt to help vision-impaired scientists and boost the popularity of genomic biology.

New research published in the open access journal Genome Biology describes how researchers have found a way to present human proteins as musical notes. Doctors Rie Takahashi and Jeffrey H. Miller from the University of California, Los Angeles, USA, have so far transcribed segments of two human proteins into music. But to make their melodies more pleasing on the ear, they had first to overcome a few problems -- how to incorporate rhythm, and how to cram the 20 standard amino acids into just 13 notes.

Amino acids are the building blocks of proteins. The two researchers focused on codons which are sets of three adjacent bases that code for particular amino acids. They decided to include four different note durations with codons that appear more frequently transcribed into longer notes than those which appear less often. Individual amino acids are expressed as chords, in which similar amino acids are paired. For example, the amino acids tyrosine and phenylalanine are both assigned a G major chord, but they can be distinguished because the notes in the chord are arranged differently. This means the resulting music has a 20 note range spanning over 2 octaves, but with just 13 base notes.

The team find their music more melodic and less 'jumpy' than previous attempts, which have focussed on DNA sequences and protein folding, and hence closer to the musical depth of popular compositions. They are currently piloting a computer program, written by a collaborator Frank Pettit, which uses their translation rules to convert amino acids into music and hope it will speed up the translation of large segments of genomes.

==========

NEWS SOURCED TO THE RSGB NEWS SERVICE AND READ BY G4NJH FROM GB2RS NEWS

Successful reunion of surviving WW2 radio operators

Surviving WWII radio operators who intercepted the highly secret traffic from the German Secret Service attended a reunion at Bletchley Park on April 29th.

Hams who attended were previously involved with Ultra, the top secret material which was deciphered at Bletchley Park and disseminated only to those who had direct responsibility for directing the war.

Mike Coleman, G1YVR, gave the group an illuminating history of Direction Finding from before WWI to the present day. Direction Finding was a vital part of the WWII operations and was directed by Major Dick Keen with assistance from G5RV, G6LL, G8LT and G6CJ working on aerial systems and distribution wideband amplifiers. A well-known D/F operator was G2BTO, who unfortunately could not attend the reunion.

Bob Painter, G3BPF, described how he was member of the party given the task of tracking down the illicit transmitters of the Stern Gang and the Voice of Israel in 1946. This was in extremely dangerous circumstances but he survived to locate the Stern Gang, though not the Voice of Israel, which was perhaps fortunate for him.

The 1,500 hams who became Voluntary Interceptors during the war were recruited by various, sometimes bizarre, means. The RSGB was called upon to help but due to the sensitive nature of the work it could not be advertised in the T&R Bulletin! Interceptors were mostly selected via the Old Boy Network.

First school in Britain to run a radio station

A Lothians high school has been awarded a licence by Ofcom, enabling it to be the first in Britain to have its own community radio station.

Pupils at Queensferry High are delighted to have won a five-year public service licence for Jubilee FM, which they will run with local volunteers. They will broadcast music, news and entertainment 24 hours a day to North and South Queensferry and parts of Fife. Station director Charles Fletcher commented that they are absolutely thrilled. The plan is to launch on St Andrew's Day.

The school is looking to the community radio fund, the National Lottery and other potential sources of funding. It will also be a great way of helping train young journalists on how to run a radio station.

NOVEMBER 17/18
Spring VHF-UHF Field Day - November 2007
For everyone who likes to plan ahead - please note the dates for this year's Spring VHF-UHF Field Day. It will be held on November 17/18, a week later than usual. This will prevent a clash with club activities in two states.

SPECIAL EVENTS, BEACON AND NET ADVICE

Planning ahead for the Lighthouse Weekend

So far 16 Australian lighthouses are registered on the official International Lighthouse and Lightship Weekend website (http://illw.net/) to take part in this annual event.

Last year there were 30 registrations for Australia out of the 380 from 51 countries for what is not a contest, but a fun weekend of putting lighthouses on the air.

Preparing for its 3rd year will be Amateur Radio Victoria VK3WI at the Williamstown Lighthouse and Timeball Tower.

It again extends an invitation to particularly new licensees to visit the lighthouse, or perhaps go activate one themselves.

Put it in your calendar - the International Lighthouse and Lightship Weekend the 18th and 19th of August.
(Amateur Radio Victoria amateurradio.com.au)

IT'S ALL GOOD NEWS FROM THAT RECENT DXPEDITION TO HELL!

The ZS 1 HELL team announces, with pride, that the number of QSL-cards needed to be taken into consideration for a TOP BAND certificate has been reached on the e-QSL service of the SARL web. This is proof that the electronic QSL service works well.

The ZS1HELL team, which consisted of 12 members of the Boland Amateur Club wishes to thank all stations who have already answered their QSL electronically.

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUPS --- APRS

The South African Radio League reports that Dick Stratford, ZS6RO, has set-up a server on APRS which can be used to obtain callbook information from anywhere in the APRS international network.

It works this way. When querying a local South African call sign, the South African Radio League database is used. When a D-X callsign is queried via APRS, the QRZ.COM database is used in real-time. The same databases are used when querying from the packet radio network.

APRS, the acronym for Automatic Position Reporting System, was developed by Bob Bruninga, WB4APR. The system uses amateur radio to transmit position reports, weather reports, and messages between users. (SARL ARNewsLine)

WW SPECIAL INTEREST GROUPS --- RADIO AMATEUR OLD-TIMERS
http://www.raotc.org.au

A meeting of the South Australian club, SCARC has seen a presentation by Dennis VK5OF / G3IEY, who celebrated his 55th year in Amateur Radio with the club.

Dennis gave a brief talk, showing a time-line of some technological advances and where they fitted in during his life.

He brought in his personal construction of a 'rats-nest' transistorised, transmitter which he created in his early years of AR in fact approximately 7 years after the transistor was first developed at the Bell Telephone Laboratory.

Congratulations Dennis.

SEPTEMBER 21-23
North Queensland Amateur Radio Convention
Happening in twin cities of Thuringowa and Townsville.

JANUARY 20 2008

The Mid North Coast Amateur Radio Group invite all amateurs to attend the 2008 Mid North Coast Radio Expo to be held in Coffs Harbour on Sunday 20th January.

The Expo is held at the St Johns Church Hall, Mc Lean Street, Coffs Harbour. Gary VK2ZKT is the Radio Expo Coordinator on 02 66 55 2 990 or visit the Groups comprehensive web site at www.mncarg.org

THE FINAL FINAL

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

Now we usually don't give url's as they can be a pain to take down but in this case very simple go to www.jeffswalk.com

Jeff operates 5 watts, often with the dipole less than 3 metres off the ground. Daily latitude and longitude shown on web site.

He is well, no health complaints.

Thursday 17th May...Camped near Mosquito Creek Bore. Raining, stuck in tent, no sked this morning. Contact by satellite phone.

Friday 18th...Back on the move after rain. 18 to 24 degrees. Aircraft circled. Walked 28 Kms. Clear skies. Antenna placed across sand hills.

Saturday 19th...Reached Strezleki Track at 1pm. Road wet clay and rutted. 5Km to Monticeline Bore. 12 to 22 degrees. 160 Km south of Moomba.

Sunday 20th...Good interview with Macca on Sunday and an Ausie in Luoyang Henan Province, China heard about Jeff's walk. Chopper checking the road dropped in.

Monday 21st...12 degrees in tent. Heading for Strezleki Creek Crossing. 4wheel drive and van stopped for a chat. nice muffins! Rangers on road.

Tuesday 22nd...Walked 28 Kms. Fantastic sunset.

Wednesday 23rd...Walking towards turnoff to Marty Merty Cattle Station, about 25 Kms. Took short cut after information from Marty Merty and will camp within sight of homestead.
11 to 24 degrees. Will stay at this station till Friday morning.

We are maintaining 2 skeds per day. Evening sked on 7.045 Mhz at 1730 EST. Fellow operators invited to participate after housework, that is location, temperatures, weather and Jeff's condition etc.

Thanks again to the gentlemen who have offered to assist with the web page. Dividing the work helps VK4BNQ (Roger) who has contributed greatly. Thank you Roger. Roger is also the main radio link as I can only hear Jeff clearly some days. A good and vital working example of amateur radio.

Regards,
Bill Johnson
VK2FWGJ

OK Fred,

Usually when I do see a hidden extension like that, red flags go up.
Just habit, I guess.
The virus scanner caught it first.

Thanks Fred.

I'm more interested in the general issue of the health of the hobby than the specific correlation with a code requirement. Here in the US, I see potential ham radio operators spending their time with computers and not impressed by the concept of being able to communicate with people all over the world because they can do that by opening their cell phone. I wonder how the population of amateur radio enthusiasts is holding up in countries where there might be less computers but more cell phones. There's a very different dynamic in less-developed countries and I don't know whether it favors the hobby. For example, people might be more motivated to explore amateur radio but unable to do so because equipment is not available.

Thanks for your nice comment. I won't rebuke you for not consulting
the help file for the size of the bitmap because I have endured
several rebukes myself for asking questions answered in other freeware
help files. The help file is in the folder with the program. I think
that it is 511 x 680 (I am not at home now). I will try to find a
place to put a help button on the interface in the next version.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 27 MAY 2007

You are listening to Amateur Radio Station ZS6SRL of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is broadcast every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. This broadcast can also be heard on Echolink by connecting to ZS6FCS. To listen to a web stream go to www.sarl.org.za, click on ARMI and follow the links. This, and previous bulletins, can be downloaded from the web site of the SARL i.e. www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area as well as on 145,7875 and 438,850 MHz in the Johannesburg area.. (Other news readers please change to suit).

SILENT KEY

It is with sadness that SA AMSAT learned of the passing away of Garth Milne, ZR1AFH, after a short illness early on Friday morning. Garth gave South Africans the first satellite, SUNSAT, and was largely instrumental in securing an amateur radio payload on SumbandilaSat. He was a true pioneer in technology. His key has become silent but his contribution to science and technology will long be remembered. Our thoughts and sympathy go out to his wife, relatives and friends. A memorial service will be held on Monday 28th May at 14:30 in the Welgelegen Dutch Reformed Church in Dalsig, Stellenbosch,

(PAUSE)

In the news today:

ALL ROADS LEAD TO STELLENBOSCH NEXT SATURDAY

CANDIDATES HAVE DONE WELL IN THE MAY RADIO AMATEUR EXAMS

JOIN THE PRESIDENT'S NET AND INTECNET THIS EVENING

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

ALL ROADS LEAD TO STELLENBOSCH NEXT SATURDAY

An exciting day awaits Western Cape Radio Amateurs when the SARL Radio Technology event will be held at the University of Stellenbosch next Saturday 2 June 2007. The event takes place at the Department of Electrical and Electronic Engineering in lecture hall 203 in the Electronics Engineering Building. The cost is R20 per person which includes entry into the attendance prize draw. Students and learners enter free. The proceedings will be opened by Prof Chisto Viljoen.

Lectures and demonstration include: . The mystery of the frog's thigh - the story of the invention of the battery. This is a very popular lecture with demonstrations of how the battery as we know it today was developed.

. Research in ionospheric radio propagation - South Africa is in the forefront of research in this area. The lecture will highlight the work carried out at the Hermanus Magnetic Observatory.

. Cognitive Radio, an emerging technology that may make more intelligent use of the available radio spectrum.

. Automatic Position Reporting System, (APRS) a system that uses amateur radio to transmit position reports, weather reports, and messages between users. A live demonstration is included in the presentation.

. BACAR 2007 - a new approach to promote Amateur Radio at schools and a fun club project using a miniature satellite launched on a couple of party balloons. BACAR is the acronym for Balloon Carrying Amateur Radio.

The full programme is available on www.sarl.org.za, click on Radio Technology in Action.

CANDIDATES HAVE DONE WELL IN THE MAY RADIO AMATEUR EXAMS

Excellent results have been recorded in the May Radio Amateur Examination. Of the 65 candidates who wrote the class A exam 57 passed, putting the pass rate at 87,7%. 26 of the 31 candidates who wrote the class B examination passed. The pass rate is 86,7%. This was the first examination where candidates who wrote the class A exam could also write the class B exam if they felt that they would not pass the class A exam. Of the 9 candidates who failed the class A exam, 8 also wrote the class B exam of which 5 passed.

The highest mark in the class A examination was achieved by two candidates who obtained 98%. Congratulations to L Kriedeman, ZS1LEO, and Ms L Fitchat, ZS6LIZ.

The highest mark in the class B examination was 93%. Congratulations to D G Jackaman, ZU6DG, and H D Steyn, ZU6SAP.

The oldest person to write the class A examination is 73 years old and the youngest person 14. The youngest candidate in the class B exam is 13 years old,

The SARL congratulates all the candidates who were successful and hopes that they will soon be on the air enjoying amateur radio. If you did not make it this time, don't give up, study some more and write the next class A examination on 18 October or the next Class B exam on 2 August 2007. All the results are available on www.sarl.org.za.

JOIN THE PRESIDENT'S NET AND INTECNET THIS EVENING

Join the SARL President Graham Hartlett this evening at 19:00 (Sunday 27 May 2007) when he will discuss some of the recent developments on PLT. The guest speaker on the Intecnet, starting at 20:00, is Dick Stratford, ZS6RO, who will talk about APRS and answer questions on how to become involved. His discussion will be supported by a PowerPoint presentation which is available on www.sarl.org.za, click on ARMI and you will see the link. The presentation is in PDF format for easy download.

Clubs wishing to link their local repeater are invited to send details to armi@sarl.org.za . Both programmes are streamed on the internet and on Echolink. You will find the links on the SARL web under ARMI.

THE TRUST INVITES YOUR INPUT FOR THE CONSTRUCTION COMPETITION

Are you a constructor at heart? Why not enter the 2007 construction competition. It is an open competition which means you can enter with your favourite project. There are two Yaesu VHF transceivers sponsored by Verstay to be won and a number of 2007 ARRL handbooks. Full details on how to enter can be found on www.amateurradio.org.za.

BOOK A SLOT FOR YOUR GROUP TO TALK TO MARK SHUTTLEWORTH DURING THE SARL YOUTH DAY EVENT

To ensure that the group of young people you or your club are hosting on Youth Day on 16 June get to talk to Mark Shuttleworth you need to book your slot now. Time slots will be allocated on a first come basis and will vary between 5 and 15 minutes depending on the size of your event. Mark will be available between 10:00 and 11:30.

To book slots send an email to armi@sarl.org.za with the following details: Group/Club, where the event will be held and how you plan to link into the network. It is planned to have the normal President/Intecnet links operational. How many young people do you expect to host? Who will be your liaison officer and his/her contact details? A detailed guideline will be mailed to the liaison officer a week before the event.

Don't delay. Do it now if you or your club don't wish to miss out.

CLUB NEWS

APRS INTEREST MEETING

The ERB Club extends their apologies to those who travelled to the APRS Meeting which was scheduled for the 19th May.

The meeting was cancelled at the last minute and all were not informed. No new date has been set as yet.

DURBAN AMATEUR RADIO CLUB NEW COMMITTEE

At the recent AGM of the Durban Amateur Radio Club the following Committee was elected:

Chairman Louis de Bruin ZS5LP; Vice Chairman Dave Long ZS5FR; Secretary Laurie Devereux ZS5DL; Treasurer Louis de Bruin ZS5LP; Members Dave Smith ZS5LPT;

Danny Giraud ZS5DG;

Glen Duffy ZS5GD;

Neal Slogrove ZR5NAS.

Good luck to the new committee and thanks to the retiring committee members for all their hard word.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will continue at very low levels. The geomagnetic field is expected to range from quiet to unsettled levels on 3 till 4 June. The expected Effective Sun Spot number for the coming week will be less than 5.

20 m and 15 m will provide best opportunities for DX. There is a possibility of 20 m openings towards India from about 15:00 CAT. 40 m may open towards Australia from 20:00. From about 15:00, there may be good 15 and 20 m openings towards Europe. Contacts to the USA are going to be very challenging. For the CW and digital enthusiasts it may also be worth monitoring 10 MHz.

Although the DX predictions may currently not be too enthusiastic, now is the time to work towards your 80 m WAZS during the evenings. Remember that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

This evening 27 May - President's Net and Intecnet; 16 June - SARL Youth day; 30 June - Closing date for updating of SA DX Survey; 2 August - Class B RAE; 18 October - Class A RAE.

SARL News depends on clubs and individuals for news items of importance and interest to radio amateurs. The one and only way to ensure that your contribution will reach the SARL News team, is to place it in www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date. It will be appreciated if you will do it in both Afrikaans and English.

The SARL also invites all listeners to listen to the program Amateur Radio Mirror International this Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. Audio is also streamed on www.zs6mrk.org and on Echolink from ZS6FCS as for this bulletin. A repeat transmission takes place on Mondays at 21:00 on 3 215 kHz. Telkom and Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

You have been listening to a news bulletin by the South African Radio League, which was compiled by Gustav, ZS6BWN.

A prosperous week to all, 73.

/EX

1037. Ninety Days

Newsgroup: rec.radio.amateur.moderated
Date: 2007-05-26 19:32:57 UTC
From: AF6AY <LenAnderson@ieee.org>
Message-ID: <1180207956.992855.240930@p77g2000hsh.googlegroups.com>
Source record: 4442

U.S. License Changes over two 90 Day Periods from www.hamdata.com:

Hamdata information sorted from FCC publicly-available database of 24 May 2007 and [in square brackets] 24 January 2007:

New Licensees 8,732 [5,281]

Expirations 8,109 [6,496]

Class Changes 15,819 [3,100]

Call Changes 2,876 [1,231]

All Updates* 47,863 [44,976]

* Renewals, address or name changes, plus other administrative changes.

The number of new licensees has gone up but not doubled as in the last (60 Day) posting. This comparison is to the November 2006 to January 2007 90-day period when code testing was required.

The number of license class changes has approximately quintupled since the advent of code testing cessation on 23 February 2007. The number of
callsign changes has slightly more than doubled.

Expirations are slightly increased. In the last 90 days the number of new
licensees is greater than the number of expirations; for November 2006 to January 2007 period expirations exceeded new licensees.

The November 2006 to January 2007 period includes the announcement of FCC 06-178 ending code testing on 15 December 2006. That may have influenced the November 2006 to January 2007 numbers. Comparing the 90-day period ending 24 January 2007 with the 90-day period ending
22 September 2006 [sqaure brackets] we get:

New Licensees 5,281 [4,529]

Expirations 6,496 [9,722]

Class Changes 3,100 [2,704]

Call Changes 1,231 [1,458]

All Updates* 44,976 [30,315]

There is only a slight increase in new licensees but a definite downturn
in expirations from September to January. The sudden increase in adminstrative updates may be a reflection of "summer" activities since this second comparison uses the months of July to September.

73, Len AF6AY

1038. GB2RS NEWS Sunday 27 May 2007

1 GB2RS NEWS Sunday 27 May

The news headlines

* British amateurs inducted to Hall of Fame

* Exceptional woman passes Foundation exam

* New workshop for Amateur Satellite Service

Two British amateurs were inducted to the prestigious CQ Magazine DX Hall Of Fame at the Dayton Hamvention last weekend. Roger Western, G3SXW, and Nigel Cawthorne, G3TXF, were jointly honoured for their many years of activating rare RX locations. To date, Nigel has operated from 44 DX locations, and Roger has activated 37. Nigel has what may be the world's largest collection of QSL cards. In fact, he recently completed a house extension solely to house his QSL collection!

In addition to his trips with Nigel, Roger is a founding member of the "Voodoo" contest DXpedition group, a member of the CQ Contest Hall of Fame, and an international adviser to the CQ World Wide DX Contest Committee. He has also written two books, on DXpeditioning and Contesting.

Finningley Amateur Radio Society is delighted to announce the success of a very exceptional lady. Vera Tomlinson, an octogenarian, passed her M3 Foundation examination at the second attempt. What makes this an outstanding achievement is that Vera is registered blind.

Vera was subjected to the same stringent rules as any other candidate with the exception that Club President, John Swift M0UTX, was allowed to act as a reader for her. Lead instructor, Peter Myers G3UWT, was full of praise for Vera and stated she was a delight to teach and is now looking forward to a QSO on air.

AMSAT UK appreciate that space communications may seem daunting to many new amateurs so they have organised a special beginners workshop which will show how to get started in this exciting aspect of amateur radio.

The beginners workshop will be held as part of the AMSAT UK 22nd International Space Colloquium to be held at the University of Surrey, Guildford, from Friday 20 to Sunday 22 July.

>From 2002 until 2006 AMSAT UK campaigned to get Foundation licence holders access to the Amateur Satellite Service. At the end of last year the UK regulator Ofcom agreed to allow Foundation holders full access to the Amateur Satellite Service following detailed negotiations

with the RSGB.

This new privilege enables Foundation holders to speak directly to Astronauts on the International Space Station and communicate around the world on VHF and UHF via the rapidly growing number of Amateur Radio Satellites.

The event is open to all radio amateurs and SWL's. You do not need to be an AMSAT-UK member. Either day passes or full packages comprising overnight accommodation and meals at the University are available. There is an online booking service and PayPal, Visa and Master Card payments are accepted. For more details contact Jim Heck on G3WGM on 01258 453959.

Ireland's Limerick Radio Club has been invited by the Foynes Flying Boat Museum to operate a special amateur radio station. At the same time there will also be a commemorative Transatlantic ReEnactment Flight.

2 The special event call sign has been issued to the club to operate as EI70FOY. The station will be on the air from July 7 to 8 on the high frequency bands 80 through 10 metres. EI70FOY will also operate on VHF/UHF.

On July 5 1937 the first transatlantic passenger test flight took place from Botwood, Newfoundland and flew to Foynes, Ireland. To commemorate the 70th anniversary of this event a special re-enactment flight is planned by Captain Patrick White and his son Ian. They will be flying their vintage PBY Cattlaina Flying Boat from Botwood Newfoundland on 5 July, landing at Foynes on 6 July.

A special QSL card commemorating the flight re-enactment will be sent to all stations worked over the three day event. All inbound QSL cards should be sent to the Club's QSL Manager, Alan Cronin.

An operation over the American Memorial Day weekend, May 26 to 28, by special event station K0S will highlight the 2007 Strange Antenna Challenge.

Sponsors say K0S will employ out of the ordinary antennas to promote amateur radio and making do with what might be available during an emergency.

Individuals and clubs may participate as satellite stations by using anything but wire or pipe for a radiating element and adding K0S to their call signs. Strange antennas used in past events, dating back to 2002, have included folding chairs, paint easels, ladders, tape measures, dog kennels, fences, cots and chicken wire with a trampoline as an apparent ground plane.

Scarborough has been chosen to host the 2007 World Thundercat Racing Championships. Normally held in South Africa or Australia, this will be the first time that the final has been held in the northern hemisphere.

Thundercats are small speedboats with a crew of two. Regional heats to qualify for the final have been held worldwide. The 400 metre course will be marked out in the South Bay Scarborough. Racing will commence on Tuesday 2 June with the final on Saturday 9th June. The special event station GB2CAT will be on the air June 9 to 10. HF activity will be around 7055 or 3725 KHz SSB, and 7025 or 3525 KHz CW. QSL via the RSGB bureau.

The RSGB are happy to announce that they will be providing an examination session at RSGB HQ on Friday 20th July 2007 to coincide with the July Advanced Examination. We are also able to run Foundation and Intermediate examinations on this day but practical assessments must be completed beforehand. If you are interested in attending then please contact rce.dept@rsgb.org.uk no later than 22 June.

And now for the details of rallies and events for the coming week On Sunday 3 June the SPALDING & DARS ANNUAL RALLY takes place from 10am at the Sir John Gleed Technical School, Halmer Gardens, Spalding. Details from Ambrose, M0DJA, on 07989 636 520, or on the web at www.sdars.org.uk. 3 JUNE 2007 On Sunday 3 June the Red Rose QRP Festival takes place from 11am at Formby Hall, Alder Street, Atherton, Manchester M46 9EY. Details from Les, G4HZJ, on 01942 870634, or by email to g4hzj@ntlworld.com. More details of these and future events can be found on pages 88 and 89 of the June edition of RadCom.

Now for the news of the special events The Bolsover Amateur Radio Society will be operating as GB2PF on Saturday 11 and Sunday 12 August to commemorate the birthday of local man Peter Fidler, who was a famous surveyor in Canada in the 1790s.

3 The club intends to operate as many bands as possible, HF, VHF and UHF, from the new club shack located at the Coalite Sports and Social Club, Moor Lane, Bolsover. The Norman Lockyer Observatory Amateur Radio Group will be participating at the 2nd South West Astronomy Fair. It is due to be held in the grounds of the Norman Lockyer Observatory, Salcombe Hill, Sdimouth, Devon. It will be operating on 1 August using call sign GB2NLO from 0900 to 1800 BST, 0800 TO1700 UTC. They will be working SSB, CW, SSTV and PSK31 as appropriate on the 80, 40, 20, 6, 4 and 2 metre bands. QSL via the RSGB bureau with a special event QSL card. They would welcome any licensed amateurs or those interested in taking up the hobby to visit the exhibition tent. Burton upon Tent Amateur Radio Club will be at the Doveridge Steam and Vintage Charity Rally on the weekend of the 21 and 22 July. Licensed operators are welcome to come along and operate the equipment. They may ask to see your licence so please bring it along. HF, VHF and UHF bands will be in operation over the weekend. For more information www.doveridgesteam.co.uk. The Maidstone Amateur Radio Society G3WM will be operating a special event station GB2BVC celebrating 30 years of sailing at Bewl Sailing Club, Lamberhurst, Kent on Saturday, 26 May. The station will be on HF GB2BVC and VHF as GB2BSC from 0830 until 1600 UTC. HF bands will be 80, 40 and 20 metres.

Roger Greengrass, G4NRG, plans to operate as GM4NRG/P from the Isle of Lismore Scotland, from approximately 3 to 15 June. As the QTH is in a semi-residential location on an island with a population of only 176, actual operation will be dependant upon the ability to erect and use the antennas. He will try and put a spot on the DX cluster when operational. The Isle of Lismore is in the Inner Hebrides, IOTA Island Reference EU-008, Maidenhead locator IO76GN Operation is hoped to be on 6m, hopefully taking advantage of sporadic E propagation, voice and JT6M. Activity is also planned on HF, using SSB and digital modes PSK31. Operation will be holiday style. QSL via home call. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Richard, M0EAZ, is currently sailing across the Atlantic and regularly checks in to the Maritime Mobile net on 14.300MHz at 2100z each evening. His signals are reported as good, despite using just 100W to a back-stay antenna, and would welcome calls. Special callsign PA25UKSMG will be aired from The Netherlands between 19 May and 3 June to celebrate the 25th anniversary of the UK Six Metre Group. Expect activity on 160-2 metres, including an entry in the CQ WW WPX CW Contest from 26 to 27 May. QSL via PA7FM. Several other special call signs are expected to be used from other countries, especially during the UKSMG 6 Metre Contest during the first weekend of June. Celebrating the 750th anniversary of Krakow's city rights is HF750C, which will be active from 14 May to 30 June. QSL via SP9BRP. Expect also a large number of local operators to use special prefix SN0 during the year. Chris, M0DOL, and other members of the Northampton Radio Club will be active as either GP8LED/P and GP3GWB from castles and fortifications on the island of Guernsey, EU-114, from 26 May to 1 June. Look for HB0/DL1GDS, HB0/DO1ARS and HB0/DK4SFW to be active on 10 to 160 metres from Liechtenstein on 26 to 30 May. QSL via home calls, direct or bureau.

4 Six operators from the Flying Dutch DX Group will be active as HB0/PA0ABM from Triesenberg, Liechtenstein on 15 to 22 June. They will operate on 160 to 10 metres CW, SSB and some digital modes with two stations. Logs will be available at www.logsearch.de and will be uploaded to Log of the World. QSL via PA0ABM, direct or via bureau. Look for JA1UNS/1, JI1PLF/1, 7N1GMK/1, 7L4PVR/1 and 7N4VPS/1 to be active from Hachijo Island, AS043, JIIA AS-043-004, on 25 to 28 May. They plan to operate SSB and CW on the HF bands and 6 metres. QSL via home calls, direct or via bureau. JA1KJW/JR6, JJ1JGI/JR6, JK1EBA/JR6 and 7N4AGB/JR6 will operate Okinawa Island, AS-017, JIIA AS017-033, on 28 May and again on 15 to 18 June. From 29 May to 14 June they will be active from Ishigaki Island, AS-024, AS-024-004. Expect activity on the HF bands and 6 metres SSB and CW. QSL via home calls, direct or via bureau. DL1DWR, DG4VX and DG0CH will be active as LA/DL1DWR from Tromoy Island, EU-061, on 25 to 29 May. Activity will be on 160-2 metres mostly digital modes with some CW, SSB and FM. QSL via DL1DWR. Special Ukrainian callsign EO20R will be aired from 28 May to 3 June for the 20th anniversary of Slavutych, for the city built after the Chernobyl nuclear disaster. They will host the survivors who had relocated from

the evacuation zone around the reactor. QSL via UY2RO. Maciek, WQ7X will be active as VP5/WQ7X from 24 May to 5 June. He plans to operate CW and SSB on 10 to 80 metres. QSL via home call. Jim, VQ9JC, ND9M, has received written permission to use the special callsign VQ97JC from 23 May through 5 June. The 7 added to the prefix reflects the year, and apparently this is the first time special prefix has been authorized for use from Diego Garcia. Jim can only operate during his spare time, which normally means 1200 to 1730 UTC. However, he hopes to make the VQ97 prefix available at least ten evenings during that period, and to stay overnight at the shack both nights during the CQ WW WPX CW Contest from 26 to 27 May. QSL via ND9M, direct or bureau, but cards will not be printed at least until after he returns home in August. Now the contest news The RSGB 70MHz activity takes place between 2000 to 2230 local on 29 May on the 70MHz band, all modes. The exchange takes the form of RST, serial number and locator. The RSGB National Field Day takes place between 1500 to 1500 on 2 to 3 June on the 1.8 to 28 MHz bands using CW. The exchange takes the form of RST and serial number. Now the solar factual data for the period from 14 May to 20 May compiled by Neil Clarke, G0CAS. A sunspot group emerged on the 14th and increased rapidly in area, number of spots and magnetic complexity. By the 17th the growth had slowed. However, only two small C class solar flares took place and had very little effect on propagation. On the remaining days solar activity was very low. Solar flux levels increased from 73 units on the 14th to peak at 77 units. Levels then declined and by the 20th were down to 74. The average was 76 units. The 90 day solar flux average on the 20th was 74 units, that's the same level as last week. X-ray flux levels increased from below the minimum level to A3 units by the 16th. The average was A1.6 units. Geomagnetic activity was quiet until the expected coronal hole disturbance arrived. The Ap

5 index was only 3 units on the 14th, which was the quietest day and in contrast the Ap was 18 units during the disturbance. The average was Ap 8 units. The ACE spacecraft saw solar wind speeds increase from 280 kilometres per second to 680 by the 18th. Particle densities were low except for the 18th, which increased briefly to 60 particles per cubic centimetre. Bz varied between minus 2 and plus 4 nanoTeslas on the quiet days and between minus 15 and plus 14 nanoTeslas during the disturbance. Low geomagnetic activity meant HF propagation reached forecast levels up the 17th. Some paths were degraded on the 18th but recovered by the 19th. Sporadic-E was occurred every day on both 28 and 50MHz, with at least one opening to West Africa on Six. Few contacts were reported on 70MHz, though crossband QSOs to 50MHz were made with several countries that do not currently allow 4-metre operation. And finally the solar forecast. This week the slightly more active side of the Sun is expected to be looking our way. Solar flux levels could be just in the 80's for the next few days but then levels are expected to decline. Geomagnetic activity is expected to be quiet until next weekend when activity should increase due to a recurring coronal hole. MUFs during daylight hours at equal latitudes should be around 18MHz for the south and 15MHz for the north. The darkness hour lows should be

about 10MHz. Paths this week to the Middle East should have a maximum usable frequency with a 50 per cent success rate of around 23MHz. The optimum working frequency with a 90 per cent success rate will be about 18MHz. The best time to try this path will be between 0700 and 1800 hours UTC. Sporadic-E should take place on some days this week. Historically, the favoured times are mid morning and late afternoons. However, opening can take place at any time. And that's all for this week from the propagation team.

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 27 May Chelmsford Amateur Radio Society is going to the Waters and Stanton open day. Contact Martyn, G1EFL, on 01245 469 008.

On Tuesday 29 May Stevenage and District Amateur Radio Society is operating HF. Contact Neil, M0ARH, on 01438 217 077.

On Wednesday 30 May Chesham and District Amateur Radio Society is on the air. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 30 May Dover Radio Club is having its half term net on GB3KS . Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

On Wednesday 30 May Fareham and District Amateur Radio Club is having a junk sale. Contact Jim, M1JJN.

On Wednesday 30 May Norfolk Amateur Radio Club is having a Bright Sparks meeting to complete the DF 100 kit and design a QSL card. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 30 May Worthing and District Amateur Radio Club is having a report on Dayton 2007 by G4UDU. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 31 May Bittern DX Group is having a debrief on GB4NSR. Contact Keith, G0GFQ, on 01263 588 506, keith@g0gfq.com, or on the web at www.bittern-dxers.org.uk.

On Thursday 31 May Shefford and District Amateur Radio Society is watching a DVD on the Wurlitzer storycourtesy of Brian, G8GHR. Contact David, G8UOD, on 01234 742 757.

On Friday 1 June Crystal Palace Radio and Electronics Club is having a talk on Susy Radio by John Stockley, G8NMY. Contact Bob, G3OOU, on 01737 552 170.

On Friday 1 June Mid-Sussex Amateur Radio Society is having a boule evening. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 1 June Torbay Amateur Radio Society is operating GB60TR. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Friday 1 June Wey Valley Amateur Radio Group is having a club night. Details on the web at www.weyvalleyarg.org.uk.

On Saturday 2 June Brede Steam Amateur Radio Society is operating HF from the bunker. Contact Steve, M0SSR, on 01424 720 815.

7 On Saturday 2 June Chelmsford Amateur Radio Society is taking part in National Field Day from Sandford Mill car park. Contact Martyn, G1EFL, on 01245 469 008.

On Saturday 2 June Cray Valley Radio Society is taking part in the HF CW Field Day. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Saturday 2 June Harwich Amateur Radio Interest Group is taking part in the restricted section of National Field Day. Contact James, M0ZZO, on 01255 242 746.

On Saturday 2 June UK Six Metre Group is running its annual Summer Sporadic E Contest. It's the Group's Silver Jubilee and to commemorate 25 years of promoting 50MHz activity there will be UKSMG stations operating with special callsigns during the contest and at various times during May and June. Details on the web at www.uksmg.org.

On Sunday 3 June Radio Society Of Harrow is operating GB2DHH at the DeHavilland Heritage Museum, London Colney, from 10am. Contact Linda, G7RJL, on 020 8386 8586, or on the web at www.g3efx.org.uk or Chris 01895 621 310.

NEWS FOR THE SOUTH-WEST

On Sunday 27 May Flight Refuelling Amateur Radio Society is having a talk on microwave EME by John, G0API. Contact Tony, G3PFM, on 01202 622 262.

On Tuesday 29 May Flight Refuelling Amateur Radio Society is running Intermediate training 1900 - 2130 . Contact Tony, G3PFM, on 01202 622 262.

On Wednesday 30 May South Bristol Amateur Radio Club is on the air. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 30 May Thornbury and South Gloucestershire Amateur Radio Club is on the air. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 31 May Swindon and District Amateur Radio Club is having its AGM. Contact Mike, M5CBS, on 01793 826 465.

On Saturday 2 June Taunton and District Amateur Radio Club is taking part in the CW National Field Day. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

NEWS FOR THE MIDLANDS

On Monday 28 May Gloucester Amateur Radio And Electronics Society is operating from the Escarpment from 3pm to 6.30pm, weather permitting. Contact Anne, 2E1GKY, on 01452 548478, daytime.

On Monday 28 May Stourbridge and District Amateur Radio Society is having an open shack night. Contact John, M1EJG, on 01562 700 513.

On Monday 28 May Stratford Upon Avon District Radio Society is having a round table chat. Contact Jack, G3VYE, on 01926 641 988.

On Tuesday 29 May Derby and District Amateur Radio Society is having a visit to Milford hydro-electric station. Contact Martin, G3SZJ, on 01332 556 875.

8 On Tuesday 29 May Loughborough and District Amateur Radio Club is having its 2nd DF of 2007, on 160m. Contact Chris, G1ETZ, on 01509 504 319.

On Wednesday 30 May Lincoln Short-Wave Club is having its Scout camp debrief. Contact John, G1TSL, on 01526 323 153.

On Wednesday 30 May Telford and District Amateur Radio Society is operating portable in the park - come and see how to do it! Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Friday 1 June Hucknall Rolls-Royce Amateur Radio Club is on the air on HF from 8pm. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

On Friday 1 June Lincoln Short-Wave Club taking part in the HF National Field Day. Contact John, G1TSL, on 01526 323 153.

On Sunday 3 June Wythall Radio Club is having its summer fox hunt. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

NEWS FOR THE NORTH OF ENGLAND

On Monday 28 May Hornsea Amateur Radio Club is having a DF night, fox hunting on 2m. Contact Steve, G4GPY, on 01482 860 440, or by email to g4gpy@eddiesplace.karoo.co.uk.

On Monday 28 May Macclesfield and District Radio Society is on the air and having a club evening from 8.00pm. Contact Tom, M1EYP, on 01625 612 916, tommyread@hotmail.com, or on the web at www.gx4mws.com.

On Monday 28 May Sheffield Amateur Radio Club is having an HF, BBQ and sports evening. Contact Trevor, M0TWS.

On Tuesday 29 May Chester and District Radio Society is having a talk on the history of Liverpool airport by Robin Tudor. Details on the web at www.chesterdars.org.uk, info@chesterdars.org.uk.

On Tuesday 29 May Halifax and District Amateur Radio Society is on the air with G2UG at Rishworth. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Tuesday 29 May Morecambe Bay Amateur Radio Society is having a talk on the RSGB by Dave Wilson. Contact Chris, M5XYZ.

On Tuesday 29 May Northwest Amateur Radio Club is having its second Open Evening. Contact Ian Cooper.

On Tuesday 29 May Wakefield and District Amateur Radio Society is having a digimodes evening with the new shack computer. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Wednesday 30 May Great Lumley Amateur Radio And Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Wednesday 30 May Wirral and District Amateur Radio Club is meeting at The Dee View, Heswall. Contact Tom, G4BKF, on 07050 291 850.

On Thursday 31 May Grimsby Amateur Radio Society is having a DF hunt. Contact Brian, G4DXB, on 01472 231 383.

9 On Friday 1 June Tynemouth Radio Club is having a talk on A Slinky Antenna by Ken, M3ILL. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

On Saturday 2 June Grimsby Amateur Radio Society is taking part in the CW Field Day contest at Cibas. Contact Brian, G4DXB, on 01472 231 383.

NEWS FOR SCOTLAND

On Sunday 27 May Dundee Amateur Radio Club is taking part in the Scout Centenary Celebrations. Contact Martin, MM0DUN, by email to mm0dun@dundee-amayeur-radio.co.uk, or on the web at www.dundeeamateur-radio.co.uk.

On Monday 28 May Lothians Radio Society is having a DF hunt with Peter Dick, GM4DTH. Contact Toby, MM0TSS, on 07739 742 367, or by email to enquiries@lothiansradiosociety.com, or on the web at www.lothiansradiosociety.com.

On Wednesday 30 May Paisley (YMCA) Amateur Radio Club is having its AGM. Contact Jim, GM3UWX. On Thursday 31 May Aberdeen Amateur Radio Society is on the air. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Friday 1 June Cockenzie and Port Seton Amateur Radio Club is having a club night. Contact Bob, GM4UYZ, on 01875 811 723.

On Saturday 2 June Aberdeen Amateur Radio Society is taking part in the RSGB National Field Day, operating GM3BSQ/P and GM4RGC/P at Counteswells. Contact Lewis, GM4AJR, on 01224 575 663, or on the web at www.aars.freeserve.co.uk.

On Saturday 2 June Dundee Amateur Radio Club is taking part in the CW National Field Day. Contact Martin, MM0DUN, on mm0dun@dundee-amayeur-radio.co.uk, or on the web at www.dundee-amateurradio.co.uk.

On Saturday 2 June Moray Firth Amateur Radio Society is taking part in the HF Field Day. Contact Jim, MM0SMD, on 01340 820 134.

On Sunday 3 June Dundee Amateur Radio Club is taking part in CW National Field Day. Contact Martin, MM0DUN, by email to mm0dun@dundee-amayeur-radio.co.uk, or on the web at www.dundee-amateurradio.co.uk.

NEWS FOR WALES

No news items have been received for Wales this week. NEWS FOR NORTHERN IRELAND

No news items have been received for Northern Ireland this week. And that's the end of this week's GB2RS news broadcast,

prepared by the Radio Society of Great Britain.

1039. Re: Gulf Coastal Software - QSLeCard new freeware

Newsgroup: rec.radio.amateur.moderated
Date: 2007-05-27 20:28:41 UTC
From: KØHB <groupk0hb@earthlink.net>
Message-ID: <1180297053.118137.26070@m36g2000hse.googlegroups.com>
Source record: 4444

OK, I've played with it some more, and for casual use (making up 1 or a few cards) it's great.

But can you take it to the next step?

Over this weekend a I played awhile in the WPX contest. I can export the log from the contest to an ADIF file, and it would be awesome if I could import that ADIF file into QSLeCard and output (in "batch" mode) cards for all my weekend contacts.

73, de Hans, K0HB

Irish Radio Transmitters Society
Radio News Bulletin

Sunday May 27th 2007

CW Field Day

Don't forget that the CW field day takes place over the June bank holiday weekend (the 2nd and 3rd of June).

EI4CF and Shannon Basin Club have once again made the grounds of Garbally College in Ballinasloe available for any stations interested in taking part from a central location.

Any stations planning on entering the field day please e-mail ?contests at irts dot ie?.

International Museums Weekend

The International Museums Weekend takes place in three weeks time on the 16th and 17th of June. This amateur radio special event has grown in popularity since the first event was held in 2002.

Among past participants are The Tower of London, HMS Belfast and the US battleship New Jersey. The Howth Martello Radio Group will be participating again this year, operating from the Vintage Radio Museum in Howth. Visitors are welcome to call and operate the station over the weekend. The museum web site is www.qsl.net/ei5em/museum.html. A full list of participating museums and further information of the event is available from the organiser's web site www.ukradioamateur.co.uk/imw/.

VHF News

The monthly 6-metre net organised by Kerry Amateur Radio Group will take place next on Monday the 4th of June. The frequency used is 50.135 MHz SSB at 9.00 p.m. local time. The 6-metre net takes place on the first Monday of each month.

The 4-metre activity night will take place on Tuesday the 5th of June on 70.2625 MHz from 8 to 10 p.m. local time. Modes in use are AM, FM and SSB. The 4-metre activity night takes place on the first Tuesday of each month.

The EI 6 meter beacon EI0SIX operates on 50.052 MHz with using 20 Watts into a Trident V6M half-wave vertical antenna. The beacon is located on the Hill of Allen in County Kildare - IO63NF.

Rallies

Bangor & District Amateur Radio Society Rally will take place on Sunday the 17th of June in the Crawfordsburn Country Park, Helen's Bay, Co. Down. The Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel, Blarney, Co. Cork and the Mayo Radio Rally will be on Sunday the 18th of November in the Belmont Hotel, Knock, Co. Mayo.

A full listing of upcoming rallies is available on www.irts.ie.

South Eastern Amateur Radio Group

Please note that there will be no general meeting for the month of May. The next committee meeting will take place on Monday the 4th of June at 8.00 p.m. in The Roanmore Centre, Waterford. All committee members are asked to attend.

Prefixes for Montenegro and Serbia

When Montenegro first became an independent country, the prefix YU6 was tentatively allocated to it. However, it now has a call sign block of its own. The ITU now lists 4O (that's "four Oscar") as Montenegro's prefix. This means Montenegro stations may use 4O0 through 4O9, while Serbian stations will continue to use YT and YU prefixes for all call districts, 0 through 9. The ITU reportedly wants the two nations to complete the transition to new call sign blocks as soon as possible.

The ITU has taken back the former 4N and YZ prefixes for future reassignment.

Members that use computer logging software should update their software to reflect these new prefix allocations.

Contests

The CW field day will take place in two weeks time on the 2nd and 3rd of June and the VHF/UHF field day will take place on the weekend of the 7th and 8th of July.

The RSGB IOTA contest will be held on the 28th and 29th of July.

Ladies Mini Marathon

The 2007 Flora Ladies Mini Marathon takes place on Bank Holiday Monday the 4th of June at 3.00 pm. It starts from Fitzwilliam Square, and finishes in Stephens Green Dublin 2. Sadly this year's event will happen without the familiar voice of Donnchadh O'Shea who traditionally operated the net control station. This year's public service event will be dedicated to his memory. The co-ordinator for the event again this year will be George Adjaye who may be contacted by phone on 086 2586103 or Fax 01 4908546 or email 'george_adjayeg at dcu.ie'.

Galtee Walking Festival

It's now just one week from the 2 days of activity in the Galtees on the Saturday and Sunday of the June Bank Holiday weekend. John Ronan EI7IG is event Coordinator and he is being assisted by John EI2JB and other members of the Tipperary Amateur radio Group. Newcomers are welcome and training will be provided by AREN each morning. Please contact John EI7IG on 086 8167310 or John EI2JB at QTHR if you are interested in participating.

Theory Examination

The next Theory Examination for the Experimenters Licence will be held on Thursday the 28th of June next. Places for the examination are limited and will be allocated on a 'first come first served' basis. Intending candidates should forward the appropriate fee to Se'n Nolan EI7CD, 12 Little Meadow, Pottery Road Dunlaoghaire, Co. Dublin. The fee is 50 Euro or 25 Euro for full time registered students, those who are retired, are unemployed or have a disability. In addition to the exam centre at the ComReg offices in

Dublin an examination will be held on the same date and with the same paper at the Community Centre, Carrigtwohill, Co. Cork.

The closing date for the examination is the 16th of June and it will be strictly adhered to. Sean's e-mail address for further enquiries is "ei7cd at gofree dot indigo dot ie".

Isle of Man, Special Event

Mike GW6NLP and Colin MW0JNI are running a Special Event Station until the 6th of June, in association with Scarlett Point Amateur Radio Society, to celebrate the 100th anniversary of the Isle of Man TT races. They'll be based at Scarlett Point Tower in Castletown, on the southern most tip of the Isle of Man.

They'll be running with the callsign GB100TT. A full operating schedule will be on either Wrexham ARS' website, or the Scarlett Point website hopefully this will be finalised nearer the time. Wrexham ARS' website is located at: www.qsl.net/wars and Scarlett Point ARS is at www.scarlettpoint.com.

EI75IRTS

Just a reminder that as part of the Society's Jubilee Celebrations, the IRTS has been allocated the call sign EI75IRTS for the duration of 2007. The licence holder is Finbarr Buckley EI1CS, and with his agreement, the call sign may be used by individual and club members holding a current Radio Experimenter's licence.

Individual and club members of the IRTS can apply to use the call sign EI75IRTS during the rest of the year. More information is available on www.irts.ie.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to "news at irts dot ie" for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday's bulletin.

1041. Re: 2m FM calling practices

Do not confuse digital television (DTV) with high definition TV (HDTV)
which is a subset of DTV. All TV stations will be required to use DTV
but the use of HDTV is optional.

As far as the transmitters go, in general they are being junked
because most of them are near the end of their useful lives and are
held together by duct tape and baling wire in anticipation of the
transition.

A couple of 'nits' to pick.

The frequency field should be labeled: MHz (or KHz maybe) but not Hz.

When printing to a printer, the program will ALWAYS print to the
systems default printer, even if an alternate printer is selected in
the print option box.

I beg your pardon - most if not all major coast stations throughout
the world had that capability. I was involved with the Israeli coast
station - 4XO in Haifa (Haifa Radio) - in the mid-60s and I knew that
all of the European coast stations had HF SSB voice service available
as well.

>Before satellite communication systems were widely available, the only way

Two brothels in a remote area of Nevada (where such activity was
legal) tried that in the late 70s and the VHF Marine carrier who
colluded in that lost his license and equipment as a result.

Printer are a bear to deal with. I don't know how to fix that
problem. It probably has something to do with the print component I
am using.

>The frequency field should be labeled: MHz (or KHz maybe) but not Hz.
This was an oversite and will be corrected.

I am not into contesting myself, but I did have the idea of doing
what you suggested with contest records. However, I need to get a
copy of the records from someone, or at least a few records to see how
to format them when the program reads them into the program. I may
have to get records from every logging program, I don't know if there
is a standard format.

If you can post a few in this news group, I will go to work with the
modification.

I have also uploaded a new version (v73.2) that is supposed to send
the card upon clicking a send button. I have not been able to test it
because of the restrictions I have with my ISP. It should on Simtel
and PCMag (search QSLeCard)
http://shareware.pcmag.com/search.result.php?format=&SiteID=pcmag
within about 20 days. Simtel takes forever to get my freeware on
their system.

Thanks for your suggestions. I usually try to make requested mods.

ADIF is a standard format which pretty much all logging programs (not
just contesting programs) can export and import, allowing the exchange
of log information between programs, regardless of the 'native' file
structure of the importing/exporting program.

The specifications for ADIF are at http://www.adif.org/ ..... there
are two generations, ADIF 1 and ADIF 2. Build to ADIF 2, as it is
backward compatible to ADIF 1.

Below is a short excerpt with 4 records from a recent export from one
of my programs. The ADIF file is straight ASCII text, and your
QSLeCard program would only need import a few fields from each record,
ie. <CALL>, <FREQ>, <MODE>, <QSO_DATE>, <RST_SENT>, and <TIME_ON>.

I thunk some more on this (always dangerous, almost as dangerous as planting copper with chain saws) and thunk up this idea.

Rather than just a mindless bulk import (or better yet, in addition to a mindless bulk import), have a facility to import in 'one-at-a-time' sequence, then have a "Next" and a "Print" option button. In this mode, the program would import and display a QSO, you'd decide whether to print a card for it, or skp to the next QSO record. In that same feature put an "End" button to terminate the import at any point desired.

She gets very concerned that she will run over them when she mows the lawn. I used lawn staples, and they were never run over, but the fear was always there. Now everything including the coax gets buried.

OK, thanks. I was hoping that tyhere was going to be a standard
format. Your suggestion about programming some form of selectivity
into the program is good also. This mod will probably take about a
week, but again, Simtel will hold up on the upload for another 20+
days.

(e-mail: dl7voa@darc.de)

DU - PHILIPPINES, OC-129
Kaoru,JA7QVK/DU7, is staying on Cebu Island (OC-129) now for one year.
He is on a business trip and will stay there until August 2007. Kaoru
is working mainly in SSB on 40-6m and skeds can be arranged via e-mail:
kaoru12506@globelines.com.ph
Unfortunately QSLs only direct, when he is back in Japan.
This is his address: Kaoru Ono, Unit 1204, Park Tower 2,
Cebu Business Park, Cebu City, Philippines 6000.

EA8 - CANARY ISLANDS, AF-004
Franky,ON7RU, will be active as EA8/OQ7R in CW/SSB/RTTY on 80-10m using
a FT-990 and wires from Jun 4-13. QSL via ON7RU, bureau or direct.

FO/C - CLIPPERTON ISLAND, NA-011
During the "Dayton DX Dinner Banquet" an upcoming activation of
Clipperton was announced for March 2008. The team leader will be
Bob Grimmick,N6OX. More information will be released at a later date.

HI - DOMINICAN REPUBLIC, NA-096
IW2NEF/HI7 will be QRV from Bayahibe (NA-096) from Jun 3-9. He will
work on 40-10m and 6m using a Yaesu FT-857D with 100 watts and vertical
but only for one or two hours a day. QSLs via his homecall.

KH8/S - SWAINS ISLAND, OC-200
The first N8S QSLs of the Swains Island DXpedition will be sent on
Jun 5. Meanwhile more than 6.000 letters arrived directly at YT1AD.
The call N8S has been issued to Dale,K9TTT, in June 2006 and was used
by the "Michigan DX Association" before. Dale promised to forward all
errant QSLs to YT1AD.

TA - TURKEY
Mill,LX1CC, will spend his holidays in Turkey from Jun 7-21. His QTH
will be the city of Selcuk and he got the special callsign YM3CC.

Activities will take place in SSB on 80-10m (including the WARC bands).
QSL cards via bureau to his homecall, direct or via eQSL.

VP6/D - DUCIE ISLAND, OC-182
First information was released about an upcoming DXpedition to
Ducie Island (OC-182) lasting for two weeks around Feb 10, 2008.
Licence and landing permission have been guaranteed already. The
first top DXers joining the team were: Carsten,DL6LAU (team leader),
Eric,K3NA (co-leader), Dietmar,DL3DXX, Andy,DL8LAS, Martti,OH2BH,
Robin,WA6CDR, and Krassimir,K1LZ. More info will be released at:
http://www.vp6dx.com

3A - MONACO
The special event station 3A7JO will be QRV in all modes on all bands
from Jun 2-10. All QSOs will be confirmed via bureau automatically.
If you can't wait that long send your direct QSLs to:
ARM (Association des Radioamateurs de Monaco) QSL Bureau, B.P. 2,
MC 98001, Monaco Cedex.
More information can be found on the website: http://www.monaco2007.mc

3B6 - AGALEGA ISLAND, AF-001
3B6SP will be the callsign of the Polish DXpedition which will show up
for 12 days starting on Jun 6. For health reasons Wojtek,SP9PT, had to
leave the team which now consists of: SP9MRO (team leader), SP5BFX,
SP3MGM, SP6EQZ, SP3RBR, YL SP9SX and SP5XVY. Danuta,SP9SX, will take
care of the QSLs. The team left Poland for Mauritius on May 28 and
their flight back goes on Jun 18. These QRGs were announced for 3B6SP:
band CW SSB RTTY PSK (QRGs in MHz)
160m 1.821,5 1.845 - -
80m 3.521 3.780 3.590 -
40m 7.021 7.070 7.040 7.038
30m 10.121 - 10.140 10.142
20m 14.021 14.185 14.084 14.072
17m 18.081 18.136 18.104 18.102
15m 21.021 21.290 21.084 21.072
12m 24.901 24.930 24.924 24.922
10m 28.021 28.490 28.084 28.122
Updated information is released on their website: http://3b6.godx.eu

5B - CYPRUS, AS-004
5B/G3RWF will be QRV in SSB/RTTY/PSK during his holidays from Jun 2-30.

FRANCE, SPECIAL EVENT STATIONS
The "24 Hours of Le Mans" belong to the classics in motor racing and
will be held the 56th time this year. TM6ACO will be active in CW/SSB
on all bands from Jun 3-17. QSL via bureau to F6KFI. Please check also:
http://asso.proxiland.fr/aras72

TM5BBC will be QRV from Creully from Jun 1-15 remembering the BBC
correspondents who reported from there about the battle in the Normandy
in June/Jule 1944. QSL via F2UW.

POLAND, SPECIAL EVENT STATION
The special event callsign HF750C celebrates the 750th birthday of the city of Cracow on the air since May 14. This station will be active until Jun 30 (QSL via SP9BRP) supported by several SN0 calls until the end of 2007.

SPAIN, SPECIAL EVENT STATION
The 32nd America's Cup is the most prestigious event in sailing and this year it is carried out in Europe for the first time off the shore of Valencia. Pascual,EA5FKQ (AO5FKQ), and other OMs from this region will use the special prefix AO5 instead of EA5 until Jul 7.

UKRAINE, SPECIAL EVENT STATION
The town of Slavutych was founded to be the new home for those persons who had to be evacuated after the nuclear accident in Chernobyl back in 1986. The special event station EO20R is working during this small jubilee from May 28 until Jun 3. QSLs as usual via UY2RO.

CQ DX HALL OF FAME
Thirty years after Geoff Watts (BRS-3129, publisher of the legendary "The DX News Sheet") was elected into the CQ DX HALL OF FAME the first Italian HAMs received this honour as well. Mauro,I1JQJ, and his XYL Valeria,IK1ADH, publishers of the Italian "425 DX News" were both elected into the CQ DX HALL OF FAME this year. The other new entries are Roger Western,G3SXW, and Nigel Cawthorne,G3TXF, who are travelling together almost all the time. Nigel activated 44 DXCC entities and Roger 37 and both are founding members of the "Voodoo Contest Group". Congratulations!

SRT-DX MAILING LIST
The "Strangeradio DX Team" has a mailing list featuring DX- and IOTA-news or rumours from the DX community on their website:
http://www.strangeradioteam.com/reflector.asp

LINKS: Rob,PA3GVI, published several interviews with fellow HAMs at:
http://www.sitekreator.com/pa3gvi/ham_interview.html

Once again we want to point your interest to the interview with the BS7H DXpedition team member Christian Entsfellner,DL3MBG, and two new videos of BS7H on the homepage: http://dokufunk.org
---
Current SOTA activities are announced at:
http://sotawatch.sota.org.uk/activations.php or

UPCOMING CONTESTS

Jun 2/3: IARU-Region 1 CW Fieldday

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
EU-several, SV, TA: Tommy Horozakis,VK2IR, is on a roundtrip through Greece

at the moment including a visit to Mount Athos. He will activate about
15 to 18 different Greek and Turkish islands between May 27 and Aug 28.
He will work on HF not only in the usual modes but also in PSK/SSTV.
He will join the "SV DX Group" (SV1GE, SV1AAU, SV2DGH, SV1DPJ, SV2FWV,
SV2HNC, SV0XAD and DH9VA) to show up as SY8AN from Antiparos (EU-067)
working in SSB/CW/RTTY on all bands from Jun 9-17. See also:
http://www.sv2dgh.gr/sy8an

EU-001, SV5, Dodekanese: Harvey,SV5/OO5S, and Dan,SV5/OQ1C, are sepnding
their holidays there until Jun 1. QSL via ON4ON, direct/bureau.

EU-001, SV5, Kos: Alex,SV5/GM0DHZ, will be QRV in CW/SSB during his holiday
on Kos for two weeks starting on Jun 7.

EU-014, TK, Corsica: Marco,TK/IK1YED, is QRV mainly in SSB but also in digi
modes on 6-160m until Jun 1.

WLOTA

Lighthouse activities:
GU, Guernsey, EU-114, WLOTA 0013: To complete the information published in
the last DXNL we want to remember that the activity of Chris,M0DOL, and
Tom,2E0TSW, signing GP8LED and GP3GWB takes place from May 29 until
Jun 2. This counts for the Hanois Lighthouse (WLOTA 0013).

SV, Gavdos, EU-187, LH 1885 (Tripiti), ARLS CRE-007: Wolfgang,SV9/DL5MAE,
showed up from Gavdos on time and will stay there until the beginning
of June. QSL via homecall, direct/bureau.

I made an "aside" for comparison and haven't confused anything.
Firstly, DTV isn't about using HF spectrum...I am very aware of that.
The transmitters for television represent a sizeable capital
investment by broadcasters. I am aware of the complaints of the
broadcast industry (pro and con) during the entire time of the "Grand
Alliance" testing that led to the eventual DTV broadcasting format
that went into broadcasting regulations. It's been years since I
"rode gain" at a control console or "took" a particular camera or tape
unit, but I do
know something of the MPEG video transport format even though it
generally gives me considerable confusion every time I've studied
it. :-)

The MPEG video transport format can accommodate four different pixel
arrangements and DTV receivers are supposed to be built to decode all
of them automatically. That video format includes the old-style
analog format (converted from analog to digital) on up to the High-
Definition TV which is considered by most consumers as "wide screen
TV." The DTV transmitters themselves handle the entirety of the video
format sent up from the studios,including the quadraphonic sound, text
for hearing impaired, and whatever else the studio central control
sticks in there.

In the old TV transmitter arrangements of any appreciable power, they
were almost always TWO, one for video (AM sorta SSB called "vestigal
sideband"), one for audio (FM) with a Diplexer (passive filter) to
connect
both to the same wideband antenna. The DTV transmitter is a single
one since ALL of the modulation information is conveyed by it, no
"extra" one for sound, seldom any need for an external filter, let
alone

a diplexer. The internal design of the DTV transmitter HAS to be different than either the AM video or FM aural transmitters by nature of the modulation mode. But, that DTV transmitter can handle ANY of the video transport formats automatically. Whether the TV station central engineering sends old NTSC video converted to "low grade" digital format or has gone all-out to run everything in "high definition"
doesn't bother the DTV transmitter. The end result for conversion to DTV was a replacement of the transmitters (old) by one new one. Draconian for the broadcasters but visual and audible pleasure for millions of consumers receiving the DTV.

>As far as the transmitters go, in general they are being junked
>because most of them are near the end of their useful lives and are
>held together by duct tape and baling wire in anticipation of the
>transition.

I disagree with that "junk" figurative phrasing. Here in Los Angeles, there is one central TV (and most FM) broadcast transmitter site, Mount Wilson. It's been a few years since I was up there but all the stations (7 on VHF, 4 on UHF) had good, long-lasting transmitters. At the time KTLA (ch. 5) was beginning to convert to DTV; they were a pioneer broadcaster in L.A. and this year is their 60th anniversary here. Both studio and transmitter sites have excellent equipment and their DTV signal is absolutely HDTV. Their morning show content is, in my view, JUNK, but that is CONTENT, having nothing to do with equipment or signal quality...a personal critique.

What used to be a TV "leader" in quality of equipment, NBC (ch. 4) under the 'general's" eye of RCA, hasn't fully converted to HDTV in their studios. NBC evening news is HDTV but local news is still narrow TV. NBC is owned by General Electric and "RCA" exists solely as a brand name now. I think...haven't kept up on the mergers and acquisitions of large corporations lately. :-)

TV is above 30 MHz, definitely not in the HF spectrum. However the type and kind of modulation carried by any transmitter will determine whether or not it will be "junked" for a new replacement, NOT it's supposed "held together by tape and bailing wire." If hams could run 4 KW PEP SSB on HF (not in the USA) then the ages-old Western Electric LD-T2 SSB transmitter would be a great surplus bargain for them...Class A stages up to the PA which is AB_2, push-button QSY to any one of 10 pre-tuned frequencies. Problem is, the SSB format is 12 KHz wide and has internal frequency multiplexing for four 3 KHz audio inputs combined for the output SSB modulation. A no-no for amateur radio use, even if well-designed after WW2 by WE. Too much modification required to fit the "tranditional" and technical specs even
if a superb design for its intended use. That was the general point I
was making, not something about the video format of DTV.

==>ARRL TO FCC: SHUT DOWN "GROSSLY NONCOMPLIANT" AMBIENT BPL PILOT PROJECT

The ARRL has again demanded that the FCC shut down Ambient Corporation's
broadband over power line (BPL) pilot project in Briarcliff Manor, New York.
On May 21 the FCC called on the BPL equipment maker and system operator to
demonstrate it's complying with all terms of the Part 5 Experimental license
<http://www.arrl.org/news/bandthreat/BriarcliffManorResponse20070521.pdf>
authorizing the system, or face possible enforcement action. In a May 31
letter to FCC Spectrum Enforcement Division Chief Kathryn S. Berthot, ARRL
General Counsel Chris Imlay, W3KD, contended that it's "long past time that
```

the Commission enforce its own rules," and again objected to the Commission's "inexplicable inaction" in the face of evidence the system is noncompliant. Imlay pointed out that the FCC's May 21 letter made no mention of Condition #1 of Ambient's Part 5 Experimental license.

"That condition requires that if any interference occurs, the holder of the authorization will be subject to immediate shutdown," Imlay wrote. "Interference has repeatedly occurred, and it has been witnessed and verified by a member of the Commission's Enforcement Bureau staff. Yet no action has been taken whatsoever to terminate this experimental authorization over a period of more than two and one-half years. This is inexcusable."

Ambient operates the Briarcliff Manor BPL pilot program under Experimental license WD2XEQ. ARRL testing as recent as late May indicated the system is operating outside of the parameters of its FCC authorization.

The League called the FCC's most recent push to get the company to comply with the terms of its Experimental license "too little, too late and an abdication of the Commission's responsibility to protect its licensees from interference from unlicensed RF devices."

"The Commission's obsessive compulsion to avoid any bad news about BPL has clearly driven its multi-year inaction," the League continued. "Had this been any other experimental authorization dealing with any technology other than BPL, the experimental authorization would have been terminated long ago."

The League's complaints regarding interference to Amateur Radio communication from the Briarcliff Manor system date back to October 2003 and included supportive technical reports and test results.

As it stands, the League maintained, the FCC should have shut down Ambient's BPL system a long time ago. The ARRL further objected to Ambient's "repeated misrepresentations in its six-month reports claiming that its Briarcliff Manor BPL system meets FCC emission limits."

New measurements done May 24 by ARRL Laboratory Manager Ed Hare, W1RFI, conclusively establish that the Ambient BPL system, in Hare's words, "continues to operate well above the Part 15 emission limits that are stipulated as a condition of its Experimental license." Hare said his latest excursion marked the third time his emissions testing in Briarcliff Manor showed the system to be operating significantly above Part 15 emissions limits.

"The spectral masks in this system intended to protect some radio services from interference work poorly enough in this generation-1 equipment, but when the system is operated at excessive levels, strong interference is an inevitable outcome," he commented. "By operating this system above the Part 15 emissions limits, Ambient is making it impossible for any electric utility to use results from this experiment to reach any conclusions about the technical and commercial viability of BPL."

The ARRL further argued that the Ambient BPL system should not be permitted to continue operating under the radar with an Experimental license instead of under the FCC's Part 15 BPL rules, adopted in 2004. The Briarcliff Manor system does not even appear in the FCC's BPL database, the League noted.

"Causing Ambient to operate in accordance with the BPL rules rather than allowing it to hide behind its experimental authorization would at least be consistent with the Commission's regulatory plan for BPL, however inadequate that plan is in terms of interference avoidance," Imlay's letter concluded.

==>RILEY REITERATES RECOMMENDATION TO "LIGHTEN UP" ON HAM BANDS

FCC Special Counsel in the Spectrum Enforcement Division Riley Hollingsworth's main message at the Dayton Hamvention¿½ <http://www.hamvention.org> 2007 FCC Forum may not have been a new one. But it's certainly one he believes bears repeating -- at least until it starts cutting through the QRM and QRN that pervade more communication channels than our Amateur Radio bands.

"Well, you could have gone to the flea market, but you came to church instead," Hollingsworth quipped to his Dayton forum audience. "I've got you now."

Hollingsworth repeated what for many Riley Watchers has become a familiar refrain: That the Amateur Radio community needs to "lighten up" on the air. Acknowledging that he was repeating himself, Hollingsworth urged his audience to take his message more to heart. "All of you can learn from each other," he said, "and you need to work together more and show a little more respect for your diverse interests and for the Amateur Service as a whole. It isn't about you. It isn't about enforcement. It's about Amateur Radio."

As radio amateurs take to the airwaves, he continued, they need to decide what's most important -- the best interests of ham radio or their ego, pride or perceived "rights."

"I realize I may be preaching to the choir here, but on the air you need to be more cooperative and less argumentative -- and I need you to take this message with you when you go home," he continued.

As a "homework assignment," Hollingsworth encouraged his listeners to read the "It Seems to Us . . ." editorial, "Most Effective Use" <http://www.arrl.org/news/features/2007/05/01/1/>, by ARRL Chief Executive Officer David Sumner, K1ZZ, in May 2007 QST. In his commentary, Sumner stressed that interference occurring as a side effect of legitimate Amateur Radio activities in crowded bands "is simply a fact of life" and that it's "unfair to your fellow amateurs to assume that every instance of interference you may encounter is a hostile act."

Hollingsworth offered good news and bad news. "The good news: Nothing is wrong with Amateur Radio," he allowed. "It is a good service that is showing its value to the public on a daily basis."

The bad news, he asserted, making a comparison to "road rage," is "that there is an element of Amateur Radio that too often reflects present society

generally."

Hollingsworth urged all radio amateurs to cooperate more and depend less on the FCC to solve their operating issues.

"We live in a rude, discourteous, profane, hotheaded society that loves its rights, prefers not to hear about its responsibilities, and that spills over into the ham bands," he said.

Hollingsworth's bottom line: Be flexible in your frequency selection and make regular use of the "big knob" on the front of your transceiver to shift to any of the "thousands of frequencies and hundreds usable at any given time of day or year" as necessary to avoid problems. "The world is ugly enough -- don't add to it," Hollingsworth advised.

"We can enforce our rules, but we can't enforce kindness and courtesy or common sense," Hollingsworth concluded. "And a very wise person, who happens to be standing to my left [FCC Wireless Telecommunications Bureau staffer Bill Cross, W3TN -- Ed] once told me: 'You can't regulate stupid.' If we could, we'd be working for the United Nations instead of the FCC."

In his comments, Cross singled out the controversy that erupted recently over fears that automatically controlled digital stations would overwhelm the amateur bands, eclipsing most other modes. Cross cited ï¿½97.7 of the rules, which requires each amateur station to have a control operator and, in essence, to employ a "listen-before-transmit" protocol."

When a station is under automatic control, regardless of the transmission mode, Cross explained, the control operator need not be at the control point, but must employ station control devices and procedures while transmitting that ensure compliance with the FCC rules and does not cause harmful interference to ongoing communications of other stations.

The operational rule, Cross said, is: "Your call sign, your responsibility."

==>ARRAY OF NEW GEAR DEBUTS AT DAYTON 2007

It's always a treat to get your first look at a new HF transceiver at Dayton. This year, there were no fewer than six to drool over. Here, in alphabetical order, is a rundown:

Elecraft <http://www.elecraft.com/> announced its new K3 HF and 6 meter transceiver. It includes many upgrade options, so many, in fact, that you can configure anything from a kit-built 10 W portable QRP radio to a full-featured, contest-ready 100 W rig with *two* high-performance receivers. It is scheduled to ship starting in July.

FlexRadio Systems <http://www.flex-radio.com/>, a pioneer in high-performance software defined radios (SDRs), introduced its Flex-5000 HF plus 6-meter transceiver series that promises higher performance and more features than its earlier model. Included are the Flex-5000C, a fully integrated system in a single box, and the Flex-5000D, which includes a second receiver.

Hilberling, the first Amateur Radio transceiver maker from across the Atlantic for some years, announced its PT-8000 transceiver. It's offered as a full-featured HF and VHF transceiver available in 10, 100 or 600 W versions. The North America distributor is Array Solutions <http://www.arraysolutions.com/>.

ICOM <http://www.icomamerica.com/> unveiled its IC-7700 HF + 6 meter transceiver. It appears to be a single-receiver version of its top-tier IC-7800, sharing the 200 W transmitter, high performance receiver and 7-inch display of its sibling. Contesters are the market target, but the IC-7700 may be of interest to anyone who covets the features of the IC-7800 but doesn't need two receivers or the higher price tag.

Ten-Tec <http://www.tentec.com/> has its new Omni-VII HF + 6 meter transceiver on display. The unit's "distributed roofing filter architecture" promises ham-band-only receive performance with a general coverage receiver. Stay tuned for the "Product Review" in July QST.

Finally, Yaesu <http://www.yaesu.com/> showed its new FT-450 HF + 6 meter offering. The FT-450 bears some similarities to the Yaesu FT-2000, but with fewer features and a correspondingly lower price.

What else?

Array Solutions is distributing the SPE Expert 1K-FA solid-state linear amplifier. It is a compact light weight (44 pounds) fully automated, full break-in capable amplifier that puts out 1000 W PEP on 160 through 10 meters (700 W PEP on 6 meters). It has an internal 120 or 240 V ac power supply and antenna tuner.

Dishtronix <http://www.dishtronix.com/> showed off its 100% duty cycle, 1500 W output (on all modes) solid-state linear. This is a "serious" amplifier at 65 pounds with the choice of a separate 120 pound linear power supply or a 54 pound switcher.

Tokyo Hy-Power <http://www.thp.co.jp/> enjoyed a great debut at Dayton this year, showing three HF amplifiers newly introduced to the US market. On display were the HL-1.2KFX 750 W output, HL-1.5KFX 1 kW output and HL-2.5KFX legal limit amplifiers as well as the HL-500V 2 meter linear. All are solid state. THP also offers a new legal-limit automatic antenna tuner.

Kenwood <http://www.kenwood.com/> announced a new V/UHF mobile transceiver, the TM-71A. Of particular note is free software that allows downloading repeater data from ARRL's Travel Plus <http://www.arrl.org/catalog/?item=9930> directly into radio memories. It also can function as a crossband repeater.

Yaesu introduced a new V/UHF transceiver especially for hams on the go! The FTM-10 is designed to mount on the handlebars of your bike or motorcycle so that you don't even need a mic! Just talk into the front panel, and you're on the air!

Radio accessories are always popular at Dayton and MFJ can always be counted on to have new products. Topping the list this year is the MFJ-998 1500 W

Intellituner. This legal-limit auto tuner is designed to handle loads from 12 to 1600 ohms from 160 to 10 meters and includes two outputs and sophisticated memory, protection and control features.

West Mountain Radio <http://www.westmountainradio.com/>, the RigBlaster and RigRunner folk, have branched out into the audio side of your radios. They introduced a DSP-equipped speaker designed for the HF operator who would like more signal and less noise.

Palstar <http://www.palstar.com/> has a new AT1KP tuner that covers 160 through 6 meters. By switching in the 160 meter inductance only when needed, the AT1KP reduces the minimum capacitance of the tuner so it can cover 6 meters.

The Swiss Antenna Matching System from Heinz-Bolli is a legal-limit remote-controlled tuner designed for outdoor mounting. It can be manually tuned by remote control or auto tuning can be used to select the best tuner configuration or adjust the parameters. Array Solutions is the North American distributor. -- Joel Hallas, W1ZR

It's not too early to start working up those holiday gift lists.

==>FCC DESIGNATES HEARINGS ON THREE AMATEUR RADIO APPLICATIONS

The FCC has issued hearing designation orders (HDOs) to Amateur Radio license applicants in three unrelated cases. All three HDOs released May 24 hinge on licensee "character" issues. The Commission notified David O. Castle, WA9KJI, of Evansville, Indiana, that it was designating his license renewal application for hearing in the wake of alleged misconduct extending back several years and continuing at least until earlier this year.

"Since 1998, Castle has been warned repeatedly to refrain from intentionally interfering with radio communications; broadcasting without communicating with any particular station; causing interference on amateur repeaters; using amateur repeaters without authorization, and using indecent, slanderous or harassing language," the FCC said in the HDO it issued to Castle. "We find that Castle's continuing course of conduct raises questions as to whether he possesses the requisite character qualifications to remain a Commission licensee."

In March, FCC Special Counsel in the Spectrum Enforcement Division Riley Hollingsworth warned Castle to abide by a request to refrain from using repeaters owned by the Tri-State Amateur Radio Society.

The FCC also designated for hearing two applications for new Amateur Radio licenses. In the case of Frank C. Richards of Mooers, New York, the Commission says the applicant apparently had attempted in 1995 to hijack the license of a Frank C. Richards, KB4VU, who lives in Ft Myers, Florida. The New York Richards was initially successful, and the FCC granted him KG2IC, but after the Florida Richards contacted the FCC to say he'd never moved nor modified his license, the FCC directed the New York Richards to explain. On June 2004, the New York Richards turned in his license. While the FCC did not pursue further enforcement action the, it did tell the New York Richards

that the circumstances of the apparent abuse of the license system could become a factor if he ever applied for an Amateur Radio ticket in the future.

The New York Richards applied for a Technician license last June 28, and accompanied his application with a letter. The FCC Enforcement Bureau said it was unable to determine whether the Wireless Telecommunications Bureau should grant the application, however, so it now has been designated for a hearing.

"The Commission and the courts have recognized that 'the FCC relies on the honesty and probity of its licensees in a regulatory system that is largely self-policing,'" the FCC said in the HDO.

"The attempt of Frank Richards (NY) to change the address and other information for call sign KB4VU, and his subsequent cancellation of the license in lieu of responding to EB's inquiries regarding the renewal/modification application raise substantial and material questions of fact as to whether he made false certifications, misrepresented the facts to the Commission, and/or demonstrated a lack of candor in order to claim the identity and operating privileges of Frank Richards (FL)," the FCC said.

In a third case, the FCC has designated for hearing the new Amateur Radio license application of Jack R. Sharples of Florida. In its HDO, the FCC identified Sharples as "a convicted felon and registered sexual predator."

"Sharples's felony conviction for at least one sexual-related offense involving children raises material and substantial questions as to whether he possesses the requisite character qualifications to be a Commission licensee," the FCC said. "Although Sharples's felony adjudications occurred more than seven years ago, the nature of the criminal misconduct and the fact that the Amateur Radio Service is particularly attractive to children call into serious question whether he should be permitted to obtain an Amateur Radio authorization."

The FCC gave Castle, Richards and Sharples 20 days to file a "written appearance" with the Commission or face dismissal of their applications.

==>NEVADA HAM PLAYS ROLE IN RADIO RESCUE

ARRL member Eric Christianson, KE7DZZ, of Reno, Nevada, was just listening to the repeater for background noise May 26, but an emergency call made him sit up and take notice.

"I immediately grabbed the mic and asked 'What's the nature of the emergency?' The guy said that he was in a remote area with a downed motorcycle rider who appeared to have a serious neck injury. He said the injured man couldn't sit up without feeling dizzy."

On the other end of the circuit was Dave Kersting, KF6QQO, of Redondo Beach, California, who'd been out riding his motorcycle with friends that day. Before he left, Kersting grabbed his 2 meter handheld radio, programmed with some repeater frequencies along their route, and his handheld GPS unit.

"Dave gave me the GPS coordinates of their location, so I called my local 911 dispatch, Washoe County," Christianson said. He relayed the coordinates to the 911 dispatcher, who asked him to remain on in contact with Kersting until EMS arrived at the scene.

"Washoe County couldn't find these guys," Christianson recounted. "It seems Dave's GPS had given the wrong coordinates, but another guy in the group had a GPS, and he got different coordinates. I gave dispatch the new coordinates, and by using them, they found the group."

The new coordinates placed the group inside Mono County, California. Washoe County then called Mono County. About 7:15 PM, a helicopter ambulance, called Christianson on the phone to let him know their pilot was in flight near the area and asked if he had any more details for them. The chopper landed just a few minutes later and transported the injured biker to a local hospital.

An ARES member and a ham for two years, Christianson first became interested in Amateur Radio because he wanted to help people in need. "I normally would have been on 20 meters looking for some DX, but I had the radio on the repeater memory scan just because it was quieter than listening to HF while I worked at my computer," he said. "Thank God for that, I helped to save a life."

"The real hero is Dave, who had the presence of mind to program in local repeater frequencies. The other hero is Amateur Radio. What we do with Amateur Radio is great, and I am so proud to be a part of it."

==>CONTEST CLUB "DOES THE RIGHT THING"

The Potomac Valley Radio Club (PVRC) has agreed to forfeit its victory in the 2006 ARRL November Sweepstakes because some of those contributing scores to PVRC turned out to be outside the club's territory.

"This is a decision that I take very seriously, as so many of you poured your heart and soul into this great competitive event," PVRC President Jim Nitzberg, WX3B, said in a letter to members. "We decided this was the best course of action consistent with our high ethical standards as one of the finest unlimited contesting clubs."

Nitzberg says the PVRC completed last fall's November Sweepstakes with the largest turnout of operators in its history. But upon closer examination, he said, measurable activity occurred from areas "clearly beyond" the 350-mile diameter ARRL competition boundary (175-mile radius).Once the club used more precise measurement techniques to determine its boundaries, he explained, the PVRC ended up losing by a wide margin.

Nitzberg notes that the club was not officially challenged nor requested to forfeit but made the decision on its own after carefully examining participation. He also accepted responsibility for the error as the club's president and extended congratulations to the Northern California Contest Club for winning the November SS gavel.

The PVRC this year celebrates its 60th anniversary this year, and members will take part in an annual on-the-air reunion over the June 2-3 weekend. During the event PVRC ops are encouraged to append /60 to their call signs.

==>SOLAR UPDATE

Solar swami Tad "Black Hole Sun" Cook, K7RA, Western North Carolina, this week, reports: Average daily sunspot number this week dropped nearly 23 points to 3.3, while average daily solar flux declined exactly 5 points to 68.8. We saw five days in a row with a sunspot number of zero. All those zeroes combined with sunspot numbers of 11 and 12 are what made the average only 3.3. If there are any sunspots at all, the sunspot number itself can't ever go that low, because there are no sunspot numbers between 0 and 11, due to the way the number is calculated. It is not actually a count of the number of sunspots.

Eleven is the number you get if there is just one sunspot, because a value of ten is added for each group of sunspots. So one sunspot counts for only one group, so ten plus one sunspot equals eleven. If there are two sunspots in that group, then the sunspot number is 12, three is 13, and so on. But if there are three sunspots divided into two groups, then the number is 23, as it was on May 20.

If we didn't have any images of the sun, and the sunspot number was 23, we might think there were 13 sunspots in one group, instead of three in two groups, which would be valid according to the formula, but less likely.

The forecast is for continued one or zero sunspot conditions, with the planetary A index for June 1-7 at 5, 5, 15, 15, 8, 5 and 5. Geophysical Institute Prague predicts quiet conditions for today, June 1, unsettled June 2-4, and quiet again on June 6-7. For some reason Prague didn't make any prediction for June 5, but I'll bet that it's a quiet to unsettled day.

Just prior to the writing of this update, at 0651 UTC on June 1, an M1 class X-ray flare was released from the sun. Now, the interplanetary magnetic field points south, making earth vulnerable. On June 3, a solar wind stream is expected to hit Earth when a coronal hole shifts into a critical position. That's the basis for the planetary A index forecast of 15 for June 3-4.

Sunspot numbers for May 24 through 30 were 0, 0, 0, 0, 0, 11 and 12, with a mean of 3.3. 10.7 cm flux was 69.9, 68.1, 67.7, 67, 68.7, 69.6, and 70.7, with a mean of 68.8. Estimated planetary A indices were 28, 16, 16, 12, 5, 4 and 4, with a mean of 12.1. Estimated mid-latitude A indices were 21, 9, 10, 10, 5, 5 and 3, with a mean of 9.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: The Wake-Up! QRP Sprint is June 2. The SEANET Contest, the RSGB National Field Day, the IARU Region 1 Field Day (CW) and the Alabama QSO Party are June 2-3 weekend. The RSGB 80-Meter Club Championship (Data) is June 4. The ARS Spartan Sprint is June 5. The NCCC Sprint Ladder and the Digital Pentathlon are June 8. The Portugal Day Contest and the Asia-Pacific Sprint (SSB). The ANARTS World Wide RTTY Contest and the GACW WWSA CW DX Contest and the REF DDFM 6-Meter Contest are June 9-10. The ARRL June VHF QSO Party is June 9-11. The SKCC Sprint, the NAQCC Straight Key/Bug Sprint and the RSGB 80-Meter Club Championship (CW) are June 13. The NCCC Sprint Ladder and the Digital Pentathlon are June 15. See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday. July 8, for these ARRL Certification and Continuing Education (CCE) online courses beginning Friday, July 20: Amateur Radio Emergency Communications Level 2 (EC-002), Amateur Radio Emergency Communications Level 3 (EC-003R2), Antenna Modeling (EC-004), HF Digital Communications (EC-005), VHF/UHF -- Life Beyond the Repeater (EC-008) and Radio Frequency Propagation (EC-011). These courses also will open for registration Friday, June 1, for classes beginning Friday July 20. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the CCE Department <cce@arrl.org>.

* National Hurricane Center's WX4NHC sets On-The-Air Station Test: The annual WX4NHC <http://www.wx4nhc.org> On-the-Air Station Test from the National Hurricane Center (NHC) in Miami takes place Saturday, June 2, 1300-2100 UTC. The yearly event provides an opportunity for WX4NHC to test its radio equipment, computers and antennas on as many modes and bands as possible. "This is not a contest or simulated hurricane exercise," says WX4NHC Assistant Amateur Radio Volunteer Coordinator Julio Ripoll, WD4R. He adds that WX4NHC also will be testing new computers and software as well conducting operator training. WX4NHC will be on the air on HF, VHF and UHF, plus 2 and 30-meter APRS. Suggested SSB frequencies are 3.950, 7.268, 14.325, 21.325 and 28.525 MHz, ï¿½QRM. WX4NHC also will be on the VoIP Hurricane Net <http://www.voipwx.net/> 1700-1900 UTC (IRLP node 9219/EchoLink WX-TALK Conference) and on South Florida area VHF/UHF repeaters and simplex. Stations working WX4NHC exchange call sign, signal report, location and name plus a brief weather report, such as "sunny," rain" or "cloudy." Non-hams may submit their actual weather using the On-Line Hurricane Report Form <http://www.wx4nhc.org/WX-form1.html>. QSL to WD4R and include an SASE. Do not send cards to the NHC. Due to security measures, no visitors will be allowed at NHC during the test.

* Canada ending 136 kHz and 5 MHz special authorizations: In accordance with an agreement between Radio Amateurs of Canada (RAC) and Industry Canada -- that country's telecommunications regulatory agency -- special authorizations allowing some Canadian radio amateurs to conduct experiments at 136 kHz and 5 MHz will terminate June 30. "These experiments have had, as one objective, the provision of data that would support the objectives of

RAC and the IARU for possible new allocations to the Amateur Service at these frequencies," the RAC said. Future special authorizations will depend on the outcomes of World Radiocommunication Conference 2007 (WRC-07), which gets under way October 22, the RAC added. New, worldwide, secondary amateur allocations at 135.7 to 137.8 kHz and in the 5 MHz range are up for possible consideration at WRC-07. RAC Newfoundland-Labrador Section Manager Joe Craig, VO1NA, described some of his LF experiences in "The Transatlantic on 2200 Meters," which appeared in July 2005 QST <http://www.arrl.org/qst/2005/07/craig.pdf>. Craig also has been in the forefront of 60-meter experimentation in Canada through the Marconi Radio Club of Newfoundland. In 2003, club station VO1MRC worked N1RL in Massachusetts for the first Canada-US two-way amateur contact on 60 meters. There more information on the VO1MRC 5 MHz Experiment Web pages <http://www.ucs.mun.ca/~jcraig/5megex.html>.

* FCC Amateur Radio enforcement correspondence posted: The FCC has posted additional Amateur Radio enforcement correspondence and documents on its "Amateur Radio Service Enforcement Actions" page <http://www.fcc.gov/eb/AmateurActions/Welcome.html>. Special Counsel in the FCC Spectrum Enforcement Division Riley Hollingsworth has sent letters to Anthony R. Migliori, KI6GVY (Warning Notice); Ryan A. Migliori, KI6GVX (Warning Notice); Harold L. Finley Jr, W4BAD (request for information); Commercial Radio Service/Timothy M. Doty, WB9MCD (Memorandum Opinion & Order plus Settlement Agreement); Jeffrey B. Bregel, KD6NBD (Warning Notice); James B. Cormia, WB2GAJ (Warning Notice); Eric B. Maldonado, N9OVR (Warning Notice); James L. McCurry, K4EDK (inquiry), and Henry A. Stange, WA6RXZ (Warning Notice). The FCC Enforcement Bureau has posted Hearing Designation Orders to Jack R. Sharples, Frank C. Richards and David O. Castle, WA9KJI (see above). The FCC Enforcement Bureau now posts Amateur Radio enforcement-related correspondence and documents -- with some exceptions -- on its own Web site. Direct all questions concerning the Amateur Radio Service Enforcement Actions Web postings via e-mail only to Riley Hollingsworth <fccham@fcc.gov> in the FCC Spectrum Enforcement Division.

* Aiieeee! My BS7H QSO is not in the log! The fellow who's handling QSL cards for the recent BS7H Scarborough Reef DXpedition -- Steve Wheatley, KU9C -- says he's received "quite a number" of questions concerning contacts not in the online log <http://www.scarboroughreef.com/srlog.html>, a lack of QSO details, the dog ate my log and similar. "Rather than ask via e-mail," he suggests, "I'd ask you to kindly put the inquiry in a note with your QSL to me. I'll research the log as I work your QSL request, and respond accordingly." Wheatley says that if you're not showing up in the BS7H online log, don't depair. "Put down every QSO you believe you had, and I'll do the rest." KU9C reminds operators that researching contacts takes him away from processing other cards. "If it's a busted call, I'll use well-established judgment in issuing the card," he says, "and may ask you to help confirm that the person's whose call appears did not make a QSO." But, he adds, if an operator can't supply any QSO details beyond what's in the online log, it will be impossible for him to issue a card. He also says not to fret if you sent return postage under the old rates; he'll make up the difference. Scarborough Reef has been the top most-wanted DXCC entity -- The Daily DX

<http://www.dailydx.com>

* Yasme Foundation announces address change: One of the more famous and long-lived post office box numbers in DXing has changed. Effective immediately, all mail to the Yasme Foundation <http://www.yasme.org> should go to PO Box 20578, Castro Valley, CA USA 94546. The US Postal Service will forward mail sent to the former PO box number for approximately six months, so recent mail to the Foundation should be unaffected. The Yasme Foundation is a not-for-profit corporation organized to conduct scientific and educational projects related to Amateur Radio, including DXing, and the introduction and promotion of Amateur Radio in underdeveloped countries. The Yasme Foundation derived its name from the Yasme sailing vessels that carried legendary DXer Danny Weil, VP2VB <http://www.qsl.at/common/weil.html>, to various rare DX spots around the world in the 1950s and 1960s.

* UK Six Metre Group marks Silver Jubilee with special call signs: The UK Six Metre Group (UKSMG) will commemorate its 25th anniversary of promoting 50 MHz by fielding UKSMG stations using special call signs during the group's Summer Sporadic E Contest, June 2-3 (1200 UTC to 1200 UTC) and at various times during May and June. Be on the lookout for these 25th anniversary call signs: AN7SIX, AO7SIX, EG7SIX, PA25UKSMG, SP25SIX, TM6MG and GD5KW Contest rules and details of a special UKSMG 25th Anniversary Award are on the UKSMG Web site.

* Clarke Cooper, K8BP, wins May QST Cover Plaque Award: The winner of the QST Cover Plaque Award for May is Clarke Cooper, K8BP, for his article "A Super Duper Five Band Portable Antenna." Congratulations, Clarke! The winner of the QST Cover Plaque award -- given to the author or authors of the best article in each issue -- is determined by a vote of ARRL members on the QST Cover Plaque Poll Web page <http://www.arrl.org/members-only/QSTvote.html>. Cast a ballot for your favorite article in the June issue by Saturday, June 30.

==========

The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association For Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net
<http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 03 JUNE 2007

You are listening to Amateur Radio Station ZS6SRL of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is broadcast every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. This broadcast can also be heard on Echolink by connecting to ZS6FCS. To listen to a web stream go to www.sarl.org.za, click on ARMI and follow the links. This, and previous bulletins, can be downloaded from the web site of the SARL i.e. www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEY

It is with regret that we have to announce the passing of Johan van der Mescht, ZS4VDM, on Sunday 27 May 2007 following a serious motorcycle accident.

We extend our sincere condolences to his wife, Esme, family and friends.

(PAUSE)

In the news today:

UPDATE ON POWER LINE TELECOMMUNICATION NOW ON THE WEB

LAUNCH OF SUMBANDILASAT DELAYED

NEW ZU CALL SIGNS ON THE AIR!

ADHERENCE TO THE BAND PLANS

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

UPDATE ON POWER LINE TELECOMMUNICATION NOW ON THE WEB

During last week's President's Net SARL President, Graham Hartlett, presented an update on the position of Power Line Telecommunication in South Africa. The full text is now available on the web at

www.sarl.org.za by selecting PLC in the left hand vertical menu table.

The latest tests have confirmed to ICASA that PLT has an inherent interference potential and that this must be taken care of in new type approval specification for PLT systems. ICASA has also recognised that it would need to strengthen its interference complaint handling capability and has asked the EMC working group of the TC80 SABS committee to work on type approval specifications and how to deal with interference should it occur. It is recognised that these specifications would be an interim measure and in no way pre-empt international specifications. Once international standards have been agreed, the interim specifications will be revised and brought into line. It is expected that an international agreement on PLT interference, how to measure it and acceptable limits could be some time away.

The SARL web pages on PLT include audio clips and a link to a video clip.

HAVE YOU GEARED UP FOR THE YOUTH DAY EVENT ON 16 JUNE?

The SARL Youth Day event is gaining momentum. If you or your club are planning to host young people to talk to Mark Shuttleworth via Amateur Radio, do not delay in booking a slot by sending an email to armi@sarl.org.za. Please let us know where you are setting up a station and how many learners you believe will attend. The live link will be available from 145,750 MHz in Pretoria, 145,650 MHz in Durban and local repeaters in Port Elizabeth and Cape Town. Limited HF links will be available. Send us as much detail about your event as possible. For a club wishing to host a station at one of the FET colleges, full details were mailed to Club Chairmen in the SARL Letter.

A guideline will be available on the web a week before the event.

LAUNCH OF SUMBANDILASAT DELAYED

The launch of SumbandilaSat has been delayed due to administrative problems. Some paper work is still to be completed before the launch can go ahead. SA-AMSAT is awaiting an official statement from the Department of Science and Technology.

CONTEST RESULTS

The Autumn QRP Sprint was run on Sunday 22 April 2007. The Contest Committee received 5 logs for this contest. Jan, ZS4JAN, takes top honours with 1 640 points, followed by Andries, ZS6VL, with 864 points, Ian, ZS5IAN, with 720 points, Pierre, ZS6BQS, with 560 points and Franz, ZS6EU, with 480 points.

The ZS3/ZS4 40 Metre Sprint was held on Sunday 06 May and the Contest Committee received 7 contest logs and 1 check log. Jan, ZS4JAN, takes first place with 97 points, followed by Allan, ZR1AAH, with 74 points, the Bloemfontein RAC with 60 points, Marius, ZS4MP, with 46 points, the

Sasolburg ARC with 42 points, Ian, ZS5IAN, with 41 points and Bradley, ZS5BG, with 39 points. Denis, ZR6DNS, submitted a check log worth 16 points.

The SARL Hamnet 40 Metre Simulated Emergency Communications Contest was run on Sunday 04 March 2007. To date, the SARL Contest Manager has not seen any of the results.

NEW ZU CALL SIGNS ON THE AIR!

The Magalies Amateur Radio Club assisted the new ZU Radio Amateurs with vigour by ensuring that 12 new ZU stations were on the air within one week after passing the exams. Thanks to the commitment of Louw, ZS6LME, and Theo, ZS6ATO, who obtained second-hand radios, reprogrammed them, had the output reduced to 20 watt and with the able assistance of Marten, ZS6ZY, called on the new amateurs at their homes to help them set up the radio and antennas correctly.

The newly formed school club has also in the mean time obtained its own call sign namely ZS6JVT. The newly built, fully equipped radio centre will be officially opened by Hans van de Groenendaal, ZS6AKV, on Youth Day at 08:30, where after the new amateurs will proudly operate their own club radio station. Everyone is invited to join them on this memorable occasion, which promises to be a day full of excitement. The youngsters will also attempt to make contact with Mark Shuttleworth on that day.

ADHERE TO THE HF BAND PLAN

Radio amateurs in Southern Africa are reminded to adhere to the IARU HF Band Plan, which came into effect on 1 January 2006. The band plan is available for download from the SARL web site at www.sarl.org.za. Please obtain a copy and distribute it between club members and make sure you understand the various allocations.

The allocations per band have been calculated using the maximum bandwidth in hertz and users must keep their transmissions within that bandwidth.

Listening around the bands, it has been noticed that stations are operating outside band limits or operating phone in CW segments. The lowest dial setting for phone on 160, 80 and 40 metres is 1 843, 3 603 and 7 043 kHz. The South African allocation for 160 metres is 1 810 to 1 850 kHz.

ADHERENCE TO VHF AND UHF BAND PLANS IS IMPORTANT TO ACHIEVE MAXIMUM USE OF THE SPECTRUM

VHF and UHF band plans are devised to achieve maximum use of the spectrum allocated to Amateur Radio and adherence to the plans ensures interference free operation and ultimately that great satisfaction of hearing a weak or satellite signal and making a QSO.

Amateur satellites have a very broad footprint and to ensure world-wide interference free operation certain segments of the various frequency bands are set aside for this.

For instance, for FM voice communication with the International space station and other manned space vehicles 145,200 MHz is set aside for simplex operation or 145,200/145,800 for transponder type operation. Please do not use these frequencies for ordinary ground based QSOs. The segment 145,800 - 146,000 MHz is set aside for satellite operation. Please do not use this segment for terrestrial operation. Similarly, the segment 435,000 - 438,000 MHz is also set aside for the amateur satellite service.

The International Amateur Radio Union internationally coordinates band plans by mutual agreement. Band plans are available on www.sarl.org.za, look in the left hand column for licences, open the page and then click on band plans.

DIVISION 6 BAND PLANNING COMMITTEE MEETING

The next meeting of the Division 6 Band Planning Committee will be held at the NARC from 9:00 - 12:00 on Saturday 9th June 2007. All clubs in the region are invited to send a representative.

For further information kindly contact Piet Badenhorst ZS6PJB at 082 574 4829 or by email at zs6pjb@gmail.com.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will continue at very low levels. The geomagnetic field is expected to range from quiet to active levels on 3 to 4 June. The expected Effective Sun Spot number for the coming week will be less than 5.

20 and 15 metres will provide best opportunities for DX. There is a possibility of 20 metre openings towards India from about 15:00 CAT. 40 metres may open towards Australia from 20:00. From about 16:00, there may be 15 and 20 metre openings towards Europe. At about 16:00 short 20 metre openings towards the West Coast of the USA is possible. Otherwise, contacts to the USA are going to be very challenging. For the CW and digital enthusiasts, it may also be worth monitoring 10 MHz.

Although the DX predictions may currently not be too exciting, now is the time to work towards your 80 metre Worked All ZS during the evenings. Remember that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

16 June - SARL Youth day; 30 June - Closing date for updating of SA DX Survey; 2 August - Class B RAE; 18 October - Class A RAE.

SARL News depends on clubs and individuals for news items of importance and interest to radio amateurs. The one and only way to ensure that your contribution will reach the SARL News team, is to place it in www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date. It will be appreciated if you will do it in both Afrikaans and English.

The SARL also invites all listeners to listen to the program Amateur Radio Mirror International this Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. Audio is also streamed on www.zs6mrk.org and on Echolink from ZS6FCS as for this bulletin. A repeat transmission takes place on Mondays at 21:00 on 3 215 kHz. Telkom and Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

You have been listening to a news bulletin by the South African Radio League, which was compiled by Dennis, ZS4BS.

A prosperous week to all, 73.

There's another excellent QSLing service out there, called GlobalQSL.
You design a QSL card (they provide software, or they will design a
card for you) and upload the image to their website. Then you upload
your log in A.D.I.F. format, and they print and mail (via buro or
managers) your cards. Depending on quantity, cost per card delivered
is in the range of a dime for a "real live" cardboard QSL. It's a
couple of fellows from Israel who came up with this interesting
approach. More detail at their web site http://www.globalqsl.com/

1 GB2RS NEWS Sunday 3 June

The news headlines

* Amateur becomes Mayor of Cambridge

* Canadians lose 136kHz and 5MHz

* Major product launches at Dayton Hamvention

Jenny Bailey, G0VQH, became Mayor of Cambridge in the local council election on 24 May. Jenny was first elected to Cambridge City Council in 2002, serving East Chesterton ward and becoming an executive councillor. She has spent the past 12 months as deputy Mayor. Apart from her usual civic duties, she hopes to bring a better understanding of amateur radio to local and national government.

Since 2001, a number of special, time-limited authorisations have been granted to some Canadian radio amateurs to conduct experiments on 136 kHz and at 5 MHz. All of these special authorisations will expire and transmissions must cease on 30 June, 2007. Further special authorisations will depend on the outcomes of WRC-2007, scheduled for 22 October - 16 November. At the suggestion of Canada, the agenda includes a new, worldwide, secondary Amateur allocation at 135.7 - 137.8 kHz. A secondary allocation near 5 MHz may also arise at WRC-2007 as a consideration in the review of radio services in the band 4 - 10 MHz.

A number of major companies chose last weekend's Dayton Hamvention to launch new products. Elecraft, FlexRadio, Icom, TenTec, Kenwood and Yaesu all announced new transceivers. Dishtronix and Tokyo Hy-Power announced kilowatt-class solid state linears, and other well-known names such as MFJ and Palstar also had new offerings. Look for news of these and other new products in forthcoming issues of RadCom.

CNN International is to end its analogue satellite distribution in Europe on 4 June, when its current contract with Astra expires. CNNI is already available free-to-air via other satellites and even terrestrially via DVB-T in some areas. The analogue satellite transmissions at 19.2 degrees East are still used by around half the satellite viewers in Germany, but SES Astra wants to phase out the analogue services and complete its transition to digital.

Current DAB radios may be unable to receive anything in a few years time, according to Pure Digital. This is due to the introduction of DAB Plus, which uses the new AAC Plus audio coding. The new DAB standard is

incompatible with existing DAB receivers, and will render them obsolete. The new coding system is twice as efficient as the MP2 system currently in use, meaning that the number of channels per multiplex could double. Manufacturers are expected to quietly switch to producing dual standard receivers before any changeover occurs. The British DAB system is unlikely to be affected for many years.

And now for the details of rallies and events for the coming week [Note to newsreaders: please exercise your judgement on which of the 3 June events to read, based on your service area and time of transmission].

2 On Sunday 3 June the Red Rose QRP Festival takes place from 11am at Formby Hall, Alder Street, Atherton, Manchester. Details form Les, G4HZJ, on 01942 870634.

On Sunday 3 June the Spalding & DARS Annual Rally takes place from 10am at the Sir John Gleed Technical School, Halmer Gardens, Spalding. Details form Ambrose, M0DJA, on 07989 636 520. On Sunday 10 June the Elvaston Castle National Radio Rally takes place from 9am at Elvaston Castle Country Park, Elvaston, Derby. Details from Les on 01332 559965 or on the web at www.elvastonrally.co.uk. More details of these and future events can be found on pages 88 and 89 of the June edition of RadCom. Now for the news of the special events

GB1EPC will be active until 28 June to celebrate the European PSK Club 1st year birthday. EPC number is EPC#2000. The station will be setup at Bridge Street in Glasgow. Anyone is welcome to operate at the station. PSK modes only of course. QSL-cards via MM0DFV. Roger Greengrass, G4NRG, plans to operate as GM4NRG/P from the Isle of Lismore Scotland, EU-008, from approximately 3 to 15 June. He will try and put a spot on the DX cluster when operational. Operation will be on HF and 6m, holiday style, on SSB and digital modes. QSL via home call. On 9 and 10 June several members of the Marcon section of ARI in Italy will join the operations relevant to the Museum Ships Weekend 2007, in coordination with A.R.M.I. (Italian Mariners Radioamateurs Association). This weekend will see the simultaneous activation of many military and commercial ships around the world. The Bolsover Amateur Radio Society will be operating as GB2PF on Saturday 11 and Sunday 12 August to commemorate the birthday of local man Peter Fidler, who was a famous surveyor in Canada in the 1790s. The club intends to operate as many bands as possible, HF, VHF and UHF, from the new club shack located at the Coalite Sports and Social Club, Moor Lane, Bolsover. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

In June and July 1944 the BBC war correspondents used the tower of the chateau at Creully as a radio studio, from where the first reports of the Battle of Normandy were broadcasted. Look for special callsign TM5BBC to be aired again from Creully on until the 15 June. QSL via F2UW.

Simone, IZ4DYQ will be active as IA5/IZ4DYQ from Elba Island (EU-028) until 13 July. He plans to operate mainly SSB on 20 and 40 metres. QSL via home call, bureau preferred.

The Polish 3B6 Agalega Islands DXpedition Team is on course to start operation on Tuesday 5 June. In an announcement by team leader Witek, SP9MRO, the group's call sign was confirmed as 3B6DX. Operation will be for ten or more days, with the team leaving the area on Monday 18 June. For more details and updates, visit www.3b6.godx.eu/.

Maciek, WQ7X, will be active as VP5/WQ7X to the 5 June. He plans to operate CW and SSB on 10 to 80 metres. QSL via home call.

Jim, VQ9JC, ND9M, will be active as VQ97JC through to the 5 June from Diego Garcia. Jim can only operate during his spare time, which normally means 1200 to 1730 UTC although he will try and arrange occasional evening working. QSL via ND9M, direct or bureau, but cards will not be printed at least until after he returns home in August.

3 Special event station TM2RHC, which stands for 2nd Regiment Helicoptere Combat, will be active on 10 to 24 June before and during an air show at Le Luc le Cannet, France. QSL via F4EUN.

ARI Versilia will activate special event station II5MD on 11 to 13 June for the "Meucci Day". Antonio Meucci was recognized as the first inventor of the telephone by the United States Congress in its resolution 269 dated 11 June 2002. QSL via operator's instructions.

The Yankee Clipper Contest Club celebrates its 30th anniversary and its members may sign homecall/30 (eg K1RX/30) for the rest of the year. A special certificate will be available for contacting at least 10 members; details can be found at www.yccc.org.

Richard, M0EAZ, is currently sailing across the Atlantic and regularly checks in to the Maritime Mobile net on 14.300MHz at 2100z each evening. His signals are reported as good, despite using just 100W to a back-stay antenna, and would welcome calls.

Celebrating the 750th anniversary of Krakow's city rights is HF750C, which will be active until 30 June. QSL via SP9BRP. Expect also a large number of local operators to use special prefix SN0 during the year.

Now the contest news

The RSGB 80m Club Championships takes place between 1900 to 2030 on 4 June on the 3.5MHz band, data modes. The exchange takes the form of the RST and serial number. The ANARTS RTTY contest takes place between 0000 and 2359 on 9 and 10 June on 3.5 to 28 MHz bands. The exchange takes the form of RST, Time UTC and CQ.

The RSGB 144MHz activity and club championship takes place between 2000 to 2230 on 5 June, all modes. The exchange takes the form of RST, serial number and locator.

The RSGB 144MHz Backpackers contest takes place between 0900 to 1300 on 10 June on 10 June, all modes. The exchange takes the form of RST, serial number and locator.

The Practical Wireless 144MHz QPR contest takes place between 0900 to 1600 on 10 June, all modes. The exchange takes the form of RST, serial number and locator.

Now the solar factual data for the period from 21 to the 27 May compiled by Neil Clarke, G0CAS. Despite a magnetically complex sunspot group that was visible it failed to produce any solar flares. Solar activity was very low. Gradually the sunspot group decayed and by the 24th it had disappeared. Solar flux levels declined from 73 units on the 21st to 67 by the 27th. The average was 70 units. The 90 day solar flux average on the 27th was 73, that's one unit down on last week. X-ray flux levels was A2.2 units on the 21st but then declined to below the A1 level for the remainder of the period. Geomagnetic activity started at quiet levels with an Ap index of 6 units on the 21st. Activity increased to sub-storm levels on the 23rd, this disturbance is possibly due to a filament disappearance on the 19th of May. A high-speed coronal hole disturbance caught the original disturbance and this lasted through to the 27th. The most disturbed day was the 23rd with an Ap of 42 units. The average was Ap 19 units. The ACE spacecraft saw solar wind speeds increased from 430 kilometres per second on the 23rd to 750 by the 26th. Particle densities were low except for the 22nd, which increased to 36 particles per cubic centimetre on the 22nd. Bz varied between minus 11 and plus 7 nanoTeslas during the disappearing filament disturbance and between minus and plus 7 nanoTeslas during the coronal hole disturbance the next day.

4 The magnetic disturbances resulted in periods when HF propagation was markedly degraded, particularly over the North America path. Auroral propagation occurred at 50 and 144MHz from late morning on the 23rd, resuming on the 24th. Sporadic-E was reported at 28 and 50MHz on most days. There were several reports of double-hop contacts with the eastern Mediterranean area on Six, while the new Athens 4-metre beacon was heard in the UK for the first time.

And finally the solar forecast. This week the quiet side of the Sun is expected to be looking our way. Solar activity is expected to be very low. Solar flux levels should slowly decline and by next weekend be around the 70 mark. Geomagnetic activity is expected to be unsettled today and tomorrow due to a recurring coronal hole. Activity will then decline to quiet levels for the remainder of the period. MUFs during daylight hours at equal latitudes should be around 18MHz for the south and 15MHz for the north. The darkness hour lows should be about 10MHz. Paths this week to Australia should have a maximum usable frequency with a 50 per cent success rate of around 20MHz. The optimum working frequency with a 90 per cent success rate will be about 16MHz. The best time to try this path will be between 0900 and 1200 hours UTC. Sporadic-E should take place almost daily with openings on 28MHz and 50MHz. Openings on 70MHz can be expected on some days and openings on

144MHz cannot be ruled out. And that's all for this week from the propagation team.

5 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA Calling all Isle of Wight Radio Amateurs. The RSGB Roadshow featuring the President Angus Annan, MM1CCR, the General Manager Peter Kirby, G0TWW, your Regional Manager Gavin Keegan, G6DGK and

your local RSGB representative Chris Brown, G0DWE will be holding an open meeting at the Camphill Club, Quarry View, Camphill, Newport, IOW on Tuesday 3 July commencing at 7.30. All Radio Amateurs on the Island are invited to attend. On Sunday 3 June Radio Society Of Harrow is operating GB2DHH at the DeHavilland Heritage Museum, London Colney, from 10am. Contact Linda, G7RJL, on 020 8386 8586, or on the web at www.g3efx.org.uk or Chris 01895 621 310. On Monday 4 June Braintree and District Amateur Radio Society is having an aerial clinic and 70cm aerial testing evening. Contact John, M5AJB, on 01787 460 947.

On Monday 4 June Cray Valley Radio Society is taking part in the 80m club data championship. Contact Bob, BRS32525, on 020 8265 7735 after 8pm. On Monday 4 June Felixstowe and District Amateur Radio Society is having a talk on ESWR Planning with Steve, M1ACB. Contact Paul, G4YQC, by email to paul.whiting@bt.com. On Monday 4 June Southdown Amateur Radio Society is having a talk by John, G3DQY, on getting S9 to ZL and about GB2PW, Chaseley. Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com. On Monday 4 June Surrey Radio Contact Club is having a BBQ at G3ZPB's. Contact Ray, G4FFY, on 020 8644 7589. On Tuesday 5 June Chelmsford Amateur Radio Society is having a table top sale. Contact Colin, G0TRM, on 01245 223 835, colinpage@ukgateway.net, or on the web at www.g0mwt.org.uk. On Tuesday 5 June Cray Valley Radio Society is taking part in the 2m club championship. Contact Bob, BRS32525, on 020 8265 7735 after 8pm. On Tuesday 5 June Horndean and District Amateur Radio Club is having a social evening. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk. On Tuesday 5 June Leiston Amateur Radio Club is visiting the Orfordness BBC Transmitter site. Contact Dave, G4HUP, on 01473 737 717, g4hup@btinternet.com. On Tuesday 5 June Stevenage and District Amateur Radio Society is having a talk on the Lifetime Licence by Dave, G4ETG. Contact Neil, M0ARH, on 01438 217 077. On Wednesday 6 June Dover Radio

Club is having an operating and natter night. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk. On Wednesday 6 June Fareham and District Amateur Radio Club is having operating and natter night with G3VEF and G8KGI. Contact Jim, M1JJN.

6 On Wednesday 6 June Havering and District Amateur Radio Club is having a talk by Oliver, G3TPJ, on test equipment. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 6 June Norfolk Amateur Radio Club is having a talk by Rob Mannion, G3XFD, Editor of Practical Wireless. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk. On Wednesday 6 June Southdown Amateur Radio Society is operating at Halisham. Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com. On Wednesday 6 June Worthing and District Amateur Radio Club is planning for the PW Contest. Contact Roy, G4GPX, on 01903 753 893. On Thursday 7 June Cray Valley Radio Society is having the G3VLX auction and planning for VHF Field Day. Contact Bob, BRS32525, on 020 8265 7735 after 8pm. On Thursday 7 June Horsham Amateur Radio Club is having a talk on recorded sound by John Weller, G0GNA. Contact or on the web at www.harc.org.uk. On Thursday 7 June Shefford and District Amateur Radio Society is planning for VHF National Field Day. Contact David, G8UOD, on 01234 742 757. On Friday 8 June Cambridge and District Amateur Radio Club is having a foxhunt. Contact David, G8JKV. On Friday 8 June Hilderstone Radio and Electronics Club is having a talk by Don, G4TKR. Contact Mike, G4MIX, on 01304 813 175, g4mix@waitrose.com.

On Friday 8 June Loughton and Epping Forest Amateur Radio Society is having a review of the Canvey Island and Dunstable Downs Rallies by John, G0VEH and Marc, G0TOC. Contact Marc, G0TOC, on 020 8502 1645, or by email to info@lefars.org.uk. On Friday 8 June Mid-Sussex Amateur Radio Society is having an APRS demo by Bob, G0BUX. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 8 June Radio Society Of Harrow is having a talk and demonstration of slow scan TV by Kelly, M1KFM, Don G0ACK and Ray, G0BSP. Contact Linda, G7RJL, on 020 8386 8586, or on the web at www.g3efx.org.uk or Chris 01895 621 310. On Friday 8 June Wimbledon and District Amateur Radio Society is having a talk on a Desert Island Radio DIY project by Reg, M1EEK. Contact Jim, M0CON, on 020 8874 7456.

On Saturday 9 June Loughton and Epping Forest Amateur Radio Society is operating GB2AVF at the Abridge Village Fete, Abridge, Essex. Contact Marc, G0TOC, on 020 8502 1645, or by email to info@lefars.org.uk. On Sunday 10 June Cambridge and District Amateur Radio Club is taking part in the PW 144MHz QRP contest. Contact David, G8JKV.

On Sunday 10 June Mid-Sussex Amateur Radio Society is taking part in the Practical Wireless 144MHz QRP contest. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk. On Sunday 10 June Southdown Amateur Radio Society is operating at the Beachy Head Site. Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com.

NEWS FOR THE SOUTH-WEST

On Tuesday 5 June Flight Refuelling Amateur Radio Society is running its Intermediate training from 1900 - 2130. Contact Tony, G3PFM, on 01202 622 262.

7 On Wednesday 6 June Exmouth Amateur Radio Club is having a fox hunt. Details by email from g0uil@eclipse.co.uk.

On Wednesday 6 June South Bristol Amateur Radio Club is having a technical matters evening. Contact Len, G4RZY, on 01275 834 282. On Wednesday 6 June Taunton and District Amateur Radio Club is having a club open forum. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com. On Wednesday 6 June Thornbury and South Gloucestershire Amateur Radio Club is having a mobile foxhunt in the Thornbury area. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net. On Wednesday 6 June Trowbridge and District Amateur Radio Club is having a talk on monitoring air traffic control with an airband radio by Mike Beale, M5CBS. Contact Ian, G0GRI, on 01225 864 698, E/W. On Thursday 7 June Cornish Radio Amateur Club is having a talk by Wayne Gannon on RAF RF. Contact Ian, 01872 561 058. On Thursday 7 June Saltash and District Amateur Radio Club is on the air. Contact Brian, M0BHG, on 01752 844 321. On Thursday 7 June Swindon and District Amateur Radio Club is having a BBQ . Contact Mike, M5CBS, on 01793 826 465. On Thursday 7 June Yeovil Amateur Radio Club is having a talk on capacitors by Robert, G0RYL. Contact Derek, 01935 414 452, or by email to m0wob@tiscali.co.uk. On Friday 8 June Jersey Amateur Radio Society is working outside on the club antennas, towers and building. Contact Phil, MJ0JER, by email to gj3dvc@gj3dvc.org.je.

NEWS FOR THE MIDLANDS

On Sunday 3 June Wythall Radio Club is having its summer fox hunt. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Monday 4 June Stourbridge and District Amateur Radio Society is on the air. Contact John, M1EJG, on 01562 700 513. On Tuesday 5 June Derby and District Amateur Radio Society is having its junk sale. Contact Martin, G3SZJ, on 01332 556 875. On Tuesday 5 June Loughborough and District Amateur Radio Club is erecting 160m aerials on college field. Contact Chris, G1ETZ, on 01509 504 319. On Tuesday 5 June Wythall Radio Club is taking part in the 2m Club Championship from the shack. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk. On Wednesday 6 June Lincoln Short Wave Club is having a microlight evening at Wickenby Airfield. Contact John, G1TSL, on 01526 323 153.

On Wednesday 6 June Midland Amateur Radio Society is having a general meeting at Church Hall, Pershore Road, Birmingham. Contact 01953 458844. On Thursday 7 June Salop Amateur Radio Society is having its third fox hunt. Contact Glenda, G1YJB, on 01939 235 412.

8 On Thursday 7 June Stafford and District Amateur Radio Society is having a shack night. Contact Graeme, G4NVH, on 01785 604 534, or by email to graeme.boull@ntlworld.com.

On Friday 8 June Hucknall Rolls-Royce Amateur Radio Club is having a club forum. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com. On Sunday 10 June Stourbridge and District Amateur Radio Society is attending the Alveston Rally. Contact John, M1EJG, on 01562 700 513. NEWS FOR THE NORTH OF ENGLAND

On Monday 4 June Grimsby Amateur Radio Society is taking part in the 80m data Club Contest. Contact Brian, G4DXB, on 01472 231 383. On Monday 4 June Macclesfield and District Radio Society is having an aerial construction evening. Contact Tom, M1EYP, on 01625 612 916, tommyread@hotmail.com, or on the web at www.gx4mws.com. On Monday 4 June South Manchester Radio and Computer Club is having its monthly technical forum. Contact Ron, on 0161 969 3999. On Monday 4 June Thornton Cleveleys Amateur Radio Society is having its AGM followed by an inquest on HF Field Day. Contact Jack, G4BFH, by email to jack.duddington@btinternet.com. On Tuesday 5 June Chester and District Radio Society is having a talk on modern day simple code by John Langan. Details on the web at www.chesterdars.org.uk, info@chesterdars.org.uk. On Tuesday 5 June Stockport Radio Society is having a presentation on microwaves, the world above 1GHz by Peter Day, G3PHO. Contact David, M1ANT, on 0161 456 7832. On Tuesday 5 June Wakefield and District Amateur Radio Society is having a radio trivia quiz with G4CLI, competing for a prize donated by Steve, 2E0NFK. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk. On Wednesday 6 June Great Lumley Amateur Radio And Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Thursday 7 June Grimsby Amateur Radio Society is having an RSGB Video Night. Contact Brian, G4DXB, on 01472 231 383. On Friday 8 June South Manchester Radio and Computer Club is having members mini lectures. Contact Ron, on 0161 969 3999. On Friday 8 June Tynemouth Radio Club is having an operating and Morse night. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk. On Saturday 9 June Hull and District Amateur Radio Society is running a Foundation course at Walton St Leisure Centre, Hull. Irish Radio Transmitters Society
Radio News Bulletin

Sunday June 3rd 2007

International Museums Weekend

The International Museums Weekend takes place on the 16th and 17th of June. This amateur radio special event has grown in popularity since the first event was held in 2002.

Among past participants are The Tower of London, HMS Belfast and the US battleship New Jersey. The Howth Martello Radio Group will be participating again this year, operating from the Vintage Radio Museum in Howth. Visitors are welcome to call and operate the station over the weekend. The museum web site is www.qsl.net/ei5em/museum.html. A full list of participating museums and further information of the event is available from the organiser's web site www.ukradioamateur.co.uk/imw.

Tipperary Amateur Radio Group

The next monthly meeting of the Tipperary Amateur Radio Group will take place in Raheen House Hotel Clonmel on Thursday next the 7th of June at 8.00 p.m.

South Eastern Amateur Radio Group

Two theory revision classes will take place prior to the theory exam in June. The date of the first class is this coming Tuesday the 5th of June. The following revision class will take place two weeks later on Tuesday the 19th of June. Classes start at 7.30 p.m. and will be held at the usual venue of the Roanmore Centre, Waterford.

A committee meeting will take place on Monday the 4th of June at 8.00 p.m. Committee members are asked to attend.

Rallies

Bangor & District Amateur Radio Society Rally will take place on Sunday the 17th of June in the Crawfordsburn Country Park, Helen's Bay, Co. Down. The Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel, Blarney, Co. Cork and the Mayo Radio Rally will be on Sunday the 18th of November in the Belmont Hotel, Knock, Co. Mayo.

A full listing of upcoming rallys is available on www.irts.ie.

Marconi's Wireless Telegraph in Ireland, "Alpha/Omega Tour"

In 1907, Guglielmo Marconi's dream of fixed point-to-point wireless telegraph stations linking North America and Europe became a reality. Derrygimla near Clifden, County Galway served as the site of his wireless station. Over the next 15 years, spark-induced blue flashes generated by the station's massive 20 kV generators sent tens of thousands of wireless messages across the Atlantic, linking to its North American counterpart at Glace Bay, Nova Scotia.

2007 marks the centennial of those first sparks generated from Marconi's historic Clifden station. To commemorate this significant event, as well as radio's first-ever commercial venture at Ballycastle-Rathlin, Hal W8HC announces a special amateur radio operation from both locations central to Marconi's fame and success as a pioneer in wireless technology. Ballycastle-Rathlin was his first wireless telegraph station and the Clifden station would be his last, ceasing operation in 1922.

On Saturday and Sunday, August the 4th and 5th. Hal will operate from Ballycastle as GI/W8HC/p. He will be also taking part in the annual Marconi Festival at Ballycastle with the Marconi Radio Group's MN"MRG special event station on Sunday the 5th of August. On Monday the 6th of August, he will ferry over to Rathlin Island (EU-122) and operate from East Lighthouse (ARLS designator NTI 011).

He will arrive in Clifden on Wednesday the 8th of August where he will operate as EI/W8HC/p at the Derrygimla site on Thursday and Friday the 9th and 10th of August. It is hoped that some operating time can also occur from nearby Letterfrack, site of an ancillary receive station built in 1912 to allow for

full duplex operation of the transatlantic signals.

All QSOs will be confirmed via LOTW and special QSLs from each of these historic Marconi locations will be printed and sent via GlobalQSL www.globalqsl.com. In addition, a specially designed certificate will be issued to those stations making contact with both GI and EI operations from either Ballycastle or Rathlin and Derrygimla or Letterfrack. In keeping with the historic connection, all QSOs from these locations will be CW only. Limited mobile phone operation will take place during transit in both GI and EI.

Contests

The CW field day will take place in two weeks time on the 2nd and 3rd of June and the VHF/UHF field day will take place on the weekend of the 7th and 8th of July.

The RSGB IOTA contest will be held on the 28th and 29th of July.

Ladies Mini Marathon

The 2007 Flora Ladies Mini Marathon takes place on Bank Holiday Monday the 4th of June at 3.00 pm. It starts from Fitzwilliam Square, and finishes in Stephens Green Dublin 2. Sadly this year's event will happen without the familiar voice of Donnchadh O'Shea who traditionally operated the net control station. This year's public service event will be dedicated to his memory. The co-ordinator for the event again this year will be George Adjaye who may be contacted by phone on 086 2586103 or Fax 01 4908546 or email 'george_adjayeg at dcu.ie'.

Theory Examination

The next Theory Examination for the Experimenters Licence will be held on Thursday the 28th of June next. Places for the examination are limited and will be allocated on a 'first come first served' basis. Intending candidates should forward the appropriate fee to Se'n Nolan EI7CD, 12 Little Meadow, Pottery Road Dunlaoghaire, Co. Dublin. The fee is 50 Euro or 25 Euro for full time registered students, those who are retired, are unemployed or have a disability. In addition to the exam centre at the ComReg offices in Dublin an examination will be held on the same date and

with the same paper at the Community Centre,
Carrigtwohill, Co. Cork.

The closing date for the examination is the 16th of June and it will be strictly adhered to. Sean's e-mail address for further enquiries is "ei7cd at gofree dot indigo dot ie".

EI75IRTS

Just a reminder that as part of the Society's Jubilee Celebrations, the IRTS has been allocated the call sign EI75IRTS for the duration of 2007. The licence holder is Finbarr Buckley EI1CS, and with his agreement, the call sign may be used by individual and club members holding a current Radio Experimenter's licence.

Individual and club members of the IRTS can apply to use the call sign EI75IRTS during the rest of the year. More information is available on www.irts.ie.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to "news at irts dot ie" for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday's bulletin.

Wow! While it is limited to "via the BURO", this looks like a great
idea in the "electronic evolution" of QSLing.

Thanks for the link.

Thanks Fabian. That certainly looks like it.

This was a question (no prize) in my local ham club magazine.

DXNL 1522 - Jun 6, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

EA8 - CANARY ISLANDS, AF-004
The Teide National Park (Tenerife, Canary Islands) shall be added to
the UNESCO World Patrimony List and this campaign is supported by a
group of radio amateurs who will activate the special callsign AN8TID
operating from the volcano La Rambleta (Pico del Teide, 3555m above sea
level). They will work in CW/SSB/digital on HF/VHF/UHF on June 9/10.
The QSL manager EA8NQ confirms direct and via the bureau. See also:
http://www.ure.es/ea8arg/an8tid.htm

FO/C - CLIPPERTON ISLAND, NA-011
The DXpedition announced in the last DXNL opened a website now at:
http://clipperton2008.org/ There you can find many useful information
like the 30th anniversary of the 1978 Clipperton DX Club's DXpedition.
Approximately 24 OPs plan to make 100.000 QSOs.

FY - FRENCH GUYANA
FY/G3SXW and FY/G3TXF announced to be active from Jun 8-10. As usual
the two fresh elected "DX Hall of Fame" members will work in CW only
on 80-17m. QSL cards are confirmed reliably via their homecalls, also
via the bureau.

OD - LEBANON
Jean-Marc,ON4JM, is working for the Belgian army and will be based at
a field hospital in South Lebanon from Jun 6 until the mid of August.
He will try to hit the airwaves in SSB/CW/digital modes on 10-160m
signing OD5/ON4JM during his very rare leisure time.
QSLs via homecall, via bureau preferred.

TA - TURKEY
TA1HZ and TA2RX are very active as TC800YOM mainly in SSB on 17/20/40m
until Jun 30. This activity shall remember the poet and theologian
Mevlanas who would celebrate his 800th birthday now.

TI9 - COCOS ISLAND, NA-012
"After the big success of TI9M we start again! The next DXpedition to TI9 will depart in February 2008! Become part of an exciting adventure! Write to: ti2hmg@qsl.net" This is the text on the website and you can even fill out an application form to become a team member of this DXpedition at: http://www.qsl.net/ti2hmg/cocos.htm

V2 - ANTIGUA AND BARBUDA, NA-100
V26HS will be the call of Howard,WB4WXE, on NA-100 from Jun 9-26. Howard prefers to work on 6m, with 350 watts and mainly on 50.125 MHz or 50.110 MHz. QSL via homecall.

3A - MONACO
Luc,ON4LUC, and Paul,ON6DP, can be found on the air signing 3A/ON4LUC and 3A/OP0P since Jun 3. They are working with 100 watts and inverted V in RTTY/PSK/SSB on 20/40/80m until Jun 8 or 9. QSLs via ON6DP.

3D2 - ROTUMA ISLAND, OC-060
Tony,3D2AG, writes that his trip to Rotuma has been delayed. He plans to stay on Rotuma for several months now starting in Nov or Dec 2007.

5N - NIGERIA
Marek,5N2/SQ8JCA, is working in Cogi during the whole month of June and will be QRV in SSB on 6-80m especially from 1000-1600 UTC. QSL via SQ8JCA.

GERMANY, SPECIAL EVENT STATIONS
DH150HZ (with the special DOK HZ1857) is a special event callsign to celebrate the 150th birthday of Heinrich Hertz. The QSL manager DL5KUA writes that the decision how many QSLs have to be printed is not made before this autumn and the shipment is going to start not much earlier than in the beginning of 2008. However all QSO information is uploaded to the LotW regularly. Other special event calls active from Germany are DK150HZ (Karlsruhe, DOK HZ1885), DR150HZ (Bonn, DOK HZ1894) and DB150HZ (Berlin, DOK HZ1878). The licences are valid until Jan 1, 2008.

PORTUGAL, SPECIAL EVENT STATION
CQ4IPY will be the call of Marq,CT1BWW, during the 4th International Polar Year in SSB/CW/PSK31/RTTY/SSTV on 80-10m from Jun 9-15 and once again from Sep 8-14. QSLs via his homecall.

HUNGARY, SPECIAL EVENT STATION
The "Danube River Day" is held in Hungary every year. HG7DANUBE can be found on the air from Jun 1-30. QSLs direct via HA2MN or as a eQSL. Check also his homepage at: http://ha2mn.dsgnet.hu
---
The 46th Firac Congress takes place in Hungary as well from Sep 13-17. For this reason Tibi,HA5BSW, will use the special call HG46FC between May 30 and Sep 30. QSL via HA5BSW, also via LotW. The Firac is the international radio club of HAMs related to railways.

SPAIN, SPECIAL EVENT CALLS
The URE and the Spanish commmunication authority DGTel have an agree-
ment which allows the URE to apply for all special callsigns of its

members at once. All Spanish HAMs interested in a special callsign from July 1 until Dec 31,2007, should send their request to the URE secretary until Jun 10. The prefixes ED, EE and EF are reserved for minor events completed with the suffix of the applicant's call. The prefixes AM and AN are reserved for major national events and the prefix AO for major international events. Three letters suffixes starting with UR, RC or RK may only applied for by radio clubs or amateur radio societies and suffixes with one letter are reserved for special contests but may be completed with any of these prefixes: ED, EE, EF, EG, EH, AM, AN,AO.
These contests are considered:
Jul 14/15: IARU HF Championship
Aug 11/12: WAEDC CW Contest
Sep 1/2: All Asian DX SSB Contest
Sep 8/9: WAEDC SSB Contest
Sep 29/30: CQ WW RTTY DX
Oct 27/28: CQ WW DX SSB Contest
Nov 24/25: CQ WW DX CW Contest
Dec 8/9: ARRL 10m Contest

DXCC: The approval of the 7O1YGF cards (activated in April 2000) is still refused by the DXCC. Rumours from the USA say that the "files" are not closed yet, so there is still some hope that this may change some time.

LINKS: VA3RJ published a very comprehensive list of special event calls at:
http://webhome.idirect.com/~va3rj/spevents_dx.html

Current SOTA activities are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

UPCOMING CONTESTS

Jun 9, 0000-2400 UTC: Portugal Day Contest
Jun 9, 1500 UTC till Jun 10, 1500 UTC: 2007 GACW WWSA CW DX Contest
You can find the rules at: http://gacw.no-ip.org/contestgerman.html

Amateur Radio Newsline(tm) Report 1556 - June 8, 2007

Amateur Radio Newsline report number 1556 with a
release date of Friday, June 8, 2007 to follow in 5-4-3-2-1.

The following is a QST. A Manassas Virginia ham
proves RF ingress can seriously hamper
BPL, South Africa's ham community takes a stand
on BPL, and the FCC takes another step toward an
enhanced Emergency Alert System. All this and
more on Amateur Radio Newsline report number 1556 coming your way right now.

**

THE BPL FIGHT: MANASSAS VA HAM PROVES BPL INGRESS AT PROBLEM EVEN AT QRP

A simple test conducted by a ham radio operator
in Manassas, Virginia, has provided proof
positive that even flea-power Q-R-P ham radio
operations can shut down Broadband Over Powerline
Internet access operation. Amateur Radio
Newsline's Don Carlson, KQ6FM, reports:

--

The revelation comes on the website of George
Tarnovsky, K4GVT. On it, Tarnovsky shows the
results of tests made using only 40 watts and QRP
at 2 watts on the 80 through 10 meter bands.

The gear used in his test was an Icom 706
transceiver, with Outbacker Perth antenna on his
car parked curb side. The vehicle was
approximately 70 feet from his house, and more
than 100 feet from the BPL power pole
interface. Inside the home a laptop with BPL
interface repeatedly downloading a 40 Megabyte file.

--

Tarnovsky: "Well, what we found is that when we
were within reasonably close proximity -- I would
say within 100 feet or so of any of the BPL
installations -- when we transmitted on E-CARS on
7.225 that we actually had an affect on

them. The way ewe knew that we had an affect was
that as soon as you released the microphone
(PTT), rather than hearing the typical BPL noise,
you knew the system was backed up with data and
consequently became very aggressive and just
blanked (the band). If you looked at a spectrum
display of it -- it just covered the entire
spectrum. Its almost as though all the stops
were off. In other words the band stops were
off. Just rip and get the data out and that's exactly what it did."

--

What K4GVT found was that on all bands the
connection suffered at least a major slowdown
when he transmitted at the 40 watt level. On 80
through 15 meters the 40 watts caused the
download to stop altogether and requiring it to
be restarted. But the biggest surprise was on 40
meters where 2 watts of R-F rendered the BPL
connection numb. He says that the 2 watts at 7
MHz caused the BPL data transfer to stop.

--

Tarnovsky: " With the original G1 installation,
2 watts would have an affect on it. Since then
they have made some changes in their firmware to
the G1. The G2 has agile notching so they can go
in and they can notch it (the spectrum), but
being agile they can also remove them and that's
the problem that we are facing here."

--

Tarnovsky notes that regardless of what carriers
a BPL provider might notch out of a system, the
system operator cannot filter its input. As
such, R-F ingress to the BPL system is wide open,
and susceptible to all near field RF from 2 to 29
MHz. Even one that only 2 watts and more than 100 feet away.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

--

More on the BPL ingress experiment by K4GVT
including a band by band results chart is on his
website. Its in cyberspace at
www.k4gvt.com/bpl/bplweakness.html (ARNewsline(tm), QRZ.com)

**

THE BPL FIGHT: LATEST SOUTH AFRICA REPORT NOTES INTERFERENCE POTENTIAL

South Africa's ham community has confirmed what so many others know already. That Broadband Over Powerline Internet access is a major source of interference to High Frequency communications

During a recent net, South African Radio League President Graham Hartlett, presented an update on the society's position of powerline telecommunication in South Africa. The latest tests have confirmed that BPL has an inherent interference potential and that this must be taken care of in new type approval specification for powerline data communications systems.

Hartlett noted that telecommunications regulator ICASA has recognized that it will need to strengthen its interference complaint handling capability and has asked the EMC working group to develop type approval specifications and how to deal with interference should it occur. These specifications would be an interim measure and in no way pre-empt international specifications. Once international standards have been agreed, the interim specifications would be revised and brought into line. (WIA News)

**

THE BPL FIGHT: ARRL SAYS FCC MUST SHUT DOWN AMBIENT

Still with BPL news, word that the ARRL has again demanded that the FCC shut down Ambient Corporation's broadband over power line pilot project in Briarcliff Manor, New York.

In a May 31 letter to FCC Spectrum Enforcement Division Chief Kathryn S. Berthot, ARRL General Counsel Christopher D. Imlay, W3KD, says that it's long past time that the Commission enforce its own rules, and again objected to the Commission's inexplicable inaction in the face of evidence the system is noncompliant.

On May 21 the FCC called on the BPL equipment maker and system operator to demonstrate it's complying with all terms of the Part 5 Experimental license authorizing the system, or face possible enforcement action.

Imlay's letter pointed out that the FCC's May 21 letter made no mention of Condition #1 of Ambient's Part 5 Experimental license. That condition requires that if any interference occurs, the holder of the authorization will be

subject to immediate shutdown. (ARRL)

**

RESCUE RADIO: FCC MOVES TOWARD AN UPGRADED EAS

The FCC has adopted a Second Report and Order and Further Notice of Proposed Rulemaking that strengthens the nation's EAS or Emergency Alert System. The Commission's Order promotes the development of fully digital Next Generation technologies and delivery systems that will better serve the American public.

According to the CGC Communicator, the Order requires EAS participants to accept messages using a messaging system called Common Alerting Protocol. CAP as it will be known is the groundwork for what's being called the Next Generation EAS delivery systems. This protocol will need to be in place no later than 180 days after FEMA makes a key announcement.

The Further Notice of Proposed Rule Making is the second part of the decision. It seeks comment on whether participants should be required to deliver EAS alerts originated by local, county, tribal, or other state governmental entities. More on the Report and Order is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-273458A1.pdf (CGC)

HAM RADIO IN SPACE: RAFT DE-ORBITS

The US Naval Academy's RAFT ham radio satellite has reached the end of its orbital life. Data compiled from stations monitoring its 145.825 MHz downlink indicates that RAFT de-orbit occurred between 02:00 and 03:00 UTC on May 30th. Its final beacon was heard at 01:45 UTC that day. (ANS)

**

WITH ARNEWSLINE(tm): 2007 YHOTY NOMINATIONS NOW CLOSED

The nominating season for the 2007 Young Ham of the Year Award is now closed. The deadline for submitting nominations was midnight on May 30th, The judging committee is now hard at work selecting this years winner. We will have that persons name to announce in a few weeks.

TELECOMMUNICATIONS LAW: BROADCASTERS WIN APPEAL ON INDECENCY AND PROFANITY
RULES

A federal appeals court has overturned an
indecency ruling against the Fox Broadcasting and
has broadly questioned whether the Federal
Communications Commission has any right to police
the airwaves for offensive language. Mark Abramowicz, NT3V, has more:

--

In a 2 to 1 decision on June 4th, , the U.S.
Court of Appeals for the 2nd Circuit in New York
ruled that the FCC went too far in issuing a 2006
decision against Fox for separate incidents in
2002 and 2003 after two personalities each
uttered an expletive on live television.

In 2004, the agency reversed years of policy and
effectively branded even "fleeting," or one-time,
use of an expletive off-limits on broadcast
television and radio In its ruling the court
found that that the FCC had not adequately, or
constitutionally, explained why it changed its
mind on the fleeting use of profanity and ordered
the agency to retool its regulations.

Because the Fox incidents occurred before the
FCC's 2004 ruling on fleeting profanity, the
agency did not fine the network, though it did
rule that the broadcasts were indecent. Fox
appealed the FCC ruling to the 2nd Circuit,
saying the new rule set a dangerous precedent for clamping down on free
speech.

According to the Washington Post, the decision is
likely to be looked on as a rebuke to the FCC and
a victory for television networks, which in
recent years have pushed back against the
regulatory agency's crackdown on indecency. It
could also bolster the broadcasters argument that
parents need better tools such as

channel-blocking technology rather than more
government regulation to police the viewing habits of their children.

FCC Chairman Kevin Martin said that he was
disappointed in the court's ruling. He added
that FCC attorneys were reviewing the agency's
options and might appeal the decision to the
Supreme Court. Lawyers who specialize in the
First Amendment issues told the Washington Post
that such an appeal could easily become a test
case to determine whether the federal government
still has the right and responsibility to police the public airwaves.

For the Amateur Radio Newsline, I'm Mark Abramowicz, NT3V, in Philadelphia.

--

What affect this ruling might have on indecency
and profanity issues in other FCC administered
services is unknown. (ARNewsline(tm) from published news reports)

**

RESCUE RADIO: TSA VOLUNTEER TRAINS NEW HAMS

30 Transportation Safety Administration
volunteers have been trained to use emergency
high frequency radio equipment during disasters.
The 30 have also qualified for Amateur Radio operator licenses.

According to news reports, TSA employees
participating in the May 9th training traveled to
Pensacola, Florida for the session. Volunteers
came from as far away as Louisiana, Alabama,
Mississippi, Arizona and New York State.

Spokesman Steve Earnest said that Pensacola is
fortunate that it has a Transportation Safety
Officer who is also a highly experienced Amateur
Radio operator, trainer and examiner.

Earnset says that this radio amateurs volunteer
efforts have given the agency tremendous in-house
capability. One he says would have been
expensive for the agency to replicate using
contractors. More is on-line at
/www.tsa.gov/press/happenings/amateur_radio_operators.shtm (TSA Release)

**

RESCUE RADIO: TENNESSEE RED CROSS CHAPTER GIFTED RADIO GEAR

Within the next 18 months, the Treis-County
Tennessee Chapter of the American Red Cross

should have a new emergency communications station. One with improved capabilities ready to use in the event of a disaster.

According to the Tullahoma News Guardian, the emergency communications station is being made possible by a donation by the wife of the late Bill Bearden, a former Red Cross volunteer and ham radio operator. Mrs. Bearden has donated two antennas and numerous pieces of Amateur Radio equipment that is being refurbished. One of the antennas will be installed on a new tower at the local Red Cross headquarters where the station will be installed.

Chapter Executive Director Alice Cano thanked Mrs. Bearden and noted that the new station would better enable the Red Cross to stay in touch with drivers of emergency response vehicles. She also noted that Bryan Marlowe, KE4LPL, a member of the Red Cross chapter's information technology team, Jimmy Floyd, NQ4U and other radio amateurs make up the Treis County chapter's disaster communications committee. (Tullahoma News)

**

RESCUE RADIO: ATV AT SANTA BARBARA EM COMMS DRILL

Fifteen California Amateur Radio Emergency Service volunteers equipped with slow-scan television assisted with a voluntary wildfire evacuation drill on Saturday morning, April 28th. An exercise involving residents of over 900 homes near the city of Santa Barbara.

During the event, five ARES teams were stationed at key intersections where winding, narrow roads merged into the main street out of a mountain community. The amateurs sent slow scan photos in a pre-arranged rotation, with the camera number appearing in the picture. Each number corresponding to the assigned intersection so officials could easily identify the location on large area maps.

Receiving stations were set up at the City's Emergency Operating Center. According to Santa Barbara City Fire Battalion Chief John Ahlman, the amateur television pictures were the only continuous, real-time information his department received from the field.

This is not the first time ham radio has been a part of Santa Barbara emergency communications drills. Fire officials were so impressed with

the information provided by the ARES slow-scan TV
at a smaller drill two years ago, that they
invited the ham radio group back to participate in this one as well.
(N6ZKJ)

**

ENFORCEMENT: BEHRINGER FINED $1,000,000 FOR UNAUTHORIZED GEAR SALES
Electronics supplier Behringer USA, Inc. has been
dinged with a proposed one million dollar fine by
the FCC. This, for marketing 50 models of
unauthorized radio frequency equipment in the
United States without prior consent from the regulatory agency.
The gear in question is described as digital
audio music devices. This says the FCC was a
willful and repeated violation of Section 302(b)
of the Communications Act of 1934, and Section
2.803(a) of the Commission's Rules. (FCC)
**

REGULATORY NEWS: ARRL VEC TYPO LEADS TO LICENSE CLASS CORRECTION

The FCC has rescinded an Extra class upgrade
accidentally granted to W5VXJ of Phoenix,
Arizona, who had only filed for a General class
upgrade. And it's doing so with the implied
consent of the radio amateur involved. Bill
Pasternak, WA6ITF, has the details:

--

The story goes this way. On February 2, 2006,
the Commission received from the ARRL VEC an
electronic data file that contained an
application requesting modification of John R.
Ure, W5VXJ''s license to upgrade his operating
privileges from Technician Plus Class to Amateur
Extra Class. The license was modified to
authorize Amateur Extra Class operator privileges on February 2, 2006.

On April 19, 2006, the ARRL VEC requested that
the Commission rescind this modification. This,
on the grounds that the earlier data file it
submitted contained a typographical error and
that the requested upgrade was intended to modify
the operator privileges for Amateur Radio Service
Station W5VXJ to General Class operator privileges.

Based on the new information, the FCC contacted
Ure and proposed to modify the license to change
the license class from Amateur Extra Class to General Class.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF, in Los Angeles.

--

W5VXJ did not protest the proposed modification
of his license within the requisite thirty-day
time frame s the FCC says that Ure is deemed to
have consented to the modification. (FCC)

**

TELECOMMUNICATIONS LAW: SPOOFING CAN GET YOU 5 IN JAIL

Spoof and you could go to jail. So says one
house of Congress. Jim Davis, W2JKD, has more:

--

The House of Representatives has voted to make
phone "spoofing," the use of fake caller ID
information to defraud people, a felony subject.
The bill makes it a federal crime to use false
caller ID information with the intent to defraud
or to deceive the recipient about the identity of
the caller. A conviction brings a 5 year prison
sentence and forfeiture of any gains from the
offense, or of the software or technology use to
commit the crime. Exemptions are made for the
activities of law enforcement and intelligence agencies.

--

The bill now goes to the Senate for action and debate. (Technology Today)

**

NEW AT HAMVENTION 2007: LINK COMMUNICATIONS

Continuing with our coverage of new products
shown at the recent Dayton Hamvention, we turn
this week to a rather specialized area. That of
repeater controllers and a company called Link
Communications. Here's Fred Vobbe, W8HDU:

--

Audio report only. Please download the audio report at www.arnewsline.org

--

HAM HAPPENINGS: "AMATEUR RADIO TODAY" IS #1 HAM VIDEO ON YOUTUBE

"Amateur Radio Today" the ARRL video produced by
Dave Bell, W6AQ, Bill Baker, W1BKR, Bill
Pasternak, WA6ITF and the late Alan Kaul, W6RCL
-- and written by W6RCL-- has today become the
most watched ham radio video on www.YouTube.com

As this is written, there are three postings of
"Amateur Radio Today" of this show on
YouTube. The one posted by "Tomintexas" has to
date garnered some 24,423 people screening
it. Another by a user named mranticocialguy has
been screened 3,727 time and the third by user
VA3CSS that has been viewed 1859 times. Adding
all three postings together, "Amateur Radio
Today" has been viewed on YouTube a total close to 30,000 times.

In second place in the most viewed ham radio
YouTube videos is "The Ham Band" singing "Come
and Join Us On The Airwaves." The video
featuring Andrew John Huddelston, Oh-Zed-1-X-J
and his wife Lissa Ladefoged on a 100 foot high
tower has so far racked up an impressive 20,676 views.

Third place goes to the on-line programmer 88
SLIDE whose "Ham Radio Field Day" video has
garnered 6785 views. It uses footage shot around
Los Angeles and Orange County California on Field Day weekend, 2006.

While none of these shows have set any YouTube
viewing records their numbers are still very
respectable for a special interest such as Amateur Radio. (ARNewsline(tm))

**

COMMUNICATIONS TECHNOLOGY: DAB STANDARD BEING CHANGED

A major change is coming to a digital broadcast
radio near you. Jeramy Boot, G4NJH, is in
Nottingham in the U-K with the latest on DAB
standards and the future of digital receiver design:

--

Current DAB radios may be unable to receive
anything in a few years time, according to Pure Digital.

This is due to the introduction of DAB Plus,
which uses the new AAC Plus audio coding. The new
DAB standard is incompatible with existing DAB
receivers, and will render them obsolete. The new
coding system is twice as efficient as the MP2
system currently in use, meaning that the number
of channels per multiplex could double.

Manufacturers are expected to quietly switch to
producing dual standard receivers before any changeover occurs.

I'm Jeramy Boot, G4NJH.

--

The switchover only affects terrestrial DAB radio
and not satellite delivered services such as Sirius or XM. (GB2RS)

**

WORLDBEAT - GERMANY: THE DL 100 AWARD

In news from around the world, German hams are on
the air throughout June with a special
celebration. This with members of the radio
clubs of Norddeich and Hage commemorating the
100th anniversary of the well known coast station
Norddeich Radio. Operations are planned for 160
through 10 meters on various modes. The special
callsign, DL100DAN is being used and a special D
A N 100 award will be available. More
information can be found at http://norddeich-radio.de/ (OPDX)

**

WORLDBEAT - JAPAN: JARL TO CELEBRATE INTERNATIONAL QRP DAY

The Japan Amateur Radio League's QRP Club will be
running five special event stations, 8J1P, 8J3P,
8J4P, 8J5P and 8J6P on June 17th to celebrate the
International QRP Day. International QRP Day was
designated by the IARU Region 1 Conference held
in April 1984 in Italy to stimulate QRP operation
worldwide. It was reaffirmed by the IARU Region
3 Conference in New Zealand in December of 1985 (JARL)

**

WORLDBEAT - UK: GB3RAL PROPOSED 40 AND 60 MHz BEACONS ON THEIR WAY

In VHF news, work from the United Kingdom that
the new GB3RAL 40.05 and 60.05MHz beacons are due
to receive government clearance in mid-June but

both have already cleared their key Primary User stages. Assuming that regulatory clearance is also obtained the sponsors will go forward to for final clearance and approval sometime this summer.

If approved, it brings ham radio in the UK closer to the prospect of a unique 40, 50, 60 and 70 MHz co-located beacon system at the Rutherford Appleton Labs location near Oxford. While not in amateur bands, the 40 and 60 MHz beacons should prove to be extremely useful propagation study markers both in the UK and world wide. (GB2RS)

**

ON THE AIR: CELEBRATING IN INDY WITH HAM RADIO

Back in the United States, Indianapolis, Indiana has been a hotbed of special event stations during May and it continues in June. Fire up that new HF rig and get ready to copy. Jack Parker W8ISH has this report from the Circle City.

--

If you have your HF rig fired up and your antenna pointed toward Indianapolis you many score some great contacts in the next few weeks. Beginning Friday evening June 8th the Indianapolis Radio Club will begin making contacts from the site of the USS Indianapolis Memorial. The USS Indianapolis was sunk during World War Two after delivering atomic bomb components that were later used in the attack on Hiroshima. Listen for the W9IND call sign during the 44 hour event or check the Indianapolis Radio Club web page for more information.

The pace continues to quicken as the United States Grand Prix rolls into town on Fathers Day weekend, June 17th. Special event station W9IMS will be on the air, taking check-ins, during that weekend . This world class special event station operates during each one of the major races at the Indianapolis Motor Speedway. If you don't catch W9IMS during the Formula One race you have another opportunity to snag a special QSL card during the Brickyard 400 NASCAR race the weekend of July 29th.

And last but not least, many central Indiana clubs report gearing up for Field Day 2007 on June 23rd and 24th. Maybe we'll catch you on the HF bands.

Reporting for Amateur Radio Newsline this is Jack Parker W8ISH.

--

The USS Indianapolis Memorial station will join
nearly 70 other special event stations around the
world as part of the Museum Ships Weekend. (W8ISH)

**

DX

In D-X, word that N6PF, will be celebrating his 60th birthday with a
visit to 3A2MD's QTH in Monaco. He will be
operating with his call portable 3A from June
25th to the 30th. Bands and modes of activity
were not provided. QSL via his home callsign.

And SQ8JCA, will once again be active portable 5N2
from Cogi, Nigera during all of June. Activity is
expected to be on 80 through 6 meters on SSB
only. Listen out for him between 10:00-16:00 UTC
and QSL to his home callsign address.

Lastly, members of the Borisov Amateur Radio Club
will be active as EW905B between now and November
30th. This, three number callsign is to
celebrate the 905th anniversary of Borisov City
in Belarus. QSL this one via EW2EO.

(From various DX news sources)

**

THAT FINAL ITEM: THE LONG SAIL

And finally this week the story of a voyage by
sea and the role played by Amateur Radio. Rob Mt
Barker, VK5MM, of the W-I-A News has the details:

--

"Sometimes we could hear them, but they couldn't
hear us. But we knew they were out there."

They were the words of John Hackney of Orono, who
joined the crew of a Trans-Atlantic sailing
expedition in the British Virgin Islands.

A father and son crew from Bangor, along with an
assortment of additional mates, completed the
last leg of a journey that took them from Bangor
to ports throughout Europe and back again over the course of two seasons of
sailing.

Dan Cassidy, 58, and his son David, 23, left
Bangor in May 2006 to start the voyage that would
cover nearly 18,000 miles and take them to 10

different countries. And Amateur Radio went along for the ride.

In a smaller boat, rotating watches have to keep an eye out for other, larger vessels and an ear out for the weather forecasts. For those communications, they relied on a Ham radio contact with an inland operator who monitors weather conditions for mariners.

The Ham radio also allowed Fleana's crew to send e-mails, which sometimes were more reliable than voice communications. Those e-mails were a godsend for family members.

"We were getting some information," said Deena Cassidy, Dan's wife.

"We knew things were going well, so I didn't really worry."

Good day. I'm Robb, VK5MM

--

As we go to air, the voyage continues. (WIA News)

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB, the Southgate News and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline@arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

Before we go, the results of our on-line poll that asked the question of what are your upgrade plans now that Morse is no longer required. Well 38.8% of those who responded said they planned to upgrade while only 15.8% said they will stay with the license they now have. And a whopping 45.8% clicked the box that said that they wished everyone would stop talking about the Morse exam going away. We tend to agree.

The new poll now on line regards your ham radio reading habits. It asks what is your favorite major U.S. ham radio magazine. You vote at www.arnewsline.org.

For now, with Bill Pasternak, WA6ITF, at the
editors desk, I'm Jim Damron, N8TMW, and I'm Jeff
Clark, K8JAC, saying 73 and we thank you for listening.

==> ARRL, DoD, FCC TRY TO COME TO TERMS WITH PAVE PAWS

The ARRL has sent out more than 100 letters to repeater owners/trustees who have repeaters affected by the "Pave Paws" radars (PPR). Citing an increasing number of interference complaints, the US Air Force has asked the FCC to order dozens of repeater systems to either mitigate interference to the Pave Paws radars or shut down. The ARRL is working with the US Department of Defense (DoD) to develop a plan to mitigate alleged interference from 70 cm ham radio repeaters to this military radar system on both coasts.

The situation affects 15 repeaters within less than 100 miles of Otis Air Force Base on Cape Cod, Massachusetts, and more than 100 repeaters within some 140 miles of Beale Air Force Base near Sacramento, California.

ARRL Regulatory Information Specialist Dan Henderson, N1ND, stresses that the Defense Department acknowledges Amateur Radio's value in disasters and emergencies and is being extremely cooperative -- and a wholesale shutdown of US 70 cm Amateur Radio activity is not on the table.

The Amateur Radio Service is a secondary user in the 420-450 MHz band, both by the Table of Frequency Allocations and the FCC Part 97 regulations. As such, Amateur Radio licensees, jointly and individually, bear the responsibility of mitigating or eliminating any harmful interference to the primary user, which in this case is the Government Radiolocation Service that includes the DoD Pave Paws systems.

The letters sent to affected repeater owners/trustees give them an up-to-date briefing on the ongoing negotiations with the US Air Force, as well as outlines the DoD's plan. The DoD has indicated a willingness to try a mitigation proposal, but they have also indicated their need is for these issues to be resolved sooner rather than later. With that expediency in mind, the proposed mitigation strategy is as follows:

* All repeaters on the DoD list in the affected areas will immediately reduce power to 5 W transmitter power output (TPO). Each repeater licensee/trustee should contact Henderson to confirm this once this has been done for their system. Confirmation of this being done is needed from each repeater owner by Friday, June 15, 2007.

* The ARRL will provide the Longley-Rice calculations for each repeater to the DoD by June 15, 2007. The DoD will provide engineering data to the ARRL and FCC by June 15, 2007. These studies will be reviewed by the DoD, the ARRL Lab and the FCC to determine the amount of mitigation necessary for each repeater. Based on this review by the DoD, additional mitigation proposals for individual repeaters (including further power reductions, lowering of antenna heights, use of more directive antennas and other possible mitigation techniques) will be provided by the ARRL as needed to individual repeater owners. If there is a disagreement on the conclusions, a conference call will be held to resolve any outstanding issues.

* All interference must be resolved no later than August 1, 2007.

* Beginning in August 2007 (and continuing on a periodic basis), the DoD will have a follow-up engineers study at each PPR site to ensure corrective actions have been taken and the interference and to ensure that successful mitigation continues.

According to the DoD, the in-band interference from Amateur Radio fixed FM voice repeaters has increased to an unacceptable level. Pave Paws radars are used for national security functions, including early detection of water-launched missiles. They are critical to our national

defense and are in use 24 hours per day, seven days per week.

The goal of the ARRL has been to develop and implement a plan that would mitigate the interference, and at the same time to permit the repeaters to continue operation and to operate on as liberal a basis as possible. To do so, the League has offered to work closely with the two involved repeater coordinating groups, as well as the individual repeater owners, sharing information and dealing with this issue on a coordinated basis with all stakeholders.

The League has also been in contact with representatives of the FCC. They have the ultimate responsibility for enforcing any mitigation plan, up to and including ordering specific repeaters to shut down operations. The FCC is aware of the complex nature of this problem and the mitigation strategy being proposed by the DoD.

Since Amateur Radio operators are secondary users on the band, the ARRL has few options, and all options involve cooperation with the DoD. It is hoped the Longley-Rice calculations from the ARRL and the DoD's engineering studies will provide enough data to allow as many of the repeaters in the affected areas as possible to remain on the air at reasonable power levels.

It is entirely probable that even with extreme mitigation techniques, some repeaters in close proximity to the PPR sites may have to be shut down permanently. If that happens, official notice would come from the FCC. It is also possible that some repeaters might be required to operate permanently at a lower power level in the areas near these Air Force bases. In those cases, the League will be in contact with the individual repeater owners with that information and the FCC will be notified.

Henderson requests that all repeater owners/trustees affected by this issue immediately implement the 5 W TPO for your repeater/s; please contact his office by June 15 indicating if you have implemented the power reduction. This will allow the ARRL to have voluntary compliance on hand that can be used to show the cooperation of the amateur community.

Henderson stresses that it is to each repeater's long-term advantage to implement the power reduction as soon as possible. The DoD indicated they will be collecting engineering data during June. This presents the opportunity to assess a repeater's actual impact at the lower power level and a more honest determination of its continued potential for harmful interference to the PPR sites. If any repeaters are running at higher power levels, then the determinations can only be based on assumptions rather than on actual data.

==> ARRL/IARU TEAM TO REPRESENT AMATEUR RADIO AT ITU MEETING IN GENEVA

ARRL Chief Executive Officer and IARU Secretary David Sumner, K1ZZ, will be representing the IARU at a meeting of ITU-R Working Party 1A next week in Geneva, Switzerland. WP 1A is responsible for spectrum

engineering techniques within Study Group 1 (spectrum management) and will be working on a document that may eventually become what's called a "preliminary draft new report" on the impact of power line telecommunications (PLT, what we call BPL on this side of the Atlantic) on radiocommunication systems operating below 80 MHz. Of course, the IARU's interest is in ensuring that the report accurately reflects the sensitivity of the amateur services to interference from this source. Jon Siverling, WB3ERA, of the ARRL Technical Relations Office is on the US delegation.

Also meeting at about the same time (June 12-20) is ITU-R Working Party 8A, which is responsible for most of the land mobile services, plus the amateur and amateur-satellite services. WP 8A hopes to complete work on a "draft new handbook for the amateur and amateur-satellite services" to be published by the ITU. This isn't competition for The ARRL Handbook -- it is simply an overview of the activities of the amateur services along with existing ITU texts that relate to the two services, and is intended to be a helpful guide for administrations that may not be familiar with Amateur Radio. IARU President Larry Price, W4RA, will represent the IARU, and Sumner will assist as time permits. ARRL Chief Technology Officer Paul Rinaldo, W4RI, is on the US delegation and is chairman of the working group that will deal with the amateur handbook.

After these meetings, Sumner, Price and Rinaldo will travel via train to attend the Friedrichshafen convention in Germany the following weekend.

==> FCC ANNOUNCES ENHANCEMENTS TO ULS LICENSE ARCHIVE

The FCC has announced a redesign of the Universal Licensing System (ULS) License Archive Search. Users can access this new functionality via the "Archives" button under "SEARCH" on the ULS page.

"Each time a license is acted upon, the current version is captured within ULS," the FCC explained this week in a public notice. "The License Archive allows users to view the current and prior versions of a license."

In the redesigned License Archive, the search interface, results screen and detail pages will use the same display as ULS License Search. On the detail pages, users now will be able to directly access license information.

"There will be no need to 'drill down' -- follow link after link -- to reach the information you need," the FCC noted. "This enhancement increases functionality and improves compliance with Section 508 of the Americans with Disabilities Act."

The redesigned License Archive search interface allows a user to search using most of the criteria available in ULS Advanced License Search except for Radio Service Group, Licensee City, State and ZIP Code and Frequencies. Users will have the same ability to sort and restrict their archive search results that they have in ULS License Search, the FCC said. Licensee ID no longer will be available as a License Archive

Search criterion, however. Users should now search by the Licensee's FCC Registration Number (FRN).

The search results display will be similar to the search results in License Search, with a few minor exceptions: There will be no display of a "Pending Applications" icon, a column titled "Version" will display "Archived" or "Current" depending on the version of the license and a "Last Action Date" column will be used instead of "Expiration Date."

In general, the License Archive Search details will look similar to License Search details. However, the following additional fields will be displayed for all archived licenses: Last Action Date, Version, Licensee ID, and Sub-Group Identification Number (SGIN).

Also, other License Search functions that previously were not available in the License Archive have been added, including a "Printable Page" link that allows the user to print the contents of the page pre-formatted for most common printers. A "Reference Copy" link now allows the user to print an unofficial copy of the license. A link to view "Related Applications" from the current version of the license has been added, as has the ability to view attachments and automated letters in a PDF file.

License Archive will display termination pending components similar to the manner in which they are currently displayed in License Search. Additionally, License Archive will display all terminated components of a license, regardless of when it was terminated. These components will indicate a status of "Terminated" on the component's summary and detail pages. Under the previous License Archive system, terminated components were not displayed unless the license itself was terminated as well.

For additional information or assistance, visit the FCC's at <http://esupport.fcc.gov/index.htm> or call the FCC Support Center, (877) 480-3201 or 717-338-2888 (TTY 717-338-2824) and select Option #2, Forms or Licensing Assistance. Hours are weekdays, except federal holidays, from 8 AM until 6 PM Eastern Time.

==> IT'S KD5PLA IN FOR KD5PLB ON INTERNATIONAL SPACE STATION

NASA has given the go-ahead for the launch of the space shuttle Atlantis Friday, June 8. The STS-117 mission will carry US astronaut Clay Anderson, KD5PLA, to the International Space Station to succeed Suni Williams, KD5PLB, as ISS Expedition 15 Flight Engineer. Anderson will join Expedition 15 Commander Fyodor Yurchikhin, RN3FI, and Flight Engineer Dr Oleg Kotov.

Williams will return to Earth aboard the Atlantis. She arrived on the ISS last December and has been among the most active ISS crew members on Amateur Radio. NASA originally planned the astro-swap for the STS-118 shuttle mission, now targeted for an August launch.

Atlantis Commander Rick Sturckow and his six crewmates will spend 11 days in space and take part in three spacewalks. Work planned for this

mission will increase the ISS's power capability in preparation for the arrival of new science modules from the European and Japanese space agencies.

Joining Sturckow and Anderson on STS-117 will be Pilot Lee Archambault and mission specialists Patrick Forrester, Steven Swanson, John "Danny" Olivas and Jim Reilly.

==> LEAGUE STAFFERS CRISSCROSS THE COUNTRY PROMOTING AMATEUR RADIO

ARRL Membership Manager Katie Breen, W1KRB, was in Rochester, New York for the Atlantic Division Convention and Rochester Hamfest May 31-June 3. ARRL President Joel Harrison, W5ZN; Atlantic Division Director Bill Edgar, N3LLR, and Vice Director Tom Abernethy, W3TOM, were there as well. Katie reports that both attendance and spirits were high at the event, especially on Saturday morning with long lines and standing-room-only for the VE test sessions. More than 100 test elements were given with over 70 passes. Many excited new hams came to share their good news at the ARRL Booth and have their pictures taken with President Harrison. Katie gave a forum on Saturday afternoon that included a tour of HQ, highlighting the Special Event blogs and videos on youtube.com.

ARRL Regulatory Information Specialist Dan Henderson, N1ND, attended the Georgia State Convention in conjunction with the Atlanta Hamfest on June 2. Dan spoke about the changing face of Amateur Radio since the 2006-2007 rules changes.

ARRL Chief Development Officer Mary Hobart, K1MMH, attended the Northwestern Division Convention led by Division Director Jim Fenstermaker, K9JF, and Vice Director Bill Sawders, K7ZN. The event, held in Seaside, Oregon last weekend, attracted about 2500 people from Oregon, Washington, Montana, Alaska, Idaho and California. The special event stations, W1AW/7 was operational for the duration of the convention, which also offered flea market opportunities and key ham radio vendors. More than 300 people attended the Saturday night banquet where Steve Johnson, N7VIC, received a scholarship. The ARRL table saw brisk business as publications and Field Day T-shirts and other paraphernalia flew off the table.

==> ARISS MILESTONE: 300TH CONTACT

On Thursday, May 31, Amateur Radio on the International Space Station (ARISS) made its 300th contact since its inception back in December 2000. This milestone QSO was to the NASA Teacher Conference in Houston, Texas. The first contact was on December 21, 2000 to Burbank School in Burbank, Illinois.

The United States leads in the number of ARISS contacts with 153. Japan is next with 25; Australia has 18, Canada has 16, Belgium has 10, the United Kingdom and Germany have 8 and France has 7 contacts. A total of 28 countries have made contact with the ISS through ARISS.

For schools interested in setting up an ARISS contact, first check with your local school! See if the school's Amateur Radio school station is sufficiently equipped to enable a successful contact (i.e., general technical level, transceiver + power, steerable antenna, tracking programs and such). Please take into account the expected level of deployment of the Amateur Radio equipment operated onboard ISS. Next, carefully fill out the application form (this can be found at <http://www.rac.ca/ariss/arissapp.htm>. Please make sure to include the school's educational proposal. The educational proposal should include answers to these questions: How will you: a) integrate this activity into the school curriculum and b) involve as many grade levels as you can, participating through essay contests, poster drawing, letter writing and so on? How will you get as much media coverage as possible? For US schools, e-mail your completed application to ariss@arrl.org.

For more information on the ARISS program, please see <http://www.rac.ca/ariss/faqariss.htm.>

==> SOLAR UPDATE

Tad "There's a Little Black Spot on the Sun Today" Cook, K7RA, Western North Carolina, this week, reports:

After five days of no sunspots from May 24-28, spots returned on May 29, and have increased since in number and size. There are currently several sunspots visible, and the sunspot number for the past five days (Sunday through Thursday) was 58, 58, 63, 47 and 59. Coupled with quiet and stable geomagnetic indicators, this is good for HF propagation. Our reporting week for this bulletin (the numbers reported at the end) runs from Thursday through Wednesday, and the average daily sunspot number for May 31 to June 6 rose nearly 43 points to 46.1 when compared to the prior seven days. Average daily solar flux rose nearly 15 points to 83.7.

Last week the latest projection looked like no sunspots around Field Day with a declining geomagnetic disturbance, but this week the forecast looks a little better. Including the Friday before (the event doesn't begin until Saturday) the projected solar flux last week for June 22-24 was 65 for all three days, with a planetary A index of 20, 12 and 5. This week's prediction for those dates shows the same A index, but a solar flux 10 points higher, at 75 for all three days.

A check of recent sunspot numbers alongside solar flux values on the same dates at <http://www.sec.noaa.gov/ftpdir/indices/DSD.txt> shows no sunspots when the solar flux was down around 65, but at 75 the sunspot number can be in the forties.

For the next few days expect continued quiet geomagnetic activity, with the same moderate (for the low point of the sunspot cycle) sunspot count.

Sunspot numbers for May 31 through June 6 were 11, 41, 45, 58, 58, 63 and 47 with a mean of 46.1. 10.7 cm flux was 74.6, 79.4, 83.2, 87, 85.7,

88.8, and 87.1, with a mean of 83.7. Estimated planetary A indices were 4, 6, 7, 10, 8, 3 and 2 with a mean of 5.7. Estimated mid-latitude A indices were 2, 5, 5, 7, 8, 2 and 2, with a mean of 4.4.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: The ARRL June VHF QSO Party is June 9-11. On June 8, it's the NCCC Sprint Ladder and the Digital Pentathlon. The ANARTS WW RTTY Contest, Portugal Day Contest, the Asia-Pacific Sprint (SSB), the GACW WWSA CW DX Contest and the REF DDFM 6 Meter Contest are all on June 9. Coming up on June 13 is the SKCC Sprint, the NAQCC Straight Key/Bug Sprint, the RSGB 80 Meter Club Championship (CW) and the NCCC Sprint Ladder. Next weekend plays host to the Digital Pentathlon, the All Asian DX Contest (CW), the SMIRK Contest, SARL Youth for Amateur Radio, the West Virginia QSO Party, the AGCW VHF/UHF Contest, Kids Day, DIE Contest, Run for the Bacon QRP Contest and the RSGB 80m Club Championship (SSB). See the ARRL Contest Branch page <http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday June 17 for these online courses beginning on Friday July 6; Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). These courses will also open for registration Friday May 15, for classes beginning Friday July 3. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the CCE Department <cce@arrl.org>.

* New England ham honored for work with Handiham program: Phil Temples, K9HI, ARRL New England Assistant Director and Affiliated Club Coordinator for the ARRL Eastern Massachusetts Section, was recognized by Boston College for his work with the Courage Center Handiham program and participation in the Read Aloud program in the Boston school system. Temples, an employee in the Boston College Computer Science Department and a Handiham volunteer instructor, received BC's 2007 Community Service Award at a recognition dinner in May. "You have been recognized for your efforts in recruiting, organizing, teaching and mentoring at the non-profit Courage HandiHam System Camp in Lake George, Minnesota and Cupertino, California," wrote William R. Mills, Jr., Director of Community Affairs at Boston College. "We know you consider yourself a privileged man to be able to serve others because you believe that people should have the right to live, work and learn in a community based on abilities, not disabilities."

* Local Radio Club to Honor John Hennessee, N1KB (SK): The Newington Amateur Radio Club (NARL) will operate Field Day this year with call sign W1H in honor of John Hennessee, N1KB (SK). John, a long-time ARRL Headquarters staff member, died last year. He was 42. A Headquarters employee since 1986, Hennessee was a regulatory information specialist in ARRL Field and Educational Services. In addition, Hennessee was an active member of NARL where he was a Field Day regular; he also belonged to the Quarter Century Wireless Association. Over the years, he enjoyed operating various bands and modes, often as a guest operator at W1AW or at the Headquarters club station W1HQ. John enjoyed CW and low-power operating (QRP). For more information contact E. Jonathan Hardy, KB1KIX, NARL Field Day Chairman, at kb1kix@arrl.net. Field Day is June 23-24, 2007.

* ARRL Staff Relays for Life: Team ARRL joined in the American Cancer Society's Relay for Life of Newington last weekend, raising almost $3500 to help find a cure for cancer, well over their goal of $3000. Team ARRL remembered those who have lost their battle with cancer, and walked in honor of our survivors. There are more than 4600 Relays this year world-wide. To find a Relay near you, go to <http://www.cancer.org>. You can visit Team ARRL at <http://www.acsevents.org/relay/ctnewington>.

* ARISS warns of pirate activity: Amateur Radio on the International Space Station (ARISS) reports a rumor that the ISS was making direct contacts on the 40 meter band. ARISS stresses this is not happening, as there is no HF radio equipment on board the space station, although the HF antenna is mounted. Sometimes the Goddard Amateur Radio Club, WA3NAN, retransmits shuttle audio.

* ARRL seeks new Assistant Editor: The ARRL is currently seeking applicants for an Assistant Editor to join the publications group at Headquarters in Newington. The successful candidate will fulfill a variety of responsibilities related to preparing material for publication. The primary responsibilities of the position include preparing general interest and some technical material for publication in QST and on the ARRL Web site; ensuring that manuscripts are well written and engaging, conforming to the rules of grammar, spelling, usage and ARRL style; taking photographs for publication in QST and on the ARRL Web site and writing material for publication. Other responsibilities as may be assigned, and include the possibility of some weekday and weekend travel. Those interested in the position should send a cover letter and resume to LouAnn Campanello at <lcampanello@arrl.org>.

* We stand corrected: The Contest Corral column in the July 2007 issue of QST, which will be arriving in ARRL members' mailboxes soon, lists an incorrect date for the IARU HF World Championship. It will be held July 14-15.
* The resonance probe article listed on the front cover of the July 2007 issue (now being mailed to ARRL members) does not appear in that issue. The article will appear in an upcoming issue.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!):
letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 10 JUNE 2007

You are listening to Amateur Radio Station ZS6SRL of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is broadcast every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. This broadcast can also be heard on Echolink by connecting to ZS6FCS. To listen to a web stream go to www.sarl.org.za, click on ARMI and follow the links. This, and previous bulletins, can be downloaded from the web site of the SARL i.e. www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other newsreaders please change to suit).

In the news today:

GET READY FOR YOUTHDAY 2007

CALL FOR BURSARY APPLICATIONS

LAST CHANGE TO ENTER THE 2007 CONSTRUCTION COMPETITION

SARL FAX NUMBER

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

GET READY FOR YOUTHDAY 2007

Is your club and are you ready for Youth Day 2007? The objective of this year's June 16 activity day is to get as many young people to experience amateur radio by operating an amateur radio station under your supervision and talking to other young people on the air.

The emphasis should be on operating an amateur station, not on just handing the microphone to your young guest to say a few words.

Spend some time, showing how to operate the transceiver and how to go about calling CQ or another station. After that you sit back and keep a watchful eye on the operation and give guidance as required. Don't take over.

To make it all legal, simply complete the registration for an educational station. It is available on the web at www.sarl.org.za, click on SARL forms and download the registration as an educational station form, complete the form and fax the completed form to the number on the form. The next step is to send an email to youth@sarl.org.za and give details of the youth day activities you or your club are planning.

The SARL is also planning a special event where the youth can talk to an interesting personality. It was planned to have Mark Shuttleworth as the guest, but due to last minute changes in Mark's travelling schedule he had to pull out. The SARL is talking to other personalities and once finalised details will be available on the web. The special event will be between 10 and 11:30 CAT and to ensure that your group is given an opportunity, it is advisable to register by sending an e-mail to youth@sarl.org.za. Although there will be some open time, there is a better opportunity if you have a booked slot so you don't have to compete with other stations.

Guidelines on how to make Youth Day 2007 a great success will be available on the web from tonight at www.sarl.org.za, click on youth activity at the bottom of the left hand side column. Also look for regular updates.

CALL FOR BURSARY APPLICATIONS

The Itchen Valley Radio Club has made three bursaries available for Students under the age of 25 to become radio amateurs. The bursaries are each valued at R650 and will assist students to enter the October 2007 Class A Radio Examination. The bursaries are known as the Itchen Valley Radio Club YARP 2007 Bursaries and cover the examination enrolment fee and one year's junior membership of the SARL upon passing the examination and R150 towards tuition costs levied by local clubs teaching the RAE. The tuition manual is available free of charge from the SARL web at www.sarl.org.za

"We decided that as part of our outreach we would make a contribution to the development of amateur radio in South Africa, particularly amongst the younger generation", Quentin Gee, the Itchen Valley Radio Club Secretary, told SARL News.

The SA Amateur Radio Development Trust administers the bursaries. The closing date for applications is extended until 30 June 2007. Applications forms are available on www.amateurradio.org.za.

NEXT PRESIDENT'S NET AND INTECNET ON 1 JULY

The next President's Net and Intecnet will be held on Sunday 1 July starting with the President's Net at 19:00 followed by the Intecnet at 20:00. The subject for discussion on the Intecnet will be about home construction. Stay tuned for more details.

SARL FAX NUMBER - PLEASE CHANGE YOUR RECORDS

Some time ago the SARL fax number at the NARC was converted to a faxmail system which allows faxes to be received on the office PC with the facility to email the fax to councillors if the fax requires their attention.

The new number is the old number with a 088 prefix. The full fax number is thus 088 011 675 2793.

Please use the full 13-digit number, failing to do so means that your fax will no longer arrive at the NARC.

LAST CHANGE TO ENTER THE 2007 CONSTRUCTION COMPETITION

The closing date for entries is Monday 11 June. The competition is an open competition where the entrant decides what he or she would like to enter. Once all the paper entries are received, the judging committee will meet to evaluate all the paper entries and select five finalists.

Each finalist will have up to R1 000 at his/her disposal to construct the project.

The closing date for the completed project is 31 July 2007 and the prizes will be presented at the SARL RTA in Johannesburg on 18 August. Verstay, Yaesu distributors in South Africa, will present the two overall winners with a Yaesu 2 metre mobile transceiver. Full details on www.amateurradio.org.za.

YOUTH DAY ACTIVITIES

The Magalies Radio Amateur Club invites everyone to the official opening of the new radio centre at The John Vorster Technological School situated in Meyer Street, Rietfontein, Pretoria. Activities commence at 08:30 with the official opening of the radio centre by Hans van de Groenendaal, ZS6AKV, where after the new ZU licensees will operate their own radio station under the call sign ZS6JVT. All radio amateurs are invited to make contact with the youngsters on 40 and 80 metres as well as on VHF.

Call-ins for directions to the school will be available from 08:00 on the 145,750 repeater. Please visit us on youth day and experience the excitement displayed by the young radio amateurs, it is contagious.

The Alberton Amateur Radio Club (AARC) will be setting up a special event field station at the Dalview Primary School in Brakpan as part of the Youth Day festivities. A station will be active on HF, VHF and UHF from Friday 15 June and again from 08:00 to 12:00 on 16 June. An APRS station will be on show and a foxhunt will form part of the activities.

CLUB NEWS

ZS6PTA Mega Flea market. The Pretoria Amateur Radio Club wil be hosting their winter flea market on 30 June 2007 at the South Campus of the University of Pretoria, on the corner of Lynwood and University roads. The starting time is 09:00 and all are welcome. There will be the usual tasty eats and drinks available. For more information, or to book a

table, contact Almero, ZS6LDP, on 012 567 3722 or on 082 908 3359.

Website of ZS6POT. It is with pleasure that the Potchefstroom Amateur Radio Club announces that it now has its own website, www.zs6pot.za.org. The webmaster is Mike Brink, ZR6BRI, and the management of the club and all its members thank Mike for his outstanding effort. Please visit this exciting new website and give your comments!

CONTEST NEWS

The SARL Digital Contest will be run on Sunday 24 June 2007 from 15:00 to 18:00 CAT. Following a suggestion from the SARL VHF Manager, the contest has been changed to include 6 and 2 metres as well. The rules can be found in the 2007 SARL Contest Manual.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at low to moderate levels with a slight chance of high activity. The geomagnetic field is expected to be quiet. The expected Effective Sun Spot number for the coming week will be less than 15. The higher sun activity in conjunction with a quiet geomagnetic field may lead to a bit of excitement.

20 and 40 metres will provide best opportunities for DX. There is a possibility of 20 metre openings towards India from about 16:00 CAT. 20 metre may open towards Australia from 07:00. From about 17:00, there may be 20 metre openings towards Europe. At about 16:00 short 20 metre openings towards the West Coast of the USA are possible. Otherwise, contacts to the USA are going to be very challenging. For the CW and digital enthusiasts, it may also be worth monitoring 10 MHz.

Remember that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

16 June - SARL Youth day; 24 June - SARL Digital Contest; 30 June - Closing date for updating of SA DX Survey; ZS6PTA Flea Market 1 July - President's Net and Intechnet; 2 August - Class B RAE; 18 October - Class A RAE.

SARL News depends on clubs and individuals for news items of importance and interest to radio amateurs. The one and only way to ensure that your contribution will reach the SARL News team, is to place it in www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date. It will be appreciated if you will do it in both Afrikaans and English.

The SARL also invites all listeners to listen to the program Amateur Radio Mirror International this Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. Audio is also streamed on www.zs6mrk.org and on Echolink from ZS6FCS as for this bulletin. A repeat transmission takes place on Mondays at 21:00 on 3 215 kHz. Telkom and Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

You have been listening to a news bulletin by the South African Radio League, which was compiled by Dennis, ZS4BS.

A prosperous week to all, 73.

/EX

1 GB2RS NEWS Sunday 10 June

The news headlines

* British ARDF Championships go well

* Centenary of Marconi's Clifden station

* Club marks Amelia Earhart's solo Atlantic flight

The British ARDF Championships were held over the Spring Bank Holiday weekend as part of a three day International Festival of ARDF and attracted visitors from Germany, China and Kazakhstan.

RSGB president Angus Annan visited on the second day. In spite of poor weather, the participants set out with determination to find their allotted hidden transmitters which had been placed in Bucknell Woods, Shropshire. Angus presented the new 3.5 MHz ARDF trophy to Michael Dunbar, RS195082, whose time on the M40 course was the fastest of the day for the host country participants.

This year marks the centennial of those first sparks generated from Marconi's historic Clifden station. To commemorate this event W8HC has announced a special amateur radio operation from both locations central to Marconi's fame and success as a pioneer in wireless technology.

Ballycastle-Rathlin was his first wireless telegraph station and the Clifden station was his last, ceasing operation in 1922. In 1907, Guglielmo Marconi's dream of fixed point-to-point wireless telegraph stations linking North America and Europe became a reality. Derrygimla near Clifden, County Galway served as the site of his wireless station. Over the next 15 years, spark-induced blue flashes generated by the station's massive 20 kV generators sent tens of thousands of wireless messages across the Atlantic, linking to its North American counterpart at Glace Bay, Nova Scotia.

On August 4 and 5 Hal W8HC will operate from Ballycastle as GI/W8HC/p. He will also be taking part in the annual Marconi Festival at Ballycastle with the Marconi Radio Group's MNO/MRG special event station on 5 and 6 of August, he will ferry over to Rathlin Island (EU-122) and operate from East Lighthouse (ARLS designator NTI 011). He will arrive in Clifden on 8 August where he will operate as EI/W8HC/p at the Derrygimla site on 9 and 10 August. It is hoped that some operating time can also occur from nearby Letterfrack, site of an ancillary receive station built in 1912 to allow for full duplex operation of the transatlantic signals.

All QSOs will be confirmed via Log of The World and special QSLs from each of these historic Marconi locations will be printed and sent via GlobalQSL www.globalqsl.com. In addition, a specially designed certificate will be issued to those stations making contact with both GI and EI operations from either Ballycastle or Rathlin and Derrygimla or Letterfrack.

Foyle and District Local Amateur Radio Club recently linked up with an amateur radio group in the Newfoundland on the 75th anniversary of aviation pioneer Amelia Earhart's solo Atlantic crossing. She took off from Harbour Grace airfield en route to Paris and despite a gruelling passage and storms she landed safely in Gallagher's field at Ballyarnett on 21 May 1932.

A live link up was set up on 20 to 21 May with their counterparts in Newfoundland where the epic flight began. The amateur radio group in Conception Bay and Harbour Grace added a further historic dimension to the event as they transmitted on vintage radio equipment from their local museum. Civic dignitaries, including the Mayor of Habour Grace, sent good wishes to the people of Derry.

2 On 24 July to 8 August both the 21st World Scout Jamboree in Chelmsford in the United Kingdom and Brownsea Island will be on the air with their own fully equipped amateur radio stations. Both will offer a radio programme to the participating Scouts. The stations are operated by an international team of Scout radio amateurs.

During the Sunrise Ceremony on 1 August, GB100J will have a central role in connecting the world together. It will be part of the Sunrise Network.

The staff at GB100J offer a full radio-scouting set of activities to all Jamboree participants. The station is located at the Central Plaza of the camp site and will be active on all HF bands. Arrangements are being made for a contact with the International Space Station on one of its passes over the Jamboree.

Following the resignation of Bill Mahoney, G3TZM, after 21 years service to the Repeater Management Committee, a new committee member is sought for the West Midlands Area. The Chairman and Members of the RMC would wish to place on record their sincere thanks to Bill for his long and loyal service to the repeater community and wish him all the very best for the future.

Duties of committee members include dealing with all repeater issues in their area, advising on feasibility and vetting of proposals, liaison with local repeater groups, representing the RMC at rallies and attendance at RMC meetings.

Those RSGB members interested in applying for this interesting position should send their CV detailing experience in amateur radio and particularly in respect of repeaters to John McCullagh, GI4BWM, the RMC Chairman. John can be contacted by email at gi4bwm@ukrepeater.net or by post via RSGB HQ. The closing date for receipt of applications is 31

July.

Falkland Remembrance Weekend takes place next weekend 16/17th June, marking its 25th anniversary. The Firepower Museum, located in the former Royal Arsenal site at Woolwich will be holding a special display over the weekend, including visits from vehicles similar to those involved.

GB2FR will be operated on HF and VHF by the Museum Station, by members of the museum club station from 10am on Saturday 16th until 4pm on Sunday 17th. QSL Cards and certificates will also be available for working this unique special event call.

Visitors are most welcome on site and will be extended the courtesy of the microphone if they bring their identification with them. There is a free museum car park adjacent to the Museum. And now for the details of rallies and events for the coming week

[Note to newsreaders: please exercise your judgement on which of the 10 June events to read, based on your service area and time of transmission].

On Sunday 10 June the Elvaston Castle National Radio Rally takes place from 9am at Elvaston Castle Country Park, Elvaston, Derby. Details from Les on 01332 559965 or on the web at www.elvastonrally.co.uk. On Sunday 17 June the Newbury and District ARS rally and boot sale takes place from 9.30 at the Newbury Showground, near M4 Junction 13. Email carboot@nadars.org.uk for more information. On Sunday 17 June the East Suffolk Wireless Revival takes place from 9.30 at Suffolk Showground, Felixstowe Road, Ipswich. More details from John, G3XDY, on 01473 717830 or Steve, M1ACB, on 07720 412648. More details of these and future events can be found on pages 88 and 89 of the June edition of RadCom.

Now for the news of special events GB25FC is the special event call sign that will be active until 18 June to commemorate 25 years since the end of the Falklands conflict. Up to four independent stations working from the Wyke Regis Amateur Radio Training Centre. They will be using Morse, SSB, digital modes, RTTY SSTV & UI-View, and there will also

3 be a station working through the local radio internet links. Anyone who is licensed and would like to help work one or more of the stations is invited to contact the organisers by email to gb25fc@wykeradio.org.

GB1EPC will be active until 28 June to celebrate the European PSK Club 1st birthday. EPC number is EPC#2000. The station will be setup at Bridge Street in Glasgow. Anyone is welcome to operate at the station - PSK modes only of course. QSL cards via MM0DFV. Roger Greengrass, G4NRG, plans to operate as GM4NRG/P from the Isle of Lismore Scotland, EU-008, until 15 June. He will try and put a spot on the DX cluster when operational. Operation will be on HF and 6m, holiday style, on SSB and digital modes. QSL via home call.

On the 10 June several members of the Marcon section of ARI in Italy will join the operations relevant to the Museum Ships Weekend 2007, in coordination with A.R.M.I. (Italian Mariners Radioamateurs Association). This weekend will see the simultaneous activation of many military and commercial ships around the world.

The Bolsover Amateur Radio Society will be operating as GB2PF on Saturday 11 and Sunday 12 August to commemorate the birthday of local man Peter Fidler, who was a famous surveyor in Canada in the 1790s. The club intends to operate as many bands as possible, HF, VHF and UHF, from the new club shack located at the Coalite Sports and Social Club, Moor Lane, Bolsover.

And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Isido, I1XOI, Piera, IK1AIF, Mario, IW1PZC, Giovanni, IZ1DFG, Giorgio, IZ1HGP, Mauro, IW2KVT, Giuseppe, I2AZ and possibily Emanuele, IW2NOD will be active as IG9/homecall from Lampedusa Island (AF-019, IIA AG-001) on 9 to 19 June. They plan to operate SSB and CW on the HF bands plus 6 and 2 metres. QSL via home calls, direct or bureau. In June and July 1944 the BBC war correspondents used the tower of the chateau at Creully as a radio studio, from where the first reports of the Battle of Normandy were broadcasted. Look for special callsign TM5BBC to be aired again from Creully until 15 June. QSL via F2UW.

Six operators from the Flying Dutch DX Group will be active as HB0/PA0ABM from Triesenberg, Liechtenstein on 15 to 22 June. They will operate on 160 to 10 metres CW, SSB and some digital modes with two stations. Logs will be available at www.logsearch.de/ and will be uploaded to Log of The World. QSL via PA0ABM, direct or bureau. The White Tower DX Team's operation from Skyros Island (EU-060) is expected to take place on 16 to 22 June. Nine operators SV0XAW, SV2FPU, SV2HNZ, SV2HOB, SV2HPP, SV2HPY, SV2HRT, SV2HSV and SV2GNQ will be active as SY8WT with six stations, five amplifiers and a wide range of beams, verticals and dipoles. QSL via SV2HPP, direct or bureau. Look for RV3ATS, RV3ATT and RU3AVF to operate on 10, 15, 20, 40, 80 and 2 metres as RV3ATS/p from 16 mountains located in various different Russian Districts between 19 June and 21 July. They also plan to participate in a number of contests on the VHF and HF bands. QSL via RV3ATS, direct or bureau. The Polish 3B6 Agalega Islands DXpedition Team will be operating until 18 June. In an announcement by team leader Witek, SP9MRO, the group's call sign was confirmed as 3B6DX. For more details and updates, visit www.3b6.godx.eu. Francois, ON4LO, will be active as CT/ON4LO/p from a couple of Portuguese lighthouses namely Cabo de Sao Vincente (ARLHS POR-012) and Ponta Sagres (ARLHS POR-043) until 29 June. He plans to operate

4 SSB and digital modes on 10 to 40 metres. Marq, CT1BWW, will operate as CQ4IPY on 9 to 15 June and to celebrate the 4th International Polar Year. Expect him to be active on 10 to 80 metres SSB, CW, PSK31, RTTY and SSTV. QSL via home call.

Special event station TM2RHC, which stands for 2nd Regiment Helicoptere Combat, will be active on 10 to 24 June before and during an air show at Le Luc le Cannet, France. QSL via F4EUN.

ARI Versilia will activate special event station II5MD on 11 to 13 June for the Meucci Day. Antonio Meucci was recognized as the first inventor of the telephone by the United States Congress in its resolution 269 dated 11 June 2002. QSL via operator's instructions.

Celebrating the 750th anniversary of Krakow's city rights is HF750C, which will be active until 30 June. QSL via SP9BRP. Expect also a large number of local operators to use special prefix SN0 during the year.

Now the contest news The RGSB 80m Club Championships takes place between 1900 to 2030 on 13 June on the 3.5MHz band, CW. The exchange takes the form of RST and serial number. The All Asian Contest takes place from 0000 on 16 June to 2359 on 17 June on the 1.8 to 28MHz bands, CW. The exchange takes the form of RST and Age. The RSGB 432MHz activity takes place between 2000 to 2230 on 12 June on 70cm, all modes. The exchange takes the form of RST, serial number and locator. The RSGB 50MHz Trophy Contest takes place between 1400 on 16 June to 1400 on 17 June on 6m, all modes. The exchange takes the form of RST, serial number and locator. The RSGB 50MHz Backpackers takes place between 1100 to 1500 on 6m, all modes. The exchange takes the form of RST, serial number and locator. Now the solar factual data for the period from 28 May to the 3 June compiled by Martin Harrison, G3USF. After weeks with low or very low solar activity, a big new sunspot that appeared on the 1st quickly brought the largest batch of flares this year, with 7 M-class and 4-C-class flares on the 2nd and 3rd, triggering several sudden ionospheric disturbances that affected the low bands. The solar flux increased from 67 to 87, with the weekly average rising from 70 to 76. However, the 90-day average remained at 73. X-ray flux levels were initially minimal but surged to B1.0 on the 1st. Geomagnetic levels were in single figures every day except the 3rd, when a high-speed coronal stream resulted in an Ap figure of 10. The average was a lowly 6 units. Solar wind speeds ranged between 277km/sec on the 31st and 531km/sec on the 3rd. Particle densities were mostly low but reached 31 per cubic centimetre on the 2nd, when the interplanetary magnetic field showed its maximum variation of plus 10 and minus 5 nanoTeslas. HF propagation was variable, with some disappointing days but others with good openings to Asia and the Pacific and evening propagation to South and North America and Japan. Thanks to the low geomagnetic field transpolar paths were more reliable. Sporadic-E was reported every day at 28 and 50MHz, with occasional 4-metre openings on 4 metres and at least one on 2 metres to Spain and Italy.

5 And finally the forecast. That big sunspot will still be making itself felt, though it will have passed the central meridian. It seems set to sustain the solar flux in the 80s for most of the week, though the level may dip into the 70s towards the weekend. Geomagnetic levels will be variable. There is a possibility of flare-induced disturbances

over the next few days and a recurring coronal hole will bring higher geomagnetic levels around the 14th or 15th. MUFs at equal latitudes will reach 18MHz in southern Britain and 15MHz in the north on the quieter days, but will be a couple of MHz lower during disturbed periods. Darkness hour lows should be about 10MHz. Paths to South America will have a maximum usable frequency around 23MHz; but 24 and 28MHz openings will be possible on the better days. The optimum working frequency, giving a 90 per cent chance of a contact, will be about 18 MHz. The best time will be between 2000 and midnight UTC. Expect 28 and 50MHz sporadic-E on a daily basis, with openings at 70MHz on several days. A vigilant watch on 144MHz may catch brief, intense openings there, mainly through bearings from east to south. And that's all from the propagation team for another week.

6 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

Irish Radio Transmitters Society
Radio News Bulletin

Sunday June 10th 2007

CW Field Day

Three Irish field day stations were heard during last weekend's CW Field Day. Shannon Basin Radio Club, using the call sign EI3Z/P, and South Dublin Radio Club (EI2SDR/P) battled it out in the grounds of Garbally College in Ballinasloe, County Galway, while well known EI contester Paul EI5DI operated with the "GI Brass Pounders" (call sign GI6YM/P) in County Antrim. Although the weather was not so kind, band conditions were generally good. There was a lot of Solar activity over the weekend, following the M3 flare on Friday 1st June, making band openings unpredictable. However 10 metres and 15 metres were open for some hours on Saturday and also briefly on Sunday.

The majority of QSOs were with other field day stations in IARU Region 1, particularly UK and German stations. However all participants reported calls from DX stations, with Australian, African and South Pacific call signs in the logs.

Theory Examination

Next Saturday, the 16th of June is the closing date for those intending to sit the theory examination for an Experimenter's Licence to be held on Thursday the 28th of June.

As announced last week all of the places for the exam centre at the ComReg offices in Dublin have already been allocated. In addition to the Dublin exam centre an examination will also be held on the same date and time and with the same paper at the Community Centre, Carrigtwohill, Co. Cork. Anyone who intends sitting the exam at this centre and who has not already done so would need to forward the appropriate fee immediately to Se&#65533;n Nolan EI7CD, 12 Little Meadow, Pottery Road,

Dunlaoghaire, Co Dublin.

The fee is 50 Euro or 25 Euro for full time registered students those who are retired, unemployed have a disability or are repeating the examination. Remember, the closing date for applications is Saturday next the 16th of June and for administrative reasons this date has to be strictly enforced. Se&#65533;n's e mail address for further enquiries is ei7cd at gofree dot indigo dot ie and his postal address may be found in the call book section of the IRTS website at www.irts.ie.

International Museums Weekend

The International Museums Weekend takes place on the 16th and 17th of June. This amateur radio special event has grown in popularity since the first event was held in 2002.

Among past participants are The Tower of London, HMS Belfast and the US battleship New Jersey. The Howth Martello Radio Group will be participating again this year, operating from the Vintage Radio Museum in Howth. Visitors are welcome to call and operate the station over the weekend. The museum web site is www.qsl.net/ei5em/museum.html. A full list of participating museums and further information of the event is available from the organiser's web site www.ukradioamateur.co.uk/imw.

South Eastern Amateur Radio Group

The date of the next theory revision class will take place on Tuesday the 19th of June at 7.30 p.m. in the Roanmore Centre, Waterford.

The next general meeting will take place on Monday the 26th of June at 8.00 p.m. in the Roanmore Centre, Waterford.

Comeragh Cycle Race

The national under 23 road racing championship will take place in Waterford on the 1st of July. Richie EI9HR is event Co-ordinator and he is being assisted by John EI8JA. This years race will be on a greater scale with over 160 riders taking part. The Civil Defence have come on board this year to help with marshalling and RTE will be filming the event.

AREN will provide the communications for safe traffic management and accident reporting. There will be more radio reporting points and mobile stations than last year so more radio operators are required. Again newcomers are welcome and training will be provided on the morning of the race. This is an excellent opportunity for operators to put their radio skills to good use in a very enjoyable and rewarding way for the benefit of the Community. All operators irrespective of experience are welcome.

Please contact Richie on mobile 085-1465465 or evenings on 051-854315. You can also contact Richie by e-mail at "ei9hr at yahoo dot com".

Rallys

Bangor & District Amateur Radio Society Rally will take place on Sunday the 17th of June in the Crawfordsburn Country Park, Helen's Bay, Co. Down. The Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel, Blarney, Co. Cork, the Waterford Rally will take place on the 21st of October 2007 in the Woodlands Hotel, Waterford and the Mayo Radio Rally will be on Sunday the 18th of November in the Belmont Hotel, Knock, Co. Mayo.

A full listing of upcoming rallys is available on www.irts.ie.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to news at irts dot ie for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sundays bulletin.

Fellow hams,

Like many others, I occasionally use AM on both 160 and 80 meters. My reasons for doing so are probably typical: I do it because it reminds me of the first transmitter I owned, and of other rigs and earlier times, before I had the money to buy new equipment and linear amplifiers. I also have many good friends who operate AM, and I like to talk to them as well as to my friends who use CW or SSB.

I'm writing this to ask that hams who don't favor AM make allowances for us: it seems that the "AM Window" on 80 meters is being taken over by hams operating SSB, sometimes with blunt, on-the-air comments to the effect that those running AM aren't entitled to use the space. There have been skirmishes, complaints, acrimonious debates, and even outright jamming lately, and I'm afraid it will escalate to the point that FCC action will be needed.

I'm going to be blunt here: I'm not a psychologist, but I think those who oppose AM are making a big mistake by not treating AM operators with the same standard of on-air behavior that they show to other hams. I'm not sure why this "range war" has started, but it's only logical endpoint is with reduced privileges for ALL hams, not just those who use AM.

Our hobby is at a crossroads: with young technophiles gravitating to the Internet, and military forces needing neither CW operators nor technicians, the future we face at the frequency-bargaining table and in the public's mind is no longer in the hands of benevolent government agencies eager for trained personnel who can be pressed into service quickly. In fact, the future of the hobby is now in OUR hands, and unless we start working together and stop sniping at each other over minor things like the modes we use, we're going to fade away without anyone noticing.

FWIW. YMMV.

73, Bill W1AC

I am interested in geting into digital modes. I have not done
anything with these modes before. Can I get some suggestions on what
is(are) the best software on the market for multiple mode operation?
Are there possibly separate mode freeware programs out there that are
just as good. I have downloaded the freeware digital multi-mode from
F6CTE but have not been able to set it up yet. I have also seen the
MMTTY and DigiPan software mentioned in QST articles.

Thanks for any help on this.

There are quite a few freeware programs out there. I personally use Digipan, and have been trying out Ham Radio Deluxe. In the past I'd used Zakanaka. For SSTV, I use MMSSTV, and for RTTY, I use MMTTY.

I'm big on separate programs for separate modes. To me the multi moded programs show that they don't specialize.

I will note however, that Ham Radio Deluxe is a pretty full featured program. It is actually more toward rig control than just PSK31. I use it to control my IC-761. Google it up, especially if you are thinking about computer rig control.

A few tips to get you started:

Keep the sound level low. You'll avoid splattering up the band. When you first look at the waterfall display, you'll notice that some guys signals are mostly 2 bars with a bit of "stuff" between them. Then there are the signals that look like a porcupine, with spikes heading out from them. This severely messes with the bandwidth. A good PSK31 signal doesn't take a whole lot more than a fast OOK CW signal, but I've seen messy ones take up over a KHz.

Don't be that guy! 8^)

Keep the sound level low enough so that your ALC doesn't kick in, and you'll do great. Hope to see you on my screen sometime.

There is an element on 75 meters that just seems to hate the idea of
Hams having fun, and want to spoil it for others.

I suspect that they don't really have all that much against AM'ers, or
at least no more than they have against anyone else in the hobby. Though
no doubt they bring up the mode as a wedge to "justify" their harassment.

I believe that we are at a good point in the timeline of Amateur radio
that we need to have the amateurs who are being interfered with to start
documenting the interference, and sending it off to the F.C.C.

You're pretty much right there Bill, although I would not quite agree on tekkie folks going to the internet. I don't think we're producing many tech folks at all. But that's another issue.

I am convinced that what we need are:

Kind and friendly folk who are willing to take the newbies under their wing and teach them.

Folk who do not judge other Hams by their favorite mode of operation.

Folk who are willing to go after the jammers and riff raff and follow through with that RDP.

OM, I think your best bet is to start with packet on VHF, because
digital modes are really different from code or voice, and there's a lot
to learn. You can get used Termincal Node Controllers (TNCs) for less
than fifty bucks.

Your best bet is to find someone that's already experienced, and he
might even have some equipment to loan out.

Good luck!

William

Good listing, thank you!

On programming scanners, another who has a Uniden BC868T
asked me if its possible to program just two frequencies (repeater
Tx/Rx). Other than taking up a whole bank of 50 frequencies
(the Uniden BC868 has 10 banks of 50 each) for just one repeater,
I didn't know. I'd like to follow just the Rx/Tx from a single
repeater
also. Note: Most scanners scan in one direction. With just two
frequencies per bank it could do it...but the other 48 frequency
memory slots would have to be emply. Anyone have any
suggestions?

73, Len AF6AY

DXNL 1523 - Jun 13, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

HB0 - LIECHTENSTEIN
Six OPs of the "Flying Dutch DX Group" are going to Triesenberg in
Liechtenstein to hit the airwaves as HB0/PA0ABM from Jun 15-22. They
are working with two stations in CW/SSB/digital modes on 160-10m.
Online logs will be made available at: http://www.logsearch.de
QSL via PA0ABM, direct, via bureau or LotW.

HI - DOMINICAN REPUBLIC, NA-096
Dave,NA6DF/HI7, is going to spend his holidays in Punta Cana from
Jun 14-23. He will work with QRP in CW/SSB on 10-20m. QSL via NA6DF.

KH3 - JOHNSTON ATOLL, OC-023
Susan,W7KFI/mm, left Hawaii on her yacht "USSV Dharma" with destination
Johnston atoll this monday. She expects about six days of travel so be
aware that she might show up as KH3/W7KFI already this weekend. She
will be QRV for one week, prefers working in CW on following QRGs:
14.036, 14.236, 7.036 MHz etc. Susan is using a FT-847 for CW and an
IC-718 for SSB. Her QSL manager is K6FAF. She would also use the LotW
but never found out how to use it properly. Her next planned stops are
V7, T32 and then the Southern hemisphere.

KP4 - PUERTO RICO, NA-099
Pietro,IT9OPR, will spend his holidays on Puerto Rico (NA-099) from
Jun 15-28. He might show up as guest OP from the shack of Flavio,KP4AWX
or he might be underway with Pedro,WP4CCQ/m.

OX - GREENLAND, NA-018
Jan-Ole,OX/DB8JO (SSB), Juergen,OX/DJ5HD (CW), and Wolfgang,OX/DJ5ZWS
(RTTY and PSK31), announced to become QRV from Nuuk/Greenland (NA-018)
on 10-80m from Jun 14-25. QSLs via their homecalls.

T9 - BOSNIA-HERCEGOVINA, 9A - CROATIA
Zik,VE3ZIK (DO7ZZ), will stay in Bilice/Croatia between Jun 16 and

Sep 5 . He plans to activate at least one IOTA island as 9A/VE3ZIK during this time possibly also during the IOTA Contest. He will work with 100 watts and a wire for all bands in CW/SSB/RTTY/PSK31 and in FM on 29.600 MHz.
He also plans to show up as T9/VE3ZIK from Jun 20-27 and from Sep 5-10.
Zik's homepage can be found at: http://www.qslnet.de/ve3zik
Bureau QSLs may be requested via e-mail to zik@tiscali.de but all other QSLs should be sent via bureau to DL3PS.

TA - TURKEY
Charlie,TA4/GI4FUE, spends his holidays in Marmaris from Jun 12-24. Of course he will also indulge in his hobby and plans to show up mostly in CW on 30/20/17/15/12/10m. He hopes to find some space in his luggage for his 6m portable antenna as well.

TZ - MALI
Fredo,TZ/TU5GV, can be found on 10-80m until Jun 15.
Please send your QSLs direct or via bureau to F4DXW.

VP6 - PITCAIRN ISLAND, OC-044
VP6TD who will stay on Pitcairn until August 2008 showed up on the air already. He was spotted in PSK on 14.070 MHz from time to time.
See also DXNL 1517.

3B7 - ST BRANDON ISLANDS, AF-015
Due to an engine breakdown the 3B6SP team had to land on Raphael Island belonging to St. Brandon. The team obtained the permission to work as 3B7SP (instead of 3B6SP) while their catamaran "Josephina" is repaired there. More updates can be found at: http://3b6.godx.eu

9X - RUANDA
Vlad,UA4WHX, hit the airwaves as 9X0VB during the first week of June. He is travelling Africa and the Indian Ocean for several months now and still it is not known where he will go next and how long he will stay there. As usual he is working in SSB/CW on most of the HF bands. Vlad is the guest of Colonel Diogene Mudenge,9X1AA, a high ranking officer of the defense ministry in Ruanda. Rumours say 9X1AA plans to found a national amateur radio society in Ruanda.
QSLs for this and all other activities of UA4WHX will be managed by Vlad himself after his return home and nobody knows when this will be.

CROATIA, SPECIAL EVENT STATION
The special event station 9A07P is working in all modes on all bands from the city of Djurdjevac between Jun 1 and Dec 31.
QSLs will be sent automatically via the bureau.

BELARUS, SPECIAL EVENT STATION
Members of the Borisov Amateur Radio Clubs (BARC) can be found working on the air as EW905B until Nov 30. This call celebrates the 905th anniversary of the city of Borisov. QSL via EW2EO.
Check also their homepage at: http://www.qsl.net/ew2ww

PIRATE
Apollo,SV2ASP/A, was very active and made more than 1500 QSOs in CW,
SSB and RTTY during the past time. But Apollo writes also that his call
was abused in CW by a PIRATE on May 16/17 (2300-0200 UTC) while he was
working in SSB at the same time.

LINKS: Very interesting slide shows about the trips of Susan A Meckey,W7KFI,
can be found at: http://ussvdharma.net/photofolio/index.php

Current SOTA activities (mountain summits) are announced at:
http://sotawatch.sota.org.uk/activations.php or
http://sotawatch.sota.org.uk/spots.php

UPCOMING CONTESTS

Jun 16/17: JARL All Asian DX Contest

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
EU-034, ES0, Saaremaa County: Frank,DL1FT, will be QRV as ES0FTZ from Saare-
maa from Jul 11-21. More info via: http://www.funkexpedition.de/estland

EU-057, DL, Bock Island, GIA O 04: The island Bock will be activated for
the very first time on Jun 16 from 0700 UTC until the late afternoon.
DL5KVV/p and DL5CO/p will work on the usual IOTA frequencies.
QSLs via the DARC bureau to their homecalls.

EU-060, SV, Skyros: SV2FPU, SV2HNZ, SV2HOB, SV2HPP, SV2HPY, SV2HRT, SV2HSV
and SV2GNQ of the "White Tower DX Team" will use the call SY8WT on
Skyros (EU-060) from Jun 16-22. QSL via SV2HPP, via bureau or direct.
Their homepage is: http://whitetowerdxt.com/content/view/50/87/lang,en

EU-138, SM7, Blekinge County: Bernd,DL8AAV, will be on the air as SD1B/7
from Aspoe Island between Jun 18 and Jul 1.

EU-181, LZ, Bulgaria Group: LZ/G0SGB/p will be QRV from Sveti Ivan Island
on Jun 16/17. QSL direct via homecall.

OC-268, YB, Payung Payungan, Laut Kecil Islands: Fuadi,YC7IM, and friends
will show up as YE7M on 40/20/17/15/10m from Jun 22-24.
QSL via YC7IM (H.M. Fuadi Yatrin, P.O. Box 195, Banjarmasin 70000,
South Borneo, Indonesia).

GOOD TO KNOW...

The new IOTA Directory 2007 has been published lately and can be bought
at the RSGB booth on the HAM RADIO fair in Friedrichshafen or via DK1RV, not
earlier than Jun 15.

Not necessarily. My R/S scanners (rebadged Unidens) have the
capability to lock out "filled" channels and banks just as most modern
scanning ham rigs have the capability of locking out filled
"memories". Actually, the banks are "opt in" while the channels
therein are "opt out". I even have one scanner which I operate in
non-scanning "manual" mode all the time.

Or did I misunderstand your question?

>Or did I misunderstand your question?

Yes, because I may have omitted a paragraph on location in
my posting. My apologies. I'm IN the foothills and a quarter-
plus mile (closest approach) to I-5. Some repeaters come in
solid, some on multipath. Mobile repeater users can be solid
as a rock on the closest approach to me, then do the multipath
or fade thing as I-5 winds around behind some local hill
outcroppings. Sometimes big rigs on I-5 can do multipath fun
and games with their big box when close to the mobile repeater
user: the repeater user won't notice it since they are rolling at
the same rate as everyone else. Being able to "short-scan"
between Rx and Tx frequencies would seem to ease the burden
of (sometimes) severe multipath cutting off one or the other,
perhaps both briefly.

Yes, I do know that BOTH repeater frequencies are carrying
the same information. :-)

The Uniden BC898T (apparently now a discontinued model)
was chosen because it has a nice little tuning knob. More
modern scanners are going to keypad (PC input optional)
frequency input, no tuning knob at all (not traditional radio,
heh heh heh). A toggling push-button selects either
Frequency Tuning or Channel Tuning. For a few repeater
frequency pairs that have shown more-severe effects, I've
programmed both frequencies into memory as pairs in
sequential memory locations. With the tuning selection
set to Channel Tuning it is easy to go back and forth.
However, that requires me to be close to the scanner. I'd
prefer to use it as a scanner with my ear-mind set on
automatic as most scanner users do.

For the civil aviation band, I have 41 frequencies programmed,
and that is not including the ATIS (Air Traffic Information Service)

continuous-loop transmissions. Those are programmed in according to airport and function (tower, approach control, departure control, ground, etc.) and, if I am close to the scanner I can use the Channel Tuning to easily flip up or down for that airport (BUR, VNY, WHP, SMO, LAX), following a particular aircraft's progress.

My BC898T can select or deselect any memory bank as desired, even to just scanning within one memory bank. Very easy to select. Instructions don't tell how to select just certain frequencies to scan within a single memory bank. I was hoping there might be some 'undocumented' programming commands that might enable doing that. [only a very few of those available for the BC898]

BTW, the Diamond 130 discone works fine from FM BC bottom end on up to 70cm ham band, measured for good VSWR (between 1.2 and 1.6 all the way). That's with the bottom cone radials two feet above the roof peak here. The IC-746Pro does a creditable job on 2m but I will eventually get dedicated VHF-UHF transceivers in the collection.

73, Len AF6AY

There are a lot of cbers on the ham bands who happen to have ham
licenses.

Ahem...most of the "newbies" recently getting on HF aren't "new" at
all but
have now been able to administratively change their class as a result
of
FCC 06-178. [I am a relatively rare extra-out-of-the-box who has been
IN
radio longer than most here, but I'm cheering for the recent
'upgraders.']

BTW, I've never had any "Elmer" since my Army active duty time ended
in
1956. The closest to that I've gotten since is to silently observe
others
operating their rigs and, once in a while, get to say a few words as a
guest third-party. First-hand observation can teach much and the
'teacher'
doesn't have to explain anything, certainly not lecture.

> Folk who do not judge other Hams by their favorite mode of operation.

Whoa! BIG issue from what I've heard. Usually its against DSB AM as
if it
is some cardinal sin! I don't understand it even though I've heard
all the
rationales of "limited bandspace" and all that for years.

The very last time hams got more bandspace on HF was 28 years ago at
WARC-79. Lately the FCC gave out a few channels at "60m" instead
of the ARRL-requested band of frequencies. Nobody in any position of
amateur leadership seems to be doing anything about getting more band-
space in HF, yet HF is much less used overall now than it was 28
years ago.

> Folk who are willing to go after the jammers and riff raff and follow
> through with that RDP.

I don't know about all this "riff-raff" stuff since I've not heard much, yet I
can receive fairly good over HF, same as most others. So far, I've only
had one UNIDENTIFIED Raddio Kopp try to flash his badge about my
using the phrase "roger that" instead of just 'roger.' :-)

How does one follow up on the Unidentified riff-raff without having a trio
of DF-equipped hams all taking bearings at the same time? Shout and
holler in newsgroups and other forums and demand somebody do
something?!? Listening to 10m here I just don't get all that "jamming"
and "riff-raff" supposedly done by CBers, just hams doing their ham
thing with a few complaining about that CBer riff-raff. :-(

I like the sound of DSB AM. Saves having to retweak tuning for a network
of SSB users, none of which are exactly on-frequency.

73, Len AF6AY

I would respectfully note that the problems cannot all be laid at the feet of those who use/used Citizen band radios. It is a kind of convenient word to generalize with, but in the end can add to the problems.

But more importantly, what are we going to do about it? Somewhere between the world of "You will not say the word "roger" lest ye be banned from my repeater", and the Dodge City of 75 meters is a middle ground that needs explored.

Basically, Hams need to accept that there are some of us who have different accents from us, and may talk differently.

We need to not get spun up when someone says "My handle is...". Or Roger, or whatever. People who speak Q-signals and give 5 of 9 reports should not berate others for silly language.

On the other hand, people who interfere with others communications need dealt with, and dealt with harshly once found.

True enough, but I'm not really addressing admin upgrades. There is a new group of Hams who are interested in radio, but may not know all that much. In our area we nave new Hams who haven't used a soldering iron. We teach 'em how to use one.

There are some Hams who would hold these unpolished gems in contempt for their lack of knowledge.

There is some contention here. The enhanced bandwidth SSB crowd is pretty roundly panned for their use of bandwidth. Theey might point out that the AM'ers also use a lot.

My thoughts are that the AM is a legacy mode, and there really aren't a lot of practitioners, so I am willing to put up with that bit of extra use. Wide band SSB on the other hand, is just a mode that doesn't serve much purpose.

There is a fair amount of interference out there. It isn't really too
many people, much less than 1 percent, but that small group can wreak
some havoc.

And as I have said before, there is altogether too much worry about
saying the exact correct words. If more hams worried about actual
problems, and less about speech patterns, it would be FB... ;^)

> How does one follow up on the Unidentified riff-raff without having a
> trio of DF-equipped hams all taking bearings at the same time?

More or less just that, Len. There are a lot of Hams who love
Fox-Hunts. This would be different from most fox hunting, but would
serve an actual useful purpose. We have Hams who travel to some pretty
awful places to DXpedition. Seems a few might want to do some direction
finding.

Sometimes this isn't even needed, as some of the miscreants aren't too
secretive about their callsigns.

> Shout and holler in newsgroups and other forums and demand somebody do

Hehe, people have tried that for some time, and it doesn't work too well.

> Listening to 10m here I just don't get all that

I don't spend a lot of time on 10 m, but what time I have spent there,
the inhabitants have been pretty well behaved. Most of my experience
with the bad guys has been on 75 meters, and a little on 20.

The Marconi Radio Club of Newfoundland (MRCN) station VO1MRC will be conducting a propagation experiment from 0000-2359 UTC on the 15th and 16th of June. During this period, a CW beacon will be in operation on 5269
kHz. The station will be open briefly for 2 way contacts starting 0001 UTC
each of these days and will operate simplex on 5260.5 kHz CW. Following this it will transmit on 5327.5 USB and receive 5346.5 USB for stations authorised to transmit on 60 metres and 3807.5 kHz LSB for other stations.
Please note that only stations so authorised by their respective administrations may transmit on 60 metres.

The experiment was proposed by MRCN, endorsed by Radio Amateurs of Canada and authorised by Industry Canada. Further information may be found by searching for VO1MRC on the internet.

This clarifies it a little. Do I understand that channels within a
bank cannot be selectively locked out? Strange - because that has
been a feature of most if not all scanners from the days of crystal
control (pre-synthesized) scanners. What sayeth the manual?

The Uniden 'Bearcat' BC898T Trunk Tracker III manual (56 pages) only
says to MANUALLY skip certain channels. I have done that but that is
not the automatic mode I wanted.

Now, I'm not all that familiar with scanners or their history or who
made what except as what is available on the web. I would suppose
that selective within-memory-group automatic operation might be
available on other models. I specifically wanted some Trunk Tracking
capability because of all the Trunking operations going on in the Los
Angeles area. If Uniden had what you described in other models I
could only surmise that such was removed from internal programming to
cover the more complex Trunking modes. I won't dispute anything as
this subject isn't worth the time and trouble to me.

Since the Icom IC-746Pro here does have 2m memory presets, I could use
that to listen to 2m repeaters and leave them off the BC898T. The
746Pro control panel functions take a separate learning curve exercise
with all the bells and whistles Icom stuck in there...but I wouldn't
trade it for the world now.

I appreciate Ace's link to the 2m ham repeater listing and hope to get
other bands' listings on up to the start of L-band, just to add to the
non-amateur radio stuff going on in a large urban area. There is a
huge amount of that down here if you remember. It may exceed the 500
memory channels in the BC898T! :-)

In my experience the bulk of "problem" operators were on air before CB
became a popular hobby.

Using the term "CBer" as a derogatory remark can only lead to pointless
arguments. A tactic some very successfully use as a means to divert debate
away from the fact that bad operators are bad operators regardless of their
other interests, and focus on those newer to the hobby than themselves.

Can we use the term "CBer" to describe people who use CB radio? And accept
that CB is really off topic for this group so why are we talking about these
guys anyway?

Nope. A few months ago, I did a little investigation on repeaters. Surprisingly enough to me, a lot of the repeater pages had guidelines of "how to speak" Roger was in a few.

Keeping in mind that that is quite legal - a repeater owner can bring down the repeater or kick someone off it if s/he doesnt want anyone to say "Chewbacca", it isn't a freindly sort of thing to do.

My experience has been the same. A local Ham who is a truck driver just happens to be an excellent ham, in all ways. We're bringing him up on the technical end too. He does occasionally say "roger that". Big deal. I'll take ten of him for every grump.

> And if a new ham does happen to say "10-4" or "my handle is" it's easy
> enough to privately Elmer him on the sensitivity some have to that

> to look for another hobby. We have enough grouchy old men as it is.
> ;-)

Right! We can lead by example, and if need be, I can make a mention of it if it is egregious. Mention it off the air, and in a constructive way. I wouldn't browbeat anyone for saying roger, or even first personal, but would make an exception if people were delving into the "avoidance/defeat" of law enforcement activities that I've heard on 11 meters.

> 75M.

Seeing the enforcement letters, I read much the same. There is the occasional Technician that is operating beyond their priveliges, but unlicened operation, repeater jammers, and plenty of hams who have been licensed for a very long time.

1104. WIANEWS for week commencing JUNE 3 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-06-14 04:17:49 UTC
From: nationalnews@wia.org.au
Message-ID: <200706140416.l5E4Gsf06527@panix2.panix.com>
Source record: 4309
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing JUNE 3 2007

New National Standard Built Around Amateur Radio

The Commonwealth Department of Education Science and Technology has endorsed a new competency standard, called:-
"Operate and maintain an amateur radio communication station".

The standard approximates the syllabus for a Standard amateur operators certificate of proficiency.

This means the there is now a nationally recognised standard built around amateur radio. This is a link between amateur radio and education and industry. Competency to this standard can be an element in an electro-technology qualification.

It certainly should make amateur radio as an activity much more attractive to schools.

However, it is important to note that holding the competency will not qualify the holder for an amateur licence which still requires WIA certification to ACMA of competency in the theory, regulatory and practical elements of the syllabus.

WIA President Michael Owen VK3KI welcomed the Departments endorsement, saying that he hoped that schools would be encouraged to support amateur radio activities and also acknowledged the work of the WIA's Nominated RTO, Fred Swainston VK3DAC in achieving this recognition of amateur radio.

Previous Editor of Westlakes Amateur Radio Magazine, Frank, VK2FJL in his May edition told how, on May 16 Barry VK2BZI was awakened by a telephone call from the Australian Search and Rescue in Canberra requesting he locate an EPIRP that the Westpac helicopter said was near the 16 ft. Sailing Club at Belmont NSW.

With RDF receiver, a Potomac FIM 71 Field Strength meter, x Government Auctions he left home and as he neared Belmont Bay the familiar signal of an EPIRB was starting to be heard.

At Belmont 16 footer Sailing Club the signal was very strong, bearing parallel to the shore. The transmitter was either in the club or west of the club and west of the club is not easy access.

VK2BZI called in the water police to help check west of the club and proceeded to check out the club premises.

The club is built over water and it was necessary to send a volunteer under the club in case a floating device had washed underneath.

However with some sleuthing on Barry's part he found the EPIRP laying behind some flowers in the front garden of one of the houses west of the club where it had been left running, actually he located its position not by the RDF but by the switching noise it made whilst it transmitted.

His well used and slightly deaf human ear found the device.

Finally disabling he advised ASAR and thanked all who assisted and was back hom
e
by morning cuppa time.

BPL INTERFERENCE - THE BATTLE CONTINUES

WIA Director Delivers BPL Presentation to 2007 IIR FleetMobile Conference in Sydney.

WIA Director Phil Wait (VK2DKN) delivered a presentation on BPL to the IIR 2007 FleetMobile conference held at Star City in Sydney, over the 28-30th of May.

The conference was attended by about 100 executives and business managers responsible for communications and IT in Government Radio Networks including State, Federal and New Zealand Police, Fire Departments, Defence, Emergency Services, and representatives from ACMA and commercial organizations such as Telstra, Motorola and Cisco.

The theme of the conference was the converged future of communications-realizing significant operational benefit by achieving intelligent mobile communications strategies.
Discussion cantered around new communications technologies which bring together disparate communications systems and technologies into a single operational platform, and where ad-hoc communications links can be easily and quickly formed between different agencies or different parts of an agency to suit the immediate communications needs.

Shortly all forms of information such as, voice, data, location and mapping, video, SMS GPRS and GSM, Email and Internet, will be able to be shared seamlessly between different operators using quite different communications systems. This is especially valuable in disaster response situations where emergency services have at times had difficulty establishing robust communications links with each other.

In short, the traditional divide between voice and data transmission is no more.

This was a very valuable opportunity for the WIA to highlight its concerns about the potential for BPL interference to HF radio communications.
As Phil stated, "the unique thing about HF radio is that, unlike other newer technologies, it does not require infrastructure which can easily be destroyed in times of disaster or conflict. There will always be a place for HF radio and its utility must be protected".

The WIA's presentation was extremely well received. A copy of the PowerPoint presentation and the video can be downloaded from the WIA's BPL page. This is a large file and will require a broadband connection and a

copy of Microsoft PowerPoint. Clubs and others are welcome to use this presentation without modification.

WIA Awards Website
Our Awards website is very functional but does not display all our new awards.

The WIA is currently designing and building a new National website that will include our new awards section.

Until this is completed you are invited to place all requests via email to the awards manager.
Malcolm K. Johnson. VK6LC
awards@wia.org.au

And speaking of our website, the results of the John Moyle competition have been posted to the website.

www.wia.org.au/contests/john_moyle/

Sadly, Bill Rice VK3ABP an old stalwart of the Federal WIA, at age 80 years old a week ago, passed away quietly sitting in his favourite chair at about 5.00 pm Tuesday.

Bill will be remembered by many as the longest ever serving editor of Amateur Radio magazine. Bill joined the AR Publications Committee in 1972, became editor in July 1984 and continued in the position until December 1999.

Older amateurs will remember Bill as a keen 2 m operator and constructor. The VK3ABP 2 m valve converter, described in Amateur Radio around 1970, is arguably the most replicated radio equipment ever described in the magazine.

Next week we will bring you a special tribute to this new octogenarian, now sadly silent key. VK3ABP

AROUND VK in 80 Seconds.

VK2

School radio club calling CQ IRLP

The Bishop Druit College Radio Club at Coffs Harbour on the mid-north coast of New South Wales is looking VK, ZL or Asia-Pacific contacts on IRLP.

The students who have been experimenting with building simple FM radio receivers are also keen to have some on air operating experiences.

IRLP contacts with interested parties or similar school electronic/radio groups would be great - but the club only has limited time during the local lunchtime period.

The station equipment has been provided by Peter McAdam VK2EVB - and the club is QRV Fridays 0315 - 0345 UTC, on the IRLP node 6625 which is via its local repeater VK2RDO.
(VK3PC)

The Hunter Radio Group Contesters will be operating in the Trans Tasman 160 meter phone event on July 7th this year at Luskintyre Tiger Moth Airport.

There will be some fun type foxhunt also held round the airport.
The group extends a cordial welcome to all operators.
This will be an ideal training event for the up coming RD contest at the same location.

Food, drinks and accommodation will be available.
Accommodation will be on a first to book basis
As in all Hunter Radio Group functions, having fun will be the main objective For further information, or to confirm your attendance please contact Grahame VK2FA on 02 49-548-688 before June 24th 2007

Whilst in the Hunter, they'll hold their next licence assessments on 23rd & 24th of June at 9.00 am at the Print Makers Workshop, 27 Popran St Adamstown.

For further information, again contact the Examination Group Leader, Grahame O'Brien VK2FA on 02- 49548688. It is important that Foundation candidates have a copy of the foundation manual and have studied it before attempting an assessment.

Manuals are available from the Hunter Radio Group.

Some places will be available for candidates wanting to upgrade from foundation licences to standard or advanced licences and the Hunter Radio Group will be having a sausage sizzle on both days for lunch.

VK4
Invitation to a Seminar about Tesla

The IEEE North Queensland Section and the Communication Society Chapter, invite you to attend a technical seminar on: Tuesday 12th June 2007 from 4 pm to 5 pm in the Electrical Engineering Building, James Cook University's Douglas Campus.

The seminar is titled -
NIKOLA TESLA ? THE MAN WHO LIT UP THE WORLD

The Seminar marks the 150th anniversary of the birth of Nikola Tesla whose theoretical work at the end of the 19th and the beginning of the 20th century created the conditions for the electrification of the world via a multiphase ac electricity supply.

For further information contact
Dr. Graham Woods,
Chairman IEEE North Queensland Section,
Ph 07-47814219

VK5

Good morning listeners
This is John VK5DJ for the South East Radio Group.

The Australian Fox Hunting Championship is coming up very soon on the Queen's Birthday long weekend in Mount Gambier. Action starts on Saturday 9th June starting from the Scout Hall in Margaret Street, Mount Gambier.

Events begin at midday on the Saturday with the 2 metre sniffer hunt and finish on Sunday with event 10 the 1.2GHz foxhunt at 4.00pm.

Catering will be by Phil VK5HAM and his team.

Once again there will be a home brewer's competition and as always there are really good prizes to be won. Amateurs are encouraged to bring their latest projects for display.
They need not be fancy or complicated. We look for a range of construction projects from the simplest antenna, antenna coupler or crystal set to the most complex of equipment.
Ham radio has an interest for all but at the heart of our hobby is the home brewer. Support out home brew competition. Entries are judged on creativity, interest to others, workmanship and documentation. But even if your project doesn't fit these criteria it could well win a prize because the judges just thought it was a great little project.

Sunday afternoon we have arranged for a cruise up the Glenelg River for the partners.
The cost at $25 is very reasonable and the voyage aboard the Nelson Endeavour is really worth every cent.

So put it in your diary now - the South East Radio Group Convention and Australian Fox hunting competition on the Queen's Birthday long weekend in June. It's worth coming just to see some of the technology some of the fox hunters have in their cars and atop them.
On our part we enjoy making it hard to find the foxes in the forests and beautiful country side of Mt Gambier.

Check the SERG website for details.
See you there, June 9 and 10.
John VK5DJ

The next meeting of BARC will be a combined Club meeting with North East Radio Club at their clubrooms, Ardtornish Primary School Hall, Saarinen Avenue, St Agnes on Friday June 8 at 7.30pm.

If you require further details contact Ian VK5AIC on 85245029 or Norm VK5NR on 85642522.
(Brian VK5BC)

DISCUSSION POINT

This in from the NZART InfoLine

Plasma TVs

"I wonder what we can do about the proliferation of Plasma TVs? They seem to be producing horrendous interference on HF - up to half a kilometre or more radius.

I'm certainly affected, since about five weeks ago, by, I believe, one of these 'unintentional radiators'.

160, 80, 40 and 20m unworkable due to S9+ noise.

Plasma TVs *generally* *FAIL* US FCC Class A (commercial) requirements, which are looser than FCC Class B (residential) requirements. Yet these appliances are introduced into the residential environment without concern to the requirements of non-interference to other services.

What can be done to manage the interference caused to the amateur service by these devices?

De Glenn, ZL2TLD

INTERNATIONAL NEWS READ BY Rob VK5MM

"Sometimes we could hear them, but they couldn't hear us. But we knew they were out there."

They were the words of John Hackney of Orono, who joined the crew of a Trans-Atlantic sailing expedition in the British Virgin Islands.

A father and son crew from Bangor, along with an assortment of additional mates, completed the last leg of a journey that took them from Bangor to ports throughout Europe and back again over the course of two seasons of sailing.

Dan Cassidy, 58, and his son David, 23, left Bangor in May 2006 to start the voyage that would cover nearly 18,000 miles and take them to 10 different countries.

And Amateur Radio went along for the ride.

In a smaller boat, rotating watches have to keep an eye out for other, larger vessels and an ear out for the weather forecasts.

For those communications, they relied on a Ham radio contact with an inland operator who monitors weather conditions for mariners.

The Ham radio also allowed Fleana's crew to send e-mails, which sometimes were more reliable than voice communications. Those e-mails were a godsend for family members.

"We were getting some information," said Deena Cassidy, Dan's wife. "We knew things were going well, so I didn't really worry."

Thanks to Amateur Radio.

Special Authorizations for Canadian Amateur Radio Experiments at 135 kHz and 5 MHz to Cease 30 June 2007.

Since 2001, at the request of RAC, Industry Canada has granted a number of special authorizations to some Canadian radio amateurs to conduct experiments in the band 135.7 - 137.8 kHz and at 5 MHz.

These experiments have had, as one objective, the provision of data that would support the objectives of RAC and the IARU for possible new allocations to the Amateur Service at these frequencies.

In accordance with the agreement between RAC and Industry Canada, all the special authorizations to Canadian radio amateurs will be terminated and transmissions must cease as of 30 June, 2007.

Further special authorizations will depend on the outcomes of WRC-2007, scheduled for October - November, at which, on the initiative of Canada, a new, worldwide, secondary allocation to the Amateur Service at 135.7 - 137.8 kHz is on the agenda.

A secondary allocation near 5 MHz may also arise at WRC-2007 as a consideration in the review of radio services in the band 4 - 10 MHz.

Per the agreement for special authorizations, each experimenter is required to prepare a summary report of his experiments, which may be in the form of an article for TCA.
(RAC)

NEWS FROM ARNEWSLINE

DAYTON HAMVENTION: NEW PRODUCTS

What about this years hot new products. Over the next several weeks Newsline's Fred Vobbe, W8HDU, will be highlighting a number of them. One of the first to catch his eye was at the Vertex Standard booth. The folks who make Yaesu brand products:

Fred Vobbe, W8HDU: Were here at the Yaesu booth with Dennis. Tell us, what is the new hot product that Yaesu has come out with this year?,

Dennis Motschenbacher, K7BV: "We have two very interesting products and both are very unique. Its been quite a while since we had a good HF radio for entry level and we have developed our FT-450 which a radio with a goal being to be in (priced) at under $1000, weigh under 10 pounds with 100 watts. It came out to be a really good radio because we had the learning curve from the FT-2000 and we were able to drop that IF DSP into that radio. O, in a very small package that only weighs 8 pounds, it's a heck of a (good) receiver and its going to be a good radio for the desktop as well as being able to go mobile."

CQ ANNOUNCES HALL OF FAME INDUCTEES

CQ Amateur Radio magazine has announced this year's inductees into its CQ Amateur Radio, CQ Contest and CQ DX Halls of Fame.

This year there are 15 inductees into the Amateur Radio Hall of Fame. We do not have time to list all of them, but there are several that will be easily recognizable. These include such well known hams as NASA Administrator Michael Griffin, NR3A, Swan Electronics founder Herb Johnson W6QKI, along with S-S-T-V pioneers Copthorne MacDonald, VY2CM, Don Miller W9NTP and Farrell Winder, W8ZCF.

Also being honoured this year is ARRL Senior News Editor Rick Lindquist, N1RL. Maybe best known as the voice of the ARRL Audio News, Lindquist has also been responsible the past decade for keeping the amateur community updated on new developments, via the ARRL Letter and the ARRL Web news pages. The honour comes at a very special time since Rick will retire from the Headquarters staff on Friday, June 1. We at Amateur Radio Newsline wish him well along with a lot of good D-X in the days, months and years ahead.

There are three new inductees this year into the CQ DX Hall of Fame. Roger Western, G3SXW, and Nigel Cawthorne, G3TXF, were nominated together. Both are avid DXpeditioners and have activated many rare locations with their two-man, CW-only, expeditions. Also inducted was Mauro Pregliasco, I1JQJ, the co-editor of Europe's 425 DX News.

The CQ Contest Hall of Fame inducts three new members this year as well. They are Fred Capossela, K6SSS, Tom Taormina, K5RC, and the late Phil Goetz, N6ZZ.

The announcement of this years lists of inductees was made public at the Dayton Hamvention on Saturday, May 19th. Check www.cq-amateur-radio.com for more

In DX, word that the West Lancashire Scouts' Expedition to Renland, East Greenland will be taking place from the 23rd July to 20th August. A party of 50 Scouts and Leaders from West Lancashire in the U-K will be exploring the ice cap and mountains of Renland. As well as mountain exploration a number of scientific and wildlife studies and experiments are being carried for various academic bodies. The Expedition will also be operating an amateur radio station for a considerable period of time. Operation will be on the 40, 30 and 20 meter bands using SSB, data and some CW, under the call sign G3WGU portable OX. QSL as directed on the air. Special station LZ07KM will be active on 1st to 31st May to celebrate Ss Kiril and Methodius' Day. QSL via LZ1PJ direct, or bureau requests can be sent to mailto:lz1pj%40qsl.net.
Lastly, HF750C, which will be active through the 30th of June. This, to celebrate the 750th anniversary of Krakow Poland's city rights. QSL via SP9BRP. Also, you can expect also a large number of local operators to use special prefix SN0 during the year.

==========

NEWS SOURCED TO THE RSGB NEWS SERVICE AND READ BY G4NJH FROM GB2RS NEWS

Two British amateurs were inducted to the prestigious CQ Magazine DX Hall Of Fame at the Dayton Hamvention. Roger Western, G3SXW, and Nigel

Cawthorne, G3TXF, were jointly honoured for their many years of activating rare RX locations. To date, Nigel has operated from 44 DX locations, and Roger has activated 37. Nigel has what may be the world's largest collection of QSL cards. In fact, he recently completed a house extension solely to house his QSL collection!

In addition to his trips with Nigel, Roger is a founding member of the "Voodoo" contest DXpedition group, a member of the CQ Contest Hall of Fame, and an international adviser to the CQ World Wide DX Contest Committee. He has also written two books, on DXpeditioning and Contesting.

Finningley Amateur Radio Society is delighted to announce the success of a very exceptional lady. Vera Tomlinson, an octogenarian, passed her M3 Foundation examination at the second attempt.

What makes this an outstanding achievement is that Vera is registered blind.

Vera was subjected to the same stringent rules as any other candidate with the exception that Club President, John Swift M0UTX, was allowed to act as a reader for her.

Lead instructor, Peter Myers G3UWT, was full of praise for Vera and stated she was a delight to teach and is now looking forward to a QSO on air.

NOVEMBER 17/18
Spring VHF-UHF Field Day - November 2007
For everyone who likes to plan ahead - please note the dates for this year's Spring VHF-UHF Field Day. It will be held on November 17/18, a week later than usual. This will prevent a clash with club activities in two states.

SPECIAL EVENTS, BEACON AND NET ADVICE
VK's longest continual net;
The Southern Cross DX Net has been running for 43 years, operates 7 days a week - propagation permitting - on a frequency of 14.238.5MHz at 1215 zulu.

2nd DANUBE RIVER DAY ACTIVITY
(New rules for 2007)

The International Commission for the Protection of the Danube River has declared June 29, each year to be the INTERNATIONAL DANUBE DAY.

On the occasion of the event in 2007 the group of Hungarian ham radio amateurs being resided the Danube River Bend, HUNGARY call for the secondly organized special event activity.

All hams worldwide are kindly invited to take part!

Official name:
Danube River Activity

Participation: any licensed ham

Period: 0000 UT June 01 - 2359 UT June 30, 2007

Frequency: all

Mode: all

Repeater operation: accepted

VoIP (EchoLink, etc.) operation: allowed if both sides are on radio (Radio - VoIP System - Radio).

Special Event Station:
HG7DANUBE

Report: all participants are to send signal report, operator's name, QTH. Stations alongside the river shall send "nr Danube" in addition.

Points:

Stations alongside Danube River from all 10 countries worth 1 point,
2 points can be claimed for them on the day of June 29.

QSO with HG7DANUBE worth 5 points all over the activity period.

A station sending "nr Danube" counts once for scoring independently from
band and mode over the activity period.

Multiplier: None

The highest score will be awarded with a special Cup.

Any station reaching 100 points will be awarded with a special Danube Day
Certification.

Logs are to be sent to: Mr. Jozsef Szekely HA7VY, H-2011 Budakalasz,
Kinizsi u. 5. Hungary or via email ha7vy@freemail.hu
as text attachment till July 30. 2007

More details and information may be available on
http://ha2mn.dsgnet.hu

The Organizers would highly appreciate VK hams' participation, especially
foundation licensees. There are EchoLink repeaters to contact Hungarian
hams alongside Danube River: HG2RUB-R in Esztergom, HG5RUG-R in Budapest
and HG7RUC-R in Dobogoko
(ASL 700 mtrs).

Otherwise, all 10 countries has EchoLink repeaters covering Danube River
areas.

Thanks in advance and see you in activity.
(73 de Tibi, HA2MN)

D X A C T I V I T Y A N D D A T E S

Prefixes for Montenegro and Serbia

When Montenegro first became an independent country, the prefix YU6 was
tentatively allocated to it. However, it now has a call sign block of its
own. The ITU now lists 4O (that's "four Oscar") as Montenegro's prefix.

This means Montenegro stations may use 4O0 through 4O9, while Serbian
stations will continue to use YT and YU prefixes for all call districts,
0 through 9.
The ITU reportedly wants the two nations to complete the transition to
new call sign blocks as soon as possible.

The ITU has taken back the former 4N and YZ prefixes for future
reassignment.

Members that use computer logging software should update their software
to reflect these new prefix allocations
(IRTS)

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUPS --- ATV (Every pixel tells a story)

QRP ATV

Past Editor of Westlakes News Bulletin Frank VK2FJL in his May edition tells of yet another ATV record attempt.

Ho Hum, how boring, Do you say?

But wait a minute, what about an Australian ATV record using stock standard A/V sender/ receivers sold by Jaycar, utilizing 15mW over 175km? Remember, these units are designed to show Video from Foxtel set-top boxes from room to room, say up to 100m.

This is really a story about how you, the amateur can get on 5.7Ghz ATV with minimal equipment.

The authors' 5.7G units, are in our Amateur 6cm band.

In the last John Moyle field day contest Dan VK2GG and Graham VK2DWL found a spot whilst Jack VK2TRF travelled some 175km away.

Jack ended up at Mt Gibraltar, a very busy site, having all kinds of nasty RF installation which could hamper any record attempt, or swamp the puny 15mW from the transmitter.

On the other hand, the other pair were on Mt Warrawalong, a Forestry Fire tower site, with mainly forestry UHF yagi's on it.

It turns out 5.7Ghz is a remarkable band. For this attempt, Dan made a "tuppeny" feed out of WR137 waveguide, which he attached to his 1.2m dish. Jack used a "Golden Dish" for improved gain.

P5 pictures were received at each end of the link.

How's that for minimizing spurious RF emissions, using QRP for a record attempt?

Further successful ATV transmissions on 10Ghz and 2.4Ghz were made along the link for the purpose of the John Moyle event.

WW SPECIAL INTEREST GROUPS --- FEMALES IN RADIO

NATIONAL WIA STORIES

ROBERT BROOMHEAD AND SILENT KEY

It is with sadness that the WIA advises the passing of Bill Rice VK3ABP, who at age 80 became a silent key whilst sitting in his favourite chair in his home in Altona.

It is a sad yet reflective occasion on which to remember a unique character.

Bill was the longest serving editor of the Wireless Institute of Australia's journal Amateur Radio magazine. He joined its Publications Committee in 1972, became Editor in July 1984 and continued in the position until December 1999. It was a role in which he relished and able to contribute in so many ways. As Editor he was also a member of the WIA Federal Executive for a number of years.

Bill was a quietly spoken gentleman, with the persona not unlike that of a yester-year stereotypical bearded scientist, with a brilliant mind.

He had been an active radio amateur for 60 years, first as VK5BP at Murray Bridge South Australia moving in 1948 to Adelaide to attend university.

On relocating to Melbourne in 1960 be became VK3ABP. He was from the era when radio amateurs built their own equipment. Synonymous with the callsign VK3ABP was his valve two-metre converter that featured in AR magazine and became a very popular project enabling many to get on to that band.

While a good listener and being very personable, Bill talked little about his occupation in the defence research and development field and the leading edge technology that it involved.

Retirement from work gave Bill extra time for amateur radio projects

Bill had many friends and I have on the line Ron Fisher VK3OM ...
(Ron Fisher online recording)

Some of Bill's other activities included history and sailing. He often sailed in Gippsland - a personal achievement was to sail on the rarely filled inland salt Lake Eyre in South Australia.

In 2001 he was awarded honorary life membership of the WIA for his long and meritorious service, which he accepted with genuine humility.

One of Bills other close friends was Bill Roper VK3BR and I have Bill on line to share a few words....

(Bill Roper online recording)

A service was held Tuesday at St Eanswythe's Church, in Altona with about 200 people attending.

Bill will be sadly missed and his passing is a great loss to amateur radio.

ROBERT BROOMHEAD AND FRED SWAINSTON LISTEN TO THE AUDIO MP3

New National Standard Built Around Amateur Radio

The Commonwealth Department of Education Science and Technology has endorsed a new competency standard, called:-
"Operate and maintain an amateur radio communication station".

The standard approximates the syllabus for a Standard amateur operators certificate of proficiency.

This means the there is now a nationally recognised standard built around amateur radio. This is a link between amateur radio and education and industry. Competency to this standard can be an element in an electro-technology qualification.

It certainly should make amateur radio as an activity much more attractive to schools.

However, it is important to note that holding the competency will not qualify the holder for an amateur licence which still requires WIA certification to ACMA of competency in the theory, regulatory and practical elements of the syllabus.

WIA President Michael Owen VK3KI welcomed the Departments endorsement, saying that he hoped that schools would be encouraged to support amateur radio activities and also acknowledged the work of the WIA's Nominated RTO, Fred Swainston VK3DAC in achieving this recognition of amateur radio.

P29 revival underway

A strong effort is being made to increase amateur radio activity in Papua New Guinea and a recent P29 CQ Day is only just the beginning.

Wilfred Kilepak Amai P29PG/VK3DWA initiated the very successful special activity day outside the Parliament Building in Port Moresby. There were plenty of interested on-lookers.

The radio administration PANGTEL is supportive of any steps to achieve a greater participation in amateur radio.

Wilfred says PANGTEL is aware of the Australian licence restructure that occurred in October 2005 that includes the Foundation Licence, but has not yet followed suit.

Traditionally P29 has mirrored the VK licence system, due to the strong relationship between Papua New Guinea and Australia that was established before it gained independence in 1975.

And Papua New Guinea could also have its first ever YL operator with an individual who qualified for a licence in Australia now being considered for a P29 callsign allocation.

I'm Jim Linton VK3PC and you're listening to VK1WIA.

PRESENTED BY KYLEA VK6FXYL

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then encourage them to enrol in a Foundation Licence training course.

Next Foundation Licence course, and Standard / Advanced assessments .....

NEW SOUTH WALES

The Hunter Radio Group
They'll hold their next licence assessments on Saturday 23rd & Sunday the 24th of June at 9.00 am at the Print Makers Workshop, 27 Popran St Adamstown.

For further information, please contact the Examination Group Leader, Grahame O'Brien VK2FA on 02- 49548688. It is important that Foundation candidates have a copy of the foundation manual and have studied it before attempting an assessment.
Manuals are available from the Hunter Radio Group.

Some places will be available for candidates wanting to upgrade from foundation

licences to standard or advanced licences and the Hunter Radio Group will be having a sausage sizzle on both days for lunch.

WEST AUSTRALIA

HANDS UP IF YOU WOULD LIKE TO GO TO HAM COLLEGE?

Thought that would get your attention. In VK6 we now have HAM College offering courses for the foundation, standard and advanced licences. The next Foundatio
n
course is to be held on the 21st & 22nd of July - get your name in early to sec
ure
a place in the classroom.

Is anyone interested in obtaining their Advanced licence - the next course is scheduled to start in July/August.

How about Morse code.....yes there is even a course run for Morse - why not sto
p
procrastinating and sign up today.

The next date for those wishing to sit Exams is June 30th.
Go to www.warg.org.au under the foundation licence page to view additional cour
se
and exam dates or you can contact VK6BDO Neil or myself for further details.

CONGRATULATIONS - RESULTS

Congratulations go out to new Radio Amateur Robert Young VK4FRJY
who has recently received his new callsign from ACMA after successfully
completing Foundation Assessment with the WIA Exam Service in Townsville.

Congratulations to 10 new Ham College graduates who obtained their Foundation
licences over the past couple of weeks, as well as 1 standard and 1 Advanced.
Look forward to making contact with you all in the near future.

AROUND VK in 80 Seconds.

The Hunter Radio Group Contesters will be operating in the Trans Tasman 160
meter phone event on July 7th this year at Luskintyre Tiger Moth Airport.
As in all Hunter Radio Group functions, having fun will be the main objective
For further information, or to confirm your attendance please contact
Grahame VK2FA on 02 49-548-688 before June 24th.

VK3

Amateur Radio Victoria say that the Mt St Leonard 70cm repeater VK3RMU
north-east of Melbourne is now on its new frequency of 439.800MHz.

Amateur Radio Victoria made the very recent QSY was mainly due to
persistent interference from a suspected low interference potential device
(LIPD).

The Sunday VK1WIA broadcast will also adopt the new frequency later this
month.

In south-west Victoria at Warrnambool the VK3RWL repeaters on 2m
147.050MHz and 70cm 439.650MHz are getting plenty of use by locals.

Early indications are that the range of VK3RWL is excellent with reports
from Ballarat, Horsham, Hamilton and Portland being received.

While the repeaters are up and running there's still a little bit more
work to do before the project is complete.

With the arrival of the winter rains and cold weather access to the site
is becoming difficult.

Many thanks to Russell Lemke VK3ZQB who with others have worked to restore
the repeaters, that were required to meet rigid and costly commercial site
requirements, borne by Amateur Radio Victoria.

Early indications are that the range of VK3RWL is excellent with reports
form Ballarat, Horsham, Hamilton and Portland being received.

DISCUSSION POINT

Often around this time in the WIA National News we bring you
"Discussion Point",
Today we bring you BOILING POINT, thanks to Frank VK2FJL, Previous editor
of Westlakes Magazine.

It seems a person decided to have a cup of coffee. He took a cup of water
and put it in the microwave to heat it up (something that he had done numerous
times before).

I am not sure how long he set the timer for, but he wanted to bring the water
to a boil.

When the timer shut the oven off, he removed the cup from the oven. As he
looked into the cup, he noted that the water was not boiling, but instantly
the water in the cup "blew up" into his face.

The cup remained intact until he threw it out of his hand but all the water had
flown out into his face due to the build up of energy. His whole face blistered
and he suffered 1st and 2nd degree burns to his face.

Worse he may have lost partial sight in his left eye.

While at the hospital, the doctor who was attending to him stated that this is
a fairly common occurrence and water (alone) should never be heated in a
microwave oven.

If water is heated in this manner, something should be placed in the cup to
diffuse the energy such as: a wooden stir stick, tea bag, etc.

It is however a much safer choice to boil the water in a tea kettle.

WHY IS IT SO???

Micro waved water and other liquids do not always bubble when they reach the
boiling point.
They can actually get superheated and not bubble at all. The superheated liquid
will bubble up out of the cup when it is moved or when something like a spoon
or tea bag is put into it.

To prevent this from happening and causing injury, do not heat any liquid for
more than two minutes per cup. After heating, let the cup stand in the
microwave for thirty seconds before moving it or adding anything .

==========
NEWS FROM ARNEWSLINE

WORLDBEAT - GERMANY: THE DL 100 AWARD

In news from around the world, German hams are on the air throughout
June with a special celebration. This with members of the radio clubs
of Norddeich and Hage commemorating the 100th anniversary of the well
known coast station Norddeich Radio. Operations are planned for 160
through 10 meters on various modes. The special callsign, DL100DAN is
being used and a special D A N 100 award will be available. More
information can be found at http://norddeich-radio.de/ (OPDX)

WORLDBEAT - JAPAN: JARL TO CELEBRATE INTERNATIONAL QRP DAY

The Japan Amateur Radio League's QRP Club will be running five special event stations, 8J1P, 8J3P, 8J4P, 8J5P and 8J6P on June 17th to celebrate the International QRP Day. International QRP Day was designated by the IARU Region 1 Conference held in April 1984 in Italy to stimulate QRP operation worldwide. It was reaffirmed by the IARU Region 3 Conference in New Zealand in December of 1985 (JARL)

WORLDBEAT - UK: GB3RAL PROPOSED 40 AND 60 MHz BEACONS ON THEIR WAY

In VHF news, work from the United Kingdom that the new GB3RAL 40.05 and 60.05MHz beacons are due to receive government clearance in mid-June but both have already cleared their key Primary User stages. Assuming that regulatory clearance is also obtained the sponsors will go forward to for final clearance and approval sometime this summer.

If approved, it brings ham radio in the UK closer to the prospect of a unique 40, 50, 60 and 70 MHz co-located beacon system at the Rutherford Appleton Labs location near Oxford. While not in amateur bands, the 40 and 60 MHz beacons should prove to be extremely useful propagation study markers both in the UK and world wide. (GB2RS)

ON THE AIR: CELEBRATING IN INDY WITH HAM RADIO

Back in the United States, Indianapolis, Indiana has been a hotbed of special event stations during May and it continues in June. Fire up that new HF rig and get ready to copy. Jack Parker W8ISH has this report from the Circle City.

If you have your HF rig fired up and your antenna pointed toward Indianapolis you many score some great contacts in the next few weeks. Beginning Friday evening June 8th the Indianapolis Radio Club will begin making contacts from the site of the USS Indianapolis Memorial. The USS Indianapolis was sunk during World War Two after delivering atomic bomb components that were later used in the attack on Hiroshima. Listen for the W9IND call sign during the 44 hour event or check the Indianapolis Radio Club web page for more information.

The pace continues to quicken as the United States Grand Prix rolls into town on Fathers Day weekend, June 17th. Special event station W9IMS will be on the air, taking check-ins, during that weekend . This world class special event station operates during each one of the major races at the Indianapolis Motor Speedway. If you don't catch W9IMS during the Formula One race you have another opportunity to snag a special QSL card during the Brickyard 400 NASCAR race the weekend of July 29th.

And last but not least, many central Indiana clubs report gearing up for Field Day 2007 on June 23rd and 24th. Maybe we'll catch you on the HF bands.

Reporting for Amateur Radio Newsline this is Jack Parker W8ISH.

The USS Indianapolis Memorial station will join nearly 70 other special event stations around the world as part of the Museum Ships Weekend. (W8ISH)

THE QNEWS WORK BENCH - the nuts and volts report -
Since Adelaide's South Coast Amateur Radio Club took over the distribution of the VK5JST Antenna Analyser kits they have been receiving numerous orders for the kits from right across Australia.
Just visit their website, www.scarc.org.au

MORSE ON YOUR iPoD - we are joined by VK1KEP Peter Ellis.

This interesting contribution from Mark Sullivan ZL3AB appeared on the KiwiDX Group cluster.

In an attempt to improve CW comprehension and speed it was decided to load some CW files onto an iPoD to listen to on the way to work.

To start you need to create a CW sound file in "wav" format.

To do this, look for a great little freeware program on the net called WinMorse 2.0. Its a 482kb download and extremely easy to use.

http://winmorse. mark-bellamy.qarchive. org/

Once you open the software you can set the speed you want the CW sent at and then type/paste some text into the window.

All you need to do then is choose the output as "wav" from a drop down menu and the software does the rest.

Once you save the file you can then open it in the iTunes software that will convert the file into AAC, the default format for the iPoD and you can then copy it onto your iPoD and play it.
This process will also work for any MP3 player that has software that can convert wav files into MP3. If your software does not do that there are a number or wav to MP3 converters on the Net.
(fists club downunder)

MEDIA WATCH

TV SHOWS THE EARLY DAYS OF UK EMCOMMS

A television show about the early days of Amateur Radio emergency communications in England was recently broadcast on the U-K TV station Channel 4 . This, as a part of the stations ongoing '3 Minute Wonder' series.

The program was called "Preparing for the Worst" was hosted by Pat Gowen G3IOR. It discussed one of the first ever mobile emergency communications operations ever in the U-K. Also in the show is Terry Owen, G4PSH and references are made to Rafars & Raynet of the city of Norfolk.

Preparing for the Worst can be seen on the YouTube video service.

Happening in twin cities of Thuringowa and Townsville.

JANUARY 20 2008

The Mid North Coast Amateur Radio Group invite all amateurs to attend the 2008 Mid North Coast Radio Expo to be held in Coffs Harbour on Sunday 20th January.

The Expo is held at the St Johns Church Hall, Mc Lean Street,
Coffs Harbour.
Gary VK2ZKT is the Radio Expo Coordinator on 02 66 55 2 990 or visit the Groups comprehensive web site at www.mncarg.org

THE FINAL FINAL

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

Now we usually don't give url's as they can be a pain to take down but in this case very simple go to www.jeffswalk.com

Jeff entered Moomba Gas Field on Sunday 27 May

Well received and looked after by Santos and staff.

Made presentations and received donations for DeafBlind.

Left Moomba Wednesday 30th. Walked 14Km and set up camp. 24 degrees.

VK4BNQ (Gympie)and myself VK2FWGJ (Mooranbah), heard Jeff QRP on 2 and a half watts (2.5).
Temporary external battery problem. (Wednesday and Thursday)

Will walk 25 Km Thursday.
(Bill Johnson VK2FWGJ)

This really not-too-grouchy old man remembers the use of "my handle
is...." or "handle here is..." on HF as "good amateur practice" even
before CB was invented.

Of course the use of "first personal is...." still grates on my ears
but give them time....they'll learn eventually.

My two electrons....

My own personal pet peeve is when someone speaks "HI HI". In Morse it does sound kind of like laughter, but when spoken it sounds quite strange.

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rram/index.html

Welcome to rec.radio.amateur.moderated! This is a moderated newsgroup
for amateur radio operators and other people having an interest in the
Amateur Radio Service, as defined by national regulations and
international treaties. Following are the posting guidelines for this
newsgroup.

This message includes the following sections:

1. Topics and posting policies from the rec.radio.amateur.moderated Charter
2. Additional posting guidelines
2.1 Netiquette guidelines
2.2 Posting form requirements
2.3 Guidelines on signature (.sig) files
2.4 Guidelines on excessive quoting
2.5 Guidelines on pointers to outside sources
2.6 Guidelines regarding questioning someone's suitability to hold
an amateur radio license
2.7 Guidelines regarding name-calling
2.8 Guidelines regarding civility
2.9 Other unacceptable topics

------------------------------------------------------------------------

1. Topics and posting policies from the rec.radio.amateur.moderated Charter

rec.radio.amateur.moderated is an inclusive on-line community of amateur
radio operators and other people having an interest in the Amateur Radio
Service. Participants are invited to engage in open discussion of
amateur radio issues and exchange information about participating in the
hobby/service, in an atmosphere of civility, friendship, and fun.

Acceptable topics include but, are not necessarily limited to, questions
and discussions about amateur radio licensing, regulations, tips on
various aspects of setting up an amateur radio station, and sharing
operating experiences and insights.

Unacceptable posts include, but are not limited to, buy/sell/trade
posts, posts that are off-topic to the Amateur Radio Service, posts
promoting or defending unlawful activities, etc. Crossposts of regular
discussion articles between rec.radio.amateur.moderated and other
```

discussion newsgroups are not permitted.

Frequently-Asked-Questions lists and other information/bulletin/
announcement postings may be crossposted to rec.radio.info, rec.answers,
and news.answers only with prior approval of the moderators of those
newsgroups. In all such cases, an appropriate "Followup-To" header,
containing only rec.radio.amateur.moderated, will be added by the
moderators if one is not already provided.

Posters are encouraged to state their own views and share their
experiences, but to refrain from making assumptions about the
motivations of other newsgroup participants. Posters are expected to
maintain a basic tone of civility. Prohibited uncivil discourse
includes, but is not limited to, name calling.

Posts containing unsolicited advice questioning the right, worthiness,
suitability and/or readiness of any individual (or members of any group)
to be an amateur radio operator are unacceptable in this newsgroup. If
an individual chooses to post asking for advice on when or whether to
obtain an amateur radio license, or to participate in any type of lawful
activity in the Amateur Radio Service, respondents should be careful to
address their comments only to the original poster and not explicitly
generalize to others in similar situations.

Similarly, posts that arbitrarily declare certain classes of amateur
radio licenses, or certain members of national amateur radio societies
(e.g., American Radio Relay League, Radio Amateurs of Canada, Radio
Society of Great Britain, Wireless Institute of Australia, etc.), to be
more or less worthy than others, are not permitted. Posts that politely
encourage individuals to join their local amateur radio society, or to
upgrade to higher classes of amateur radio license in order to enjoy
greater operating privileges, are permitted, however. Posts that
contain reasoned, civil, and fact-based discussion of the activities and
internal politics of national amateur radio societies are also
permitted.

Buy/Sell/Trade and Commercial Policy:

Posts containing offers to buy, sell, or trade are not permitted on
rec.radio.amateur.moderated. The rec.radio.swap newsgroup was created
for this purpose, and should be used instead. All such articles will be
rejected by the moderators with the advice to re-post to that newsgroup.

Postings that are entirely commercial press releases, advertisements, or
other public relations campaigns will not be permitted. Relatively
unbiased announcements or reviews of new amateur radio-related products
or services may be permitted at the discretion of the moderators. Such
posters are asked to disclose their financial or professional interest,
if any, in such products or services.

---

2. Additional Posting Guidelines

2.1 Netiquette guidelines

Participants who are new to Usenet should familiarize themselves with the "netiquette" of Usenet as well as the particular posting guidelines for this group. Several useful posts for "newbies" can be found on the newsgroup news.announce.newusers or on the WWW at:

http://www.faqs.org/faqs/by-newsgroup/news/news.announce.newusers.html

Particularly helpful articles are:
Welcome to Usenet!
Rules for posting to Usenet
Hints on writing style for Usenet
A Primer on How to Work With the Usenet Community
Emily Postnews Answers Your Questions on Netiquette
Answers to Frequently Asked Questions about Usenet

2.2 Posting form requirements

Any article that falls into any of the following categories will be automatically rejected:

A) Articles that contain original text of more than 75 characters per line
B) Crossposted articles to newsgroups not included in these Guidelines
C) Articles that contain more than 400 lines
D) Encoded binary files (except PGP and other short digital signatures)
E) Attachments to posts
F) Articles containing obscene language
G) Articles from individuals who have been suspended or banned from the newsgroup

2.3 Guidelines on signature (.sig) files

Many people close each article they write with a few lines of common text. This may be a cute quip or quote, or may include information about their family, contact information, or disclaimers required by their employer, for example.

Signature files used on rec.radio.amateur.moderated posting must be no longer than 8 lines.

The content of a poster's signature need not be relevant to amateur radio, but it must not violate any of the other posting guidelines. (For example, name-calling that would not be acceptable in the body of a message is also unacceptable in a signature.) Posters may include Uniform Resource Locators (URL's) and business addresses in signature files, provided they comply with all the other guidelines regarding signatures.

2.4 Guidelines on excessive quoting

Posts more than 20 lines long that also have more than 75% quoted text will be carefully reviewed by a moderator to determine if that degree of quoting is warranted. Posts with excessive quoted text may be rejected.

Posters must show a reasonable effort to trim the post they are replying to and to include just enough material to establish context. "Me too!" posts are discouraged, and, when posted, must edit the quoted material significantly.

2.5 Guidelines on pointers to outside sources

Unsolicited announcements and pointers to web sites that are strictly commercial press releases, advertisements, or other public relations campaigns, are not permitted. However, a pointer to a website or other external source of information is permitted and encouraged in cases where it is relevant to an existing thread, with appropriate context being given in the post. A URL with no information about what a user should expect to find there will be rejected. A pointer to information that is off-charter for rec.radio.amateur.moderated will be rejected, as will a pointer which itself does not meet the rec.radio.amateur.moderated guidelines (such as a URL containing embedded name-calling).

Moderators are not responsible for verifying the contents of any external information source.

2.6 Guidelines regarding questioning someone's suitability hold an amateur radio license

Identifiable groups and individuals may not be asked/told/etc. not to obtain an amateur radio license, or to only obtain certain classes of amateur radio license. It is not permissible to make statements that a person or members of a specific group "should" not, or should not be allowed to, become an amateur radio operator.

Solicited advice of this type is permissible; however, posters must be careful not to explicitly generalize to others who are in some way "like" the poster asking the question. Stick to the individual asking for advice.

It is acceptable to discuss verified violations, documented in criminal convictions or other government enforcement actions, by a person or members of a specific group.

2.7 Guidelines regarding name-calling

Nastiness addressed at a person is considered name-calling. Criticizing a person's *actions* is not, provided that it is done in a civil manner.

Attacks on an action which by their very nature include an accusation against the person's character are not acceptable. For example, "That's a lie" implies an intentional prevarication, and is considered name-calling. Acceptable ways of questioning the truth of a poster's statement include the more tactful "I don't think that's true," "I believe you are mistaken because..." or even simply "That's not true."

"That's not true and you know it" crosses back over into name-calling, however.

2.8 Guidelines regarding civility

By charter, posters are expected to maintain a civil tone in all their postings. The guidelines on name-calling cover part of that requirement, but not all of it.

In general, posters are expected to consider the reputations of other participants, and refrain from making unnecessary accusations or assumptions about the motivations of others. A good rule of thumb is to phrase your comments as your opinion -- "I think..." "It seems to me that..." "This makes me wonder whether..." etc...

Posters are expected to make factual claims, to debate topics openly and in good faith, and to accept honest criticism, all without provocation or prevarication. At least one professional organization, the Institute of Electrical and Electronics Engineers (IEEE), has recognized that such fair dealings are necessary components of ethical conduct, and has incorporated them into its Code of Ethics:

http://www.ieee.org/portal/pages/about/whatis/code.html

Though the Amateur Radio Service is not a professional endeavor, the moderators strongly feel that the IEEE Code of Ethics is also a worthwhile set of guiding principles for participants in the rec.radio.amateur.moderated newsgroup.

Posters are not required to support the American Radio Relay League (ARRL). However, they are expected to adhere to the spirit of the other parts of the ARRL's "Amateur's Code":

http://www.arrl.org/acode.html

2.9 Other unacceptable topics

Participants are reminded that the charter also prohibits posts promoting or defending unlawful operating practices.

Posts may discuss whether operating practices are unlawful, or engage in reasoned debate over why certain operating practices should or should not be unlawful. Posts may discuss enforcement actions, such as by the Federal Communications Commission in the United States or similar government agencies in other countries, and evidence gathered by parties such as Official Observers in support of complaints about unlawful operation.

Discussions of what practices constitute unlawful operation in the Amateur Radio Service should be limited to *factual* descriptions of the laws in various jurisdictions. Posters' *opinions* as to what practices they consider unlawful are not permitted. In particular, posters are cautioned not to extrapolate their country's laws and regulations to those in other parts of the world, as they may be quite different.

Posts that entirely concern themselves with other radio services or hobbies, such as Citizen's Band, General Mobile Radio Service/Family Radio Service, and Scanner or Shortwave Listening, are considered off-topic to the rec.radio.amateur.moderated newsgroup. Newsgroups such as rec.radio.cb, rec.radio.scanner, and/or rec.radio.shortwave may be more appropriate venues for such posts.

Please direct any comments, questions, or criticisms about this article to rec-radio-amateur-moderated-request@panix.com.

RESCUE RADIO MEETS EDUCATION: 47 NEW EM COMM TEEN HAMS IN CALIFORNIA

We start this week with a very positive story
with word that 47 eighth grade students in
California are now prepared to serve their
community in time of crisis using Amateur
Radio. This, thanks to a middle-school principal
and a teacher who saw the opportunity to combine
science and public service into a learning
experience for their students. Amateur Radio
Newsline's Jeff Reinhardt, AA6JR, lives in the area and has more:

--

Representatives of the City of Calabasas, the Los
Angeles County Sheriff's Department, the American
Radio Relay League and other agencies were on
hand recently to congratulate 47 eighth-graders
at A.C. Stelle Middle School. This, after they
completed a class that lead to their getting the
Amateur Radio licenses as a part of the American
Radio Relay League's educational incentive known better as The Big Project.

The adoption of the Big Project into the Las
Virgenes Unified School District as an Amateur
Radio educational program was the brain child of
school Principal, Mary Sistrunk, and science
chairman, Karl Beutel. Beutel, who is KE6MAO,
kicked off the project in all six of his science
classes some time ago with a presentation and

demonstrations of radio, including communication with other amateur operators using the schools own radio station. He then offered the students the opportunity to take an Amateur Service exam on-campus.

Meantime, emergency services groups are supporting this project with hopes that it will provide a source of communications volunteers. Sheriff's Department Reserve Captain, Tom Fakehany, N6FDR, says that these students are likely the next generation of emergency volunteers who will provide communications when all else fails. County Disaster Communications Service member Norm Goodkin, K6YXH, says that the plan is to help organize these new hams into a youth group. One with the ability to provide emergency communications services to the school and to the community in the the City of Calabasas.

Next semester, the 47 students plan to start an amateur radio club at Calabasas High School, along with the 17 new hams already there from last year's project. According to Beutel, his school nearly tripled the number of students who earned their licenses from the program's inception last year.

For the Amateur Radio Newsline, I'm Jeff Reinhardt, AA6JR, in Los Angeles.

--

Beutel believes that this program is among the largest groups of middle school students to ever accomplish this. The honor of the largest middle school ham radio licensing program thus far goes to "The Bardstown Experiment," that was chronicled in the October 1989 issue of QST magazine. That article detailed how more than 60 middle-school students and two teachers studied for and received their Novice class licenses. (ARNewsline(tm) via E-Mail)

WORLDBEAT - NEWFOUNDLAND: VO1MRC BEACON ON THE AIR

Turning to world news, word that the Marconi Radio Club of Newfoundland will be conducting a propagation experiment running a CW beacon on 5 point 269 MHz. This, using its VO1MRC station.

The beacon will be operational on June 15th and 16th from 00:00 to 23:59 UTC. VO1MRC will also be open briefly for 2 way contacts. Starting

00:01 UTC each of these days it will operate on
5260.5 KHz using CW. Following this it will
transmit on 5327.5 and receive 5346.5 KHz using
Upper Sideband for stations authorized to
transmit on 60 meters. It will also operate on
3807.5 KHz Lower Sideband for other stations.

Further information may be found by searching for
VO1MRC on the World Wide Web. (VHF Reflector)

**

WORLDBEAT - AUSTRALIA: NEW COMPETANCY STANDARD FOR HAM RADIO

New and closer ties between government, industry,
education and ham radio have come together
down-under. This, as a result of a new
Competency Standard exam in Amateur Radio being
made available to all citizens of
Australia. Graham Kemp, VK4BB, of the WIA News has the details:

--

The Commonwealth Department of Education Science
and Technology has endorsed a new competency
standard, called:-"Operate and maintain an
amateur radio communication station".

The standard approximates the syllabus for a
Standard amateur operators certificate of
proficiency. This means the there is now a
nationally recognised standard built around
amateur radio. This is a link between amateur
radio and education and industry. Competency to
this standard can be an element in an electro-technology qualification.
It certainly should make amateur radio as an
activity much more attractive to schools.

However, it is important to note that holding the
competency will not qualify the holder for an
amateur licence which still requires WIA
certification to ACMA of competency in the
theory, regulatory and practical elements of the syllabus.

WIA President Michael Owen VK3KI welcomed the
Departments endorsement, saying that he hoped
that schools would be encouraged to support
amateur radio activities and also acknowledged
the work of the WIA's Nominated RTO, Fred
Swainston VK3DAC in achieving this recognition of amateur radio.

For the Amateur Radio Newsline, I'm Graham Kemp,
VK4BB, of the WIA News in Australia.

--

The new competency standard may not bring a lot
of operators to the air but it should give the
citizens of Australia a better understanding of
what Amateur Radio is really all about. (WIA News)

**

NAMES IN THE NEWS: OCEAN TRAVLER W7KFI HEADS TO JOHNSTON ISLAND

Ham radio operator and ocean adventurer Susan
Meckley, W7KFI, has told the Ohio Penn DX
Newsletter that she is on her way to Johnston
Island and should be there by the time this
newscast goes to air. W7KFI plans to operate 80
through 10 meters on SSB and CW while on Johnston
and is usually at 36 Kilohertz above the bottom
of any band. She expects to be on Johnston
Island for about a week before heading to
Marshall Islands which is a 3 week voyage further South.

What makes this story unique is that Susan
Meckley is a 70 year old grandmother and the
skipper of the USS Dharma who has been sailing
all over the Pacific. This amazing lady has a
truly interesting story to tell and it is highly
recommend that you visit the following Web pages
to see where she has been:
http://ussvdharma.net and www.qrz.com/callsign/W7KFI (Southgate, OPDX)

**

WORLDBEAT - NEW GUNIA: HAM RADIO REVITALIZATION IN P29

Still in the South Pacific, Papua New Gunia is
seeing a revitalization in its Amateur Radio
community. Jim Linton, VK3PC, has the rest of the story.

--

A strong effort is being made to increase amateur
radio activity in Papua New Guinea and a recent
P29 CQ Day is only just the beginning.

Wilfred Kilepak Amai P29PG/VK3DWA initiated the
very successful special activity day outside the
Parliament Building in Port Moresby. There were
plenty of interested on-lookers.

The radio administration PANGTEL is supportive of
any steps to achieve a greater participation in amateur radio.

Wilfred says PANGTEL is aware of the Australian
licence restructure that occurred in October 2005

that includes the Foundation Licence, but has not yet followed suit.

Traditionally P29 has mirrored the VK licence
system, due to the strong relationship between
Papua New Guinea and Australia that was
established before it gained independence in 1975.

I'm Jim Linton VK3PC reporting for the Amateur Radio Newsline.

--

Papua New Gunia could also soon have its first
ever female radio amateur. The unidentified ham
qualified for a license in Australia earlier this
year. She is now being by that nations
telecommunications regulator Pang Tel for a P29 callsign. (WIA News)

RADIO REGULATIONS: HAM RADIO VS. PAVE PAWS - CHAPTER 2

The ARRL has sent out more than 100 letters to
owners and trustees of 70 centimeter repeaters
whose systems have allegedly affected the
governments PAVE PAWS radar installations on the
Atlantic and Pacific coasts. The letters
essentially tell these hams to lower the output
power of their repeaters to 5 watts and await
further notice from the FCC. Amateur Radio
Newsline's Bruce Tennant, K6PZW, reports:

--

Citing an increasing number of interference
complaints, the US Air Force earlier this year
asked the FCC to order dozens of repeater systems
to either mitigate interference to Pave Paws
radar installations or to shut down. According
to the ARRL Letter, the situation affects 15
repeaters within less than 100 miles of Otis Air
Force Base on Cape Cod, Massachusetts, and more
than 100 repeaters within some 140 miles of Beale

Air Force Base near Sacramento, California.

The ARRL is working with the Department of Defense to develop a plan to mitigate alleged interference from 70 centimeter ham radio repeaters to this military radar system on both coasts. The letters sent to affected repeaters give them an up-to-date briefing on the ongoing negotiations with the US Air Force, as well as outlines the Department of Defense plan. The Department of Defense has indicated a willingness to try a mitigation proposal, but they have also indicated their need is for these issues to be resolved sooner rather than later. With that in mind, the ARRL proposed an initial mitigation strategy. It works this way.

All repeaters on the Department of Defense list in the affected areas will immediately reduce power to 5 watt absolute maximum transmitter power output. Each repeater licensee or trustee should then immediately contact ARRL Regulatory Information Specialist Dan Henderson, N1ND, to confirm that this step has been taken.

Meantime, the ARRL will provide Longley-Rice calculations for each repeater to the Department of Defrense. For those who have never before heard the term, Longley-Rice Calculations are used to compute signal loss from a transmitter to receiver along a particular path and terrain.

For its part, the Department of Defense will then provide engineering data to the ARRL and FCC. These studies will be reviewed by the Department of Defense, the ARRL Lab and the FCC to determine the amount of mitigation necessary for each repeater.

Based on this review by the Department of Defense additional mitigation proposals for individual repeaters will be provided by the ARRL as needed to individual repeater owners. This might include further power reductions, lowering of antenna heights, use of more directive antennas and other possible mitigation techniques. If there is a disagreement on the conclusions, a conference call will be held to resolve any outstanding issues.

All interference must be resolved no later than August 1st. Beginning in August and continuing on a periodic basis, the Department of Defense will have a follow-up engineers study at each PAVE PAWS Radar site to ensure corrective actions

have been taken and to ensure that successful mitigation continues.

The ARRL says that even with extreme measures, its still possible that some repeaters in close proximity to the PAVE PAWS sites may have to be shut down permanently. If that happens, official notice would come from the FCC. It is also conceivable that some repeaters might be required to operate permanently at a lower power level in the areas near these Air Force bases. In those cases, the League will be in contact with the individual repeater owners with that information and the FCC will be notified.

The bottom line: Its up to the ham community near the two PAVE PAWS Radar installations to make co-existance work. If the hams fail to do so, then they could have their repeaters taken off the air for good.

For the Amateur Radio newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

PAVE PAWS radar systems are used for national security functions, including early detection of water-launched missiles. The Amateur Radio Service is a secondary user in the 420 to 450 MHz band. As such, Amateur Radio licensees bear the responsibility of mitigating or eliminating any harmful interference to the primary user, which in this case is the Government Radiolocation Service that includes the PAVE PAWS Radar systems. (ARRL)

**

MILITARY RADIO: EXPIREMENT AT MIRAMAR

An experimental authorization has been granted to Northrop Grumman to operate in the 1850 to 1865 and 1930 to 1945 MHz bands. This, to demonstrate a Battlefield Airborne Communications Node for the U.S. Air Force. The system will operate both fixed and mobile as well as airborne at an altitude of 60,000 feet within 92 miles of Marine Corp Air Station Miramar near San Diego, California. More about it is on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-273498A1.doc (CGC)

**

RESCUE RADIO: NEW CELLPHONE SENSORS

The United States Department of Homeland Security has reportedly launched an initiative asking the

wireless industry about the potential for
equipping a new generation of cellular telephones
with technology to scan and detect harmful
compounds in the environment and automatically
relay the readings to a central monitoring
point. According to the CGC Communicator, the
concept, known as "Cell-All," is said to have
attracted the interest of several companies, and
partnerships with handset manufacturers are being
discussed. More is on-line at
http://public.cq.com/docs/hs/hsnews110-000002524221.html (CGC)

**

FCC NEWS: BETTER ULS INTERFACE ASSISTS THE HANDICAPPED

The FCC has enhanced the usability of the
Universal Licensing System website for people with disabilities.

According to the Handi Ham Newsletter, in the
redesigned License Archive, the search interface,
results screen and detail pages will use the same
display as ULS License Search. On the detail
pages, users will directly access license information.

Handi Hams says that this attention to better web
design will help everyone navigate the ULS pages,
not just people with disabilities. Users are
able to access the new functionality via the
"Archives" button on the ULS homepage at:
http://wireless.fcc.gov/uls/ (Handi Ham Newsletter)

**

NAMES IN THE NEWS: GET WELL WISHES TO QCWA PRES W3BE

Some names in the news. First some get well soon
wishes to QCWA President and 1991 Radio Amateur
of the Year John B. Johnston, W3BE. John is back
at his Maryland home recuperating from heart
bypass surgery on Thursday, June 8th. According
to word from the QCWA the operation went well and
he should be fine after his recovery period. Get
well wishes can be sent to W3BE at his callbook address. (ARNewsline(tm),
QCWA)

**

NAMES IN THE NEWS: JOHN HENNSEESS N1KB TO BE REMEMBERED AT FIELD DAY 2007

The ARRL is reporting that the Newington Amateur
Radio League in Connecticut will honor the memory
of long-time Handiham volunteer John Hennessee,
N1KB. This, at Field Day 2007 by using the special event callsign W1H.

John Hennessee died in 2006 at age 42. He had worked at ARRL headquarters for 20 years and was described as always patient and thorough in his answers to our questions about rules and regulations. The Field Day operation using the W1H callsign is a tribute to his dedication to the Amateur Service over his lifetime. (ARRL)

**

NAMES IN THE NEWS: N6R - A FIELD DAY CELEBRATION OF PRESIDENT AND MRS. REAGAN

And listen out for a very special Special Event station over Field Day weekend. This one operating from the Ronald Reagan Presidential Library in Simi Vally, California as N6R.

This is the third consecutive year that the Ventura County Amateur Radio Society will operate from the library grounds . And once again they will be joined by members of the Simi Settlers Amateur Radio Club for what is fast becoming an annual Field Day operation that also commemorates the lives of President Ronald and Mrs. Nancy Reagan.

This is a prize contact not to be missed. QSL N6R to N6ZE with Self Addressed Stamped Envelope to his QRZ.com mailing address. (N6ZE)

**

NAMES IN THE NEWS: A K9EID FIELD DAY CONCERT

This year will mark a different kind of Field Day for ham radio's own Mr. Audio. This with word that Bob Heil, K9EID, will spend Sunday, June 24th firing up the Mighty Wurlitzer pipe organ at the Towe Auto Museum in Sacramento, California.

For those of you not aware, in addition to being an inventor and researcher, Bob Heil is also a well accomplished concert organist. And this particular concert will actually be a reunion of sorts between K9EID and the instrument on which he will be performing.

The gorgeous instrument which Bob will play was originally installed in the St. Louis, Missouri. Lowe's State theatre during the late 1920's. In 1958 it was removed and installed in Rugerri's restaurant in St Louis where a then young Bobby Heil played this very Wurlitzer for the diners. The organ was moved to Sacramento were pipes from the Hollywood home of the late

producer director Cecil B. De Mille were added to make this spectacular sounding instrument.

The Sierra Chapter of the American Theatre Organ Society is sponsoring this Sunday afternoon concert. It begins at 2 P.M. Pacific time and admission to it is free with a paid museum admission. And during the program K9EID will introduce songs from his latest CD titled "Bob Heil at Home." This recently completed album was recorded on his own 3 manual theatre organ that is installed in his Illinois studio.

Again, that's Field Day Sunday, June 24th at the Towe Auto Museum in Sacramento, California, for a free theater organ concert by ham rafios's own Bob Heil, K9EID. It should be a truly fun afternoon. (Heil Sound Ltd. release)

**

BREAK 2

This is ham radio news for today's radio amateur. From beneath the Southern Cross, we are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CHANGING OF THE GUARD: 73 TO "MR. WIZARD"

If you grew up in the 1950's and 1960's and had a fascination with science, them you likely tuned into a television program called "Watch Mr. Wizard." For 30 minutes each week from 1951 to 1965, Don Herbert donned the persona of "Mr. Wizard" to teach his legions of young viewers about the magic of science in every day living.

Its not known if Don Herbert was a radio amateur. Years ago there were stories circulating that he held a W 9 call prior to World War 2, but that's never been established. No matter, Don Herbert as "Mr. Wizard" is generally credited with helping to build the United States base of baby boomer technologists whose interest in science and engineering was peaked by tuning into this

program. Some, credit their lifelong careers to watching Mr. Wizard as they were growing up. And one ham we know quite well got hooked in a big way. While he was in college, Henry Feinberg, K2SSQ, took a job with Mr. Wizard designing many of the simple experiments that made kids want to turn on and tune in. He says that Don Herbert's key to success was to always keep science understandable and use the kind of objects a youngster might find around the house.

--

Feinberg: "The first thing that I made after I found out it was Mr. Wizard -- I had watched that program while growing up -- was to take a piece of Oak Tag (construction paper) , make it into a cone, stick a darning needle on the end of it and use it as a phonograph."

--

Keeping science simple was the real key to Don Herbert's success as Mr. Wizard. As a result, the show which was aimed at youngsters between 8 and 13 received a Peabody Award in 1953 for the high quality of its youth programming. And by the mid-1950's more than 100,000 children across the United States had enrolled in 5,000 Mr. Wizard Science Clubs. And such was the power of Don Herbert on America's youth that during the 1960's and 1970's, about half the applicants to Rockefeller University in New York cited Mr. Wizard when asked how they first became interested in their chosen careers.

After his children's program went off the air, Don Herbert remained in television science programming with general-audience shows like "How About" and "Exploration." NBC revived "Watch Mr. Wizard" for one year in the early 1970's. In the 1980s, Don Herbert reprised his children's shows with "Mr. Wizard's World" on the Nickelodeon cable network.

Don Herbert never really retired. Always dedicated to the education of America's youth, in recent years he established a website where he made may past shows and his science training materials available to the general public. And it was on that website where his family posted the sad news that he had passed on Tuesday morning, June 12th . Don Herbert -- "Mr. Wizard" -- was 89.

Additional informatiuon from the Mr Wizard Studios website: For those of you who would like to share your thoughts on Don Herbert or anything Mr. Wizard related, the family has added a guestbook for your convenience. Also added is a new blog. Both Can be reached by links on the http://www.mrwizardstudios.com/ home Pge. (ARNewsline(tm) from published reports.)

**

ON THE AIR: COMMEMORATING 70 YEARS OF TRANS ATLANTIC FLIGHT

To commemorate the 70th anniversary of the first transatlantic passenger test flight, a special re-enactment flight is planned by Captain Patrick White and his son Ian. The two will be flying their "Vintage Lady", a PBY Catalina Flying Boat, from Botwood Newfoundland to Foynes, Ireland, on the 5th and 6th of July. To celebrate this event, Ireland's Limerick Radio Club has been invited by the Foynes Flying Boat Museum to operate a special Amateur Radio station in conjunction with the commemorative reenactment of the 1937 flight. EI70FOY will be on the air from the 6th to the 8th of July on 80 throuhgh10 meters as well as locally on VHF and UHF. A special QSL card, commemorating the flight, will be sent to all stations worked over the three days . All QSL cards should be sent to the Club's QSL Manager Alan Cronin EI8EM at his callbook address. (Southgate)

**

ON THE AIR: 2ND REGIMENT HELICOPTER COMMEMORATIVE

And another special event station is TM2RHC. It will be active from 10th to 24th of June before and during an air show at Le Luc le Cannet, France. QSL via F4EUN. The call letters TM2RHC stands for 2nd Regiment Helicopter Combat. QSL as directed by the operators. (OPDX)

**

THE CONTEST CALANDER: IARU WORLD CHAMPIONSHIO - JULY 14 - 15 UTC

In radiosport news, this years annual IARU HF World Championship will be held during the 24-hour period from 1200 UTC Saturday, July 14th to 1200 UTC Sunday, July 15th. Because this is unusually late in the month for the event to occur, there has been some confusion about the dates. So again the correct dates are the 14 and

15 of July in UTC time. Complete rules are on
line at www.iaru.org/contest.html (Via E-Mail)

**

DX

In D-X, word that the The Polish 3B6 Agalega
Islands DXpedition Team will be operating until
the 18th of June. Team leader SP9MRO says that
the group's call sign is 3B6DX. For more details
and updates, visit www.3b6.godx.eu

ON4LO, will be active portable C T from a couple
of Portuguese lighthouses until 29th
June. Thoise hes putting on the air are Cabo de
Sao Vincente and Ponta Sagres. He plans to
operate SSB and digital modes on 10 to 40 meters. QSL as directed on the
air.

The White Tower DX Team's operation from Skyros
Island is expected to take place from 16th to
22nd June. Nine operators will be active as SY8WT
with six stations, five amplifiers and a wide
range of beams, verticals and dipoles. QSL via
SV2HPP, direct or via the bureau.

(Above from various DX news sources)

**

THAT FINAL ITEM: FIGHTING THE 10 METER FREEBAND INVASION

And finally this week, if you are wondering what
all those conversations without call signs are on
28.085 MHz, well it appears to be a small
invasion of unlicensed truckers and so called
Freeband operators of our 10 meter band. We have more in this report:

--

Originally confined to portions of the mid-West,
the pirate trucker and Freeband epidemic appears
to be spreading nationwide. This, as more and
more of these illegal operators are making their
unauthorized home on 28.085 Megahertz and several other 10 meter
frequencies.

And what is the Amateur Radio community doing
about this invasion? On the surface at least,
very little. With the upper High frequency bands
not offering very much D-X these days, the
majority of hams are sticking to 20, 40 and 80
meters with few stations heard in the 15, 12 and

10 meter spectrum. So the truckers and
Freebanders see this is fair game for their
unlawful operations and are busy establishing
squatters rights in these bands.

What about the FCC? Well its doing what it
can. There have been several well publicized
violation notices sent to trucking
firms. They request owners to instruct their
drivers to curtail any operations for which they
are not licensed and threatening punitive action
such as fines. But that's about it. With the
FCC enforcement folks stretched thin and Freeband
operations being among the lowest of priorities
on the enforcement agenda, there is no reason to
believe that there is going to be any sort of
massive sweep by the Federal government to clear
these pirate operators out of the ham radio bands.

In the end, it will be the ham radio community
that will have to defend these frequencies. And
it does that by using them. If hams load up 10
meters or any band with legitimate Amateur Radio
operations, there will be no place for the
illegals to play and they will go elsewhere.

In the case of 28.085, there have been
suggestions that this frequency become a national
C-W or RTTY Calling Channel. That's a pretty
good approach. Another is for every ham with the
capability of operating 10 meters to start
holding QSO's on that frequency. As any Morse
enthusiast will tell you, C-W can get through
even when faced with all sorts of QRM including pirate operators using
voice.

The bottom line. if licensed radio amateurs fill
up 10 meters even for local chats, the truckers
and Frreebanders will soon be looking elsewhere for a new home.

For the Amateur Radio Newsline, I'm Evi Simons, in New York.

--

About two decades ago, then 73 Magazine editor
Wayne Green, W2NSD, coined the phrase "Use it or
loose it." Back then it was applied to the
pending transfer of 220 to 222 MHz away from
Amateur Radio. Today the same words ring
important in fighting those without licenses who
are trying to take 10 meters forcibly from
hams. (ARNewsline(tm), QRZ.com, listener input)

==> US Senate to investigate BPL's interference potential to Amateur Radio

Sen Mark Pryor of Arkansas filed a bill yesterday in the US Senate calling on the Federal Communications Commission to conduct a study on the interference caused by broadband Internet transmission over power lines, otherwise known as BPL. Sen Pryor is a member of the Senate's Committee on Commerce, Science, and Transportation.

If passed, Senate Bill 1629 would require the FCC to "conduct and submit to the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Energy and Commerce of the House of Representatives, a report on a study of interference potential of systems for the transmission of broadband Internet services over power lines."

The bill states that there are to be four required areas of study.

1. "The variation of field strength of BPL service signals with distance from overhead power lines, and a technical justification for the use of any particular distance extrapolation factor.
2. "The depth of adaptive, or 'notch,' filtering for attenuating normally permitted BPL service radiated emission levels that would be necessary and sufficient to protect the reliability of mobile radio communications.
3. "A technical justification for the permitted, radiated emission levels of BPL signals relative to ambient levels of man-made noise from other sources.
4. "Options for new or improved rules related to the transmission of BPL service that, if implemented, may prevent harmful interference to public safety and other radio communication systems."

ARRL president Joel Harrison, W5ZN, said, "The ARRL is grateful for Senator Pryor's support. The radio amateurs of my home state of Arkansas are fortunate to be represented in both the Senate and the House of Representatives by legislators who are sensitive to our needs and concerns. The Senator's recognition of Amateur Radio's role in emergency communications and public safety is greatly appreciated."

This bill calls for the same studies to be performed as House Bill 462, introduced January 12, 2007 by Rep Mike Ross of Arkansas.

To view Senate Bill 1629, please see www.arrl.org/tis/info/HTML/plc/amateur_radio_act.pdf.

==> Are you ready for Field Day?

Field Day 2007 is fast approaching! Are you ready? Dan Henderson, N1ND, ARRL Regulatory Information Specialist and Field Day Coordinator, reminds all Field Day participants that now is the time to make those final preparations. "Now is the time to make sure you have sent out the letters inviting the local officials, such as town council members, served agencies representatives, to attend your event. You should also be firming up your media contacts."

If you need additional information, please refer to your Field Day packet. This includes rules, forms and various FAQs; it can be downloaded from www.arrl.org/contests/forms. Those groups still needing handouts and exhibit kits for their information tables should not wait any longer -- orders for supplies need to be at ARRL HQ by Monday, June 18 to allow for shipping prior to Field Day. Contact Leona Adams at 860-594-0341. The cost is $6.50 for ARRL members and $9.50 for non-members.

==> Army MARS HF e-mail system passes "hurricane test"

Although the 2007 Atlantic hurricane season has yet to begin, a Transportation Security Administration (TSA) alert for a fictitious hurricane in late March sent special teams of Army Military Affiliate Radio System (MARS) emergency responders scurrying to duty stations from Miami to Houston and beyond. Dubbed "Operation Sidewinder," the drill aimed to test a new HF digital backup communication link for airports in case a weather or terrorist event ever compromised conventional telecommunications, as Katrina did in 2005. For this first comprehensive trial run, Army MARS mobilized a new Winlink digital communication system, with Air Force and Navy-Marine Corps MARS members providing active support.

Operation Sidewinder marked the first comprehensive demonstration of the TSA's partnership with the Army MARS, a Pentagon-sponsored organization of volunteer Amateur Radio operators that supports federal government agencies during emergencies. MARS has some 5000 members in its separate Army, Air Force and Navy-Marine Corps branches. Operation Sidewinder called for a Category 3 hurricane to make landfall at Miami, continuing on toward Houston. To drill MARS's capabilities in multiple emergencies, a possible terrorist operation concurrent with the weather emergency was added.

Earlier this year, the TSA, part of the Department of Homeland Security (DHS), adopted the MARS Winlink emergency communications network for deployment at major airports. DHS, however, has not adopted Winlink on a department-wide basis. DHS cites the Winlink system for its ability to provide interconnectivity between HF radio and the Internet. The use of Winlink 2000 permits access to SHARES [SHared RESources program of the National Communications System] and MARS systems via conventional HF/VHF/UHF radio circuits.

Army MARS Chief Stuart Carter said Operation Sidewinder gave MARS members the opportunity to demonstrate long-haul HF connectivity, local VHF communication, HF e-mail, a WiFi computer interface with HF radio for e-mail, a TSA HF mobile facility, an Army MARS volunteer's vehicle capable of indefinite HF operations and two small, light and portable HF suites.

Participants at Miami International Airport activated the TSA Winlink station and dispatched an initial situation report to inform the network that the airport had shut down in the face of 115 MPH winds. At Pensacola, the TSA's AAN4PNS portable unit was activated. Other TSA stations joined in from Dallas/Fort Worth, New Orleans, Baton Rouge, Houston and Charleston, West Virginia. At Charleston's Yeager Airport, a 10 member MARS support team handled 50 text messages along with several photos. Texas Army MARS Winlink gateway AAB6TX logged 236 exercise messages in addition to secondary voice and MT63 digital traffic. Additional participants included the Pentagon's AAN3PNT, the Army North headquarters at Ft Sam Houston in San Antonio; FEMA Region 6, and the Texas State Emergency Operations Center, plus dozens of Army, Air Force and Navy-Marine Corps MARS members who joined on their own initiative.

==> ElectroMagnetic Capability Committee meets at ARRL HQ

The ElectroMagnetic Compatibility Committee (EMC), an ARRL Standing Committee, met at ARRL Headquarters in Newington this week. Committee Chairman Dennis Bodson, W4PWF, ARRL Roanoke Division Director, said the group came together to discuss the Committee's goals and objectives. They also discussed presenting an EMC forum at the Dayton Hamvention in 2008, as well as ElectroMagnetic Compatibility forum as it relates to automobiles.

"We provide hams with information on how they might minimize their situations to ElectroMagnetic Compatibility. We serve as the conduit to receive reports for Committee action and respond back," Bodson said.

Bodson said the Committee has numerous goals, including monitoring the development of ElectroMagnetic Capability; assessing the impact of ElectroMagnetic Capability on the Amateur Radio Service; informing the ARRL Board of Directors about the Committee's activities, and making recommendations to the Board for further action concerning ElectroMagnetic Compatibility if necessary.

Committee members have certain areas of expertise, Bodson said. Jody Boucher, WA1ZBL, is an electric-utility RFI troubleshooter. Ron McConnell, W2IOL, and Steve Jackson, KZ1X, work with digital subscriber lines (DSL). Mark Steffka, WW8MS, deals with automotive EMC. Steve

Strauss, NY3B, is an expert concerning home-phone networking and Part 15 issues. Ron Hranac, N0IVN, handles cable television issue. Cortland Richmond, KA5S, is an EMC consultant. Other members of the committee are ARRL Laboratory Engineer Mike Gruber, W1MG, and ARRL Honorary Vice President Hugh Turnbull, W3ABC, member emeritus of the EMC Committee.

==> ARRL Headquarters gets a facelift

If you haven't been to ARRL Headquarters lately, you might not recognize it. The building received a fresh coat of paint earlier this month, and the drainage problems in the parking lot have been fixed.

This week, workers started tearing out the sidewalks in front of the HQ building in preparation for the new Diamond Terrace. New curbs and sidewalks will also be installed. Pictures chronicling the progress of the project will be up on the ARRL Web site next week. This will be a photo blog or essay that will show the project as it goes through its many steps to completion.

A project of the ARRL Diamond Club, The Diamond Terrace will be constructed of personalized, 4ï¿½8-inch laser-engraved bricks. Gracing the new entrance to ARRL Headquarters, The Diamond Terrace will recognize donors wishing to venerate their own call signs or to honor or memorialize the call sign of a family member, club or "Elmer" (mentor).

ARRL President Joel Harrison, W5ZN, was the first in line to buy a Diamond Terrace brick, and another 20 bricks already are spoken for. Others can join them with a $250 annual Diamond Club membership contribution (ARRL will contact Diamond Clubbers who made contributions of $250 or more after November 15, 2006 to ask if they wish to place a brick). The Diamond Club now has more than 2000 members, and the unrestricted funds it takes in support such ARRL activities as spectrum defense, educational initiatives, field services, DXCC, publications, contesting and the ARRL Volunteer Examiner Coordinator among others, Hobart points out. "You pick an area that's near and dear to your heart, and Diamond Club revenue is very likely supporting it."

Donors may request up to three lines of 16 characters (spaces and punctuation included) per line, although the more lines, the smaller the characters. Legends may consists of a call sign or a name -- or both -- or a club name and call sign and even a year. Diamond Club members contributing $250 or more each year may add a new brick, or bricks, to the terrace. Especially generous donors may wish to donate a garden bench to The Diamond Terrace at ARRL for an initial donation of $10,000.

New bricks for The Diamond Terrace will be put into place 50 bricks at a time each year during May and June. Bricks will be set in sand and are treated to withstand a harsh New England winter. A brick locator will be posted on the ARRL Web site.

Hobart says the terrace ultimately will consist of 5000 bricks. "We hope it will be a catalyst for growth, and that many members will support this effort," she said. Contact Hobart by telephone (860-594-0397) or via e-mail at k1mmh@arrl.org. You can also visit the ARRL Web site to learn more or to sign up for your Diamond Club membership and Diamond Terrace brick.

==> Oklahoma governor signs antenna support structure bill into law; North Carolina next in line

Oklahoma became the 24th state to pass antenna support structure legislation. Governor Brad Henry signed Oklahoma Senate Bill 426 into law May 31. This new law states antenna support structures can be erected as long as the structure complies with 47 C. F. R., Section 97.15(b). This "allow[s] for the erection of an Amateur Radio antenna or an Amateur Radio antenna support structure at a height and dimension sufficient to accommodate Amateur Radio Service communications," the law reads.

The new law defines an antenna support structure as a "structure or framework that is designed to elevate an antenna above the ground for the purpose of increasing the effective communications range and reliability of an amateur radio station. Amateur Radio antenna support structures are removable by design and therefore are a removable structure for assessment purposes."

The Oklahoma law is scheduled to take effect on Thursday, November 1, 2007.

Meanwhile, in North Carolina, State House Bill 1340, the "Amateur Radio Antenna Bill" was approved by the Senate Commerce, Small Business and Entrepreneurship Committee on Thursday, June 14.

Director of Bill Drafting for the North Carolina Legislature Gerry Cohen, K4GC, wrote HB1340. "Though the committee approved the bill today, the report was not turned in; I expect that to happen Monday. If that happens, it will be on Tuesday's Senate calendar for approval, returned to the House Wednesday for concurrence in the date change amendment, probably concurred in Thursday of next week, ratified the following Monday, and delivered to Gov Michael F. Easley on Tuesday, June 26. He then has 10 calendar days to act, with day one being June 27. This is all assuming no hang-ups along the way," Cohen said.

The North Carolina bill calls for "reasonable accommodation" of antenna support structures. It states that "a city [or county] may not restrict antennas or antenna support structures of Amateur Radio operators to heights of 90 feet or lower unless the restriction is necessary to achieve a clearly defined health, safety, or aesthetic objective of the city [or county].

If North Carolina passes HB1340, 25 states will have PRB-1 language laws on the books.

==>SOLAR UPDATE

Tad "Sunrise, Sunset" Cook, K7RA, this week reports: Expect low sunspot activity and moderate geomagnetic conditions this next week. Higher geomagnetic activity is predicted for June 19 and again on June 22. The US Air Force predicts the planetary A index from June 15-24 (June 23-24 is ARRL Field Day) at 10, 5, 5, 10, 20, 15, 12, 20, 12 and 5. Geophysical Institute Prague predicts unsettled conditions for June 15, quiet to unsettled on June 16-17, quiet on June 18-19, unsettled June 20, and unsettled to active conditions on June 21. Sunspot numbers for June 7 through 13 were 59, 51, 19, 14, 13, 12 and 12 with a mean of 25.7. 10.7 cm flux was 85.5, 84.3, 78.6, 75.9, 73.3, 70.4, and 70.9, with a mean of 77. Estimated planetary A indices were 3, 8, 8, 8, 2, 4 and 5 with a mean of 5.4. Estimated mid-latitude A indices were 1, 7, 5, 6, 1, 3 and 5, with a mean of 4. These numbers show that average daily sunspot numbers for June 7-13 are down over 20 points, compared to May 31 thro!
ugh June 6. Average daily solar flux declined over five points. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: Coming up on June 13 is the SKCC Sprint, the NAQCC Straight Key/Bug Sprint, the RSGB 80 Meter Club Championship (CW) and the NCCC Sprint Ladder. The Digital Pentathlon, the All Asian DX Contest (CW), the SMIRK Contest, SARL Youth for Amateur Radio, the West Virginia QSO Party, the AGCW VHF/UHF Contest, Kids Day, DIE Contest, Run for the Bacon QRP Contest and the RSGB 80m Club Championship (SSB) are all this weekend, as well. ARRL Field Day is next weekend, June 23-24. Next weekend also plays host to the following contests: NCCC Sprint Ladder and the Digital Pentathlon on June 22; the Ukrainian DX DIGI Contest, His Majesty King of Spain Contest, (SSB), Marconi Memorial HF Contest and the ARCI Milliwatt Field Day. The Quebec QSO Party has been cancelled. See the ARRL Contest Branch page http://www.arrl.org/contests/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday June 17 for these online courses beginning on Friday July 6; Technician License Course (EC-010), Amateur Radio Emergency Communications Level 1 (EC-001), Radio Frequency Interference (EC-006), Antenna Design and Construction (EC-009), Analog Electronics (EC-012) and Digital Electronics (EC-013). These courses will also open for registration Friday May 15, for classes beginning Friday July 3. To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the CCE Department <cce@arrl.org>.

* ARRL Logbook of the World back on line: The new Logbook of the World server is up and running. The principal benefits of the new server, aside from the value of having newer hardware, are that it provides faster processing and more storage, and it uses upgraded operating-system and relational database (RDMS) software. The speed difference will be quite noticeable, as well. The increase in storage space took LoTW from using about 90 percent of its available storage to about 45 percent. The new software allows for future growth, as the ARRL has upgraded to a system that allows better distributed processing and clustering. LoTW has more than 16,400 users and over 130 million QSO records.

* New General class books are good to go!: According to ARRL Sales and Marketing Manager Bob Inderbitzen, NQ1R, the new ARRL General Class License Manual is ready for shipping. As of July 1, 2007, a new General Class license exam pool will take effect; the old pool will no longer be valid. The new ARRL General Class License Manual has everything you need to pass the General Class exam. Also available is the ARRL General Q&A. This book makes upgrading to General Class quick and easy, allowing you to review from the entire question pool with brief explanations following each question. You can order the new manuals, plus manuals for Technician and Amateur Extra from www.arrl.org/catalog/lm/.

* WAS Award gets a new look: Radio operators applying for the ARRL Worked All States (WAS) award will now receive a handsome, newly-designed certificate, sure to be a nice attraction to the ham who enjoys chasing awards and displaying prizes in the shack. The WAS Award is available to all amateurs worldwide who submit proof with written confirmation of having contacted each of the 50 states of the United States of America. The WAS Awards program includes 10 different awards and endorsements. Complete details, rules and applications for WAS can be found on the ARRL Web site. Those who already hold a WAS award can get the new style certificate issued for $10. Contact ARRL Awards Manager, Eileen Sapko at esapko@arrl.org or 860-594-0288

* US Islands revamps awards program: There have been some significant changes to the US Islands Awards Program. The US Protectorate Islands were recently added to the program;

formerly, only those islands governed by individual states were included. As such, there are several new islands added to the mix, including the US Virgin Islands, American Samoa, Guam, Puerto Rico and others. New awards have also been added to the program, and an additional award is the works for protectorate islands. USI stresses that the earlier award series is still ongoing and hasn't changed. "These new awards series marks the first expansion to the program in many years," said Page Pyne, WA3EOP, USI's Program Coordinator. For more information, please see www.usislands.org.

* Amistad takes to sea with Amateur Radio send-off: Special Event call sign W1A will be on the air this weekend in recognition and celebration of the up-coming transatlantic crossing and 18-month journey of the Freedom Schooner Amistad. This historic voyage will commemorate the 200th anniversary of the abolition of the slave trade in the United Kingdom and the United States, promoting the values of understanding and unity represented by Amistad itself. The main operation of this special event will be set up at the Long Wharf Pier in New Haven, Connecticut, homeport of the Amistad, flagship of the State of Connecticut. The ship will be docked there prior to its departure. Some stations expect to operate from remote locations using the W1A call sign. HF operations will start Friday, June 15 at noon, continuing through Saturday and Sunday. Planned frequencies include 3.675, 7.275, 14.275, 21.275 and 28.475 MHz. The Freedom Schooner Amistad is a replica of the original ship that! was commandeered by Africans who had been captured in 1839. First stopping in Halifax, Nova Scotia, the Amistad will travel to England, arriving in London in early August in commemoration of the 200th anniversary of the Abolition Act passed by England's Parliament. The Amistad will then join in the Liverpool National Museum's public opening of the International Slavery Museum on August 23, the UNESCO designated Slavery Remembrance Day. The ship travels on to Bristol before continuing its voyage to Portugal and the West Coast of Africa, marking major points in the history of the slave trade. In December, the Amistad will sail into the harbor of Freetown, Sierra Leone, the original West African homeland of many of the Amistad captives. This symbolic "homecoming" will be a capstone event of the Atlantic Freedom Tour. The Amistad will return to the United States via the Caribbean and Bermuda in spring 2008, traveling to multiple ports coming up the East Coast as the US commemo!
rates the bicentenary of legislation to ban the importation of!
slaves.
If any hams are interested in helping to operate W1A, please contact Don Wilson, K1IN at k1in@aol.com.

* Rare Rwanda on the Air: The Daily DX reports Vladimir Bykov, UA4WHX, is now operating from the very rare Rwanda as 9X0VB. Rwanda has not been on the air since late 1997 and currently ranks #33 on The DX Magazine's "2006 Most Wanted Survey." Watch for him on 10-160 meters on both CW and SSB. QSL via UA4WHX, but please wait until he gets home before sending your QSLs. There is no word on where Bykov will head to next.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also

available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>Delivery problems (ARRL member direct delivery only!): letter-dlvy@arrl.org

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

1111. Re: A plea for civility

On Jun 13, 1:08 am, "Howard Lester" <heyles...@dakotacom.net> wrote:

>
> Yeahhhhh, the personal here is Howard....
>

Talked to a young fella on the repeater the other day who introduced himself by saying "my first personal is Jim and you're my first contact, QSL?".

He seemed like a nice sort, delighted that he had just received his shiny new call sign, and was anxious to make some new friends. Kinda sounded like I felt when I put my new call sign on the air the first time way back when, except probably brighter, cuz Jim is one of those young computer jocks. Me, I still got problems with the LL scale on my Pickett slide rule. Yep, I think Jim sounded brighter than me, quick to catch on to things.

But I don't think Jim will be back on the repeater. Before I had a chance to really get to know much about Jim, or even wrangle an invite to lunch, another station, with an impressive "senior" call sign joined the contact, flashed his shiny Radio Cop badge, and proceeded to issue Jim a "verbal speeding ticket" for improper lingo on the radio. "Radio Cop" said the term "personal" (and for that matter "handle") were unwelcome in ham radio, and that Q-signals were not to be used on VHF voice. Just generally made my newfound friend feel like an unwashed interloper. (Gosh, I've been saying "handle" since I was a conditional class. Slow to catch on, you know.)

Now I should point out that "Radio Cop" took pains to appear very well meaning. Didn't use any bad words that I noticed, was quite polite, even seemed like he was trying to be "helpful." In other words, he thought he was doing Jim a favor by pointing out his transgression from our sacred Amateur Radio way of doing things. I think Jim felt just the same way I did back in a new school in third grade when the well meaning teacher pointed out that "we don't keep our pencil behind our

ear in this room." Sure enough, I looked around and none of my new classmates had pencils behind their ears. Sure was embarrassing, and at that moment I really wished I was back with my good old buddies in second grade. Now, if I'd been allowed to hang out a couple of days, I'm sure I would have learned how to properly stow my pencil. And if Jim would have hung around a couple of days on our repeater I just bet he would have noticed that his lingo, perhaps learned in another radio service, was a bit out of place, and pretty soon Jim would sound "just like the rest of us." Like I said, he seemed pretty bright to me, quick to catch on to things.

"Radio Cop", you have kept our hobby uncorrupted. I heard Jim down around 27 Mhz this morning, and saw his ad on eBay trying to sell his barely used 2-meter HT. I'm gonna miss my new friend Jim, because I think I could have learned something from him. Maybe you could have also.

Like I said, he seemed pretty bright to me, quick to catch on to things. What do think it was that he caught on to about us from "Radio Cop".

73, de Hans, K0HB

1112. WIANEWS for week commencing JUNE 17 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-06-16 04:36:42 UTC
From: nationalnews@wia.org.au
Message-ID: <200706160436.l5G4aPc24114@panix2.panix.com>
Source record: 4317
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing JUNE 17 2007

Mal VK4MAL is currently working with the Red Cross Counter-Disaster division in the flooded areas of the New South Wales Central Coast and Hunter Region.

Mal VK4MAL is Counter-Disaster Co-ordinator for Red Cross in North Queensland and he and hundreds of other volunteers were shipped in from across VK to provide some help for flood weary local volunteers and residents of the disaster zone.

VK2ATZ/portable the Westlakes AR Club were in the thick of things, but were still able, somehow, to score a vantage point to see the container ship which was washed ashore at Nobby's Beach on the Friday morning.

Saturday Westlakes Amateur Radio Club was open....But not for usual business. It was open to the few that braved the weather and answered the calls for help to clean up the debris from the horrible weather suffered the previous night.

Some helping included VK2YPW, VK2AFZ, VK2ZM and Keith VK2PKT, Paul VK2BPL, and Richard VK2FRKO also John VK2FJKG

Then when the Hunter River in Maitland looked like breaking its banks on Sunday, the Volunteer Rescue Association wasted no time in securing the specialist communications skills of WICEN (NSW).

Eight operators from the Hunter Region were deployed at Rutherford, and they were tasked with passing intelligence reports to the services involved, along with monitoring and reporting the river levels at 15 minute intervals. This involved three teams, two at the gauges and one at the control centre; all were alert and busy throughout the night and into the next morning.

As well as this, teams were on stand-by in both the Sydney North and Central Coast Regions, but as the floods abated they were not required; it is worth noting that although members in the Central Coast Region also suffered from the storm, some were still able to respond.

Other VRA squads such as CREST and Cave Rescue were also involved.

The President of the Volunteer Rescue Association, Ray Gill ESM[*], thanked WICEN for their prompt response.

(sourced to TARC Westlakes and Dave Horsfall VK2KFU WICEN (NSW))

[*]

Note: "ESM" is not a callsign, but refers to "Emergency Service Medal".

As shown in this recent Hunter Emergency, we amateur radio operators are community minded and are often keen to benefit our community and others with our equipment and skills. The development of the Wireless Institute of Australia National Network of Emergency Communications is a case in point.

Here is the Vice President of the WIA, Ewan McLeod VK4ERM.

The establishment of the Wireless Institute of Australia National Network of Emergency Communications or WIANNEC is progressing. This is the result of the IARU requirement to be able to provide initial emergency HF communications when required until government and other communications assets are operational and able to take over.

WIANNEC does not usurp the established role and capabilities of WICEN. However, it is anticipated there are WICEN operators and stations capable of satisfying the needs of WIANNEC as are well established stations and contest stations.

What can you do to assist in the planning, establishment and operation of this network in the unfortunate situation where our HF communications capability is required? Well, you must consider these five primary questions:

One. Are you in regular contact with Amateur Radio Stations in the Australasian region that is, is your station's capability proven?

Two. Are you able to support 24 hour operations with our neighbouring countries and nations?

Three. Is there a pool of experienced operators you can call on at short notice to assist in maintaining the 24 hour operation of your station?

Four. Do you have broadband and permanently on internet access?

Five. Are you prepared and able to make your station available for emergency communications in our region?

If you can answer in the affirmative for those five questions then I would appreciate hearing from you. My email address is vk4erm@wia.org.au

This is Ewan VK4ERM looking forward to your communication.

WIA PRESIDENT MICHAEL OWEN VK3KI

I would like to announce some changes that will take effect from 1 July.

>From 1 July 2007 the cost of Family Membership will drop from $40 to $30 per year.

A Family Member does not receive Amateur Radio and is a second or further person living at the same address as a Member or Concession Member receiving Amateur Radio.

The WIA Board hopes that this will encourage more people living at the same address to all become members of the WIA, particularly in this year of high expense associated with the ITU World Radiocommunication Conference next November in Geneva.

Also from 1 July 2007 the WIA will no longer offer membership without the magazine, Amateur Radio. Existing Non-AR memberships will continue.

The Board believes that while the WIA communicates in a number of ways, including broadcasts and the WIA website, the magazine is the only way that the WIA can directly communicate with all members who receive it, and so the non-AR membership is no longer appropriate.

The WIA has been forced to increase the cost of assessments.

Currently all assessment packs are $25. From 1 July 2007 the cost of packs used on or after that date will increase to $35 per pack, irrespective of when the pack was produced.

The assessment packs are for the Foundation qualification (which includes theory, regulations and a practical assessment), the Standard and Advanced Regulations and the Standard Theory and Advanced Theory. Each will cost $35, payable when the pack is used.

The only exception will be a practical assessment taken alone which will remain at $25.

A detailed cost review has revealed that the cost of producing and processing each pack is more than the amount we have been charging, and so other WIA income has been subsidising assessments.

Two reminders:

Please don't forget that the last date for nominations to be received for the Advisory Committees is 22nd June.

Currently we are reviewing the WIA's 'Assessment Instructions'.

That is, how we conduct the whole assessment process.

We have asked each Assessor to identify (with particularity) each part of the Instructions (including the forms) that have caused any difficulty or uncertainty or could be either clarified or simplified, and to make a precise suggestion as to change.

We remind the Assessors to respond and invite any one else who is interested to send your suggestions by post to Dianne Aston,
WIA Examinations Officer, PO Box 2175, Caulfield Junction, VIC, 3161, or by email to nationaloffice@wia.org.au, marking your email Assessment Instructions Revision.

We have asked that all suggestions be at the office no later than tomorrow, 18 June 2007.

THE WIA NATIONAL QSL COLLECTION

The WIA QSL card collection contains cards donated by radio amateurs and Short-Wave Listeners from both Australia and overseas, the aim of which is to save 'something for the future'. We are all aware of the great interest shown in such items as vintage cars, antique furniture and heritage buildings. QSL cards also have an archival value in that old QSLs, through their description of radio equipment and comments made by our radio 'old timers', can depict the fascinating world of amateur radio in its early days.

Members of the WIA have reason to be proud of their WIA QSL Collection, for it contains some of the most valuable archival material in the world. The QSL of Reinhartz 1XAM of the USA De Loy of France are here. It was the amateur radio transmission between these two experimenters in November 1923 that bridged the Atlantic for the first time. The QSLs of Frank Bell Z4AA and Cecil Goyder G2SZ are here. It was these experimenters who made the first two-way amateur radio contact between New Zealand and England in 1924.

The Collection has also an excellent range of post war QSLs such as rare DX, IOTA, DOK, Prefix and USA County QSLs, in addition to a thematic collection and a pictorial collection containing some of the world's most attractively designed QSLs.

The WIA appeals to all amateur radio operators and executors of 'silent key' estates to donate QSLs to the Collection. Such donations are acknowledged in the WIA's Amateur Radio magazine, and postage is fully refunded.

Both radio clubs and individuals have the opportunity of purchasing at cost price a DVD portraying a wide range of both pre-war and post-war QSLs. These have proved very popular at Club evenings.

Would you care to help by becoming one of our QSL contributors or a QSL Curator Enquiries should be directed to:

Ken Matchett VK3TL Hon. Curator
Tel: (03 9728 5350
Email: wiaqslcollection@wia.org.au

Thanks Robert, now we have received a letter from Ken, in the letter Ken tells us the he has undergone major surgery and undergoes a period of Radio and Chemo therapy. Ken is urgently appealing to all radio Amateurs particularly those in VK3 to consider become involved in the QSL collection and to help maintain what is probably one of the most valuable QSL collections in the world.

Ken says that even a few hours a week would be helpful. Again the email address to contact Ken is wiaqslcollection@wia.org.au

Following the outstanding success of the Parkes AGM weekend in May and continuing requests for copies of the reports presented at the open forum, WIA Director Robert Broomhead has announced that copies of the bound Open Forum Report Booklet would be available to members and affiliated clubs for $10 per copy including Postage..

This booklet of some 66 pages with glossy front cover pictorial of the 'Dish" will give members who were not at Parkes a good idea of the range of activities that are encompassed within the work of the Wireless Institute on behalf of members and all amateurs", said Robert, "It gives a good overview of the when, where and why of current WIA act ivies"

Appointment of Karl Hennig VK6XW as Intruder Watch Coordinator

Karl Hennig VK6 XW has been appointed by the WIA Board to replace Glenn Dunstan VK4DU who retired at the recent WIA AGM.

The WIA has accepted responsibility as a central clearing house for reports on intrusions from non amateur activities. The WIA Intruder Watch Service is an agreed mechanism with the Australian Communications and Media Authority (ACMA). The Service also links to the international intruder watch for amateur radio, specifically by linkages to the International Amateur Radio Union Region 3 covering our part of the world..

Full details of the WIA Intruder Watch system are available here on the WIA Web site.

The success of the Service in protecting the access of Australian amateurs to the HF depends heavily on the support of active amateurs willing to go that extra mile and submit formal reports about interference

Michael Owen VK3KI, President of the WIA and Phil Wait VK2DKN made special presentations at the NZART AGM June 2.

Michael spoke to the changes in the WIA since his visit two years ago at the New Plymouth Conference in 2005, whilst Phil spoke to Broadband over Power Line issue with a well presented and received presentation.

This text edition is only authorised for re-publication in full on www.wia.org.au on the ax25 ww packet radio bulletin board system and in the early email editions sent from the vk1wia server at national office. Any subsequent copying on newsgroups is a blatant pirated activity.

School radio club calling CQ IRLP

The Bishop Druit College Radio Club at Coffs Harbour on the mid-north coast of New South Wales is looking VK, ZL or Asia-Pacific contacts on IRLP.

The students who have been experimenting with building simple FM radio receivers are also keen to have some on air operating experiences.

IRLP contacts with interested parties or similar school electronic/radio groups would be great - but the club only has limited time during the local lunchtime period.

The station equipment has been provided by Peter McAdam VK2EVB - and the club is QRV Fridays 0315 - 0345 UTC, on the IRLP node 6625 which is via its local repeater VK2RDO.
(VK3PC)

VK4

FNNQARG was great !

The weather was beautiful during the day but a bit brisk at night, 65 hams and support crews attended, many experiments with canvas palaces and rapid deployment field poles and towers were undertaken and a heap of fun was had.

Oh, and some were lucky enough to purchase new transceivers and antennae and play with them in a tropical paradise PLUS sample some gastronomic resort delights.

This sums up the 2007 Far North and North Queensland Amateur Radio Get Together held over the Queens Birthday long weekend in June.

VK5

SERG have had a busy time, not only another successful Mt Gambier weekend, but would seem the hub of their extensive repeater network (VK5RNC) at Naracoorte received what seems to have been a direct lightning strike.

Took it all out; from antennae right through to UHF linking gear, meaning a complete rebuild.

Murphy lurking just before their convention again!!!

VK6

HAMFEST 2007 happens in Ashfield Sunday August 5 at 9am.

Northern Corridor Radio Group will even have interstate traders on the day with impressive specials!

Along with the usual features one experiences at hamfests, this "biggie" in Perth will feature 109 Signals Squadron and the Tesla Society.

Cyril Jackson Recreation Centre
Fisher Street
Ashfield.

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Next Foundation Licence course, and Standard / Advanced assessments .....

NEW SOUTH WALES

ARNSW regularly holds Foundation Licence Assessments as well as Exams for Standard and Advanced Licences.
Held on the last weekend of each EVEN numbered month.
The next Assessment will be 30th June & 1st of July.

The Hunter Radio Group
They'll hold their next licence assessments on Saturday 23rd & Sunday the 24th of June at 9.00 am at the Print Makers Workshop, 27 Popran St Adamstown.

For further information, please contact the Examination Group Leader, Grahame O'Brien VK2FA on 02- 49548688. It is important that Foundation candidates have a copy of the foundation manual and have studied it before attempting an assessment.
Manuals are available from the Hunter Radio Group.

Some places will be available for candidates wanting to upgrade from foundation licences to standard or advanced licences and the Hunter Radio Group will be having a sausage sizzle on both days for lunch.

VICTORIA

Amateur Radio Victoria has announced its next two Foundation Licence training and assessment weekends - 23rd and 24th of June and the 21st and 22nd of July.

Held at Box Hill North these classes attracting candidates from Greater Melbourne and Victorian regional areas.

For inquiries or to enrol please contact Barry Robinson VK3JBR 0428 516 001 or arv@amateurradio.com.au

(Amateur Radio Victoria amateurradio.com.au)

ACMA NEWS

The Australian Communications and Media Authority is seeking public comment on proposed variations to the schemes that regulate the conversion of broadcast television from analogue to digital mode.

INTERNATIONAL NEWS READ BY Rob VK5MM

ARRL/IARU TEAM TO REPRESENT AMATEUR RADIO AT ITU MEETING IN GENEVA

ARRL Chief Executive Officer and IARU Secretary David Sumner, K1ZZ, have been representing the IARU at a meeting of ITU-R Working Party 1A in Geneva, Switzerland.

Working Party 1A is responsible for spectrum engineering techniques within Study Group 1 (spectrum management) and has been working on a document that may eventually become what's called a "preliminary draft new report" on the impact of power line telecommunications (PLT, what we call BPL on this side of the Pacific) on radiocommunication systems operating below 80 MHz.

Of course, the IARU's interest is in ensuring that the report accurately reflects the sensitivity of the amateur services to interference from this source.

Also meeting at about the same time (June 12-20), ITU-R Working Party 8A, which is responsible for most of the land mobile services, plus the amateur and amateur-satellite services. WP 8A hopes to complete work on a "draft new handbook for the amateur and amateur-satellite services" to be published by the ITU.

OPERATIONAL NEWS - CONTEST COLUMN - D A T E L I N E

VK/TRANSTASMAN CONTEST
160M Phone 7 July 2007
160M CW 21 July 2007

The Hunter Radio Group Contesters will be operating in the Trans Tasman 160 meter phone event on July 7th this year at Luskintyre Tiger Moth Airport

There will be some fun type foxhunt also held round the airport.

The group extends a cordial welcome to all operators.

This will be an ideal training event for the up coming RD contest at the same location.

Food, drinks and accommodation will be available.

Accommodation will be on a first to book basis

As in all Hunter Radio Group functions, having fun will be the main objective

For further information, or to confirm your attendance please contact Grahame VK2FA on 02 49-548-688 before June 24th 2007

NZART MEMORIAL CONTEST - 80M - SSB AND CW.
7 & 8 July 2007.

Times :- 2000 NZST - 2300 NZST, divided into 3 operating periods each evening.

Band :- 80M SSB and CW.

Contest Rules NZART Website. http://www.nzart.org.nz
(John Powell. ZL1BHQ, NZART Contest Manager)

JULY 14-15
The annual IARU HF World Championship is held on the second full weekend of July. This year it will be held during the 24-hour period from 1200 UTC Saturday, 14 July to 1200 UTC Sunday, 15 July.
Rules are at www.iaru.org/contest.html

Because this is unusually late in the month for the event to occur, there has been some confusion about the dates. The CORRECT dates are 14-15 July. Any references to 7-8July are INCORRECT.
(David Sumner, K1ZZ Secretary, IARU)

14th of July the Jack Files Contest.
0800 UTC - 1400 UTC
80 metres only.
Use 3.5MHZ - 3.7MHz
CW; SSB; or All Modes

Boat Anchor Sprints:
August (11), October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

Today marks only 56 days to the 2007 RD contest.

Last years Audited results are now posted on the WIA website.

In the July issue of your AR magazine we will publish this years Rules (with some minor adjustments from the previous years).

On the WIA Website the rules are available along with associated documents.

Last year we saw a great rollup from all states including several of the then, newly licensed Foundation calls, we look forward to seeing and working many more of the F calls in this years contest.

For those using some of the computer logging programs PLEASE check that you have the current version, as many last year were using outdated programs which caused several headaches when checking the logs, and having to adjust

the scores.

7th World HST Championship will be held in Belgrade Serbia September 19-23rd.
www.hst2007.org

NOVEMBER 17/18
Spring VHF-UHF Field Day - November 2007
For everyone who likes to plan ahead - please note the dates for this year's Spring VHF-UHF Field Day. It will be held on November 17/18, a week later than usual. This will prevent a clash with club activities in two states.

SPECIAL EVENTS, BEACON AND NET ADVICE
VK's longest continual net;
The Southern Cross DX Net has been running for 43 years, operates 7 days a week - propagation permitting - on a frequency of 14.238.5MHz at 1215 zulu.

Boat Anchor Net

A regular on air gathering of people interested in old commercial amateur transceivers takes place Sunday afternoons.

The VK5 Boat Anchor Net can be heard at 3.30pm Adelaide time or 4pm Australian Eastern Standard Time on 7.064MHz plus or minus QRM.

Get their old radio out of the cupboard, tune it up and give net controller Mark Kilmier VK5EME a call.

80 metres 3.645 The Odd Night Net.

This to assist new Foundation members get used to their equipment by talking about various issues which they have and would like to discuss.

You might wonder about the name but it means they meet on the odd nights of the calendar i.e. 1,3,5,7,9. Hence the name Odd Night Net.

It is open to all classes of licences but mainly aimed at the new comers.
(Richard Osborne)

Special Event Stations

GB25FC is the special event call sign that will be active until 18th June to commemorate 25 years since the end of the Falklands conflict. Up to four independent stations will be working from the Wyke Regis Amateur Radio Training Centre.

They will be using Morse, SSB, digital modes, RTTY, SSTV and UI-View, and there will also be a station working through the local radio internet links.

More info from gb25fc@wykeradio.org

This is WIANEWS for week commencing JUNE 10 2007, I'M GRANT VK3VIM

NATIONAL WIA STORIES

ROBERT BROOMHEAD AND SILENT KEY

It is with sadness that the WIA advises the passing of Bill Rice VK3ABP, who at age 80 became a silent key whilst sitting in his favourite chair in his home in Altona.

It is a sad yet reflective occasion on which to remember a unique character.

Bill was the longest serving editor of the Wireless Institute of Australia's journal Amateur Radio magazine. He joined its Publications Committee in 1972, became Editor in July 1984 and continued in the position until December 1999. It was a role in which he relished and able to contribute in so many ways. As Editor he was also a member of the WIA Federal Executive for a number of years.

Bill was a quietly spoken gentleman, with the persona not unlike that of a yester-year stereotypical bearded scientist, with a brilliant mind.

He had been an active radio amateur for 60 years, first as VK5BP at Murray Bridge South Australia moving in 1948 to Adelaide to attend university.

On relocating to Melbourne in 1960 be became VK3ABP. He was from the era when radio amateurs built their own equipment. Synonymous with the callsign VK3ABP was his valve two-metre converter that featured in AR magazine and

became a very popular project enabling many to get on to that band.

While a good listener and being very personable, Bill talked little about his occupation in the defence research and development field and the leading edge technology that it involved.

Retirement from work gave Bill extra time for amateur radio projects

Bill had many friends and I have on the line Ron Fisher VK3OM ...
(Ron Fisher online recording)

Some of Bill's other activities included history and sailing. He often sailed in Gippsland - a personal achievement was to sail on the rarely filled inland salt Lake Eyre in South Australia.

In 2001 he was awarded honorary life membership of the WIA for his long and meritorious service, which he accepted with genuine humility.

One of Bills other close friends was Bill Roper VK3BR and I have Bill on line to share a few words....
(Bill Roper online recording)

A service was held Tuesday at St Eanswythe's Church, in Altona with about 200 people attending.

Bill will be sadly missed and his passing is a great loss to amateur radio.

ROBERT BROOMHEAD AND FRED SWAINSTON LISTEN TO THE AUDIO MP3

New National Standard Built Around Amateur Radio

The Commonwealth Department of Education Science and Technology has endorsed a new competency standard, called:-
"Operate and maintain an amateur radio communication station".

The standard approximates the syllabus for a Standard amateur operators certificate of proficiency.

This means the there is now a nationally recognised standard built around amateur radio. This is a link between amateur radio and education and industry. Competency to this standard can be an element in an electro-technology qualification.

It certainly should make amateur radio as an activity much more attractive to schools.

However, it is important to note that holding the competency will not qualify the holder for an amateur licence which still requires WIA certification to ACMA of competency in the theory, regulatory and practical elements of the syllabus.

WIA President Michael Owen VK3KI welcomed the Departments endorsement, saying he hoped that schools would be encouraged to support amateur radio activities and also acknowledged the work of the WIA's Nominated RTO, Fred Swainston VK3DAC in achieving this recognition of amateur radio.

P29 revival underway

A strong effort is being made to increase amateur radio activity in Papua New Guinea and a recent P29 CQ Day is only just the beginning.

Wilfred Kilepak Amai P29PG/VK3DWA initiated the very successful special activity day outside the Parliament Building in Port Moresby. There were plenty of interested on-lookers.

The radio administration PANGTEL is supportive of any steps to achieve a greater participation in amateur radio.

Wilfred says PANGTEL is aware of the Australian licence restructure that occurred in October 2005 that includes the Foundation Licence, but has not yet followed suit.

Traditionally P29 has mirrored the VK licence system, due to the strong relationship between Papua New Guinea and Australia that was established before it gained independence in 1975.

I'm Jim Linton VK3PC and you're listening to VK1WIA.

ROBERT BROOMHEAD AND WILFRED KILEPAK LISTEN TO THE AUDIO MP3

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then encourage them to enrol in a Foundation Licence training course.

Next Foundation Licence course, and Standard / Advanced assessments .....

NEW SOUTH WALES

The Hunter Radio Group
They'll hold their next licence assessments on Saturday 23rd & Sunday the 24th of June at 9.00 am at the Print Makers Workshop, 27 Popran St Adamstown.

For further information, please contact the Examination Group Leader, Grahame O'Brien VK2FA on 02- 49548688. It is important that Foundation candidates have a copy of the foundation manual and have studied it before attempting an assessment.
Manuals are available from the Hunter Radio Group.

Some places will be available for candidates wanting to upgrade from foundation licences to standard or advanced licences and the Hunter Radio Group will be having a sausage sizzle on both days for lunch.

WEST AUSTRALIA

HANDS UP IF YOU WOULD LIKE TO GO TO HAM COLLEGE?

Thought that would get your attention. In VK6 we now have HAM College offering courses for the foundation, standard and advanced licences. The next Foundation course is to be held on the 21st & 22nd of July - get your name in early to secure a place in the classroom.

Is anyone interested in obtaining their Advanced licence - the next course is scheduled to start in July/August.

How about Morse code.....yes there is even a course run for Morse - why not stop procrastinating and sign up today.

The next date for those wishing to sit Exams is June 30th.
Go to www.warg.org.au under the foundation licence page to view additional course and exam dates or you can contact VK6BDO Neil or myself for further details.

CONGRATULATIONS - RESULTS

Congratulations go out to new Radio Amateur Robert Young VK4FRJY who has recently received his new callsign from ACMA after successfully completing Foundation Assessment with the WIA Exam Service in Townsville.

Congratulations to 10 new Ham College graduates who obtained their Foundation licences over the past couple of weeks, as well as 1 standard and 1 Advanced.
Look forward to making contact with you all in the near future.

AROUND VK in 80 Seconds.

VK3

Amateur Radio Victoria say that the Mt St Leonard 70cm repeater VK3RMU north-east of Melbourne is now on its new frequency of 439.800MHz.

Amateur Radio Victoria made the very recent QSY was mainly due to persistent interference from a suspected low interference potential device (LIPD).

The Sunday VK1WIA broadcast will also adopt the new frequency later this month.

In south-west Victoria at Warrnambool the VK3RWL repeaters on 2m 147.050MHz and 70cm 439.650MHz are getting plenty of use by locals.

Early indications are that the range of VK3RWL is excellent with reports from Ballarat, Horsham, Hamilton and Portland being received.

While the repeaters are up and running there's still a little bit more work to do before the project is complete.

With the arrival of the winter rains and cold weather access to the site is becoming difficult.

Many thanks to Russell Lemke VK3ZQB who with others have worked to restore the repeaters, that were required to meet rigid and costly commercial site requirements, borne by Amateur Radio Victoria.

Early indications are that the range of VK3RWL is excellent with reports form Ballarat, Horsham, Hamilton and Portland being received.

DISCUSSION POINT

Often around this time in the WIA National News we bring you "Discussion Point",
Today we bring you BOILING POINT, thanks to Frank VK2FJL, Previous editor of Westlakes Magazine.

It seems a person decided to have a cup of coffee. He took a cup of water and put it in the microwave to heat it up (something that he had done numerous times before).

I am not sure how long he set the timer for, but he wanted to bring the water to a boil.

When the timer shut the oven off, he removed the cup from the oven. As he looked into the cup, he noted that the water was not boiling, but instantly the water in the cup "blew up" into his face.

The cup remained intact until he threw it out of his hand but all the water had flown out into his face due to the build up of energy. His whole face blistered and he suffered 1st and 2nd degree burns to his face.

Worse he may have lost partial sight in his left eye.

While at the hospital, the doctor who was attending to him stated that this is a fairly common occurrence and water (alone) should never be heated in a microwave oven.

If water is heated in this manner, something should be placed in the cup to diffuse the energy such as: a wooden stir stick, tea bag, etc.

It is however a much safer choice to boil the water in a tea kettle.

WHY IS IT SO???

Micro waved water and other liquids do not always bubble when they reach the boiling point.
They can actually get superheated and not bubble at all. The superheated liquid will bubble up out of the cup when it is moved or when something like a spoon or tea bag is put into it.

To prevent this from happening and causing injury, do not heat any liquid for more than two minutes per cup. After heating, let the cup stand in the

microwave for thirty seconds before moving it or adding anything .

==========
NEWS FROM ARNEWSLINE

WORLDBEAT - GERMANY: THE DL 100 AWARD

In news from around the world, German hams are on the air throughout June with a special celebration. This with members of the radio clubs of Norddeich and Hage commemorating the 100th anniversary of the well known coast station Norddeich Radio. Operations are planned for 160 through 10 meters on various modes. The special callsign, DL100DAN is being used and a special D A N 100 award will be available. More information can be found at http://norddeich-radio.de/ (OPDX)

WORLDBEAT - JAPAN: JARL TO CELEBRATE INTERNATIONAL QRP DAY

The Japan Amateur Radio League's QRP Club will be running five special event stations, 8J1P, 8J3P, 8J4P, 8J5P and 8J6P on June 17th to celebrate the International QRP Day. International QRP Day was designated by the IARU Region 1 Conference held in April 1984 in Italy to stimulate QRP operation worldwide. It was reaffirmed by the IARU Region 3 Conference in New Zealand in December of 1985 (JARL)

WORLDBEAT - UK: GB3RAL PROPOSED 40 AND 60 MHz BEACONS ON THEIR WAY

In VHF news, work from the United Kingdom that the new GB3RAL 40.05 and 60.05MHz beacons are due to receive government clearance in mid-June but both have already cleared their key Primary User stages. Assuming that regulatory clearance is also obtained the sponsors will go forward to for final clearance and approval sometime this summer.

If approved, it brings ham radio in the UK closer to the prospect of a unique 40, 50, 60 and 70 MHz co-located beacon system at the Rutherford Appleton Labs location near Oxford. While not in amateur bands, the 40 and 60 MHz beacons should prove to be extremely useful propagation study markers both in the UK and world wide. (GB2RS)

ON THE AIR: CELEBRATING IN INDY WITH HAM RADIO

Back in the United States, Indianapolis, Indiana has been a hotbed of special event stations during May and it continues in June. Fire up that new HF rig and get ready to copy. Jack Parker W8ISH has this report from the Circle City.

If you have your HF rig fired up and your antenna pointed toward Indianapolis you many score some great contacts in the next few weeks. Beginning Friday evening June 8th the Indianapolis Radio Club will begin making contacts from the site of the USS Indianapolis Memorial. The USS Indianapolis was sunk during World War Two after delivering atomic bomb components that were later used in the attack on Hiroshima. Listen for the W9IND call sign during the 44 hour event or check the Indianapolis Radio Club web page for more information.

The pace continues to quicken as the United States Grand Prix rolls into town on Fathers Day weekend, June 17th. Special event station W9IMS will be on the air, taking check-ins, during that weekend . This world class special event station operates during each one of the major races at the Indianapolis Motor Speedway. If you don't catch W9IMS during the Formula One race you have another opportunity to snag a special QSL card during the Brickyard 400 NASCAR race the weekend of July 29th.

And last but not least, many central Indiana clubs report gearing up for Field Day 2007 on June 23rd and 24th. Maybe we'll catch you on the HF bands.

Reporting for Amateur Radio Newsline this is Jack Parker W8ISH.

The USS Indianapolis Memorial station will join nearly 70 other special event stations around the world as part of the Museum Ships Weekend. (W8ISH)

THE QNEWS WORK BENCH - the nuts and volts report -
Since Adelaide's South Coast Amateur Radio Club took over the distribution of the VK5JST Antenna Analyser kits they have been receiving numerous orders for the kits from right across Australia.
Just visit their website, www.scarc.org.au

MORSE ON YOUR iPoD - we are joined by VK1KEP Peter Ellis.

This interesting contribution from Mark Sullivan ZL3AB appeared on the KiwiDX Group cluster.

In an attempt to improve CW comprehension and speed it was decided to load some CW files onto an iPoD to listen to on the way to work.

To start you need to create a CW sound file in "wav" format.

To do this, look for a great little freeware program on the net called WinMorse 2.0. Its a 482kb download and extremely easy to use.

http://winmorse. mark-bellamy.qarchive. org/

Once you open the software you can set the speed you want the CW sent at and then type/paste some text into the window.

All you need to do then is choose the output as "wav" from a drop down menu and the software does the rest.

Once you save the file you can then open it in the iTunes software that will convert the file into AAC, the default format for the iPoD and you can then copy it onto your iPoD and play it.
This process will also work for any MP3 player that has software that can convert wav files into MP3. If your software does not do that there are a number or wav to MP3 converters on the Net.

MEDIA WATCH

TV SHOWS THE EARLY DAYS OF UK EMCOMMS

A television show about the early days of Amateur Radio emergency communications in England was recently broadcast on the U-K TV station Channel 4 . This, as a part of the stations ongoing '3 Minute Wonder' series.

The program was called "Preparing for the Worst" was hosted by Pat Gowen G3IOR. It discussed one of the first ever mobile emergency communications operations ever in the U-K. Also in the show is Terry Owen, G4PSH and references are made to Rafars & Raynet of the city of Norfolk.

Preparing for the Worst can be seen on the YouTube video service.

INTERNATIONAL NEWS READ BY Rob VK5MM

ARRL/IARU TEAM TO REPRESENT AMATEUR RADIO AT ITU MEETING IN GENEVA

ARRL Chief Executive Officer and IARU Secretary David Sumner, K1ZZ, have been representing the IARU at a meeting of ITU-R Working Party 1A in Geneva, Switzerland.

Working Party 1A is responsible for spectrum engineering techniques within Study Group 1 (spectrum management) and has been working on a document that may eventually become what's called a "preliminary draft new report" on the impact of power line telecommunications (PLT, what we call BPL on this side of the Pacific) on radiocommunication systems operating below 80 MHz.

Of course, the IARU's interest is in ensuring that the report accurately reflects the sensitivity of the amateur services to interference from this source.

Also meeting at about the same time (June 12-20), ITU-R Working Party 8A, which is responsible for most of the land mobile services, plus the amateur and amateur-satellite services. WP 8A hopes to complete work on a "draft new handbook for the amateur and amateur-satellite services" to be published by the ITU.

OPERATIONAL NEWS - CONTEST COLUMN - D A T E L I N E

VK/TRANSTASMAN CONTEST
160M Phone 7 July 2007
160M CW 21 July 2007

The Hunter Radio Group Contesters will be operating in the Trans Tasman 160 meter phone event on July 7th this year at Luskintyre Tiger Moth Airport

There will be some fun type foxhunt also held round the airport.

The group extends a cordial welcome to all operators.

This will be an ideal training event for the up coming RD contest at the same location.

Food, drinks and accommodation will be available.

Accommodation will be on a first to book basis

As in all Hunter Radio Group functions, having fun will be the main objective

For further information, or to confirm your attendance please contact Grahame VK2FA on 02 49-548-688 before June 24th 2007

NZART MEMORIAL CONTEST - 80M - SSB AND CW.
7 & 8 July 2007.

Times :- 2000 NZST - 2300 NZST, divided into 3 operating periods each evening.

Band :- 80M SSB and CW.

Contest Rules NZART Website. http://www.nzart.org.nz
(John Powell. ZL1BHQ, NZART Contest Manager)

JULY 14-15
The annual IARU HF World Championship is held on the second full weekend of July. This year it will be held during the 24-hour period from 1200 UTC Saturday, 14 July to 1200 UTC Sunday, 15 July.
Rules are at www.iaru.org/contest.html

Because this is unusually late in the month for the event to occur, there has been some confusion about the dates. The CORRECT dates are 14-15 July. Any references to 7-8July are INCORRECT.
(David Sumner, K1ZZ Secretary, IARU)

14th of July the Jack Files Contest.
0800 UTC - 1400 UTC
80 metres only.
Use 3.5MHZ - 3.7MHz
CW; SSB; or All Modes

Boat Anchor Sprints:
August (11), October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

Today marks only 56 days to the 2007 RD contest.

Last years Audited results are now posted on the WIA website.

In the July issue of your AR magazine we will publish this years Rules (with some minor adjustments from the previous years).

On the WIA Website the rules are available along with associated documents.

Last year we saw a great rollup from all states including several of the then, newly licensed Foundation calls, we look forward to seeing and working many more of the F calls in this years contest.

For those using some of the computer logging programs PLEASE check that you have the current version, as many last year were using outdated programs which caused several headaches when checking the logs, and having to adjust the scores.

7th World HST Championship will be held in Belgrade Serbia September 19-23rd.
www.hst2007.org

NOVEMBER 17/18
Spring VHF-UHF Field Day - November 2007
For everyone who likes to plan ahead - please note the dates for this year's Spring VHF-UHF Field Day. It will be held on November 17/18, a week later than usual. This will prevent a clash with club activities in two states.

SPECIAL EVENTS, BEACON AND NET ADVICE
VK's longest continual net;
The Southern Cross DX Net has been running for 43 years, operates 7 days a week - propagation permitting - on a frequency of 14.238.5MHz at 1215 zulu.

Boat Anchor Net

A regular on air gathering of people interested in old commercial amateur transceivers takes place Sunday afternoons.

The VK5 Boat Anchor Net can be heard at 3.30pm Adelaide time or 4pm Australian Eastern Standard Time on 7.064MHz plus or minus QRM.

Get their old radio out of the cupboard, tune it up and give net controller Mark Kilmier VK5EME a call.

80 metres 3.645 The Odd Night Net.

This to assist new Foundation members get used to their equipment by talking about various issues which they have and would like to discuss.

You might wonder about the name but it means they meet on the odd nights of the calendar i.e. 1,3,5,7,9. Hence the name Odd Night Net.

It is open to all classes of licences but mainly aimed at the new comers. (Richard Osborne)

Special Event Stations

GB25FC is the special event call sign that will be active until
18th June to commemorate 25 years since the end of the Falklands
conflict. Up to four independent stations will be working from the
Wyke Regis Amateur Radio Training Centre.

They will be using Morse, SSB, digital modes, RTTY, SSTV and UI-View,
and there will also be a station working through the local radio internet
links.

More info from gb25fc@wykeradio.org

This is WIANEWS for week commencing JUNE 10 2007, I'M GRANT VK3VIM

NATIONAL WIA STORIES

ROBERT BROOMHEAD AND SILENT KEY

It is with sadness that the WIA advises the passing of Bill Rice VK3ABP, who at age 80 became a silent key whilst sitting in his favourite chair in his home in Altona.

It is a sad yet reflective occasion on which to remember a unique character.

Bill was the longest serving editor of the Wireless Institute of Australia's journal Amateur Radio magazine. He joined its Publications Committee in 1972, became Editor in July 1984 and continued in the position until December 1999. It was a role in which he relished and able to contribute in so many ways. As Editor he was also a member of the WIA Federal Executive for a number of years.

Bill was a quietly spoken gentleman, with the persona not unlike that of a yester-year stereotypical bearded scientist, with a brilliant mind.

He had been an active radio amateur for 60 years, first as VK5BP at Murray Bridge South Australia moving in 1948 to Adelaide to attend university.

On relocating to Melbourne in 1960 be became VK3ABP. He was from the era when radio amateurs built their own equipment. Synonymous with the callsign VK3ABP was his valve two-metre converter that featured in AR magazine and became a very popular project enabling many to get on to that band.

While a good listener and being very personable, Bill talked little about his occupation in the defence research and development field and the leading edge technology that it involved.

Retirement from work gave Bill extra time for amateur radio projects

Bill had many friends and I have on the line Ron Fisher VK3OM ...
(Ron Fisher online recording)

Some of Bill's other activities included history and sailing. He often sailed in Gippsland - a personal achievement was to sail on the rarely filled inland salt Lake Eyre in South Australia.

In 2001 he was awarded honorary life membership of the WIA for his long and meritorious service, which he accepted with genuine humility.

One of Bills other close friends was Bill Roper VK3BR and I have Bill on line to share a few words....
(Bill Roper online recording)

A service was held Tuesday at St Eanswythe's Church, in Altona with about 200 people attending.

Bill will be sadly missed and his passing is a great loss to amateur radio.

ROBERT BROOMHEAD AND FRED SWAINSTON LISTEN TO THE AUDIO MP3

New National Standard Built Around Amateur Radio

The Commonwealth Department of Education Science and Technology has endorsed a new competency standard, called:-
"Operate and maintain an amateur radio communication station".

The standard approximates the syllabus for a Standard amateur operators certificate of proficiency.

This means the there is now a nationally recognised standard built around amateur radio. This is a link between amateur radio and education and industry. Competency to this standard can be an element in an electro-technology qualification.

It certainly should make amateur radio as an activity much more attractive to schools.

However, it is important to note that holding the competency will not qualify the holder for an amateur licence which still requires WIA certification to ACMA of competency in the theory, regulatory and practical elements of the syllabus.

WIA President Michael Owen VK3KI welcomed the Departments endorsement, saying he hoped that schools would be encouraged to support amateur radio activities and also acknowledged the work of the WIA's Nominated RTO, Fred Swainston VK3DAC in achieving this recognition of amateur radio.

P29 revival underway

A strong effort is being made to increase amateur radio activity in Papua New Guinea and a recent P29 CQ Day is only just the beginning.

Wilfred Kilepak Amai P29PG/VK3DWA initiated the very successful special activity day outside the Parliament Building in Port Moresby. There were plenty of interested on-lookers.

The radio administration PANGTEL is supportive of any steps to achieve a greater participation in amateur radio.

Wilfred says PANGTEL is aware of the Australian licence restructure that occurred in October 2005 that includes the Foundation Licence, but has not yet followed suit.

Traditionally P29 has mirrored the VK licence system, due to the strong relationship between Papua New Guinea and Australia that was established before it gained independence in 1975.

I'm Jim Linton VK3PC and you're listening to VK1WIA.

ROBERT BROOMHEAD AND WILFRED KILEPAK LISTEN TO THE AUDIO MP3

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then encourage them to enrol in a Foundation Licence training course.

Next Foundation Licence course, and Standard / Advanced assessments .....

NEW SOUTH WALES

The Hunter Radio Group
They'll hold their next licence assessments on Saturday 23rd & Sunday the 24th of June at 9.00 am at the Print Makers Workshop, 27 Popran St Adamstown.

For further information, please contact the Examination Group Leader, Grahame O'Brien VK2FA on 02- 49548688. It is important that Foundation candidates have a copy of the foundation manual and have studied it before attempting an assessment.
Manuals are available from the Hunter Radio Group.

Some places will be available for candidates wanting to upgrade from foundation licences to standard or advanced licences and the Hunter Radio Group will be having a sausage sizzle on both days for lunch.

WEST AUSTRALIA

HANDS UP IF YOU WOULD LIKE TO GO TO HAM COLLEGE?

Thought that would get your attention. In VK6 we now have HAM College offering courses for the foundation, standard and advanced licences. The next Foundation course is to be held on the 21st & 22nd of July - get your name in early to secure a place in the classroom.

Is anyone interested in obtaining their Advanced licence - the next course is scheduled to start in July/August.

How about Morse code.....yes there is even a course run for Morse - why not stop procrastinating and sign up today.

The next date for those wishing to sit Exams is June 30th.
Go to www.warg.org.au under the foundation licence page to view additional course and exam dates or you can contact VK6BDO Neil or myself for further details.

CONGRATULATIONS - RESULTS

Congratulations go out to new Radio Amateur Robert Young VK4FRJY who has recently received his new callsign from ACMA after successfully completing Foundation Assessment with the WIA Exam Service in Townsville.

Congratulations to 10 new Ham College graduates who obtained their Foundation licences over the past couple of weeks, as well as 1 standard and 1 Advanced.
Look forward to making contact with you all in the near future.

AROUND VK in 80 Seconds.

VK2

The Hunter Radio Group Contesters will be operating in the Trans Tasman 160 meter phone event on July 7th this year at Luskintyre Tiger Moth Airport.
As in all Hunter Radio Group functions, having fun will be the main objective
For further information, or to confirm your attendance please contact Grahame VK2FA on 02 49-548-688 before June 24th.

VK3

Amateur Radio Victoria say that the Mt St Leonard 70cm repeater VK3RMU north-east of Melbourne is now on its new frequency of 439.800MHz.

Amateur Radio Victoria made the very recent QSY was mainly due to persistent interference from a suspected low interference potential device (LIPD).

The Sunday VK1WIA broadcast will also adopt the new frequency later this month.

In south-west Victoria at Warrnambool the VK3RWL repeaters on 2m 147.050MHz and 70cm 439.650MHz are getting plenty of use by locals.

Early indications are that the range of VK3RWL is excellent with reports from Ballarat, Horsham, Hamilton and Portland being received.

While the repeaters are up and running there's still a little bit more work to do before the project is complete.

With the arrival of the winter rains and cold weather access to the site is becoming difficult.

Many thanks to Russell Lemke VK3ZQB who with others have worked to restore the repeaters, that were required to meet rigid and costly commercial site requirements, borne by Amateur Radio Victoria.

Early indications are that the range of VK3RWL is excellent with reports form Ballarat, Horsham, Hamilton and Portland being received.

DISCUSSION POINT

Often around this time in the WIA National News we bring you "Discussion Point",
Today we bring you BOILING POINT, thanks to Frank VK2FJL, Previous editor of Westlakes Magazine.

It seems a person decided to have a cup of coffee. He took a cup of water and put it in the microwave to heat it up (something that he had done numerous times before).

I am not sure how long he set the timer for, but he wanted to bring the water to a boil.

When the timer shut the oven off, he removed the cup from the oven. As he looked into the cup, he noted that the water was not boiling, but instantly the water in the cup "blew up" into his face.

The cup remained intact until he threw it out of his hand but all the water had flown out into his face due to the build up of energy. His whole face blistered and he suffered 1st and 2nd degree burns to his face.

Worse he may have lost partial sight in his left eye.

While at the hospital, the doctor who was attending to him stated that this is a fairly common occurrence and water (alone) should never be heated in a microwave oven.

If water is heated in this manner, something should be placed in the cup to diffuse the energy such as: a wooden stir stick, tea bag, etc.

It is however a much safer choice to boil the water in a tea kettle.

WHY IS IT SO???

Micro waved water and other liquids do not always bubble when they reach the boiling point.
They can actually get superheated and not bubble at all. The superheated liquid will bubble up out of the cup when it is moved or when something like a spoon or tea bag is put into it.

To prevent this from happening and causing injury, do not heat any liquid for more than two minutes per cup. After heating, let the cup stand in the microwave for thirty seconds before moving it or adding anything .

==========
NEWS FROM ARNEWSLINE

WORLDBEAT - GERMANY: THE DL 100 AWARD

In news from around the world, German hams are on the air throughout June with a special celebration. This with members of the radio clubs of Norddeich and Hage commemorating the 100th anniversary of the well known coast station Norddeich Radio. Operations are planned for 160 through 10 meters on various modes. The special callsign, DL100DAN is being used and a special D A N 100 award will be available. More information can be found at http://norddeich-radio.de/ (OPDX)

WORLDBEAT - JAPAN: JARL TO CELEBRATE INTERNATIONAL QRP DAY

The Japan Amateur Radio League's QRP Club will be running five special event stations, 8J1P, 8J3P, 8J4P, 8J5P and 8J6P on June 17th to celebrate the International QRP Day. International QRP Day was designated by the IARU Region 1 Conference held in April 1984 in Italy to stimulate QRP operation worldwide. It was reaffirmed by the IARU Region 3 Conference in New Zealand in December of 1985 (JARL)

WORLDBEAT - UK: GB3RAL PROPOSED 40 AND 60 MHz BEACONS ON THEIR WAY

In VHF news, work from the United Kingdom that the new GB3RAL 40.05 and 60.05MHz beacons are due to receive government clearance in mid-June but both have already cleared their key Primary User stages. Assuming that regulatory clearance is also obtained the sponsors will go forward to for final clearance and approval sometime this summer.

If approved, it brings ham radio in the UK closer to the prospect of a unique 40, 50, 60 and 70 MHz co-located beacon system at the Rutherford Appleton Labs location near Oxford. While not in amateur bands, the 40 and 60 MHz beacons should prove to be extremely useful propagation study markers both in the UK and world wide. (GB2RS)

ON THE AIR: CELEBRATING IN INDY WITH HAM RADIO

Back in the United States, Indianapolis, Indiana has been a hotbed of special event stations during May and it continues in June. Fire up that new HF rig and get ready to copy. Jack Parker W8ISH has this

report from the Circle City.

If you have your HF rig fired up and your antenna pointed toward Indianapolis you many score some great contacts in the next few weeks. Beginning Friday evening June 8th the Indianapolis Radio Club will begin making contacts from the site of the USS Indianapolis Memorial. The USS Indianapolis was sunk during World War Two after delivering atomic bomb components that were later used in the attack on Hiroshima. Listen for the W9IND call sign during the 44 hour event or check the Indianapolis Radio Club web page for more information.

The pace continues to quicken as the United States Grand Prix rolls into town on Fathers Day weekend, June 17th. Special event station W9IMS will be on the air, taking check-ins, during that weekend . This world class special event station operates during each one of the major races at the Indianapolis Motor Speedway. If you don't catch W9IMS during the Formula One race you have another opportunity to snag a special QSL card during the Brickyard 400 NASCAR race the weekend of July 29th.

And last but not least, many central Indiana clubs report gearing up for Field Day 2007 on June 23rd and 24th. Maybe we'll catch you on the HF bands.

Reporting for Amateur Radio Newsline this is Jack Parker W8ISH.

The USS Indianapolis Memorial station will join nearly 70 other special event stations around the world as part of the Museum Ships Weekend. (W8ISH)

THE QNEWS WORK BENCH - the nuts and volts report -
Since Adelaide's South Coast Amateur Radio Club took over the distribution of the VK5JST Antenna Analyser kits they have been receiving numerous orders for the kits from right across Australia.
Just visit their website, www.scarc.org.au

MORSE ON YOUR iPoD - we are joined by VK1KEP Peter Ellis.

This interesting contribution from Mark Sullivan ZL3AB appeared on the KiwiDX Group cluster.

In an attempt to improve CW comprehension and speed it was decided to load some CW files onto an iPoD to listen to on the way to work.

To start you need to create a CW sound file in "wav" format.

To do this, look for a great little freeware program on the net called WinMorse 2.0. Its a 482kb download and extremely easy to use.

http://winmorse. mark-bellamy.qarchive. org/

Once you open the software you can set the speed you want the CW sent at and then type/paste some text into the window.

All you need to do then is choose the output as "wav" from a
drop down menu and the software does the rest.

Once you save the file you can then open it in the iTunes software
that will convert the file into AAC, the default format for the
iPoD and you can then copy it onto your iPoD and play it.
This process will also work for any MP3 player that has software that
can convert wav files into MP3. If your software does
not do that there are a number or wav to MP3 converters on the Net.
(fists club downunder)

MEDIA WATCH

TV SHOWS THE EARLY DAYS OF UK EMCOMMS

A television show about the early days of Amateur Radio emergency
communications in England was recently broadcast on the U-K TV station
Channel 4 . This, as a part of the stations ongoing '3 Minute Wonder' series.

The program was called "Preparing for the Worst" was hosted by Pat
Gowen G3IOR. It discussed one of the first ever mobile emergency
communications operations ever in the U-K. Also in the show is Terry
Owen, G4PSH and references are made to Rafars & Raynet of the city of Norfolk.

Preparing for the Worst can be seen on the YouTube video service.

Minor point:

For some odd reason, FCC lists "80 meters" and "75 meters" in Part 97
as if they were different bands.

> My
> reasons for doing so are probably typical: I do it because it reminds
> me of the first transmitter I owned, and of other rigs and earlier

I used to do some 75 meter AM - because it was fun. I hope to do more
soon. But the fun was definitely reduced by the behavior of a few bad
apples.

> I'm writing this to ask that hams who don't favor AM make allowances for us:

Long history of that. I don't know why, because AM activity is
concentrated on a few well-known frequencies.

> going to fade away without anyone noticing.
>

I don't think we'll lose HF spectrum. VHF/UHF is what the commercial and military folks want.

What has already started to happen is lack of protection for licensed radio amateurs. Look at the BPL mess: FCC has dragged its feet even when documented harmful interference has been presented.

As for the bad behavior on 75, it is one of the reasons I sold my AM rig (National NC-173, EFJohnson Viking 2 and 122 VFO) and focused on CW.

What really puzzles me about the problem is this:

Several months ago, FCC widened 75 meters (and narrowed 80 meters) even more than had been requested. AM voice is now legal for US Extras from 3600 to 4000 kHz. That's more space than any HF/MF ham band except 10 and 15 meters.

Is there no room for AM in all those 400 kHz?

73 de Jim, N2EY

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 17 JUNE 2007

You are listening to Amateur Radio Station ZS6SRL of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is broadcast every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. This broadcast can also be heard on Echolink by connecting to ZS6FCS. To listen to a web stream go to www.sarl.org.za, click on ARMI and follow the links. This, and previous bulletins, can be downloaded from the web site of the SARL i.e. www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other newsreaders please change to suit).

SILENT KEY

It is with regret that we have to announce the passing of Robert Mansfield, ZS5RB, aged 94, on Saturday 9th June 2007. We extend our sincere condolences to his family and friends.

PAUSE

In the news today:

TWO YAESU VX-2R 2 m / 70 cm HANDHELD TRANSCEIVERS TO BE WON

NEXT ZU EXAMINATION ON 23 AUGUST

BUMPER EDITION OF RADIO ZS

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

TWO YAESU VX-2R 2 m / 70 cm HANDHELD TRANSCEIVERS TO BE WON IN SARL CONTESTS

SARL VHF Manager Piet Badenhorst, ZS6PJB, has announced that the winners of the two contests coming up on 24 June and over the weekend of 21 - 23 September will receive a YAESU VX-2R 2 m / 70 cm micro handheld transceiver.

The first contest is the SARL Digital Contest next Sunday, 24 June running from 13:00 UTC to 16:00 UTC on the 40, 6 and 2 metre bands. The

second contest is the SARL VHF/UHF contest that takes place over the weekend of 21 - 23 September.

The SARL Digital Contest is sponsored by the Lichtenburg Amateur Radio Club and is aimed at the promotion of the use of the PSK mode in South Africa, and to establish as many contacts as possible between radio amateurs in Southern Africa using this mode.

PSK is the acronym for Phase-shift keying. It is a digital modulation scheme that conveys data by changing, or modulating, the phase of the carrier wave. What do you need to get started? The first step is to download the latest version of PSK31 from http://aintel.bi.ehu.es/psk31.html, install it and read the comprehensive help files. The site also includes a full explanation on how to wire up your transceiver to the PC.

As far as the competition rules are concerned, download the contest handbook from www.sarl.org.za. You will find details of the Digital Contest on page 8.

"PSK is an interesting mode," Piet Badenhorst told SARL News. "In many circles it is regarded as the successor of RTTY. I encourage radio amateurs who have not engaged in digital communications to set up for the contest on 24 June. Perhaps the best reason to do so is that it costs nothing and only a few junk box components are needed for the radio to PC interface.

The YAESU micro miniature 144/440 MHz handheld has extensive receive frequency coverage, providing local-area two-way amateur communications along with unmatched monitoring capability. It is the world's smallest HT with 1,5 / 1 watt output. Receive range is 500 kHz to 999 MHz (less cellular). This means you can hear the AM, shortwave and FM broadcast bands, TV audio, aircraft and public service channels. CTCSS/DCS with split tone capability is built in. Kobus Conradie, ZS1DC / ZS6UZ, of LetsPlayRadio has donated the transceivers for the contest.

NEXT ZU EXAMINATION ON 23 AUGUST

A typographical error slipped into last week's SARL NEWS item about the next ZU examination. The exam for the entry-level licence will be held on Thursday 23 August. The closing date for entries is 23 July 2007.

BUMPER EDITION OF RADIO ZS COMING YOUR WAY SOON

The next edition of RADIO ZS was mailed on Friday 15 June, will reach members this coming week and will be available for download by members from www.sarl.org during the week. The edition has a range of interesting articles leading with Dave Ingram, K4TWJ's feature "Ham Pride - our legacies and traditions."

Hannes Enslin, ZS6JDE's interesting article on EME for Africa is another good read. Texting with Eagle is about an interesting SMS type facility that will be included in AMSAT North America's Eagle project.

Chris Gryffenberg, ZS6COG, reviews the RigExpert Standard digital mode's interface available for use with digital modes and general transceiver control. He now shares his experience with you in purchasing and installing the Rig Expert.

The Quickie beam by Al Akers, ZS2U, is the ideal article for newcomers to amateur radio who would like to build a quick and inexpensive beam, or for the amateur who has trouble getting into the local repeater with a ground plane.

Eddie Leighton, ZS6BNE, asks the question in his Digital Modes column "is there a future for amateur radio?" There is also museum news, scouting and all about QSL cards. Do not miss this edition of Radio ZS.

Thanks to members of the Boland ARC who assisted in putting Radio ZS into the envelopes and affixing the address labels.

If you have something interesting to share, write it for Radio ZS and send it to Dennis Green, ZS4BS. His email address is zs4bs@netactive.co.za or radiozs@sarl.org.za. From now on Radio ZS will be published alternate months, so more reading for your membership of the SARL.

DX SURVEY

The closing date for the Southern African DX Survey is Saturday 30 June 2007. The survey can be downloaded from the SARL web site and after completing it, e-mail it to zs4bs@netactive.co.za. To date some 15 surveys have been received.

Also available on the SARL web site is DX Tracker V5, a MS Excel spreadsheet created by Tjerk, ZS6P, to assist you in keeping track of your DXCC entities worked and confirmed.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at low to very low levels. The geomagnetic field is expected to be quiet in general with unsettled to minor storm levels possible on 19 until 22 June. The expected Effective Sun Spot number for the coming week will be less than 5.

20 and 40 metres will provide best opportunities for DX. There is a possibility of 20 metre openings towards India from about 15:00 CAT. 20 metres may open towards Australia from 07:00. From about 17:00, there may be 20 metre openings towards Europe. At about 16:00 short 20 metre openings towards the West Coast of the USA are possible. Otherwise, contacts to the USA are going to be very challenging. For the CW and digital enthusiasts, it will also be worth monitoring 10 MHz.

It is once again time to work on your 80 metre WAZS award in the evenings. Remember that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

24 June - SARL Digital Contest; 30 June - Closing date for updating of SA DX Survey; ZS6PTA Flea Market; 1 July - President's Net and Intechnet; 23 August - Class B RAE; 18 October - Class A RAE.

SARL News wishes all fathers a very happy Father's Day.

SARL News depends on clubs and individuals for news items of importance and interest to radio amateurs. The one and only way to ensure that your contribution will reach the SARL News team, is to place it in www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date. It will be appreciated if you will do it in both Afrikaans and English.

The SARL also invites all listeners to listen to the program Amateur Radio Mirror International this Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. Audio is also streamed on www.zs6mrk.org and on Echolink from ZS6FCS as for this bulletin. A repeat transmission takes place on Mondays at 21:00 on 3 215 kHz. Telkom and Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

You have been listening to a news bulletin by the South African Radio League, which was compiled by Dennis, ZS4BS.

A prosperous week to all, 73.

/EX

I seem to remember reading something yesterday about a defense contractor
getting an experimental permit for something right spang in the middle of
1.8-2.0 MHz. I need to review the bidding on that, and will write more once
I find it.

The ARRL is holding the FCC's collective feet to the fire, and that sort of
action is one of the very few reasons that the ARRL still gets any of my
money.

Apparently not. But there's certainly plenty of room for the Hi-Fi SSB
crowd. *sigh*

Really odd, in that the ARRL lumps them together as 80 meters. The
whole thing is not accurate anyhow, so I guess it is more by convention
than anything else.

>
> I don't think we'll lose HF spectrum. VHF/UHF is what the commercial
> and military folks want.

Agreed. HF "suffers" from unpredictability, or perhaps more accurately,
it's wildly varying characteristics. One part of the day, a flea power
signal can make its way around the world, the next part it won't. Then
the sunspots can do the same thing. Those are all the characteristincs
that we have fun with, but are really bad for the control that is needed
by other groups. I like to think about what would happen during good
propagation to all those competing signals.

Politics always loses when confronted by physics. Even if wins all the
battles.

That would be quite a trick! (joke)

1 GB2RS NEWS Sunday 17 June

The news headlines

* Data and Repeater committees merged

* Chesterfield & District Scouts get lottery grant

* Amateurs in Household Cavalry pageant

A study of the work of the Data Communications Committee and the Repeater Management Committee has revealed increasingly common ground, especially where internet gateways and internet linking to repeaters are concerned. Advances are also being made towards the introduction of digital modes such as D-Star and APCO25 that amongst other newer technologies can carry both voice and data streams. With this in mind it has been agreed that a new committee based on the Repeater Management Committee structure and to be known as the Emerging Technology Co-ordination Committee will replace the DCC and RMC with immediate affect. The new committee will be chaired by John McCullagh, GI4BWM, with Iain Philipps, G0RDI as Vice-Chairman. Other committee members will include current Regional Repeater Managers and Steve Morton, G8SFR, who will continue to co-ordinate Internet Gateway applications.

Applications for Notices of Variation should continue to be submitted via the current Data Communications and Repeater Management Committee websites until further notice.

Chesterfield & District Scouts Amateur Radio Club has recently received a National Lottery Grant from the Awards for All Fund for ₯9959.00.

New radio equipment, computers, a portable generator and a mini marquee will be bought. The grant will be used to build upon the clubs aims and objectives in developing amateur radio within scouting and guiding in the Chesterfield and surrounding areas. The club intend to support scouting members in gaining their amateur radio licence, through training and development of their skills. They also want to develop Amateur Radio Direction Finding, ARDF, by purchasing equipment which will allow the club to demonstrate amateur radio within the scouting and guiding community in Derbyshire.

The Scout Radio Club usually meets once a month at varying locations in the Chesterfield area. Two members of the Worcester Radio Amateurs Association took part in the Household Cavalry pageant on 12 June.

John Griffiths, M3XER and Jem Carvil, M3JEM, are both owners of military vehicles once used by the Cavalry. John and his wife Anne are owners of an Alvis Saracen Armoured Command Post dating from 1956. Jem is the owner of a very rare Daimler Ferret Scout Car.

The event marked the official opening of the Household Cavalry Museum on Horse Guards Parade by Her Majesty the Queen. The Pageant brought to life the Household Cavalry's rich history through reenactments and ceremonial displays, from its formation in 1661 to the present day. A commentary was provided by Michael Portillo. Stephen Fry recorded seven different voices including that of Samuel Pepys and King George III, and Dame Judi Dench provided the voice of Queen Victoria.

2 EU governments have agreed that the troubled Galileo satellite navigation network needs to be built with public funds if it is to get off the ground.

Its 30 satellites will beam radio signals to receivers on the ground, helping users pinpoint their locations. The contract for the first four satellites proper in the final constellation was awarded at the end of 2004. Under the new arrangement, the public sector would now order the remaining 26.

During the course of the next six years, this will require Europe's ministers to release an extra one billion euros over and above the funds they were probably going to have to make available under the publicprivate partnership (PPP) originally envisaged. Concerns have been voiced by the amateur community because Galileo uses frequencies within the 23cm band.

Trowbridge and DARC G2BQY for the second time in three years entered the May RSGB 144MHz contest, operating portable from a former RAF airfield near Bath.

The event, which was held on 19 to 20 May was planned by David, M0GHZ and Chris, G0HFX, who supplied this equipment. David has been keen to encourage greater participation by club members in VHF events, which has also generated activity in the RSGB Club Championships. This recent contest activity proved to be a huge success for the club with 19 members taking part. A handful operated the station while others provided assistance in station assembly, aerial and tent erection, logging and catering. The club amassed 305 QSO and some 93 multipliers.

And now for the details of rallies and events for the coming week

[Note to newsreaders: please exercise your judgement on which of the 17 June events to read, based on your service area and time of transmission]. On Sunday 17 June the Newbury and District ARS rally and boot sale takes place from 9.30 at the Newbury Showground, near M4 Junction 13. Email carboot@nadars.org.uk for more information. On Sunday 17 June the East Suffolk Wireless Revival takes place from 9.30 at Suffolk Showground, Felixstowe Road, Ipswich. More details from John, G3XDY, on 01473 717830 or Steve, M1ACB, on 07720 412648. On Sunday 17 June Bangor and District Amateur Radio Club is holding its

40th Anniversary Radio and Computer Rally at Crawfordsburn Country Club, Crawfordsburn Village. Doors open at 11:30. For more details, contact Mike, GI4XSF, on 028 4277 2 383. From Friday 22 to Sunday 24 June the Hamtronic rally takes place in Friedrichshafen, Germany. On Sunday 24 June the West of England Radio Rally takes place at from 10am at the 'Cheese & Grain', Bridge Street, Frome, Somerset. Details from Shaun, G8VPG on 01225 873 098, or email rallymanager@westrally.org.uk. More details of these and future events can be found on pages 88 and 89 of the June edition of RadCom. Now for the news of special events

Nine Alpha Zero Seven Papa, 9A07P, special event station will be active on all bands and modes until 31 December to celebrate the city of Djurdjevac. Full story on a special QSL card. All QSOs will be confirmed automatically via the bureau.

3 GB1EPC will be active until 28 June to celebrate the European PSK Club 1st birthday. EPC number is 2000. The station will be setup at Bridge Street in Glasgow. Anyone is welcome to operate at the station, PSK modes only of course. QSL cards via MM0DFV. A veterans weekend using call sign GB2VET will be held on 3 to 5 August at the East Park Holderness Road Hull East Yorkshire. All veterans from the Navy, Army and Air force along with members of the public are invited to the event. The show will include outdoor displays by all the three services, military equipment and a veteran Spitfire from WW2 will be on display. Working on VHF and HF depending on the conditions at the time. Any person willing to help with this event, or for more information contact G0SWO RAFARS 2912, or telephone 01482 351907. The Bolsover Amateur Radio Society will be operating as GB2PF on Saturday 11 and Sunday 12 August to commemorate the birthday of local man Peter Fidler, who was a famous surveyor in Canada in the 1790s. The club intends to operate as many bands as possible, HF, VHF and UHF, from the new club shack located at the Coalite Sports and Social Club, Moor Lane, Bolsover.

And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources. Roland, 9A3MR, Tibor, HA3HP and Tom, 9A2AA, will be active from various islands in the IOTA EU-170 group until 20 June. They also plan to go and operate on 6 metres, from JN73 from as many (Islands Of Croatia Award) www.inet.hr/9a6aa/ new ones as possible. QSL via home calls. Giacomo, I4FGG, will operate CW and SSB as I4FGG/IF9 from Marettimo Island (EU-054, IIA TP-010) until 21 June. All QSOs will be confirmed automatically via the bureau. Dave, NA6DF, will be active holiday style from Punta Cana, Dominican Republic until 23 June. He will be operating QRP as NA6DF/HI7, mostly on 10 to 20 metres CW and SSB. QSL via home call. Look for Jan-Ole, DB8JO, SSB, Juergen, DJ5HD, CW and Wolfgang, DJ5ZWS, RTTY and PSK31, to be active on 10 to 80 metres as OX/homecall from Nuuk, Greenland (NA-018) until 25 June. QSL via home calls. Pietro, IT9OPR, reports he will be active holiday style from Puerto Rico (NA-099) until 28 June. He will operate from the QTH of Flavio, KP4AWX as well as mobile with Pedro, WP4CCQ. Jan, PA4JJ, will be active as 9A/PA4JJ/p from Porec, Croatia until 7

July. He plans to spend most of his time on the WARC bands using RTTY and PSK. QSL via home call direct or bureau a QSL request form for bureau cards can be found at www.pa4jj.nl. Look for RV3ATS, RV3ATT and RU3AVF to operate on 10, 15, 20, 40, 80 and 2 metres as RV3ATS/p from 16 mountains located in various different Russian Districts between 19 June and 21 July. They also plan to participate in a number of contests on the VHF and HF bands. QSL via RV3ATS, direct or bureau. Six operators from the Flying Dutch DX Group will be active as HB0/PA0ABM from Triesenberg, Liechtenstein until 22 June. They will operate on 160 to 10 metres CW, SSB and some digital modes with two stations. Logs will be available at www.logsearch.de/ and will be uploaded to Log of The World. QSL via PA0ABM, direct or bureau. The White Tower DX Team's operation from Skyros Island (EU-060) is expected to take place until 22 June.

4 Nine operators SV0XAW, SV2FPU, SV2HNZ, SV2HOB, SV2HPP, SV2HPY, SV2HRT, SV2HSV and SV2GNQ will be active as SY8WT with six stations, five amplifiers and a wide range of beams, verticals and dipoles. QSL via SV2HPP, direct or bureau. Special event station TM2RHC, which stands for 2nd Regiment Helicoptere Combat, will be active until 24 June before and during an air show at Le Luc le Cannet, France. QSL via F4EUN. Francois, ON4LO, will be active as CT/ON4LO/p from Portuguese lighthouses Cabo de Sao Vincente (ARLHS POR-012) and Ponta Sagres (ARLHS POR-043) until 29 June. He plans to operate SSB and digital modes on 10 to 40 metres. Celebrating the 750th anniversary of Krakow's city rights is HF750C, which will be active until 30 June. QSL via SP9BRP. Expect also a large number of local operators to use special prefix SN0 during the year.

Now the contest news

The RSGB 80m Club Championships takes place between 1900 to 2030 on 21 June on the 3.5MHz band, SSB mode. The exchange takes the form of RST and serial number. His Majesty the King of Spain Contest takes place between 1200 on 23 June to 1200 on 24 June on 1.8MHz to 28MHz bands, SSB mode. The exchange takes the form of RS and serial number. The RSGB 50MHz Backpackers Contest takes place between 1100 to 1500 on 17 June on 6m band and all modes. The exchange takes the form of RST, serial number and locator. The RSGB 1.3GHz to 2.3GHz activity takes place between 2000 to 2230 local on all modes. The exchange takes the form of RST, serial number and locator.

Now the solar factual data for the period from the 4 to 10 of June, compiled by Neil Clarke, G0CAS. Solar activity was high on the 4th and moderate on the 9th when a M class solar flare took place on each day. The remaining days activity was low with a number of C class solar flares taking place. Solar activity was dominated by a single large sunspot group. However, a gradual decay in size, number of spots and magnetic complexity took place everyday. The largest solar flare was a M8/3B on the 4th. Solar flux levels declined from 86 units to 76 by the 10th. The average was 82. The 90 day solar flux average on the 10th was

74 units, that's one unit up on last week. X-ray flux levels declined from B1 units to A2.5 by the 10th, the average was A6.8 units. Geomagnetic activity was quiet throughout. An Ap of only 2 units was recorded on the 6th. The average was Ap 6 units. The ACE spacecraft saw solar wind speeds decline from 580 kilometres per second to 310 by the 7th. Particle densities were low except for a brief rise to 23 particles per cubic centimetre during the morning of the 8th. Bz varied little day to day and varied between minus 7 and plus 8 nanoTeslas. These reports frequently note the variability of propagation during the summer sporadic-E season. That was amply demonstrated during the past week. On the 6th, there were excellent sporadic-E openings, with 6-metre contacts between the UK and the Arabian Gulf, the Caribbean and the United States. On 144MHz, openings with Spain and Greece took place. 4-metres was also open for direct and crossband contacts. These openings lasted several hours. But most of those who hoped for more of the same the next day found contacts few and far between.

5 And finally the solar forecast. This week the quiet side of the Sun is expected to be looking our way. Solar activity should be very low everyday. Solar flux levels should decline and be around the 70 mark or even slightly lower than that later in the week. Geomagnetic activity should be quiet today but tomorrow or the day after activity is expected to increase due to a recurring coronal hole. This disturbance should last till almost next weekend. MUFs during daylight hours at equal latitudes should be about 18MHz for the south and 15MHz for the north. The darkness hour lows should be around 8MHz. Paths this week to India should have a maximum usable frequency with a 50 per cent success rate of around 22MHz. The optimum working frequency with a 90 per cent success rate will be about 17MHz. The best time to try this path will be between 0800 and 1300 hours UTC. Expect sporadic-E to take place on some days with possibly openings up to 144MHz. However, prolonged elevated geomagnetic conditions are not favourable for sporadic-E. And that's all from the propagation team for another week.

6 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

No trickier than the shrinkage-gap on 30-meters.

Several years ago GEARVAKf (the 'f' is silent) revealed the discovery that radio waves were gradually slowing down. Found during experiments conducted by our own Dr. Elwood P. Lishnus and Dr. Avruell U. Harnishe of the GEARVAKf Scientific Studies Committee, the Harnishe-Lishnus Effect has had a profound influence upon the manufacture and design of amateur radio equipment and other devices that make use of the radio spectrum.

Originally, radio frequency drifing was thought to be a minor problem within receivers and transmitters brought on by unstable heating and cooling of frequency-determining circuits. That theory was abandoned, however, when the slowing of the radio waves forced the electronics industry to change its frequency measurement system from the cycles-per-second to the Hertz standard. New equipment manufactured under the Hertz standard did not drift, whereas old gear made under the cycles-per-second standard continued to drift from set frequencies. Observation of this phenomenon led to the discovery of the Harnishe-Lishnus Effect in 1966.

The early experiments, however, dealt only with frequencies below 10 MHz. Last year, Drs. Harnishe and Lishnus made a series of observations of the slowing of radio waves above 10 MHz and found that they vary at a much different rate than those below 10 MHz.

Surprisingly, they found that the lower frequencies are actually pulling away from the higher frequencies, leaving a gap in the middle. That gap just happens to fall right in the new 30 meter amateur band between 10.109 MHz and 10.115 MHz. The FCC won't let us operate there because there are no frequencies to operate on! Any rig loaded up in the gap would see an infinite SWR and instant destruction. The Harnishe-Lishnus Effect provided early warning and probably saved thousands of dollar of equipment from ruin.

Oh dear, what I meant was that it would be quite a trick to widen 75
meters because once it was widened, it wouldn't be 75 meters any more!

Yeah, I know - pretty lame, huh?

Yup. Why FCC considers them different bands, even though they are
right next to each other, is a mystery.

There's also the size of simple, effective antennas on the lower
frequencies, particularly if you want broadband, no-tuner performance.
I saw a neat design for a 40-10 meter discone in the ARRL Antenna Book
- it's not exactly small.

I don't know about politics losing all the time. If the licensed
services are not protected, all kinds of havoc can happen.

In the bad old days, 27 MHz was an ISM band, reserved for things like diathermy and heat-sealing machines. I remember one case, here in Philadelphia, where a heat-sealing factory's machines put a strong harmonic right on the Philadelphia Police dispatcher channel.

Of course FCC was all over them in a big way. But imagine if FCC had dragged its feet...

Of course amateur radio isn't the same as the police channel, but once the camel's nose gets in the tent, things get very odd.

The major problem with the 27 MHz heat sealers was the 4th harmonic in the aviation bands. The local FCC engineer in charge had the legal authority to shut the plant down immediately without a warning or hearing and the plant could not resume operation until it certified by measurement and an FAA overflight that the IX was corrected. The necessary shielding to accomplish compliance is the reason that the characteristic "heat sealer buzz" is no longer a problem on 11 or 10 meters.

>Of course FCC was all over them in a big way. But imagine if FCC had
>dragged its feet...

Even today, FAA complaints take first priority, but in reality that was a different FCC... <g>

In my first year with the agency we went out on about a half-dozen such complaints in the San Francisco area, but 30 years later when I retired we hadn't received such a complaint in many years.

2 Metre Spring Counties Contest Results

The winner of the High Power portable section in the Spring Counties Contest was EI2SBC/P and the High Power Outside EI section went to MI0CLP/P.

The Low Power Portable section was won by EI4HX/P.

The High Power Fixed section was won by EI2JD and the outside EI category went to GI4SRQ.

EI3ENB won the low power fixed section while the outside EI section of this category went to MI3IYA (Now 2I0BIW).

The FM Only section was won by EI7GY/P.

Thanks go to all stations who took part, and congratulations to all the award winners. The next contest to look forward to is the UHF/VHF field day on the first weekend of July.

AFRI 75 DXpedition QSL Update

The QSL Manager of the recent Swaziland DXpedition, Peter EI7CC, reports that over the past few weeks QSL cards in respect of over 1000 QSOs have been sent to those who requested a direct QSL. The remaining 200 or so requests should be dealt with in the coming week.

QSLs for those EI stations who have not QSLed direct will be sent via the bureau.

Hong Kong Special Prefix

Approval has been granted for the use of the Special Prefix "VR10" in addition to "VR2" for Hong Kong Radio Amateurs starting from the 1st of July 2007 to the 30th of June 2008 for the 10th anniversary of Hong Kong's

reunification with China.

More details are available in the OFTA letter for Hong Kong Radio Amateurs, which can be found at www.ofta.gov.hk/en/amateur/ama-cir200706.pdf.

HARTS is also going to use the special callsign "VR10HK" as HARTS HQ Station especially during the IARU HF Contest (14-15/7/2007).

For further information, please contact the Award and Contest Manager VR2XNG (Dawood Ng) through email at
�excom2007 at harts dot org dot hk�.

South Eastern Amateur Radio Group

The date of the next theory revision class will take place this coming Tuesday the 19th of June at 7.30 p.m. in the Roanmore Centre, Waterford.

The next general meeting will take place on Monday the 26th of June at 8.00 p.m. in the Roanmore Centre, Waterford.

Comeragh Cycle Race

The national under 23 road racing championship will take place in Waterford on the 1st of July. Richie EI9HR is event Co-ordinator and he is being assisted by John EI8JA. This year�s race will be on a greater scale with over 160 riders taking part. The Civil Defence have come on board this year to help with marshalling and RTE will be filming the event.

AREN will provide the communications for safe traffic management and accident reporting. There will be more radio reporting points and mobile stations than last year so more radio operators are required. Again newcomers are welcome and training will be provided on the morning of the race. This is an excellent opportunity for operators to put their radio skills to good use in a very enjoyable and rewarding way for the benefit of the Community. All operators irrespective of experience are welcome.

Please contact Richie on mobile 085-1465465 or evenings on 051-854315. You can also contact Richie by e-mail at "ei9hr at yahoo dot com".

Rallys

Bangor & District Amateur Radio Society Rally will take place on Sunday the 17th of June in the Crawfordsburn Country Park, Helen's Bay, Co. Down. The Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel, Blarney, Co. Cork, the Waterford Rally will take place on the 21st of October 2007 in the Woodlands Hotel, Waterford and the Mayo Radio Rally will be on Sunday the 18th of November in the Belmont Hotel, Knock, Co. Mayo.

A full listing of upcoming rallys is available on www.irts.ie.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to ﷺnews at irts dot ieﷺ for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sundayﷺs bulletin.

Iitoi-

It is according to the write-up on the right side of the page. I
suggest you check out the FCC's OET Bulletin No. 65 via the link there.

Also at the FCC web site, OET65 Supplement B references a fairly simple
BASIC language program that does the same thing. I tried it, and was
able to run it using Chipmunk BASIC on my Macintosh computer. Quoting
footnote 12 from Supplement B:

"12 For example, a power density "calculator" has been developed by
Kenneth Harker, KM5FA, and can be
accessed at the following World Wide Web site:
http://www.utexas.edu/students/utarc/. This program is based
on a C version of a public domain BASIC program written by Prof. Wayne
Overbeck that appeared in the
January, 1997, issue of CQ VHF. The source code for this program may be
downloaded at:
ftp://members.aol.com/cqvhf/97issues/rfsafety.bas"

Then the politics loses. The world is full of examples where
politicians have decided what the truth is. I'll spare us the details to
avoid going off topic, but BPL, which is one really minor example of that
sort of thought, will almost certainly fail unless Amateur radio is
outlawed in all BPL deployment areas. While it does indeed interfere with
our service, we can inadvertantly shut it down just by transmitting
legally. I wonder how the customers will feel about losing their access
for large chunks of time. I really don't think it will ever get that far,
however.

If that were to happen, the BPL providers would exercise the same
"money talks and big money talks loudly" leverage as they have done to
get BPL approved, and thereby get the FCC to shut the Amateur Radio
services down in those areas, much as the Air Force (my pre-FCC
employer) is clobbering 3/4 meter band operation with their Pave Paws
radar systems.

My personal opinion is that BPL will self-destruct on economic grounds
if we amateurs can just hold out long enough.

AMEN! Hams are members of a group comprising about one quarter of one per cent of the U.S. population. We have strong common interests as a result of that shared minority status. Let's focus on those common interests, rather than on minor differences in our mode preferences or whether we say "name" or "handle" or "first personal".

These petty arguments remind me of sail-boaters and power-boaters arguing among themselves about which technology is "most efficient", or "gets through rough water", or whatever, while in the meantime a commercial interest is petitioning to drain the water out of the lake and converting the whole stinking place to an industrial park.

Friends, our "lake" of spectrum is in danger of being drained away -- spend your energy and intellect trying to solve that problem which MEANS SOMETHING to everyone of us, instead of arguing over the merits/ demerits of Morse testing, or whether "hi hi" on voice is acceptable.

Without spectrum, there is no Amateur Radio.

Fortunately, the legal situations which exist with regard to those two
situations are rather different.

w/r/t the PAVE PAWS radar systems in the 420 - 450 MHz frequency band,
the government radar system is the primary user of this frequency
spectrum, and has been for years. Amateur operators are secondary
users of these frequencies, and are (and have been) explicitly
required to limit use of these frequencies so that amateur use does
not interfere with the primary users (radar). All that has happened
recently, is that the government users have actually asserted that
amateur use _is_ interfering with radar, and that amateur users must
eliminate the interference as is required by the FCC rules.

In short, the Air Force has the law on their side. We can hope that
the ARRL's work to come up with a selective interference-mitigation
program will succeed... but if the Air Force gets snicky and insists
on a total shutdown of 70 cm ham repeaters near the PAVE PAWS sites,
they can make it stick.

The situation with BPL is different, as least as far as the law reads
today... BPL operators have *no* licensed right to radiate in the
amateur bands, while amateur users are either primary or secondary
users of these bands. The ARRL is making a pretty good case that the
FCC is ignoring both the law (national, and perhaps even international
law and treaty obligations), and their own regulations, in allowing
BPL operators to behave as they are.

>My personal opinion is that BPL will self-destruct on economic grounds
>if we amateurs can just hold out long enough.

Agreed.

The BPL providers have made big noise about how BPL will open up
broadband access to rural customers who are not now served by any
broadband providers. It would be amusing to see what would happen if
the FCC were to offer these providers the right to continue operating
BPL systems with current emission levels... but *only* on the

condition that the providers would agree to fund a build-out of their system to cover 90% or more of rural customers. Imagine the howls of "Oh, we can't afford that!"

I share that opinion, Phil, as do most others in the telecomm industry that I associate with. For all the hoopla generated from POTUS right on down into the ranks of FCC, the stark fact is that real-live users (notice I didn't say 'paying customers') of BPL number under 10,000 nationwide, and most of those 'users' are participants in 'trials' and 'feasibility studies'. After a half-decade of promotion, BPL has been unable to gain economic traction in the form of 'production' installations in real customer bases.

In five years BPL with be nothing more than a footnote in some telecom technical journals as a dead-end technological curiosity which never made a dime. Last time I checked there were less than 8,000 paid and 'demonstration' subscribers, and the number was dwindling.

Meanwhile every second issue of QST contains another confrontational "It seems to us" K1ZZ jeremiad about BPL, we see ARRL President W5ZN sending huffy letters to the FCC Chairman, ARRL has challenged the Commission in Federal court, and now a ham in Congress is pushing for a Bill to have a Congressional "study" of the matter.. All this over an issue that is already dying a quiet death-by-apathy on the part of the commercial telecommunications community.

I've spent two successful careers in professional telecommunications, and maintain strong personal and professional ties in the industry. Up until about 5 years ago Amateur Radio enjoyed a very positive reputation among the "pros", but today we are mostly viewed as obstructionist old coots without a clue, and it's getting worse.

This is absolutely the wrong time to be making enemies of the agency which controls our service. Kid yourselves not, our Amateur Radio service exists only so long as FCC considers us "worth the bother", and the recent behavior of ARRL seems, in my opinion, deliberately calculated to raise our "bother quotient". We should expect no support from the pros when FCC decides they've had enough of us; in fact we should expect them to cheer from the sidelines as we are sent off the field of play. Recent news out of Newington portends to me a hastening of that event.

I am not certain of that. Sometimes, government agencies are not able
to give voice to certain positions because of political pressures from
elected officials and their temporary appointees. The 'work-around' is
to get some pliant non-governmental organization to give voice to those
controversial positions. It is a sort of 'good cop/bad cop' routine. The
ARRL has been the FCC's lapdog for so many decades that it is tough to
imagine that they have suddenly grown a backbone.

This issue (BPL) will collapse from a case of market apathy. ARRL is squandering good will and good money on an issue that the "pros" in telecommunications have already written off as a non-starter. We should have saved our "silver bullets" to fight a real threat.

Staying home. The local club has talked the talk two years running,
telling my wife and others that they were welcome to operate, but
failed to walk the walk and actually let them operate when they asked
to. "Fool me once, shame on you. Fool me twice, shame on me." The
crowning glory was the club president and the repeater trustee jumping
her at a meeting because she dared to bring up the problems with the
repeater during bad weather, precisely when the repeater is most
needed. I've been on the club repeater since then only to run my
weekly net, and that'll die when my dues and membership expire.

I'll be catching up on house maintenance. Y'all have fun.

The CONTEST called a "Readiness Exercise" is just another contest.
Always has been. If it's a Contest going on, there's little point in
listening to "the bands" (the HF ones) since there is very little
evidence of actual "Readiness" activity that is supposed to be a
hallmark of an outing in the park with buddies.

If "Field Day" were an ACTUAL Readiness Exercise I would consider
joining in once I had some portable equipment. Since I don't and
since it isn't, I'll just stay in my air conditioned home and "work on
my code."

PIC programming code, that is... :-)

I think the two situations are a little different, depending on who is
the primary and secondary users of a particular frequency.

I wonder if they will ban The users of 11 meters too? 5 watts is enough
to disrupt BPL.

I don't think that the money will talk loudly enough as the sunspot cycle
picks up again. Could be wrong about that tho'

And even if so, It is just poor technology, and has so many levels of
possible failure.

Our club alternates between a low power, and a high power Field
Day. While I personally like the low power FD better, some of the other
guys really like to run legal limit into a 40 meter beam on a portable
tower. So we compromise and alternate. We'll be running 3A, with a
dedicated CW station, a dedicated 40 meter station, and a Other
frequency/80 meter evening station. We'll have a recieve antenna at the
perimiter of what is allowed to eliminate the interference you get when
you have a lot of high power stations operating in close proximity.

> Y'all have fun, heah?

Nothing better! Folks come out to chat as well as operate. We socialize
and have a mostly relaxing weekend (hard to call it all relaxing when I
pull the night shift on 80 meters - I'm pretty tired by Sunday afternoon)
It's always a little interesting trying to talk the local pizza places
into delivering to a field outside of town. Sometimes they do, and
sometimes they won't.

Of course Field Day isn't for everyone.

Sounds like you need a new club.

One thought on all this. It is quite possible that "they" got just what
they wanted if they squelched your XYL and you. But will you let them?

Might be time to have your own Field day setup. If your family is being
stepped on, there might be some others in the same situation who might
join with you.

I'm participating with my local club , probably do a graveyard shift and
have my wife (not licensed) join me to log and operate if she wants to.

I really don't get a club that says the YL is welcome and then doesn't
let her operate. Time for a conversation or a new club possibly.

The June 2007 issue of the IEEE Spectrum has a Special Report which
is over-titled "By 2008 More Than Half Of The World's Population Will
Live In Urban Areas." Note "world's population," not just the USA.
That further reduces some (mythical?) need to bring the Internet-
structure to rural users, the popular rationale for BPL...as touted by
the
FCC Commissioners of the recent regime. Meanwhile most of those
"isolated" rural users are doing just fine with their POTS.

Here in southern six-land there is intense competition among the cable
TV providers to offer high-speed Internet connectivity (768 KBPS on
the
cheapest plan) using the already-installed cable TV "wires." Much of
the Greater Los Angeles area and adjoining foothill communities are
already so "wired." We don't need subcarriers on AC primary power
lines to carry even low-speed Internet.

>Meanwhile every second issue of QST contains another confrontational

Ah, but BPL very definitely remains a clear and present danger to HF
radio users. SOMEONE has to carry the banner of Forces Against
BPL. We can't ask the apathetic to do it...they have, well, too much
apathy to do it.

However, the forces that be at Newington are feeling the mortality
symptoms of their organization. They feel they must DO SOMETHING

now that they no longer have the clout with the FCC they've always assumed was theirs. They may not have received an onslaught of New Members as a result of the revolutionary effect of 06-178. They seem worried, thus all the more reason to SAY something to prove they still "have what it takes to lead their membership."

But, I agree with you that they've gone over-the-top in their response.

Sincerely, Len AF6AY

So, it's been a Contest all along, hasn't it? Not really a "Readiness
Exercise" for "emergency communications" as has been rationalized
(seemingly forever) by lots of old-timers and the ARRL. Why don't
they come out and admit the truth of what it IS and has always been?

I see nothing wrong with having an Outing At A Park for ham radio,
particularly on a nice day in June which is ideal for northern-climate
folks (I grew up in northern Illinois and know what it is like). It's
an
ideal club "togetherness" activity away from the usual clubhouse
atmosphere. I think it would be better for all to stop the pretense
of
a "readiness exercise" and just call it what it IS, a Contest From
Field Locations.

>It's always a little interesting trying to talk the local pizza places
>into delivering to a field outside of town. Sometimes they do, and
>sometimes they won't.

In real emergencies one could not expect pizza places to be open
and running. Even during a fine day in June. No male-oriented club
has members with a roll-away barbecue grill? There was a whole
page of Field Day Recipes in the last QST.

> Of course Field Day isn't for everyone.

True enough. At least a third of respondents to the ARRL on-line informal, unscientific Poll said they wouldn't be participating.

Emergency Preparedness drills using radio? Been there, done that. The Army and Marines know how to do it, even at QRP RF power levels. In all kinds of weather at any time of day or night. The only "contesting" done is plain SURVIVAL.

Not to worry about this station in southern six-land. I won't be radiating RF during Field Day. I'll be at a diferent picnic. Non-ham-radio picnic. Enjoy.

Sincerely, Len, AF6AY

The high end of the band is at 75-meters, the low end at 85-meters
(give or take). On average, I guess it's 80 meters. I'm just glad
they don't make us call the MF/HF bands:

166.666666666666667-meters,
85.714285714285714-meters,
42.857142857142857-meters,
29.702970297029703-meters,
21.428571428571429-meters,
16.603940668585344-meters,
14.285714285714286-meters,
12.053033346725593-meters, and
10.714285714285714-meters.

Well, I've only had one career in radio-electronics counting my
particular military service. "Successful?" For me? Well, I want
for
nothing having finished it. As a mostly-licensed-NOT-in-amateur-
radio
for all of that time, I would make your "5 years" into 20 or 25
years.
The pro telecommunications and radio-electronics industries were
established and grown by NON-amateurs from the get-go, despite all
the legendary hoopla from old-timer-hams.

>This is absolutely the wrong time to be making enemies of the agency
>which controls our service. Kid yourselves not, our Amateur Radio
>service exists only so long as FCC considers us "worth the bother",
>and the recent behavior of ARRL seems, in my opinion, deliberately
>calculated to raise our "bother quotient".

The ARRL (I am a voting member) rather blew it big-time with their
"Regulation By Bandwidth" proposal. Both their original petition and
subsequent retraction of that looked to my non-legal eyes as written
by undergrad law students. Real attorneys would have fun with such
things and would have to really work to try to find out what those
documents were trying to say or convey.

One of the signs of the Newington group feeling their own mortality is
the "Diamond Terrace" proposal and "membership (for extra money)."
[call it the mausoleum syndrome] I have nothing against a building
reconstruction or spiffying-up a place of work. But buying a brick
for
cash just to have some quasi-immortality by members? Okay, if they
need cash inflow so much, then the League ought to cater towards
those three-fourths of all US ham licensees who are NOT members.

>We should expect no
>support from the pros when FCC decides they've had enough of us; in
>fact we should expect them to cheer from the sidelines as we are sent

>off the field of play. Recent news out of Newington portends to me a
>hastening of that event.

I don't share your gloom and doom there. I say US amateur radio will NOT suffer any near-future demise. The FCC full well recognizes that amateur radio IS a hobby (even if they don't say so outright). The FCC also recognizes that other RF emitters are also for hobby activities; see the 100 channels allocated for model radio control use at 72+ MHz, well after the first HF CB creation. Hobbyists are ALSO citizens and the federal government is obliged to listen to them as well as the evil big-money capitalists (who are also citizens).

If there be danger, then it is to future allocations of and about amateur radio. WARC-79 gave international hams new bands in HF. But, that was 28 years ago. What have the US hams gotten lately? A few individual channels at "60m?" Those 60m channels was originally a League proposal for a whole band, not a few channels.

Newington has always been oriented to HF. That's not where the future of radio is...the future is above 30 MHz where most of the rest of the radio world has gone and expanded. If the ARRL wants to concentrate on spectrum territory where their core membership operates at and using old tried-and-true modes, fine, but I see that as just catering to a minority of a minority. I see it as just plain IGNORING the majority of licensees. That ain't leadership.

Sincerely, Len, AF6AY

And what training and qualification of proficiency do you have to slip into the seat at a disaster EOC/ICP or field position and be an effective communicator, such as familiarity with the operation and the communication needs of the site and served agency or even the message protocols and formats in use and where and how they are to be passed?

In an emergency or disaster situation, we need TRAINED "message passers", far more than untrained drop-in volunteers. We are always ready to train folks before anything happens, but we really don't have the time or resources to train folks when the stuff is flowing.

And our Team does run Field Day as a Readiness Exercise, complete with call-outs and dispersal assignments.

It's a US acronym for Broadband over Power Lines. The European term
and acronym (which I can't recall right now) is something
different(Power Line Carrier ??), but the process is the same.

Not sure that I understand. We come out and get on the air, with
different styles of operation from year to year. Certainly if it
were done in contest fashion, our approach would be different.

> I see nothing wrong with having an Outing At A Park for ham radio,

> Field Locations.

Field Day is designed to get people on the air. For some, this is
the only weekend that they do get on the air. In our club, they work
and learn how to put a station together, and how to operate. We
encourage the newbies or less experienced folk to do some operation.

If it were a contest, there would only be about three of us operating the whole time. The new guys and gals can only operate at about 25 percent the rate that our more experienced Ops can.

Field day was how I was enticed to go for my General license. A patient and more experienced amateur had me log for him for a couple hours, then turned the mic over to me. I am a quick study, but my operation in that first Field Day cost the club quite a few points. Now I run Field Day for them...

> and running. Even during a fine day in June. No male-oriented club
> has members with a roll-away barbecue grill? There was a whole
> page of Field Day Recipes in the last QST.

I've had these conversations often with local Hams about the very subject. While it is very true that the conditions do mot emulate the likely reality of an emergency, the basics of what is needed is the ability to erect a portable station that operates off of the mains, operate the station and gain or practice proficiency in that operation, and then tear down and pack up when it is over.

After all, in a real emergency the operators might be freezing, injured, starving, suffering from malaria or radiation poisoning or even worse.

Probably would be hard to get many volunteers if we insisted on literal accuracy of conditions! ;^)

I did not target ANY specific "EOC/ICP" organization. My diatribe
was directed towards the ARRL and the old-timers who've
mouthed all those legendary rationales about FIELD DAY being a
"readiness exercise."

I used the word CONSIDER in my sentence you quoted. I've
never claimed to know every procedure and protocol used by
each and every "EOC/ICP" in existance. I've considered lots of
things in my life.

Well, I'll have to rescind my consideration. I am so unworthy.
Besides, I don't reside in Oregon, not even close to it. If I were to
CONSIDER any REAL emergency preparedness group it would
be the Los Angeles Auxilliary Communications service. One of
their base stations is loaned to the ARRL VEC as a site for US
amateur radio license examinations. So far, nobody at "Old
Firehouse Number 77" has snarled at me for any reason.

I don't consider myself knowledgeable or trained enough to
"slip into the seat of an "EOC/ICP" position and "push traffic
through." I HAVE been good enough - without training - to
assist in communications of utility companies during a real
emergency on 17 January 1994. But, I don't claim that is
good enough to "slip into any [emergency comms] seat"
and do what is Right and Proper. I have been trained in the
military to do very portable communications under simulated
explosions and automatic gunfire common to combat
conditions. But that doesn't count towards being able to
push traffic according to protocol and procedure of any
particular civilian volunteer group.

>In an emergency or disaster situation, we need TRAINED "message
>passers", far more than untrained drop-in volunteers. We are always

>ready to train folks before anything happens, but we really don't have
>the time or resources to train folks when the stuff is flowing.

Now what have I been saying elesewhere about training? OF
COURSE there needs to be training, drills, observation of
effectiveness and revision of plans if that seems necessary.
That does go on down here and did before 17 January 1994.
it works. I've seen it work. In a real emergency.

>And our Team does run Field Day as a Readiness Exercise, complete with
>call-outs and dispersal assignments.

Well, good on "your Team." However, the ARRL-sponsored Field
Day is a Contest in its basic form. Will "your Team" get a good
score in that contest with everyone trained and motivated for
emergencies? Isn't a good score the epitome of any Field
Day outing?

Does "your Team" do its drilling and training and whatever on
NON-Field Day weekends? I hope they do. Readiness isn't a
holiday-sort of thing and exercises shouldn't planned months in
advance, advertised in national magazines. Real emergencies
can strike without any advance warning. QST won't know
about it until well after the fact.

Do real emergencies allow perfect protocol and procedure
to work? I'm not sure about that. Can everyone keep their
cool when a sudden aftershock trembles everything around
them? Some real emergencies can actually destroy some
comm nodes or the personnel to man them.

Hey, I apologize for ruffling feathers of other organizations
by directing my comments to the ARRL. So much so that
I don't think it is worthwhile to comment much on anything
any more in this newsgroup. Too many get all upset at
contrary-to-established-ideas. :-(

I'm joining with the Machias Radio Group near Snohomish, WA:
http://www.geocities.com/bswadener/fd2007/. We'll be running in 2A + VHF/UHF (7 ops). I understand several other hams (and non-hams) may cruise by for short visits

One HF station will be using Zepps and a 2 element wire quad for 40m. Power will be from gas engine-driven generator. The other station will be using my 40' homebrew tiltup/rotatable mast w/ a "Crushcraft" A3S for 20/15/10m yagi on top. The top guyset will be 80 & 40m inverted vees. The 80m antenna will be a 4 wire cage -- 400KHz BW -- no tuner needed! Power will be from 4 x Group27 batteries in parallel w/ a homebrew DC-DC boost regulator to get 13.8V to the radio. The logging PC will have it's own homebrew DC-DC boost converter.

My assessment of the situation is that the efforts - especially the ones by W1RFI, have paid off.

There appears to have been a push for BPL that was based on other than technical rationale.

When other rationales than technology are used to promote a technical solution, we sometimes get white elephant solutions. Like BPL.

We have the luxury of looking at the situation as it exists now, not as it would be if no effort was spent in opposition to it.

I find the situation similar to childhood vaccinations. Children were dying or being harmed by various diseases, so we came up with vaccines. They worked, and many lives were saved. Now some people question just why we should be vaccinating children. "Gee, no one is getting sick, why do we have to do this?" Just a thought.

Without any ARRL protest, it is very likely that there would have been a lot more deployment of BPL. A lot of Amateurs would be having their service disrupted by BPL. A lot of BPL customers would be having their service disrupted by amateurs.

Problem is that management technique is to not step back and reassess, not to stop digging when they find themselves in a hole; but to stick to their guns.The promoters would ride BPL right into the ground.

With no opposition, (ARRL keeping out of the issue) what would be the response to the BPL promoters to the fact that we would shut down BPL every time we keyed up?

I'll bet it would be an attempt to disallow the Amateur communications. We can talk about licensed services and part 15, but that would not stop the issue from going to court. And if the ARRL kept out of that, is there any doubt of who would win? Maybe we could get a public defender to do something pro bono for us? A likely scenario would be an injunction against amateur operation in areas served by BPL until they figured things out.

At that point, Hams would be sending angry emails wondering "Just where on earth was the ARRL in this mess? They should have been doing something!"

So while I agree that BPL is a technical failure, and will eventually go away, it had/has the potential to wreak a lot of havoc over a long period, if not opposed.

I agree to the point that the science and technical work done by Ed Hare was members money well spent. We (ARRL) should have spent more money in this area, the practical technical evaluation of the BPL. This was/is useful work.

But I stand on both sides of this issue, as a licensed Amateur, a former elected ARRL official, and as a technically involved member the telecommunications industry.

>From the aspect of a former elected ARRL official and a long-time loyal ARRL member, I view all the "whipping up the troops", long jeremiads in QST, nasty letters to the FCC Chair, Federal lawsuits, etc., as ill-advised posturing which has no practical influence on the business decisions of telecommunications providers, and only serves to alienate our regulators over a technology which is ALREADY DOA.

>From the aspect of a player in the telecommunications industry, I see K1ZZ and the BoD which supports his Quixotic crusade as comically amateur (in the Webster definition of "without skill") medlers in a game where they have only enough political power to be nothing more than a pest. This misbegotten adventure WILL be remembered in the wrong places when we need some favor down the road.

All of this, over a still-born technology without any practical possibility of gaining the traction necessary to become a market reality.

No need to have portable equipment. Many take down their base stations,
pack them up, take them out to the field day site, set them up and operate.
One guy brings out his full size Ten-Tec.

Dee, N8UZE

1157. Re: Field Day?

hi

our club runs a 7a field day setup at the farm of a member.

everyone is welcome to stop in and operate, log, have fun
and many stay overnight starting friday night.

we are running a GOTA station again this year, big success,
they scheduled groups of scouts (boy and girl), several chruch
youth groups, etc all stopped in and worked HF,
what a blast to see they young pups operate !

all our 7a stations have at least one extra class so anyone
can operate (club member or vistior) we just watch for third party
rules.

all our gear is fullsize base stations running off gensets
either the newer honda inverters (1.5 up to 10kw) or the generac types.

we also invite tv and elected officials to stop in and operate.

73 jimbo

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free
source of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group
every month. You are now reading the first article, which explains what
rec.radio.info is, and answers some Frequently Asked Questions. The
second article is titled Posting Guidelines, and you only need to read
it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the
next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet
community with a resource for information, news, and facts about any and
all things radio.

All the other rec.radio groups are intended for discussions and general
chit chat about radio. Rec.radio.info will contain informational,
factual articles only. Follow-ups are redirected to an appropriate other
group, and further discussion (if any) will not take place in
rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate
articles, it was decided to create the group as a moderated newsgroup.
```

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered presentation in rec.radio.info (even with cross-posting, only one message, with a unique Message-ID, is propagated across the net). This tag also facilitates a pre-existing method of dropping or canceling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:

/Newsgroups:.*[,]rec\.radio\.info/h:j

either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:

rec.radio.info:!s/:^

in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:

sequence
rec.radio.info
rec.radio.

at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, we will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for discussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is the rec.radio.amateur.moderated Moderation Team. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@panix.com

Comments, criticisms, suggestions or questions about the group can be e-mailed to:

rec-radio-info-request@panix.com

But before you do so, please be sure to check out the "Posting Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. We receive information in our mailbox; we then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, We would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. We reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all we can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

Google has an excellent web interface to Usenet newsgroups. It is available at:

http://groups.google.com

It supports both reading and posting.

-- Will the material appearing in rec.radio.info be archived somewhere?

Yes. See Google Groups above.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires co-operation and goodwill to be beneficial to the community in the rec.radio hierarchy.

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

1159. rec.radio.info Posting Guidelines

Newsgroup: rec.radio.amateur.moderated
Date: 2007-06-22 06:05:02 UTC
From: rram@panix.com
Message-ID: <radio/rec-radio-info/guidelines-1-1182492301@panix.com>

Posting-Frequency: posted monthly
URL: http://www.panix.com/~rram/usenet/rri/index.html

*** rec.radio.info - Posting Guidelines and Etiquette ***

Two introductory articles about rec.radio.info are posted to this group
and to rec.answers/news.answers every month. You are now reading the
second article, which explains how to submit something to
rec.radio.info, and which answers some Frequently Asked Questions about
the submission process. The first article is titled "Welcome to
rec.radio.info", and it might be a good idea to check it out as well.

-- How do I submit something to rec.radio.info?

Two possibilities. You can use your newsreading software to just post
the article to rec.radio.info, as you would do with any other
newsgroup. The difference is that the software recognizes the special
status of rec.radio.info as a moderated group, and will e-mail your
article to us, the moderation team, instead of posting it to the group.

Alternatively, you can mail your article directly to us at the following
address:

rec-radio-info@panix.com

Mailing us directly is probably (a wee bit) faster, but using the
transparency offered by the newsreading software is probably more
convenient.

If you have any questions, or wish to deal with some administrivia with
the moderation team, we suggest mailing to the following address:

rec-radio-info-request@panix.com

-- How soon will I see my article appear?

It depends on how busy we are. Your article reaches us as mail, we have
to read it first, give it the stamp of approval, and finally send it on
to the group. We will attempt to read and decide on all submissions
within 72 hours at the very least, though we will probably be able to
process submissions much faster in actual practice.

The site from which we moderate this newsgroup, "Public Access Internet
and Unix, NYC" (Panix), is directly connected to the Internet, and

articles posted at that site should appear at most major news sites, including Google Groups, the same day. The principal delay, therefore, will be the wait in the moderator's submission queue.

If you post a periodic article, and have shown to be trustworthy, we may allow you to post directly if the article is of a timely nature. See the section below on direct posting.

-- Should my article be in a specific format?

No. If it is not totally illegible, we will accept it, and if it does not have a correct subject-line we will correct it with your permission -- that's what a moderator is for.

However.

You could do us a big favor by making sure your article conforms to these simple requirements:

1) The article must present information, not discussion or requests, We will reject the article or require you to change the wording if it is worth it.
2) A good, descriptive Subject line.
3) Always mention what source you got the information from.
4) Don't forget to include a Followup-To header, at least if you don't want further discussion to automatically be forwarded to you, the poster, which is the default if the article is only posted to rec.radio.info.

As we said: if your article is appropriate we will post it even if you don't follow these guidelines, but then don't blame us for not processing it immediately. 'Perfect' articles we can send on with a couple of keystrokes. Stuff that needs minor editing is going to have to wait until we have time to do so.

Please do not waste both our and your time by posting requests, as this is an information only news group.

-- What about crossposting?

If you send something to rec.radio.info, just name any group you'd like to cross-post to in the Newsgroups field. Then, when we approve the article for rec.radio.info it will get automatically cross-posted to any other groups mentioned. This will also override the default Followup-To: poster, replacing it with the groups you cross posted to.

We would prefer if the group be cross-posted to the various discussion groups in the rec.radio.* hierarchy that are appropriate:

rec.radio.amateur.misc Amateur (ham) radio and related matters
rec.radio.amateur.packet Amateur Packet Radio discussions
rec.radio.amateur.policy Amateur Radio practices, rules, etc.
rec.radio.noncomm Non commercial radio discussions
rec.radio.shortwave International broadcasting on the 'HF' bands

rec.radio.cb Citizens Band (27 MHz) discussion
rec.radio.scanner Scanner discussions (unsupported group)

or in one of the moderated groups:

rec.radio.amateur.moderated Amateur radio practices, rules, etc.
rec.radio.broadcasting Discussion of *domestic* radio broadcasting

We will leave it up to the poster to decide which group(s) are appropriate, but reserve the right to add groups if we feel it has broader interest. We will consult with the poster first.

Notes on crossposting:

- rec.radio.broadcasting is also a moderated group. The rec.radio.broadcasting moderator prefers to review all articles himself before posting. Placing rec.radio.broadcasting before rec.radio.info on the Newsgroups line should accomplish this. We will typically abide by the rec.radio.broadcasting moderator's decision whether the article is appropriate for rec.radio.info.

- rec.radio.amateur.moderated is also a moderated group. As the rec.radio.amateur.moderated Moderation Team manages both rec.radio.amateur.moderated and rec.radio.info, we can manage crossposting and approvals for both newsgroups. The rec.radio.amateur.moderated group does not allow crossposting to other discussion newsgroups, whether moderated or unmoderated. However, we would like to manage rec.radio.info as consistently as possible with how it was done by previous moderators, including the grandfathering of existing regular postings. Therefore, the submitter can choose rec.radio.amateur.moderated or the other unmoderated rec.radio.amateur.* discussion newsgroups for crossposting, but not both.

- Any FAQ or informational posting approved by the rec.answers/news.answers moderation team that is also crossposted to any rec.radio.* newsgroup (besides just rec.radio.info) is also automatically pre-approved for rec.radio.info. See below for more information.

If you post to another moderated group, it may be better to make special arrangements with both moderators before posting by contacting us at our administrivia addresses.

In addition, cross-posts do not take up extra space; modern newsreaders can be configured to show you cross-posted articles only once anyway; not everybody reads rec.radio.info; and rec.radio.info was never meant to reduce the volume of the regular discussion newsgroups. But keep in mind that some of the mail gateways may filter out the informational postings (at request of the subscribers) to keep the load down.

You decide.

-- I have a regular posting with timely information, can I make arrangements to help speed up delivery by posting directly from my site?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as timely.

We refer to this as self-moderation, which is partly based on the model for rec.answers/news.answers. This requires cooperation and good will to be beneficial to the community in the rec.radio.* hierarchy.

If you are currently maintaining (or plan to maintain) a radio-related periodic information posting, you may wish to consider crossposting it to rec.answers/news.answers. Postings that are approved by the rec.answers/news.answers moderators for this treatment are automatically pre-approved for crossposting to rec.radio.info (as the news.answers requirements are far more rigorous than the requirements this newsgroup ever plans to use). For more information about this option, consult the appropriate information articles and posting guidelines in rec.answers/news.answers.

Realize also, that even if your post is not approved for rec.answers/news.answers, it can still be approved for rec.radio.info. The intention is not so much to get every last bit of radio-related information on rec.answers/news.answers, but rather to provide an alternative avenue of approval (as well as grandfather existing maintainers of radio-related information and spare them additional bureaucratic hurdles). Again, crossposting to either rec.radio.info or rec.answers/news.answers, both, or neither, is at the discretion of the poster (subject to the approval of the moderators). You decide what is most appropriate for your article.

Please remember that as an information maintainer, you are not alone. There are many others on the net who maintain and post periodic information postings, using various intermediate-to-advanced features of Usenet (usually via automated tools). Various degrees of technical support and general hand-holding are available from many Usenet veterans. Send us some E-mail describing your needs to our administrative address below, and we'll try to help, or at least refer you to the right knowledgeable individual(s).

-- And Follow-ups?

If the only newsgroup you have specified is rec.radio.info, then the Followup-To: field will always be set to poster. If you do not want this, you must supply a Followup-To line of your own, and we will honor that one, as long as it is a subset of the original Newsgroups line.

If you specify newsgroups to cross-post to, then the Followup-To field will be set to include all the cross-posted groups, excepting rec.radio.info itself. Again, if you do not wish this behavior, supply your own Followup-To line.

We maintain other standards on the various RFC-1036 (news transport) header lines. For example, if the article is appropriate for passing into the Packet Radio Information Network, we encapsulate the Packet Bulletin Identifier (BID) in the Message-ID: news header line indicating the machine of origin as the ampr.org domain:

Message-ID: <$opa.55.1994@ampr.org>

where the Packet Radio BID, in this example, is `$OPA.55', and it was posted in the year 1994, because some of the Bid numbers are cycled yearly. Hopefully, this can be used as a key to re-introduce the articles for the Packet Radio network. Also, if the article is a repost of an already existing information article in the rec.radio heirarchy, we ensure that the References: header line is linked to that previously posted article. This also helps to tag articles, and may be used for additional filtering if needed.

Since the articles are archived, please use the Summary and Keywords header lines to help one search for your article.

-- Why have I received no reply from you?

We never reject anything in silence, and we make a point of it to answer all our mail. However, E-mail, like a brain cell, can and does get lost, every now and again.

So, if you send us something, and you don't see it appear it rec.radio.info, and you still have not heard from us in reply after say, five days, you can be pretty sure that either your mail never reached us, or that our answer has never reached you. In that case, please try again (We will filter out duplicates).

Please direct any comments, questions, or criticisms about this article to rec-radio-info-request@panix.com.

(Adapted, with permission, from the original article written by Mark Salyzyn, AG4YD, ex-VE6MGS.)

1160. Amateur Radio Newsline(tm) Report 1558 - June 22, 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-06-22 09:17:36 UTC
From: "William M. Pasternak" <newsline@ix.netcom.com>
Message-ID: <E1I1fDW-0005CP-Nd@elasmtp-masked.atl.sa.earthlink.net>
Source record: 4215
Cross-posted to: rec.radio.amateur.moderated,rec.radio.info

Amateur Radio Newsline(tm) Report 1558 - June 22, 2007

Amateur Radio Newsline report number 1558 with a
release date of Friday, June 22, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. The RSGB restructures
to welcome digital repeaters, 6 meters opens for
some good D-X and the ARRL says that Congress may
mandate an investigation of B-P-L
interference. Find out the details on Amateur
Radio Newsline(tm) report number 1558 coming your way right now.

(Billboard Cart Here)

**

WORLDBEAT - UK: THE DIGITAL WORLD IS HERE

The world of digital ham radio comes another step
closer to reality. This as the Radio Society of
Great Britain is says that digital is the future
of ham radio and its restructuring some of its
committees so as to be ready. Jeramy Boot, G4NJH, has the details:

--

A study of the work of the Data Communications
Committee and the Repeater Management Committee
has revealed increasingly common ground,
especially where internet gateways and internet
linking to repeaters are concerned.

Advances are also being made towards the
introduction of digital modes such as D-Star and
APCO25 that amongst other newer technologies can
carry both voice and data streams.

With this in mind it has been agreed that a new
committee based on the Repeater Management
Committee structure and to be known as the
Emerging Technology Co-ordination Committee will
replace the DCCand RMC with immediate affect. The
new committee will be chaired by John McCullagh,
GI4BWM, with Iain Philipps, G0RDI, as
Vice-Chairman. Other committee members will
include current Regional Repeater Managers and

Steve Morton, G8SFR, who will continue to
co-ordinate Internet Gateway applications.

I'm Jeramy Boot, G4NJH and you are listening to the Amateur Radio Newsline.

--

What this means is that U-K hams involved in both
digital and analog relay communications or
transitioning from analog to digital now have one
central base of knowledge to work with. It also
puts the Radio Society of great Britain at the
forefront of political leadership in the U-K as
the changeover takes place. (GB2RS)

**

RESCUE RADIO: VK HAMS RESPOND AS FLOODS HIT

Hams from several Australian provinces have
responded in the wake of severe weather and
flooding that has hit the North Queensland
area. Graham Kemp, VK4BB, of the WIA News, has the details:

--

Mal VK4MAL is currently working with the Red
Cross Counter-Disaster division in the flooded
areas of the New South Wales Central Coast and Hunter Region.

Mal VK4MAL is Counter-Disaster Co-ordinator for
Red Cross in North Queensland and he and
hundreds of other volunteers were shipped in
from across VK to provide some help for flood
weary local volunteers and residents of the disaster zone.

VK2ATZ/portable the Westlakes AR Club were in
the thick of things, but were still able,
somehow, to score a vantage point to see
the container ship which was washed ashore at Nobby's Beach on the Friday
morning.

Saturday Westlakes Amateur Radio Club was
open....But not for usual business. It was open
to the few that braved the weather and answered
the calls for help to clean up the debris from
the horrible weather suffered the previous night.

Some helping included VK2YPW, VK2AFZ, VK2ZM and
Keith VK2PKT, Paul VK2BPL, and Richard VK2FRKO also John VK2FJKG

Then when the Hunter River in Maitland looked
like breaking its banks on Sunday, the Volunteer
Rescue Association wasted no time in securing

the specialist communications skills of WICEN (NSW).

Eight operators from the Hunter Region were
deployed at Rutherford, and they were tasked
with passing intelligence reports to the
services involved, along with monitoring and
reporting the river levels at 15 minute
intervals. This involved three teams, two at the
gauges and one at the control centre; all were
alert and busy throughout the night and into the next morning.

As well as this, teams were on stand-by in both
the Sydney North and Central Coast Regions, but
as the floods abated they were not required;
it is worth noting that although members in the
Central Coast Region also suffered from the
storm, some were still able to respond. Other
VRA squads such as CREST and Cave Rescue were also involved.

I'm Graham Kemp, VK4BB, of the WIA News reporting
for the amateur Radio Newsline.

--

The President of the Volunteer Rescue Association
is Ray Gill. He thanked the Australian ham
community for its prompt emergency service response.

**

THE BPL FIGHT: ARRL REPS HAM RADIO ON BPL TO ITU

A major meeting of the International
Telecommunications Union that could help
determine the future of ham radio world-wide is
taking place in Switzerland. It involves
BPL. Rob Mt. Barker, VK5MM, is here with the rest of the story:

--

ARRL Chief Executive Officer and IARU Secretary
David Sumner, K1ZZ, have been representing the
IARU at a meeting of ITU-R Working Party 1A in Geneva, Switzerland.

Working Party 1A is responsible for spectrum
engineering techniques within Study Group 1
(spectrum management) and has been working on a
document that may eventually become what's
called a "preliminary draft new report" on
the impact of power line telecommunications
(PLT, what we call BPL on this side of the
Pacific) on radiocommunication systems operating below 80 MHz.

Of course, the IARU's interest is in ensuring
that the report accurately reflects the
sensitivity of the amateur services to interference from this source.

Also meeting at about the same time (June
12-20), ITU-R Working Party 8A, which is
responsible for most of the land mobile services,
plus the amateur and amateur-satellite services.
WP 8A hopes to complete work on a "draft new
handbook for the amateur and amateur-satellite
services" to be published by the ITU.

I'm Rob, VK5MM

--

More on the outcome of these meetings in future
Amateur Radio Newsline reports. (WIA News, ARRL)

**

THE BPL FIGHT: CONGRESS MAY ORDER INVESTIGATION OF IJNTERFERENCE

The ARRL says that the United States Senate may
investigate Broadband Over Powerline's's
interference potential to Amateur Radio. This
after Senator Mark Pryor files a bill calling on
the Federal Communications Commission to conduct
a study on the interference caused by broadband
Internet transmission over power distribution
systems to customers homes. Amateur Radio
Newsline's David Black, KB4KCH, is here with more:

--

Senator Mark Pryor of Arkansas is a member of the
Senate's Committee on Commerce, Science, and
Transportation. If the measure he introduced
gains the needed support, then Senate Bill 1629
would call for the same studies to be performed
as does House Bill 462. That measure was
introduced on January 12th by Rep Mike Ross of
Arkansas. Both would require the FCC to conduct
and submit to that committee and to the House of
Representatives Committee on Energy and Commerce
a report on a study of interference potential of
systems for the transmission of broadband Internet services over power
lines.

According to the ARRL, there are to be four
required areas of inquiry. First is the
variation of field strength of BPL service
signals with distance from overhead power lines,
and a technical justification for the use of any

particular distance extrapolation factor.

Then, the depth of adaptive, or 'notch,'
filtering for attenuating normally permitted BPL
service radiated emission levels that would be
necessary and sufficient to protect the
reliability of mobile radio communications.

Also required would be a technical justification
for the permitted, radiated emission levels of
BPL signals relative to ambient levels of man-made noise from other sources.

Lastly such a report would require the FCC to
provide options for new or improved rules related
to the transmission of BPL service that, if
implemented, might prevent harmful interference
to public safety and other radio communications
systems. This is something that the FCC has been
reticent to do since it embraced B-P-L technology several years ago.

For the Amateur Radio Newsline, I'm David Black,
KB4KCH, at the South-East bureau in Birmingham, Alabama,

--

The ARRL is very thankful for this turn of events
in the BPL struggle. League President Joel
Harrison, W5ZN, said that the League is grateful
for Senator Pryor's support. He added that the
Senator's recognition of Amateur Radio's role in
emergency communications and public safety is also greatly appreciated.
(ARRL)

Break 1

From the United States of America, We are the
Amateur Radio Newsline, heard on bulletin
stations around the world including the N7VGS
repeater serving Star Valley Wyoming

(5 sec pause here)

**
ON THE AIR: 6 METERS TURNS SUMMER HOT

Six meters is showing signs of being the V-H-F
band of choice for this summers D-X season. We have more in this report:

--

That's right Don. 6 meters has been the band of
choice of VHF DX enthusiasts, with contacts like
this one becoming more and more commonplace.

--

Sound of VE3TMG working Hawaii: Hear it in the
MP3 version of the newscast downloadable at www.arnewsline.org

--

That's Terry Greenwood, VE3TMG, in Windsor,
Ontario, Canada working Fred Benardella, KH6FI,
Mountain View, Hawaii, recorded on June
18th. That's a path across land and sea of close to 4500 nautical miles.

But hams in the U-S-A are not the only ones
experiencing long haul contacts on the Magic
Band. Also on the 18th, Ev Tupis, W2EV, in
Holley New York reported over the V-H-F Reflector
that he was experiencing multi-hop from to EA8 on
6m. Ev also said that there were reports of 2
meter E skip contact taking place between Ohio to
Newfoundland. A bit later, John Fridenstine,
W8PAT, in Oberlin, Ohio, posted that worked or
heard all continents in a 12 hour period. For
him it was South America in the morning, Europe,
Afirca and Oceania in the a afternoon and Asia on EME in the evening.

We don't have any recordings of those, but we do
have of a truly rare south to north 6 meter
station. Heres Octavio Miranda, YN2N, in
Nicaragua trying to contact a W 5 station on what
was likely Trans-Equatorial propagation:

--

Sound of YN2N: Hear it in the MP3 version of the
newscast downloadable at www.arnewsline.org

--

The sation he was trying to work and eventually
did contract was Pat Dyer, WA5IYX, in San
Antonio, Texas. Pat tells Amateur Radio Newsline
that while not the greatest signal, Miranda was
the first Nicaraguan that he has heard or worked
in his 43 years operating 6 meters. The signals
were only 5 by 5 at WA5IYX but YN2N gave Pat a 10 db over S 9 report.

Getting on 6 meters is no longer very
expensive. The primary D-X mode is Upper
Sideband. The primary calling frequency is
50.125 Mhz and for casual operation a simple
dipole with a total length of 108 inches will
suffice. And with even that simple a set-up you
never know what you might work or hear.

--

Sound of V26HS: Hear it in the MP3 version of the
newscast downloadable at www.arnewsline.org

--

For the Amateur Radio Newsline, I'm Bill
Pasternak, WA6ITF, with the FT-847 tuned to
50.125, at the studio in Los Angeles.

--

For the latest, up to the minute 6 meter D-X news
take your web browser to the 6 Meter Prop
Logger. Its in cyberspace at http://www.dxworld.com/50prop.html

Also, if you operate on 6 meters, be sure to
switch it to A-M mode and tune up to 50.5 MHz now
and again. That's where a lot of old timers
using 1950's vintage gear hang out and you never
know who you might hear. (ARNewsline(tm))

ENFORCEMENT NEWS: FBI INVESTIGATING PHONY REPORTS TO THE NEWS

The FBI has entered into an investigation
surrounding bogus severe weather reports e-mailed
to the National Weather Service. The false
information has caused the to issue unnecessary
warnings that have taxed the resources of a number of communities.

The phony reports were sent to the NWS over its
Web page. Investigators have already traced the
Internet Protocol address of the computer sending the false reports.

Jeff Lanza,is the special FBI agent in charge of
the investigation. He says that the effort to
track down the source of bogus information to the
weather service could be the first in the
U.S. He adds that providing false information to
the federal government is punishable by up to
five years in jail. (Tech OnLine)

**

ENFORCEMNENT TECHNOLOGY: NEW CELLPHONE SENSORS

The Department of Homeland Security has
reportedly launched an initiative asking the
wireless industry about the potential for
equipping a new generation of cellular telephones
with technology. This, to scan and detect
harmful compounds in the environment and
automatically relay the readings to a central
monitoring point. The concept, known as

"Cell-All," is said to have attracted the
interest of several companies, and partnerships
with handset manufacturers are being discussed. More is on-line at
http://public.cq.com/docs/hs/hsnews110-000002524221.html (CGC)

NAMES IN THE NEWS: FCC CHAIRMAN AGAIN SAYS YES TO CABLE A LA CARTE

Federal Communications Commission Chairman Kevin
Martin has renewed a long simmering debate over
"a la carte" programming at a recent cable
industry gathering in Las Vegas,
Nevada. According to news reports, Martin told
the audience at the annual "Cable Show" that
consumers should be able to purchase what they
want without being forced to buy what they don't.

Martin has supported implementing "a la carte"
service, where consumers could choose and pay for
individual channels, rather than purchase them in
bundles from their cable companies. He said the
issue was increasingly important since the price
for "expanded basic" cable has doubled since 1996. (Published reports)

NAMES IN THE NEWS: HAM POLICE OFFICER INJURED IN THE LINE OF DUTY

A Southern California ham well known for his work
in helping to remove repeater jammer Jack
Gerritsen, the ex-KG6IRO, from the airwaves has
been injured in a traffic accident. This with
word that Los Angeles County Deputy Sheriff
Burton Brink, N6USO, was hurt in an on-duty
traffic collision the morning of June 6th.

The accident occurred when a driver tried to exit
the carpool lane on the Interstate 10
freeway. Driving in a carpool lane requires two
or more occupants in the vehicle. This driver
was alone and according to a report from the San
Gabriel Valley Radio Club, a California Highway
Patrol unit was ahead when the driver tried to
avoid a ticket for a carpool violation. The
driver did not check for a clear lane and
collided with Brink who was on motorcycle patrol.

N6USO was admitted to the County USC Medical
Center in Los Angeles where it was determined
that he had sustained multiple rib fractures, a
punctured lung, and lacerated spleen, as well as
associated road rash. His injuries, though

serious, do not appear to be life threatening.

A career law enforcement officer, Burton Brink has been with the Los Angeles County Sheriff's Department since 1989. Prior to that he was an Officer with Monterey Park Police Dept. from 1982 to 1989, and an Arcadia Police Explorer Cadet from 1977 to 1982.

N6USO is also the owner of the 145.440 MHz repeater located on Southern California's Sunset Ridge. This was one of many repeaters targeted for jamming and harassment by Jack Gerritsen during the years prior to his latest arrest and 7 year jail sentence that he is currently serving. A trained investigator, Brink stood his ground against Gerritsen and is among those credited as helping to bring Gerritsen before the bar justice.

Get well wishes can be sent to Burton Brink, N6USO, at his callbook address. (SGVARC, WA6ILQ)

**

NAMES IN THE NEWS: CATHERINE DEATON TO RETIRE FROM THE FCC

The FCC employee also generally credited with sending radio jammer Jack Gerritsen to prison will be retiring from the Commission on August 3rd. This with word that Catherine Deaton, who heads FCC Enforcement Bureau's Los Angeles field office will be leaving government service following 40 years that includes 10 years as an undercover narcotics agent and the past 27 years working at the FCC.

Bob Gonsett, W6VR, who writes the CGC Communicator calls Deaton a breath of fresh air for the L.A. field office. In his June 19th edition, he noted that ubder her guidance the Los Angeles bureau's door has been open to all inquiries and concerns, the attitude of the office has been positive and the results impressive.

After August 3, Deaton plans to do a bit of traveling, help her daughter in her medical services business and fully exercise her gym membership. If you'd like to send her your best wishes, e-mail her at Catherine.Deaton@fcc.gov (CGC)

**

NAMES IN THE NEWS: CONGRESS TO HONOR "MR WIZARD"

A follow up to our story last week on the passing of television's first ever teacher of science and

technology. On Monday, June 18th the U.S. House of Representatives honored Don Herbert, better known as "Mr. Wizard," in a resolution passed on the House floor.

Representative Vernon Ehlers of Michigan co-sponsored the resolution to honor Herbert, who died of cancer at the age of 89. In his sponsorship statement Ehlers said that the "Mr. Wizard" show laid the groundwork for the educational television genre that later spawned cable channels devoted to science, like the Discovery Channel. The show also created Mr. Wizard Science Clubs nationwide with 5000 such groups operating by 1995.

Ehlers stated that as a child, he didn't have TV, but he read science magazines his sister gave him that she would get from her high school science class. Ehlers said that he would then perform his own home experiments from the magazines. He closed by noting that he was happy to co-sponsor Don Herbert's official recognition by the Congress of the United States. (Published Reports)

ON THE AIR: W8HC TO COMMEMORATE MARCONI

2007 marks the centennial of those first signals generated from Marconi's historic station in the United Kingdom. To commemorate this event, as well as radio's first-ever commercial venture, Hal Turley, W-8-H-C has announced a special amateur radio operation from two locations central to Marconi as a pioneer in wireless technology. Once again, Jeramy Boot, G4NJH, is in Nottingham, with more:

--

On Saturday and Sunday, August 4 and 5, Turley will operate portable G I from from Ballycastle. He will be also taking part in the

annual Marconi Festival at Ballycastle with the
Marconi Radio Group's special event station
MN0MRG on Sunday, August 5th. On Monday, August
6, Hal will ferry over to Rathlin Island and operate from East Lighthouse.

Leaving Northern Ireland, Hal will arrive in
Clifden on Wednesday, August 8 where he will
operate portable E I at the Derrygimla site on
August 9th and 10th. It is hoped that some
operating time can also occur from nearby
Letterfrack, site of an ancillary receive station
built in 1912 to allow for full duplex operation of the transatlantic
signals.

Contacts will be confirmed via Logbook to the
World and special QSLs from each of these
historic Marconi locations will be printed and
sent via the Global QSL system at
www.globalqsl.com. In addition, a specially
designed certificate will be issued to those
stations making contact with both GI and EI
operations from either Ballycastle or Rathlin and Derrygimla or Letterfrack.

I'm Jeramy Boot, G4NJH

--

In keeping with the historic accuracy of the
original Marconi transmissions, all QSOs from
these locations will be CW only. (GB2RS)

**

EMERGING TECHNOLOGY: MICROWAVE SDR RADIO BEING DEVELOPED

Radio amateurs interested in the microwave bands
may find the Microwave Software Defined Radio
project interesting. Its goal is to provide a
transceiver operating on the 144, 422, 1268, 2400
MHz and above bands, covering the whole of each
band. Full duplex cross-band operation is also
planned specifically for satellite use. More
details are on line at the Microwave Software
Defined Radio website. Its in cyberspace at
http://uwsdr.berlios.de (G8UBN for the uWSDR team)

HAM RADIO IN SPACE: JPL CONGRATULATES AMSAT-DL ON VOYAGER 1 INTERCEPT

The Flight Team that oversees NASA's Voyager One
deep space probe has congratulated AMSAT Germany
on its reception of a signal from the
spacecraft. In March 2006, the signal from

Voyager 1 was received by the AMSAT D-L team
using the 20 meter dish in Bochum.

Voyager 1 is the furthest object away from earth
to be built by humans. As a token of their
collective appreciation, the controllers not
only confirmed the reception report. They also
sent Amsat Germany a photo of the Voyager
Flight That picture can be found on line at
http://www.amsat-dl.org//index.php?option=com_content&task=view&id2
&Itemid□
(Southgate, AMSAT-DL)

**

HAM RADIO IN SPACE: ME AND MY BABY - MONITOR

An elementary school science teacher in this
Chicago suburb didn't have to turn on the news
for an update on the now concluded STS 117 space
shuttle mission. This was because her baby
monitor decided to become a shuttle mission video
delivery service of its very own.

Beginning on Sunday, June 10th, one of the two
channels on Natalie Meilinger's baby monitor
began picking up video from inside the space
shuttle Atlantis. Summer Infant Products which
manufactured the remote monitoring system said
that it is investigating what could be causing
the video to appear on Meilingers unit but is so
far baffeled. Company Communications Director
Cindy Barlow said that she never heard of anything similar happening.

Meantime, NASA had its say as well. Spokesperson
Brandi Dean issued a statement denying that the
signal Meilinger was seeing was not coming
directly from the shuttle. She noted that the
live video is available on NASA's Web site, so
it's possible the monitor was picking up a signal
from some localized rebroadcast.

So far it does not look as if any local hams or
ham radio retransmission of NASA video is
responsible. More likely it's a neighbor with
one of those in home television rebroadcast units
used to send cable or satellite delivered
television to other rooms. (Published reports)

**

HAM RADIO IN SPACE: THE FLORIDA AMSAT NET WANTS SPEAKERS

The Florida AMSAT net is looking for satellite operators who are willing to be a guest speaker on their Thursday night net. The repeater network used in this network covers half the state of Florida. An echolink connection is available for all others. Please contact Drew Glasbrenner by e-mail to ko4ma@amsat.org if you are interested. (ANS)

**

WORLDBEAT - UK: HAM SCOUTING CLUB GETS GRANT

The U-K based Chesterfield and District Scouts Amateur Radio Club has recently received a National Lottery Grant from that bnations Awards for All Fund. The club was given the equivalent of $10,000 that it will use to purchase new radio equipment, computers, a portable generator and a mini marquee.

The club intends to support members who are Scouts in gaining their amateur radio licenses and in development of their skills. They also want to develop Amateur Radio Direction Finding techniques by purchasing equipment which will allow the club to demonstrate amateur radio within the scouting community in Derbyshire. (Southgate)

**

WORLDBEAT- SWEEDEN: THE ANNUAL SAQ ALTERNATOR ON JULY 1

The annual transmission on 'Alexanderson Day' with Sweden's Alexanderson alternator on the VLF frequency of 17.2 kHz will take place Sunday July 1st. The operation takes place at 09:00 U-T-C and will be repeated at 13:00 UTC. There will also be activity on amateur radio frequencies with the call SK6SAQ.

QSL cards are appreciated. They can go direct or via the Swedish Amateur Association QSL bureau. More is on-line at www.alexander.n.se (Southgate)

**

WORLDBEAT - USA: CARF ESTABLISHES ECHOLINK NET

Back in the United States, word from Lloyd Colston, KC5FM, that t the Christian Amateur Radio Fellowship has established a new network on Echolink. Using the K6JWN conference server number 127901, the net meets Saturday at 1400 UTC. Christian hams from around the world are invited to participate. More is on-line at www.carf.net (KC5FM)

**

DX

In DX, word from O-P-D-X that DL7DF will be leading a DXpediton team to East Africa. The group plans to be active as 9U0A between September 26th and October 9th. Operation will be on 160 through 6 meters using CW, SSB, SSTV and digital modes. There will be a special emphasis on the lower bands and digital operations Pilot station for this DXpedition is Bernd, DF3CB. QSL via DL7DF, either direct or by the German QSL Bureau.

Approval has been granted for the use of the Special Prefix VR10 in addition to VR2 for Hong Kong radio amateurs. This from July 1st of this year through June 20th 2008 to celebrate the 10th anniversary of Hong Kong's reunification with China. More details are available in the OFTA letter for HongKong Radio Amateurs, which can be found at www.ofta.gov.hk/en/amateur/ama-cir200706.pdf.

Lastly, the Southgate News says that the Scarborough Reef Dxpedition team has uploaded a partial log containing QSOs for those DXers who supported the BS7H operation to the ARRL Loogbook to the World website. The group says that this is a special 'Thank You' to those who made the effort to support their operation. The team adds that there will be additional periodic uploads Loogbook to the World as QSL'ing proceeds. A full upload will be done as soon as the bulk of the direct QSLs are answered. Direct cards are expected to start going out in early July. (Above from various DX news sources)

HAM RADIO ON THE WEB: REPEATER HISTORY - A VICARIOUS TRIP BACK TO WR6ABE

If you want to take a look back at repeater technology of the mid-1970's, have we got a website for you. Actually the website is YouTube.com and its where Steve Jensen, W6RHM, has posted some great video transfers shot on film in 1976 by his father, the late Bob Jensen, W6VGQ.

The four short movie clips feature a trip to California's original Mount Wilson two meter repeater, WR6ABE. Even better, the travelogue is hosted by the repeater's creator, Burt Weiner, K6OQK:

--

K6OQK audio here. Hear it in the MP3 version of
the newscast downloadable at www.arnewsline.org

--

Weiner narrates from two locations. Both the
actual repeater site overlooking the Los Angeles
basin and what you just heard from the control
point at his former home. As a bonus, you get to
meet many of the systems users from that era who
helped to make this obscure repeater into a
legend of the golden age of ham radio relay station development.

Its truly a trip back in time to an era when
tubes were still king and repeaters used a lot of them. Look for it at:

N8NN and I will be on the grounds of his place near Moundsville, WV. The Class 1B operation will be mostly CW. We've geared up to snag some of the bonus points. We'll be operating with my call.

We have a promise from a WV State Senator to visit. We'll have a sign, table with literature on amateur radio and a visitors log. We'll copy the annual FD message and pass a message via NTS.

It is highly likely that we'll have some hamburger prepared using emergency methods (on a propane grill). My wife and I will sleep in simulated emergency conditions in Bert's motor home. In an actual emergency, we'd have to fire up the motor home's 10 KW diesel generator. Radio power will come from a little 2 KW Honda gasoline generator.

We'll skip the extra hours of operation and put up our antennas this afternoon.

73,

Dave K8MN

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

C5 - GAMBIA
Darren,G0TSM, is QRV as C52T mostly on 6m from Jun 19-29.QSL via G0TSM.

HB0 - LIECHTENSTEIN
On their way to the HAM RADIO in Friedrichshafen/Germany F2JD, F5JY, F6BFH and N6OX will make a stopover in Liechtenstein. They will be active as HB0/homecalls in CW/SSB on HF and 6m from Jun 19-22.

HP - PANAMA, NA-170
Bert,CX3AN, and Mario,CX4CR, are planning to activate an island in the San Blas archipelago (NA-170) signing HP2/homecalls or 3E2/homecalls from Jun 22-28. With this DXpedition Bert is going to celebrate his "DXCC Full House" which he accomplished with his BS7H QSO. This is already their 15th trip together after activating five continents over the past 20 years.

J7 - DOMINICA, NA-101
J79RM will be the callsign of Rod,NA9N, in CW and digital modes on HF between Jun 28 and Jul 5. QSLs via his homecall.

KH3 - JOHNSTON ISLAND, OC-023
Susan,KH3/W7KFI, should have appeared on the bands last weekend already but strong toothache forced her to return to Honolulu only shortly after leaving the port. She wrote this brings her a delay of two weeks but you can expect her to show up from Johnston (OC-023) for one week around Jun 30. Her preferred frequencies in CW are 36 kHz from the band edge and in SSB 14.236. Her QSL manager is K6FAF.

KH6 - HAWAII, OC-019
Setsu,JL1UXH (KK2H), and his XYL Maki,7L4FSR, are working from Oahu from Jun 19-22. The call of their "holiday style" DXpedition is KK2H/KH6 and can be found mainly on the WARC bands (also in RTTY) and on 6m. QSL via JL1UXH.

OZ - DENMARK
New prefixes have been issued in Denmark this March. Besides of OZ
following prefixes were assigned to amateur radio: OU, OV, 5P and 5Q.
The new call of Joergen,OZ8AE, will be OV3X. He has participated in
the WPX CW Contest as 5P1ER a few years ago and received many QSLs
for HP1ER afterwards.

3A - MONACO
Eli,N6PF, is celebrating his 60th birthday with a DX trip. He will be
guest OP of Laura,3A2MD, signing 3A/N6PF from Jun 25-30. QSLs via N6PF.

3V - TUNISIA
Matthias,DD9HK, will be guest OP at the clubstation 3V8SS from Jun 21
until Jul 5. QSLs ONLY for this operation of 3V8SS via DD9HK.

5B - CYPRUS, AS-004
Mike,G0HIO, will stay on Cyprus (AS-004) from Jun 23-30. He will work
with 100 watts and wires signing 5B/G0HIO in CW only. Skeds can be
arranged via e-mail to g0hio@tesco.net

FRANCE, SPECIAL EVENT STATION
TM0GP is working from the Formula 1 race course in Nevers Magny-Cours
between Jun 18 and Jul 1. QSLs will be sent via bureau automatically.

THE NETHERLANDS, SPECIAL EVENT STATION
The famous cheese city Edam is celebrating its 650th anniversary at
the moment and the special event station PC650EDAM (QSL via PD3BL)
is active until Jul 1. See also: http://www.veron.nl/afdeling/waterland

==> Field Day Is Here!

For almost 100 years, Amateur Radio operators across the country have
been providing emergency communications when other systems failed or
were overloaded in a crisis. Each year, operators take their equipment
into unusual locations to test communications capabilities and make sure
Amateur Radio will always be there to get the message through. This
year, more than 70 years after the very first Field Day, thousands of
```

ham radio operators will be showing off their emergency capabilities this Field Day weekend. Field Day is the largest on-the-air operating event today.

Amateur Radio is about knowledge and growth. According to ARRL Field Day Coordinator Dan Henderson, N1ND, "Amateur Radio is a service that truly offers 'something for everyone.' It is a chance to learn and grow, but above all, Amateur Radio is about fun where we learn, share, and just have a good time. And for many, there is perhaps nothing more fun than ARRL Field Day. Old friendships are renewed and new ones created. We become both teacher and student during Field Day weekend -- sharing our experience while learning new things."

Henderson said that Amateur Radio "stands at a juncture where we can embrace both the old and new. While CW, or Morse code, may no longer be a testing element, it is still a strong and favorite operating mode of tens of thousands of operators." More and more operators are embracing digital technologies, from RTTY to the newer digital modes like PSK31 and Olivia. And phoneband expansion has brought about a growth in this traditionally popular mode.

Henderson calls Field Day "the time where we bring Amateur Radio to Main Street USA. By setting up in parking lots, malls, Emergency Operations Centers, parks and even at home, amateur operators learn skills that will allow them to better serve their communities. Setting up in these public venues gives added public relations value -- their friends and neighbors can see and experience the fun and public service capability that their 'ham radio' neighbors bring to their towns. High visibility helps get the Amateur Radio message out to the community."

Keep in mind two minor rule changes for Field Day 2007. First, while working for the satellite contact bonus, you are limited to making only one QSO when using any of the single-channel FM satellites. This will allow more stations to access this very limited resource.

The second change involves the bonus points for GOTA (Get-On-The-Air) stations. The number of QSOs required to attain the bonus changes from 50 down to 20, and continues in multiples of 20 up to 100 QSOs per GOTA operator -- 20 bonus points for each 20 QSOs completed. For more information on Field Day rules and procedures, check out the Field Day packet or go to the Field Day Web site available at <http://www.arrl.org/contests/forms/fd-2007-packet.pdf>.

==> Field Day from the South Pole

It's not just Field Day here on the continental United States - it's also Field Day on the South Pole! Robert Reynolds, Nï¿½QFQ, a ham down at Amundsen-Scott South Pole Station, said all three US bases on the Pole will be on the air for Field Day.

Amundsen-Scott, KC4AAA; Palmer Station, KC4AAC, and McMurdo Station, KC4/W1MRQ, will be operating on 40 meters around 7.235 MHz and on 20 meters around 14.243 MHz throughout the event. McMurdo will also be

operating CW on 7.028 MHz. Since the Pole at this time of year is in total darkness, Reynolds says 40 meters will be the better band.

Reynolds went on to say that Amundsen-Scott will be on the air throughout the entire 24 hour event. Palmer and McMurdo, he said, will be on the air "as much as possible."

Please send QSLs for Amundsen-Scott, Palmer and McMurdo to QSL Manager Larry Skilton, K1IED, 72 Brook St, South Windsor, CT 06074.

==> Field Day from Space

ARRL Field Day Coordinator Dan Henderson, N1ND, reports that he was contacted several weeks ago NASA regarding the International Space Station's participation during Field Day this year.

"As in past years, there is the usual 'soft' plan for at least one of the stations on the ISS being activated for a time during Field Day. As always, this is dependent on the astronauts' work schedule, and always subject to last minute change," Henderson said.

For each of the past five or six years, at least one of the residents of the ISS has made an appearance during Field Day. Stations should check the ISS passes - "No guarantees," Henderson said. "But if it happens, it sure builds the excitement at a Field Day site."

You can find out just when the ISS will pass over your Field Day site at spaceflight.nasa.gov/realdata/sightings/index.html.

==> Field Day from W1AW

The Hiram Percy Maxim Memorial Station, W1AW, located at ARRL Headquarters in Newington, Connecticut, will be hosting their own Field Day event. ARRL HQ staff and visitors will be operating W1AW the entire 24 hour Field Day period.

W1AW Station Manager Joe Carcia, NJ1Q, said, "If you are in the area, please stop by and say hello. You are certainly welcome, and this is a wonderful chance to operate W1AW in a fun environment." W1AW will be open to visitors during Field Day on Saturday between 2-9 PM EDT and 9 AM-2 PM EDT on Sunday.

Carcia noted that there will be times during these hours when Field Day operations will be suspended in order for the scheduled Field Day bulletins to be sent. You can find the W1AW Field Day Bulletin schedule on the Field Day Web site <http://www.arrl.org/contests/forms/fd-2007-w1aw-sked.html>.

==> ARRL Membership Numbers on the Rise

With now close to 152,000 members, the ARRL is going, and growing, strong. ARRL Customer Service Manager Amy Hurtado, KB1NXO, says the "ARRL is a viable, up-to-date organization that every ham should be a part of."

Hurtado credits the rise in membership in part to the FCC rule changes earlier this year that eliminated Morse code testing for the General and Amateur Extra license classes. "Since more people were upgrading their licenses as a result of there being no Morse code requirement, we were successfully able to show them the benefits of being an ARRL member," she said.

One of the many benefits of ARRL membership, Hurtado said, is the monthly subscription to QST, the official journal of the ARRL. Other benefits of ARRL membership include a QST/QEX/NCJ index search on the ARRL Web site; operating awards; outgoing QSL service; access to the Technical Information Service; available ham radio equipment insurance program and more. Members can also get an arrl.net e-mail address through the ARRL e-mail forwarding service.

Hurtado went on to say that new, renewing and lapsed members can join the ARRL in many ways. "About 40-50 percent of membership enrollment is online. We also have people join after taking a licensing exam, by calling us on the phone, by answering a direct mail package or by joining up at their local hamfest."

If you are interested in joining the ARRL or renewing your present membership, please see the ARRL Web site <http://www.arrl.org/join>.

==> July QST Hits the Streets

If you haven't received the July issue of QST, just wait, because it's on its way! QST, the official journal of the ARRL, is the members-only magazine featuring all the latest Amateur Radio news and technology.

This month, QST and the ARRL get ready to head to Huntsville, Alabama, site of the 2007 ARRL National Convention, held in conjunction with the Huntsville Hamfest. The convention, scheduled for August 18-19, features the ARRL Expo, a special exhibit area with ARRL program representatives, activities, presentations and the huge ARRL bookstore.

On the technical side, the July issue offers articles on how to get on 24 GHz, a balloon-lifted full-wave loop antenna and a keyboard that lets you send CW when your fingers can't. QST Technical Editor Joel R. Hallas, W1ZR also reviews the new Ten-Tec Omni VII HF/6 meter transceiver.

For those interested in the latest in Amateur Radio news, you will be sure to find it in the July issue. Hallas and QST Managing Editor Joel Kleinman, N1BKE, report on the 2007 Dayton Hamvention, noting that it was "standing room only" at many of the forums and presentations. You can also read about a ham's QRP trek in Ireland, as well as the latest in ARRL and FCC news.

For you contesters out there, read the results articles for the 2006 ARRL 10 Meter Contest, 2007 ARRL RTTY Roundup and the 2007 ARRL January VHF Sweepstakes. Keep in mind that the 2007 ARRL August UHF Contest is coming up, so catch up on the latest rules and information on this contest in the July issue.

As in each and every QST, you will find a wide variety of articles and columns for all hams, covering DXing, vintage gear and cutting edge technology, public service, special events, as well as a schedule of upcoming hamfests, conventions and contests.

==>SOLAR UPDATE

Tad "Walking on Sunshine" Cook, K7RA, this week reports: June 23-24 is ARRL Field Day, and it follows a week with no sunspots. As expected, there was a mild geomagnetic upset on Thursday, June 21 when a solar wind stream pushed against Earth's magnetic field. The planetary A index went to 14, a moderate level, but the mid-latitude A index, which affects most of us more directly, was only 8. That number comes from the Fredericksburg Geomagnetic Center near Corbin, Virginia, which is at 38.2 degrees north latitude. Boulder, Colorado provides the mid-latitude A index that we hear on WWV at 18 minutes after each hour, and at 40 degrees north latitude, it produced an A index of 12 for June 21. For the weekend, we might see another sunspot appear by Sunday, so it looks like any 10 meter propagation will be sporadic-E skip, not any great openings based on a higher MUF. Predicted planetary A index for June 22-24, Friday through Sunday, is 15, 10 and 8. Predicted solar flux is 68, 68 and 70. A solar flux value below 70 implies no sunspots, which you can observe along side zero sunspot days at <http://www.sec.noaa.gov/ftpdir/indices/DSD.txt>. Geophysical Institute Prague predicts unsettled to active conditions June 22, unsettled June 23 and quiet June 24-25, quiet to unsettled June 26 and back to quiet June 27-28. The A index and solar flux predictions referenced in the previous paragraph are available at <http://sec.noaa.gov/ftpmenu/forecasts/45DF.html>. After 2100 UTC on Friday, check this again for a June 22 update. For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: ARRL Field Day is this weekend, June 23-24, 1800-1800 UTC. This weekend also plays host to the following contests: NCCC Sprint Ladder and the Digital Pentathlon on June 22; the Ukrainian DX DIGI Contest, His Majesty King of Spain Contest, (SSB), Marconi Memorial HF Contest and the ARCI Milliwatt Field Day. The Quebec QSO Party has been cancelled. Coming up next weekend, June 30-July 1, the NCCC Sprint Ladder and the Digital Pentathlon are June 29. The WLOTA is June 30-July 1. The RAC Canada Day Contest and SKCC Weekend Sprint are July 1. During the week, the RSGB 80m Club Championship (CW) is July 2, and the ARS Spartan Sprint is July 3. Schedule the Michigan QRP July 4th CW Sprint around your hot dogs and fireworks on July 4-5. See the ARRL Contest Branch page http://www.arrl.org/contests/, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday July 8 for these online courses beginning on Friday July 20: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003); Antenna Modeling (EC-004); Radio Frequency Propagation (EC-011); HF Digital Communications (EC-005), and VHF-UHF (EC-008). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the CCE Department <cce@arrl.org>.

* ARRL Staff Members Meet in Switzerland, Germany: ITU-R Working Party 8A just finished up their meeting in Geneva. This group is responsible for most of the land mobile services, plus the amateur and amateur-satellite services, approved the Amateur Service and Amateur-Satellite Service Handbook, to be published by the International Telecommunication Union. The handbook is an overview of the activities of the amateur services, along with existing ITU texts that relate to the two services. This will be published by the ITU in the six official UN languages, and will be a useful guide to administrations in countries where the amateur services may not be well developed. IARU President Larry Price, W4RA, represented the IARU. ARRL Chief Technology Officer Paul Rinaldo, W4RI, is on the US delegation and is chairman of the working group that dealt with the handbook. ARRL Chief Executive Officer David Sumner, K1ZZ, Price and Rinaldo will meet up with Membership and Volunteer Services Manager Dave Patton, NN1N, and ARRL VEC Manager Maria Somma, AB1FM, in Friedrichshafen, Germany, Europe's largest hamfest at HAM RADIO 2007. To find out more about HAM RADIO 2007, please see their Web site <http://www.hamradio-friedrichshafen.de/html/en/>.

* ARRL Annual Report: The ARRL's 2006 Annual Report has been published. Highlighting the "Hello" Campaign and other major events in 2006, the report contains information about all of the activities of the ARRL headquarters staff throughout the year as well as summaries by ARRL President Joel Harrison, W5ZN, and CEO David Sumner, K1ZZ. According to ARRL Media and Public Relations Manager Allen Pitts, W1AGP, "The Annual Report is not only useful for showing members the strength of the organization, but it is also a valuable tool in presentations to major public officials. At times they may know little about Amateur Radio, but when they see the quality of the annual report, even before they open it up, they know this is an organization to be taken very seriously. It is indeed a national association and very active. That gets their attention quickly." The 2006 Annual Report is available in both printed format and also on the ARRL Web site. <http://www.arrl.org/announce/annualreport/2006/Annual_Report_2006_web.pdf>

* ARRL Editors Attend Publishing Conference: QST Editor and Publications Manager Steve Ford, WB8IMY, and QST Managing Editor Joel Kleinman, N1BKE, attended the National Society of Association Publications (SNAP) conference in Washington, DC June 13-14. SNAP is an organization made up of nonprofit entities that publish books, magazines, Web sites and other media. The purpose of the conference is to facilitate the exchange of

ideas between organizations, with an eye to improving their media offerings. The conference, entitled "Offset, Online, On Message... Association Publishing on the Cutting Edge," included sessions on practices in corporate publishing, understanding digital readers, measuring reader satisfaction and how to use the Internet to reach a global audience. "Being at the SNAP conference gives us an excellent opportunity to share ideas with other nonprofits to improve our books, magazines and electronic media," said Ford.

* FCC Commissioner Gets Presidential Bid to Continue; Awaits Confirmation: President George W. Bush has announced his intention to nominate Deborah Taylor Tate to a full term as a Commissioner of the Federal Communications Commission. Tate is serving out the remainder of the term of former FCC Chairman Michael Powell. Current FCC Chairman Kevin Martin said of Bush's announcement, "If confirmed, I look forward to continuing to work closely with Commissioner Tate. She has served admirably at the Commission for the past year and a half, and I appreciate her continued dedication to public service. Debi brings important insight to the Commission, including her distinguished career as a leader in state government. Her thoughtfulness, dedication, and leadership have made Debi an invaluable member of the Commission." Among her many responsibilities, Tate serves as Chair of both the Federal-State Joint Board on Universal Service (Universal Service Joint Board) and the Federal-State Joint Board on Jurisdictional Separations.

* ARRL E-Mail Usage Going Strong: One of the many benefits of ARRL membership is the ARRL e-mail forwarding service, first offered in February 1999. This service allows ARRL members to set up an arrl.net alias e-mail address. When e-mail is sent you at your arrl.net address, it is forwarded to an e-mail address you have designated. According to ARRL Information Services Manager Don Durand, approximately 45 percent of ARRL members take advantage of the e-mail forwarding service. "Using the figures from Wednesday, June 20, we had 876,993 connection attempts and 148,400 actual e-mail deliveries," Durand said. "The difference of 728,593 represents spam that was trapped and not delivered to our members." Durand said the numbers show the e-mail filters do a "pretty good job eliminating spam. Using a combination of filtering software, as well as holding in-bound messages to the accepted standards of transmittal, we are able to remove approximately 90-95 percent of all spam before it reaches a user's inbox."

* Let Us Know: Do you have a favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? This is your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org. Please title your e-mail "ARRL Letter Suggestions." We look forward to implementing positive suggestions into the Letter.

* Clarifications and Corrections: The ARRL Letter, Vol 26, No 24 (Friday, June 15, 2007), did not wish to imply the US Senate would be conducting an investigation into Broadband over Power Line issues ("US

Senate to investigate BPL's interference potential to Amateur Radio").
Senate Bill 1629, also known as the Emergency Amateur Radio Interference Protection Act of 2007, stresses the impact the Amateur Radio Service has with regard to emergency communication. The bill, if, and only if, it becomes law, would require the FCC to conduct a study on BPL and report back to House and Senate committees their findings regarding "the interference potential of systems for the transmission of broadband Internet services over power lines."

In the same edition, ElectroMagnetic Compatibility was referred to as Electromagnetic Capability ("ElectroMagnetic Capability Committee meets at ARRL HQ"); it should read "ElectroMagnetic Compatibility" throughout the article.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax 860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify

membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

Thanks to all who answered my question - and good luck to all who participate in FD 2007.

This year I'll be going out with a club group, running 3A. This FD is part readiness-exercise, part training, part publicity, part contest, and part social event. The first 100 points are already in the log.

If my count is right, this will be FD number 40 for me. Haven't missed one since I was a Novice. Doesn't seem like four decades since those days. Been lucky enough to do FD with big clubs, small clubs, small nonclub groups of a couple hams, and even single-handed. Even had an FD story in QST some years back. Always a lot of fun.

This could be interesting! If Kenwood gains access to the JVC distribution channel (including big-box retailers like Circuit City and Best Buy), amateur radio could accidentally get some much needed retail visibility.

As a teen, I got my first 2-meter mobile rig at Sears back in the 70's (actually my Mom bought it as a Xmas gift), an OEM'd version of a Midland 1510. Not sure she'd have been able to shop Henry Radio or AES, but Sears was right down at the local mall.

73,

RDW

I think that was a re-badged Midland 13-510 (not 1510). Forget the model number they had on it, but it was only on the market a year or two.

Later (early 80's?) Sears private-labeled a couple of Yaesu 2M rigs, under Model # 3880 and # 3881.

1170. WIANEWS for week commencing JUNE 17 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-06-23 11:10:56 UTC
From: nationalnews@wia.org.au
Message-ID: <200706231000.l5NA09B29019@panix2.panix.com>
Source record: 4225
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing JUNE 17 2007

Mal VK4MAL is currently working with the Red Cross Counter-Disaster division in the flooded areas of the New South Wales Central Coast and Hunter Region.

Mal VK4MAL is Counter-Disaster Co-ordinator for Red Cross in North Queensland and he and hundreds of other volunteers were shipped in from across VK to provide some help for flood weary local volunteers and residents of the disaster zone.

VK2ATZ/portable the Westlakes AR Club were in the thick of things, but were still able, somehow, to score a vantage point to see the container ship which was washed ashore at Nobby's Beach on the Friday morning.

Saturday Westlakes Amateur Radio Club was open....But not for usual business. It was open to the few that braved the weather and answered the calls for help to clean up the debris from the horrible weather suffered the previous night.

Some helping included VK2YPW, VK2AFZ, VK2ZM and Keith VK2PKT, Paul VK2BPL, and Richard VK2FRKO also John VK2FJKG

Then when the Hunter River in Maitland looked like breaking its banks on Sunday, the Volunteer Rescue Association wasted no time in securing the specialist communications skills of WICEN (NSW).

Eight operators from the Hunter Region were deployed at Rutherford, and they were tasked with passing intelligence reports to the services involved, along with monitoring and reporting the river levels at 15 minute intervals. This involved three teams, two at the gauges and one at the control centre; all were alert and busy throughout the night and into the next morning.

As well as this, teams were on stand-by in both the Sydney North and Central Coast Regions, but as the floods abated they were not required; it is worth noting that although members in the Central Coast Region also suffered from the storm, some were still able to respond.

Other VRA squads such as CREST and Cave Rescue were also involved.

The President of the Volunteer Rescue Association, Ray Gill ESM[*], thanked WICEN for their prompt response.

(sourced to TARC Westlakes and Dave Horsfall VK2KFU WICEN (NSW))

[*]

Note: "ESM" is not a callsign, but refers to "Emergency Service Medal".

As shown in this recent Hunter Emergency, we amateur radio operators are community minded and are often keen to benefit our community and others with our equipment and skills. The development of the Wireless Institute of Australia National Network of Emergency Communications is a case in point.

Here is the Vice President of the WIA, Ewan McLeod VK4ERM.

The establishment of the Wireless Institute of Australia National Network of Emergency Communications or WIANNEC is progressing. This is the result of the IARU requirement to be able to provide initial emergency HF communications when required until government and other communications assets are operational and able to take over.

WIANNEC does not usurp the established role and capabilities of WICEN. However, it is anticipated there are WICEN operators and stations capable of satisfying the needs of WIANNEC as are well established stations and contest stations.

What can you do to assist in the planning, establishment and operation of this network in the unfortunate situation where our HF communications capability is required? Well, you must consider these five primary questions:

One. Are you in regular contact with Amateur Radio Stations in the Australasian region that is, is your station's capability proven?

Two. Are you able to support 24 hour operations with our neighbouring countries and nations?

Three. Is there a pool of experienced operators you can call on at short notice to assist in maintaining the 24 hour operation of your station?

Four. Do you have broadband and permanently on internet access?

Five. Are you prepared and able to make your station available for emergency communications in our region?

If you can answer in the affirmative for those five questions then I would appreciate hearing from you. My email address is vk4erm@wia.org.au

This is Ewan VK4ERM looking forward to your communication.

WIA PRESIDENT MICHAEL OWEN VK3KI

I would like to announce some changes that will take effect from 1 July.

>From 1 July 2007 the cost of Family Membership will drop from $40 to $30 per year.

A Family Member does not receive Amateur Radio and is a second or further person living at the same address as a Member or Concession Member receiving Amateur Radio.

The WIA Board hopes that this will encourage more people living at the same address to all become members of the WIA, particularly in this year of high expense associated with the ITU World Radiocommunication Conference next November in Geneva.

Also from 1 July 2007 the WIA will no longer offer membership without the magazine, Amateur Radio. Existing Non-AR memberships will continue.

The Board believes that while the WIA communicates in a number of ways, including broadcasts and the WIA website, the magazine is the only way that the WIA can directly communicate with all members who receive it, and so the non-AR membership is no longer appropriate.

The WIA has been forced to increase the cost of assessments.

Currently all assessment packs are $25. From 1 July 2007 the cost of packs used on or after that date will increase to $35 per pack, irrespective of when the pack was produced.

The assessment packs are for the Foundation qualification (which includes theory, regulations and a practical assessment), the Standard and Advanced Regulations and the Standard Theory and Advanced Theory. Each will cost $35, payable when the pack is used.

The only exception will be a practical assessment taken alone which will remain at $25.

A detailed cost review has revealed that the cost of producing and processing each pack is more than the amount we have been charging, and so other WIA income has been subsidising assessments.

Two reminders:

Please don't forget that the last date for nominations to be received for the Advisory Committees is 22nd June.

Currently we are reviewing the WIA's 'Assessment Instructions'.

That is, how we conduct the whole assessment process.

We have asked each Assessor to identify (with particularity) each part of the Instructions (including the forms) that have caused any difficulty or uncertainty or could be either clarified or simplified, and to make a precise suggestion as to change.

We remind the Assessors to respond and invite any one else who is interested to send your suggestions by post to Dianne Aston, WIA Examinations Officer, PO Box 2175, Caulfield Junction, VIC, 3161, or by email to nationaloffice@wia.org.au, marking your email Assessment Instructions Revision.

We have asked that all suggestions be at the office no later than tomorrow, 18 June 2007.

THE WIA NATIONAL QSL COLLECTION

The WIA QSL card collection contains cards donated by radio amateurs and Short-Wave Listeners from both Australia and overseas, the aim of which is to save 'something for the future'. We are all aware of the great interest shown in such items as vintage cars, antique furniture and heritage buildings. QSL cards also have an archival value in that old QSLs, through their description of radio equipment and comments made by our radio 'old timers', can depict the fascinating world of amateur radio in its early days.

Members of the WIA have reason to be proud of their WIA QSL Collection, for it contains some of the most valuable archival material in the world. The QSL of Reinhartz 1XAM of the USA De Loy of France are here. It was the amateur radio transmission between these two experimenters in November 1923 that bridged the Atlantic for the first time. The QSLs of Frank Bell Z4AA and Cecil Goyder G2SZ are here. It was these experimenters who made the first two-way amateur radio contact between New Zealand and England in 1924.

The Collection has also an excellent range of post war QSLs such as rare DX, IOTA, DOK, Prefix and USA County QSLs, in addition to a thematic collection and a pictorial collection containing some of the world's most attractively designed QSLs.

The WIA appeals to all amateur radio operators and executors of 'silent key' estates to donate QSLs to the Collection. Such donations are acknowledged in the WIA's Amateur Radio magazine, and postage is fully refunded.

Both radio clubs and individuals have the opportunity of purchasing at cost price a DVD portraying a wide range of both pre-war and post-war QSLs. These have proved very popular at Club evenings.

Would you care to help by becoming one of our QSL contributors or a QSL Curator Enquiries should be directed to:

Ken Matchett VK3TL Hon. Curator
Tel: (03 9728 5350
Email: wiaqslcollection@wia.org.au

Thanks Robert, now we have received a letter from Ken, in the letter Ken tells us the he has undergone major surgery and undergoes a period of Radio and Chemo therapy. Ken is urgently appealing to all radio Amateurs particularly those in VK3 to consider become involved in the QSL collection and to help maintain what is probably one of the most valuable QSL collections in the world.

Ken says that even a few hours a week would be helpful. Again the email address to contact Ken is wiaqslcollection@wia.org.au

Following the outstanding success of the Parkes AGM weekend in May and continuing requests for copies of the reports presented at the open forum, WIA Director Robert Broomhead has announced that copies of the bound Open Forum Report Booklet would be available to members and affiliated clubs for $10 per copy including Postage..

This booklet of some 66 pages with glossy front cover pictorial of the 'Dish" will give members who were not at Parkes a good idea of the range of activities that are encompassed within the work of the Wireless Institute on behalf of members and all amateurs", said Robert, "It gives a good overview of the when, where and why of current WIA act ivies"

This text edition is only authorised for re-publication in full on www.wia.org.au on the ax25 ww packet radio bulletin board system and in the early email editions sent from the vk1wia server at national office. Any subsequent copying on newsgroups is a blatant pirated activity.

Appointment of Karl Hennig VK6XW as Intruder Watch Coordinator

Karl Hennig VK6 XW has been appointed by the WIA Board to replace Glenn Dunstan VK4DU who retired at the recent WIA AGM.

The WIA has accepted responsibility as a central clearing house for reports on intrusions from non amateur activities. The WIA Intruder Watch Service is an agreed mechanism with the Australian Communications and Media Authority (ACMA). The Service also links to the international intruder watch for amateur radio, specifically by linkages to the International Amateur Radio Union Region 3 covering our part of the world..

Full details of the WIA Intruder Watch system are available here on the WIA Web site.

The success of the Service in protecting the access of Australian amateurs to the HF depends heavily on the support of active amateurs willing to go that extra mile and submit formal reports about interference

Michael Owen VK3KI, President of the WIA and Phil Wait VK2DKN made special presentations at the NZART AGM June 2.

Michael spoke to the changes in the WIA since his visit two years ago at the New Plymouth Conference in 2005, whilst Phil spoke to Broadband over Power Line issue with a well presented and received presentation.

VK2

School radio club calling CQ IRLP

The Bishop Druit College Radio Club at Coffs Harbour on the mid-north coast of New South Wales is looking VK, ZL or Asia-Pacific contacts on IRLP.

The students who have been experimenting with building simple FM radio receivers are also keen to have some on air operating experiences.

IRLP contacts with interested parties or similar school electronic/radio groups would be great - but the club only has limited time during the local lunchtime period.

The station equipment has been provided by Peter McAdam VK2EVB - and the club is QRV Fridays 0315 - 0345 UTC, on the IRLP node 6625 which is via its local repeater VK2RDO.
(VK3PC)

VK4

FNNQARG was great !

The weather was beautiful during the day but a bit brisk at night, 65 hams and support crews attended, many experiments with canvas palaces and rapid deployment field poles and towers were undertaken and a heap of fun was had.

Oh, and some were lucky enough to purchase new transceivers and antennae and play with them in a tropical paradise PLUS sample some gastronomic resort delights.

This sums up the 2007 Far North and North Queensland Amateur Radio Get Together held over the Queens Birthday long weekend in June.

VK5

SERG have had a busy time, not only another successful Mt Gambier weekend, but would seem the hub of their extensive repeater network (VK5RNC) at Naracoorte received what seems to have been a direct lightning strike.

Took it all out; from antennae right through to UHF linking gear, meaning a complete rebuild.

Murphy lurking just before their convention again!!!

VK6

HAMFEST 2007 happens in Ashfield Sunday August 5 at 9am.

Northern Corridor Radio Group will even have interstate traders on the day with impressive specials!

Along with the usual features one experiences at hamfests, this "biggie" in Perth will feature 109 Signals Squadron and the Tesla Society.

Cyril Jackson Recreation Centre
Fisher Street
Ashfield.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

YOUTHDAY 2007
June 16 in ZS land saw many young people experience amateur radio by operating an amateur radio station under supervision and talking to other young people on the air.

The emphasis was on operating an amateur station, not on just handing the microphone to the young guest to say a few words.

More on the web

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Next Foundation Licence course, and Standard / Advanced assessments .....

NEW SOUTH WALES

ARNSW regularly holds Foundation Licence Assessments as well as Exams for Standard and Advanced Licences.
Held on the last weekend of each EVEN numbered month.
The next Assessment will be 30th June & 1st of July.

The Hunter Radio Group
They'll hold their next licence assessments on Saturday 23rd & Sunday the 24th of June at 9.00 am at the Print Makers Workshop, 27 Popran St Adamstown.

For further information, please contact the Examination Group Leader, Grahame O'Brien VK2FA on 02- 49548688. It is important that Foundation candidates have a copy of the foundation manual and have studied it before attempting an assessment.
Manuals are available from the Hunter Radio Group.

Some places will be available for candidates wanting to upgrade from foundation licences to standard or advanced licences and the Hunter Radio Group will be having a sausage sizzle on both days for lunch.

VICTORIA

Amateur Radio Victoria has announced its next two Foundation Licence training and assessment weekends - 23rd and 24th of June and the 21st and 22nd of July.

Held at Box Hill North these classes attracting candidates from Greater Melbourne and Victorian regional areas.

For inquiries or to enrol please contact Barry Robinson VK3JBR 0428 516 001 or arv@amateurradio.com.au

(Amateur Radio Victoria amateurradio.com.au)

ACMA NEWS

The Australian Communications and Media Authority is seeking public comment on proposed variations to the schemes that regulate the conversion of broadcast television from analogue to digital mode.
The full release can found at
www.acma.gov.au/WEB/STANDARD//pc=PC_310295

INTERNATIONAL NEWS READ BY Rob VK5MM

ARRL/IARU TEAM TO REPRESENT AMATEUR RADIO AT ITU MEETING IN GENEVA

ARRL Chief Executive Officer and IARU Secretary David Sumner, K1ZZ, have been representing the IARU at a meeting of ITU-R Working Party 1A in Geneva, Switzerland.

Working Party 1A is responsible for spectrum engineering techniques within Study Group 1 (spectrum management) and has been working on a document that may eventually become what's called a "preliminary draft new report" on the impact of power line telecommunications (PLT, what we call BPL on this side of the Pacific) on Radiocommunication systems operating below 80 MHz.

Of course, the IARU's interest is in ensuring that the report accurately reflects the sensitivity of the amateur services to interference from this source.

Also meeting at about the same time (June 12-20), ITU-R Working Party 8A, which is responsible for most of the land mobile services, plus the amateur and amateur-satellite services. WP 8A hopes to complete work on a "draft new handbook for the amateur and amateur-satellite services" to be published by the ITU.
(arrl letter)

OPERATIONAL NEWS - CONTEST COLUMN - D A T E L I N E

VK/TRANSTASMAN CONTEST
160M Phone 7 July 2007
160M CW 21 July 2007

The Hunter Radio Group Contesters will be operating in the Trans Tasman 160 meter phone event on July 7th this year at Luskintyre Tiger Moth Airport

There will be some fun type foxhunt also held round the airport.

The group extends a cordial welcome to all operators.

This will be an ideal training event for the up coming RD contest at the same location.

Food, drinks and accommodation will be available.

Accommodation will be on a first to book basis

As in all Hunter Radio Group functions, having fun will be the main objective

For further information, or to confirm your attendance please contact Grahame VK2FA on 02 49-548-688 before June 24th 2007

NZART MEMORIAL CONTEST - 80M - SSB AND CW.
7 & 8 July 2007.

Times :- 2000 NZST - 2300 NZST, divided into 3 operating periods each evening.

Band :- 80M SSB and CW.

Contest Rules NZART Website. http://www.nzart.org.nz
(John Powell. ZL1BHQ, NZART Contest Manager)

JULY 14-15
The annual IARU HF World Championship is held on the second full weekend of July. This year it will be held during the 24-hour period from 1200 UTC Saturday, 14 July to 1200 UTC Sunday, 15 July.
Rules are at www.iaru.org/contest.html

Because this is unusually late in the month for the event to occur, there has been some confusion about the dates. The CORRECT dates are 14-15 July. Any references to 7-8July are INCORRECT.
(David Sumner, K1ZZ Secretary, IARU)

14th of July the Jack Files Contest.
0800 UTC - 1400 UTC
80 metres only.
Use 3.5MHZ - 3.7MHz
CW; SSB; or All Modes

Boat Anchor Sprints:
August (11), October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

Today marks only 56 days to the 2007 RD contest.

Last years Audited results are now posted on the WIA website.

In the July issue of your AR magazine we will publish this years Rules (with some minor adjustments from the previous years).

On the WIA Website the rules are available along with associated documents.

Last year we saw a great rollup from all states including several of the then, newly licensed Foundation calls, we look forward to seeing and working many more of the F calls in this years contest.

For those using some of the computer logging programs PLEASE check that you have the current version, as many last year were using outdated programs which caused several headaches when checking the logs, and having to adjust the scores.

7th World HST Championship will be held in Belgrade Serbia September 19-23rd.
www.hst2007.org

NOVEMBER 17/18
Spring VHF-UHF Field Day - November 2007
For everyone who likes to plan ahead - please note the dates for this year's Spring VHF-UHF Field Day. It will be held on November 17/18, a week later than usual. This will prevent a clash with club activities in two states.

SPECIAL EVENTS, BEACON AND NET ADVICE
VK's longest continual net;
The Southern Cross DX Net has been running for 43 years, operates 7 days a week - propagation permitting - on a frequency of 14.238.5MHz at 1215 zulu.

Boat Anchor Net

A regular on air gathering of people interested in old commercial amateur transceivers takes place Sunday afternoons.

The VK5 Boat Anchor Net can be heard at 3.30pm Adelaide time or 4pm Australian Eastern Standard Time on 7.064MHz plus or minus QRM.

Get their old radio out of the cupboard, tune it up and give net controller Mark Kilmier VK5EME a call.

80 metres 3.645 The Odd Night Net.

This to assist new Foundation members get used to their equipment by talking about various issues which they have and would like to discuss.

You might wonder about the name but it means they meet on the odd nights of the calendar i.e. 1,3,5,7,9. Hence the name Odd Night Net.

It is open to all classes of licences but mainly aimed at the new comers.
(Richard Osborne)

Special Event Stations

GB25FC is the special event call sign that will be active until 18th June to commemorate 25 years since the end of the Falklands conflict. Up to four independent stations will be working from the Wyke Regis Amateur Radio Training Centre.

They will be using Morse, SSB, digital modes, RTTY, SSTV and UI-View, and there will also be a station working through the local radio internet links.

More info from gb25fc@wykeradio.org
(rsgb)

WW SPECIAL INTEREST GROUPS --- FINAL FRONTIER
VK5ZAI is the Australian Co-ordinator for ARISS.

AMSAT-VK UNOFFICIAL HF Net.
2nd Sunday each month.

April through October 1000 UTC 3.685 MHz

ARISS MILESTONE: 300TH CONTACT

On Thursday, May 31, Amateur Radio on the International Space Station (ARISS) made its 300th contact since its inception back in December 2000. This milestone QSO was to the NASA Teacher Conference in Houston, Texas. The first contact was on December 21, 2000 to Burbank School in Burbank, Illinois.

The United States leads in the number of ARISS contacts with 153. Japan is next with 25; Australia has 18, Canada has 16, Belgium has 10, the United Kingdom and Germany have 8 and France has 7 contacts. A total of 28 countries have made contact with the ISS through ARISS.
(ARRL LETTER)

WW SPECIAL INTEREST GROUPS --- RADIO AMATEUR YOUNG TIMERS
A Youth Net meets Saturdays at 0100 UTC on IRLP Reflector #2.

Don't forget the Young Hams Net on 80 meters! It's on 3.590

This is the net with Cohen, VK3FCLL at the helm.

This is a net for both new hams in the hobby or just a weekly catch up and chat.

Now details for the net are - 7:30pm until 8:30pm Victoria time, on 3.590mhz.

For more information e-mail vk3fcll@hotmail.com

SOCIAL SCENE

July 7+8 - GippsTech
Conference for VHF, UHF & SHF enthusiasts in Australia.
Held at the Gippsland Campus of Monash University in Churchill, about two hours drive east of Melbourne.
www.qsl.net\vk3bez\index.htm

August 5 - HAMFEST 2007 happens in Perth at 9am.
Cyril Jackson Recreation Centre
Fisher Street
Ashfield.

SEPTEMBER 21-23
North Queensland Amateur Radio Convention
Happening in twin cities of Thuringowa and Townsville.

JANUARY 20 2008

The Mid North Coast Amateur Radio Group invite all amateurs to attend the 2008 Mid North Coast Radio Expo to be held in Coffs Harbour on Sunday 20th January.

The Expo is held at the St Johns Church Hall, Mc Lean Street, Coffs Harbour. Gary VK2ZKT is the Radio Expo Coordinator on 02 66 55 2 990 or visit the Groups comprehensive web site at www.mncarg.org

THE FINAL FINAL

WALKS

Jeff VK4XJJ is still going strong on his walk across Australia.

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to
VK4XJJ

Jeff, VK4XJJ walking Gulf to Gulf, is doing fine, his position on Wednesday evening, 13th June, was 112 km northeast of Innamincka on the way to Birdsville.

For position and details see website - www.jeffswalk.com

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 24 JUNE 2007

You are listening to Amateur Radio Station ZS6SRL of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is broadcast every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. This broadcast can also be heard on Echolink by connecting to ZS6FCS. To listen to a web stream go to www.sarl.org.za, click on ARMI and follow the links. This, and previous bulletins, can be downloaded from the web site of the SARL i.e. www.sarl.org.za. You can also read or download previous bulletins from there and subscribe to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other newsreaders please change to suit).

In the news today:

A YAESU VX-2R HANDHELD TRANSCEIVER TO BE WON THIS AFTERNOON

BLOEMFONTEIN RTA PROGRAMME NOW ON THE WEB

SA AMSAT SPACE CONFERENCE MOVED

ANNUAL ACCOUNTS NOW DUE

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

A YAESU VX-2R HANDHELD TRANSCEIVER TO BE WON THIS AFTERNOON

A YAESU VX-2R 2 m / 70 cm micro handheld transceiver is up for grabs this afternoon when the SARL Digital Contest takes to the air from 15:00 to 18:00 CAT on 40, 6 and 2 metres. The Centre of Activity on the three bands are 7,037 MHz, 50,225 MHz and 144,138 MHz. The exchange is a signal report plus QSO number, starting at 001. The rules have been sent out with HF Happenings and appear on page 8 of the SARL Contest Manual. Get your log to the Lichtenburg ARC as soon as possible after the end of the contest.

BLOEMFONTEIN RTA PROGRAMME NOW ON THE WEB

Bloemfontein is the next stop for the SARL Radio Technology in action road show. The technology day will be held on Saturday 21 July at the

Advanced Training Wing at the School of Armour. The programme includes the entire main programme as presented at the other venues plus two additional presentations.

Bernie van der Walt, ZS4TX, will talk about his experiences at the World Radio Sport Team Championships and share some of his secrets on how to be a successful DXer and Contester. Phillip Venter, ZS4PV, will take the lid off the WSJT software and discuss VHF antennas. The full programme is available on www.sarl.org.za/rta.htm.

Diarise 21 July now, if you live in the Free State, Northern Cape or Lesotho you do not want to miss this event.

PLT IS NOT AN ACCEPTABLE SYSTEM WHILE INTERFERENCE TO HF IS POTENTIALLY HIGH

Power Line Telecommunication is not an acceptable system to provide broadband connections while the interference potential to HF frequencies remains high. This was the message that the SARL delivered to the Broadband Conference held at the Sandton Convention Centre during the past week.

Proponents of 'PLT as the solution to bridging the digital divide' must think again, Hans van de Groenendaal, ZS6AKV, told delegates. Bridging the digital divide is about access to Personal Computers and computer literacy and not about cheap broadband delivery. He said that the SARL is not against new technologies as long as these technologies are not at the cost of the HF spectrum, which is a scarce national resource. He said that in fact Radio Amateurs are embracing new technologies all the time. It is part of being an experimenter.

With so many successful and more mature technologies, such as WiMAX and HSPDA available, it is difficult to understand why PLT is still pursued with such vigour. Currently there is no PLT equipment type approved by ICASA and no licenses have been issued.

SA AMSAT SPACE CONFERENCE MOVED TO 15 SEPTEMBER

Due to the delay in the launch of SumbandilaSat, SA AMSAT has decided to move the date of this year's Space Conference to 15 September at the National Amateur Radio Centre in Gauteng. This means that prospective speakers have until 20 July to submit papers for consideration. More details will be announced in the next few weeks.

SARL PRESIDENT TO REPORT BACK ON STRATEGY CONFERENCE NEXT SUNDAY

SARL President Graham Hartlett will report back on Sunday 1 July during the President's Net on the SARL Council strategic session held yesterday. Annually the SARL Council meets face to face to consider strategies for the new financial year, which starts on 1 July.

The net is on the air at 19:00 and is followed at 20:00 by the Intecnet which features an open discussion on home construction.

ANNUAL ACCOUNTS DUE NOW

The SARL Annual subscription accounts were mailed and emailed during the past few weeks. Please give the account your urgent attention and send in your payment as soon as possible. The fees have remained the same as last year with an once off special 20% reduction for pensioner members. If you pay by internet or electronic banking, please indicate your call sign and name on the transaction or fax a copy to the SARL Head Office. Please note the new fax number is 088 011 675 2793. Please use all 13 digits when faxing the SARL.

CONTESTING NEWS

The provisional results of the SARL 80 Metre QSO Party held in April have been released. The Contest Committee only received 2 logs out of a possible 51. First place goes to Jan, ZS4JAN, with 530 points and second place to the East Rand ARC, ZS6ERB, with 480 points.

The provisional results of the SARL Hamnet 40 Metre Contest held in March have been released. Eleven logs and one check log was received. The full results are, in the Single Operator Stationary Mobile category: 1st Andy, ZS6ADY, with 1 260 points followed by Barry, ZS2EC, with 984 points and Roger, ZR3EC, with 588 points. In the Single Operator Portable category Al, ZS2U, took first place with 1 980 points with Alan, ZR1AAH, on 1 386 points and Dennis, ZS4BS, on 1 188 points. In the Single Operator Base Station category, Jan, ZS4JAN, leads the field with 2 988 points, followed by Francois, ZS6BUU, with 1 836 points, Carel, ZS3OBE, with 1 638 points, David, ZS1LL, with 1 350 points and Jan, ZS1VDV, with 912 points.

The annual IARU HF World Championship will be held during the 24-hour period from 12:00 UTC Saturday 14 July to 12:00 UTC Sunday, 15 July. It is a phone and CW contest on 160 to 10 metres. The complete rules will be sent out with HF Happenings.

CLUB NEWS

The Sasolburg Radio club had a successful day providing radio communications support to the 1st Sasolburg Scouts on Youth Day.

An Echolink VHF link was set up from Vanderbijlpark to the Scout Hall in Sasolburg, and a connection was made to a Dutch Scouting station, operated by Scout leader and new ham Leo, PD1LEO. A large number of the youngsters had QSO's with Leo, and many interesting questions and answers were exchanged. The youngsters were enthralled and amateur radio received good publicity. Approach your local Scout group to find out how you could assist during their centenary celebrations in August and the 50th JOTA in October.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at low to very low levels. The geomagnetic field is expected to be quiet in general while reaching active levels on 30 June until 1 July.

The expected Effective Sun Spot number for the coming week will be less than five.

20 and 40 metres will provide best opportunities for DX. There is a possibility of 20 metre openings towards India from about 15:30 CAT. 20 metres may open towards Australia from 08:00. From about 08:00 and again at 16:00, there may be 20 metre openings towards Europe. At about 16:00 short 20 metre openings towards the West Coast of the USA is possible. Otherwise, contacts to the USA are going to be very challenging. For the CW and digital enthusiasts, it will also be worth monitoring 10 MHz.

Locally, 40 metre is going to be the band to be on for the PSK31 contest with good propagation throughout South Africa until at least 16:00. Remember that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and call CQ.

Please visit www.spaceweather.co.za for further information.

DIARY OF EVENTS

24 June - SARL Digital Contest; 30 June - Closing date for updating of SA DX Survey; ZS6PTA Flea Market; 1 July - President's Net and Intechnet; 20 July - Last day to submit papers for SA AMSAT Space Conference; 23 August - Class B RAE; 15 September - SA AMSAT Space Conference; 18 October - Class A RAE.

SARL News depends on clubs and individuals for news items of importance and interest to radio amateurs. The one and only way to ensure that your contribution will reach the SARL News team, is to place it in www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date. It will be appreciated if you will do it in both Afrikaans and English.

The SARL also invites all listeners to listen to the program Amateur Radio Mirror International this Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. Audio is also streamed on www.zs6mrk.org and on Echolink from ZS6FCS as for this bulletin. A repeat transmission takes place on Mondays at 21:00 on 3 215 kHz. Telkom and Sentech sponsor the ARMI transmissions on the non-amateur frequencies.

You have been listening to a news bulletin by the South African Radio League, which was compiled by Dennis, ZS4BS.

A prosperous week to all, 73.

1 GB2RS NEWS Sunday 24 June

The news headlines

* RAG to exhibit at Space Centre

* Tony Hancock's The Radio Ham

* Foyle & District ARC on air at Jet World Masters Competition The Radio Astronomy Group (RAG) will have a stand at the annual British Astronomical Association (BAA) Exhibition Meeting to be held this year at the National Space Centre in Leicester, on 30 June.

The group intend to have a live demonstration of the latest Starbase software, with a connection to Martyn Kinder's VLF receiver, the GOES Xray satellite data feed, and some other examples of how it will work with the RAG developments. Past copies of the Circular and CD will be available for purchase.

The group currently have three university related projects still at the negotiation stage, but when they get the go ahead, they will announce these and will be looking for more eager volunteers! RAG should then have some significant external projects as well as their own developments, all of which will be accessible over the Starbase network.

For more information contact Laurence Newell RAG Coordinator via e-mail at radiogroup @btinternet.com and laurence.newell@bt.com.

The episode of the 1960 BBC TV comedy series 'Hancock's Half Hour' starring Tony Hancock and in particular, the infamous bungling radio ham segment containing those now classic lines "It is are not raining in Tokyo" and "GLK London calling the world" is available on YouTube.

This classic episode shows Hancock as a ham radio enthusiast who receives a mayday call from a ship in distress but keeps getting distracted just before he can take down its position.

The episode is split into three parts. To view log onto YouTube and type in Tony Hancock. Foyle and District Amateur Radio Club (FADARC) will be heading to St Angelo Airport, Enniskillen for the 2007 Jet World Masters competition. The competition runs from 5 July to 14 July the club will be on the air during the final two days of the event with its call sign MN0AKU/P.

This event showcases model aircrafts capable of flying at up to 250 mph. In attendance will be 100 pilots from some 31 countries

demonstrating their skills in what has been described as the ultimate radiocontrolled model aircraft competition. More details can be viewed at www.jwm2007.com.

The MSF 60 KHz time and frequency signal broadcast by VT Communications on behalf of NPL is occasionally taken off the air to allow maintenance work to be carried out in safety.

The next scheduled maintenance break will be at 0900 on 26 June until 1800 on 27 June BSP. Please be aware that during this period the signal will not be broadcast. If you have any questions please email time@npl.co.uk.

Help is still needed for the British leg of the Tour de France. Kent RAYNET requires a large number of RAYNET members being able to pass third party traffic on 8 July. If you can help contact Dennis Spalding, Kent County Controller, on dennis@spalding.freeserve.co.uk or by telephone on 01795 876091 as soon as possible.

2

A new 70cm repeater situated near Bromley in Kent entered service on 16 June. GB3LK, a new wide split 70cm repeater became operational on RU72. Co-located with GB3OK on 2 metres, coverage will include parts of London, north Kent and south Essex. More information can be found on the repeater group's website www.gb3ok.com.

And now for the details of rallies and events for the coming week

[Note to newsreaders: please exercise your judgement on which of the 24 June events to read, based on your service area and time of transmission]. On Sunday 24 June the West of England Radio Rally takes place from 1000 at the Cheese & Grain, Bridge Street, Frome, and Somerset. Details from Shaun, G8VPG, on 01225 873 098, or email rallymanager@westrally.org.uk. On Sunday 1 July the Barford radio rally takes place from 0900 at Barford, 9 miles southwest of Norwich, close to the A11 and A47. Contact David, G7URP, on 01953 457322/458844 or email radio@dcpmicro.com. On Sunday 7 July the Reddish Rally takes place from 1030 at St Mary's Parish Church Hall, Reddish Road,

Stockport. Details from Bernard, G3SHF, on 01625 850088 (daytime) or on the web at www.m5mdx.com/reddishrally. More details of these and future events can be found on pages 88 and 89 of the July edition of RadCom. Now for the news of special events

Special event station 9A07P will be active on all bands and modes until 31 December to celebrate the city of Djurdjevac. All QSOs will be confirmed automatically via the bureau. GB1EPC will be active until 28 June to celebrate the European PSK Club 1st birthday. The station will be setup at Bridge Street in Glasgow. Anyone is welcome to operate at the station, PSK modes only of course. QSL cards via MM0DFV. The annual transmission on Alexanderson Day with the Alexanderson alternator on VLF 17.2 kHz will take place Sunday 1 July at 0900 UTC. Tuning up will

be from 0815 UTC and the transmission will be repeated at 1300 UTC, tuning up from 1215 UTC. The station will be open to visitors. There will be activity on amateur radio frequencies with the call SK6SAQ. For more information log onto www.alexander.n.se/. QSL reports are very welcome. A veterans' weekend using call sign GB2VET will be held on 3 to 5 August at the East Park, Holderness Road, Hull. All veterans from the Navy, Army and Air force along with members of the public are invited to the event. The show will include outdoor displays by all the three services, military equipment and a veteran Spitfire from WW2. Working will be VHF and HF depending on the conditions at the time. Any person willing to help with this event, or for more information contact G0SWO, RAFARS 2912, telephone 01482 351907. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources. Look for Jan-Ole, DB8JO, Juergen, DJ5HD and Wolfgang, DJ5ZWS to be active on 10 to 80 metres as OX/homecall from Nuuk, Greenland (NA-018) until 25 June. QSL via home calls.

3 Pietro, IT9OPR, reports he will be active holiday style from Puerto Rico (NA-099) until 28 June. He will operate from the QTH of Flavio, KP4AWX, as well as mobile with Pedro, WP4CCQ. Jan, PA4JJ, will be active as 9A/PA4JJ/p from Porec, Croatia until 7 July. Operating on WARC bands using RTTY and PSK. QSL direct or via bureau. A QSL request form for bureau cards can be found at www.pa4jj.nl. Look for RV3ATS, RV3ATT and RU3AVF to operate on 10, 15, 20, 40, 80 and 2 metres as RV3ATS/p from 16 mountains located in various different Russian Districts until 21 July. They also plan to participate in a number of contests on the VHF and HF bands. QSL via RV3ATS, direct or bureau. Francois, ON4LO, will be active as CT/ON4LO/p from Portuguese lighthouses Cabo de Sao Vincente and Ponta Sagres until 29 June. He plans to operate SSB and digital modes on 10 to 40 metres. Celebrating the 750th anniversary of Krakow's city rights is HF750C, which will be active until 30 June. QSL via SP9BRP. Expect also a large number of local operators to use special prefix SN0 during the year. Zhang, BD3APX, will be active as BD3APX/2 from Juhua Island from 29 June to 1 July. Activity will be on 40 to 10 metres CW, SSB and digital modes. QSL via home call. Darren, G0TSM, will be active again as C52T from The Gambia until 29 June. This will only be a part time operation, and Darren plans to operate mostly on 6 metres. QSL via home call. G3ZAY, M0HSW and M0TJH, will be QRV as EI/homecall/P from Inishbofin Island (EU-121) until 25 June 10 UTC on the 27, then from Inishmore (EU-006) from 20 UTC on 27 June to 10 UTC on the 29 June. They will also try to operate for a few hours weather permitting, from the Blasket Islands (EU-007) on 30 June. QSL to home calls. Phil, F5OGG, will be active on 20 metres SSB and CW as F5OGG/p from the lighthouse on Noirmoutier Island (EU-064) on 30 June. He will participate in the WLOTA Contest. For more information log onto www.wlota.com. Special event station TM0GP will be active until 1 July for the French Formula 1 Grand Prix at Nevers Magny-Cours. All QSOs will be confirmed automatically via the bureau. A Swedish expedition to Market Reef (EU-053) is planned to take place on 5 to 9 July. Three or four operators will be active as

OJ0/homecall on 160 to 2 metres CW, SSB and digital modes. More information will follow. Now the contest news

His Majesty the King of Spain Contest takes place between 1200 on 23 June to 1200 on 24 June on 1.8MHz to 28MHz bands, SSB mode. The exchange takes the form of RS and serial number. The RSGB 50mhz activity takes place between 2000 and 2230 local on 26 June on the 50MHz band, all modes. The exchange takes the form of RST, serial number and locator.

Now the solar factual data for the period from the 11 to 17 of June, compiled by Neil Clarke, G0CAS.

4 Solar activity was very low with no significant solar flares taking place. The solar disc became spotless on the 14th. Solar flux levels declined from 73 units on the 11th to 67 by the 17th. The average was 70 units. The 90 day solar flux average on the 17th was the same level as last week at 74 units. X-ray flux levels declined from A2.1 units on the 11th to below the A1 level by the 14th. Geomagnetic activity was quiet except for the 14th, which increased due to a small coronal hole when the Ap index was 20 units. The average was Ap 8 units. The ACE spacecraft saw solar wind speeds increase from 290 kilometres per second to 630 during the disturbance. Particle densities were low except for the 13th, which increased to 16 particles per cubic centimetre on the 13th. Bz varied little on the quiet days and between minus 11 and plus 10 nanoTeslas on the 14th. HF propagation was mildly degraded when the geomagnetic field was active but, for the most part it followed the pattern of recent weeks. Sporadic-E was prominent at 28 and 50MHz. 50MHz openings were reported to Guyana and the Caribbean. There was at least one 144MHz opening to south-east Europe. There were no reports of auroral activity. The Venezuela multi-band beacon, YV5B, returned to service after a gap of six months and was heard in the UK on all five frequencies with good signals. And finally the solar forecast. This week the quiet side of the Sun is expected to rotate out of view. Solar activity should be very low. However, there is a small chance that activity could increase towards next weekend. Solar flux levels are expected to increase and by next weekend could be into the 80's. Geomagnetic activity should be mostly quiet until next weekend when a small recurring coronal hole disturbance should take place. MUFs during daylight hours at equal latitude should be 19MHz for the south and 16MHz for the north. The darkness hour lows should be around 10MHz. Paths this week to South Africa should have a maximum usable frequency with a 50 per cent success rate of around 23MHz. The optimum working frequency with a 90 per cent success rate will be about 18MHz. The best time to try this path will be between 0800 and 1700 hours UTC. Sporadic-E is expected to take place on some days. Now that we are at the peak of the sporadic-E season expect some openings up to 144MHz. And that's all from the propagation team for another week.

On Wednesday 27 June Worthing and District Amateur Radio Club is holding a PME earthing and technical evening. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 28 June Bittern Dx Group is holding its AGM followed by "G2B" RSGB IOTA 2007 contest entry detailed planning. Bittern DX Group will be operating GB4NSR from Felbrigg Hall, Norfolk at the North

6 East Norfolk District's Centenary Scout Camp. Contact Keith, G0GFQ, on 01263 588 506, keith@g0gfq.com, or on the web at www.bittern-dxers.org.uk.

On Thursday 28 June Echelford Amateur Radio Society is having a valve equipment evening. Contact John Osborne, G4GSC, on 01784 451898.

On Thursday 28 June Horsham Amateur Radio Club is holding a social meeting at The Blue Ship, The Haven. For more information log onto www.harc.org.uk.

On Thursday 28 June Shefford and District Amateur Radio Society is conducting VHF NFD final planning. Contact David, G8UOD, on 01234 742 757.

On Friday 29 June Mid-Sussex Amateur Radio Society is running a radio night and table top sale. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.

On Friday 29 June Torbay Amateur Radio Society is having an education and training evening. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Friday 29 June Wimbledon and District Amateur Radio Society is running on air and construction. Contact Jim, M0CON, on 020 8874 7456.

NEWS FOR THE SOUTH-WEST

On Tuesday 26 June Flight Refuelling Amateur Radio Society is running Intermediate training from 1900 to 2130. Contact Tony, G3PFM, on 01202 622 262.

On Tuesday 26 June Taunton and District Amateur Radio Club is operating club station. Contact William, G3WNI, on 01823 666 234, or by email to g3wni@btinternet.com.

On Wednesday 27 June South Bristol Amateur Radio Club is giving a talk on Project OSS - Session 4. Contact Len, G4RZY, on 01275 834 282.

On Wednesday 27 June Thornbury and South Gloucestershire Amateur Radio Club is presenting a slide show of Stan's travels. Contact Tony, G0WMB, by email to tonytsgarc@beeb.net.

On Thursday 28 June Yeovil Amateur Radio Club Station is on air. Contact Derek, on 01935 414 452, or by email to m0wob@tiscali.co.uk.

On Friday 29 June Guernsey Amateur Radio Society is having a talk on "what electronic log to use?" by GU0SUP. Contact Phil, GU0SUP.

On Friday 29 June Jersey Amateur Radio Society is working outside on the antennas, towers and building. Contact Phil, MJ0JER, by email to gj3dvc@gj3dvc.org.je .

On Saturday 30 June Appledore and District Amateur Radio Club is operating a special event station at the Abbotsham Fete. Callsigns G2FKO and GX2FKO. Contact Beryl, G1SVP.

NEWS FOR THE MIDLANDS

On Monday 25 June Stourbridge and District Amateur Radio Society is running an open shack night. Contact John, M1EJG, on 01562 700 513.

On Monday 25 June Stratford Upon Avon District Radio Society is having a BBQ and will be on the air. Contact Jack, G3VYE, on 01926 641 988.

7 On Tuesday 26 June Derby and District Amateur Radio Society is holding a night on the air. Contact Martin, G3SZJ, on 01332 556 875.

On Tuesday 26 June Loughborough and District Amateur Radio Club is on the air. Contact Chris, G1ETZ, on 01509 504 319.

On Tuesday 26 June Worcester Radio Amateurs Association is having a natter night and CSO Talk. Request details by email to info@wraa.co.uk.

On Tuesday 26 June Wythall Radio Club is visiting LF Droitwich at 1930 for 2000. Contact Chris, G0EYO, on 07710 412 819, or by email to g0eyo@blueyonder.co.uk, or on the web at www.wythallradioclub.co.uk.

On Wednesday 27 June Lincoln Short-Wave Club is running news and views. Contact John, G1TSL, on 01526 323 153.

On Wednesday 27 June Telford and District Amateur Radio Society is having a VHF Field Day planning meeting. Contact Mike, G3JKX, on 01952 299 677, or by email to mjstreetg3jkx@blueyonder.co.uk.

On Thursday 28 June Stafford and District Amateur Radio Society is running an Isle of Anglesey Field Trip. Contact Graeme, G4NVH, on 01785 604 534, or by email to graeme.boull@ntlworld.com.

On Thursday 28 June Stafford and District Amateur Radio Society is having a shack night. Contact Graeme, G4NVH, on 01785 604 534, or by email to graeme.boull@ntlworld.com.

On Friday 29 June Hucknall Rolls-Royce Amateur Radio Club is having an internal quiz night. Contact Carl, M0XBE, on 07979 092 447, or on the web at www.hrrarc.com.

NEWS FOR THE NORTH OF ENGLAND

On Sunday 24 June Great Lumley Amateur Radio and Electronics Society is having a foxhunt. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Sunday 24 June Wakefield and District Amateur Radio Society is taking part in the HM King of Spain contest at the portable site at

Woolley Edge. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

On Monday 25 June Macclesfield and District Radio Society is having a presentation on "QSLing the short wave broadcast bands" by Tom Read, M1EYP. Contact Tom, M1EYP, on 01625 612 916, tommyread@hotmail.com, or on the web at www.gx4mws.com.

On Monday 25 June Thornton Cleveleys Amateur Radio Society is having a talk on "protect your PC from Viruses" . Contact Jack, G4BFH, by email to jack.duddington@btinternet.com.

On Tuesday 26 June Chester and District Radio Society is running a visit to Liverpool Coastguard station. Details on the web at www.chesterdars.org.uk, info@chesterdars.org.uk.

On Tuesday 26 June Halifax and District Amateur Radio Society is having an on the air evening at Rishworth School. Contact Brenda, 2E0YKS, by email to wrenuk10@yahoo.com.

On Tuesday 26 June Morecambe Bay Amateur Radio Society is running the Annual DF Competition. Contact Chris, M5XYZ.

On Tuesday 26 June Wakefield and District Amateur Radio Society is having a surplus equipment sale. Contact Dave, G4CLI, on 07748 221 855, or by email to g4cli@hotmail.co.uk.

8 On Wednesday 27 June Great Lumley Amateur Radio and Electronics Society is on the air. Contact Nancy, 0191 477 0036, 07990 760 920, or by email to nancybone2001@yahoo.co.uk.

On Thursday 28 June Grimsby Amateur Radio Society is running a DF Hunt. Contact Brian, G4DXB, on 01472 231 383.

On Friday 29 June South Manchester Radio and Computer Club is having a demonstration on oscilloscopes and their use. Contact Ron, on 0161 969 3999.

On Friday 29 June Tynemouth Radio Club is having a pie and pea supper and quiz. Contact Tony, G8YFA, by email to tonyregnart@blueyonder.co.uk.

NEWS FOR SCOTLAND

On Monday 25 June Lothians Radio Society is having a BBQ. Contact Toby, MM0TSS, on 07739 742 367, or by email to enquiries@lothiansradiosociety.com, or on the web at www.lothiansradiosociety.com.

On Friday 29 June Banff and Buchan Amateur Radio Club is running 10GHz Microwave equipment. Contact Gerald, gerald@aol.com.

On Friday 29 June Cockenzie and Port Seton Amateur Radio Club is having a club night. Contact Bob, GM4UYZ, on 01875 811 723.

NEWS FOR WALES

The RSGB has a vacancy in Region 7 for a Deputy Regional Manager covering Monmouthshire and Newport. If you live in the area and would like to help the RSGB's Regional Team to strengthen relationships between the Society and its membership contact Regional Manager Gareth Price at gw3mpp@rsgb.org.uk or 01633 880 081.

And that's the end of this week's GB2RS news broadcast, prepared by the Radio Society of Great Britain.

1173. WIANEWS for week commencing JUNE 24 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-06-23 21:34:53 UTC
From: nationalnews@wia.org.au
Message-ID: <200706232133.l5NLXq603689@panix2.panix.com>
Source record: 4228
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing JUNE 24 2007

This is an appeal again to all WIA members for assistance with the WIA QSL Collection. Members will already know that this collection of nearly one million QSLs is one of the finest QSL Collections in the world, containing thousands of modern QSLs and very valuable archival QSLs dating back to 1921. It would be a tragedy indeed if this collection were to fall in a heap.

Listeners who heard last weeks VK1WIA news expressed sorrow at hearing Honorary Curator of this Collection, Ken VK3TL has recently undergone surgery for a cancerous tumour of the brain. He still maintains the Collection, which gives him a great deal of pleasure. However he has been forced to work on the Collection at rather short intervals and cannot give his full-time attention to it.

For this reason we are appealing for help from WIA members, especially those in the Melbourne area. No knowledge of DX is necessary for the sorting of QSLs, the placing of QSLs in albums and similar tasks.

Would you care to lend a hand for an hour or two?

Contact Ken on 9728 5350.

WALKS

In this weeks audio edition we hope to make contact and hear from Jeff VK4XJJ who is still going strong on his walk across Australia, around Birdsville and still 60 days plus to walk and talk on 40 meters.

He still wants to hear from YOU, and it is these calls in particular that keep him going! Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

www.jeffswalk.com

AMATEUR RADIO - HOME OF THE GOOD GUYS

The Potomac Valley Radio Club in Americas mid-Atlantic has shown that it takes ethics very seriously, by winning a major contest and then voluntarily forfeiting the victory because it was outside the rules.

Club President Jim Nitzberg WX3B examined the result closely to find that the club's score included measurable activity of members who were outside the required 175 mile radius stipulated in the ARRL Sweepstakes contest rules.

The Potomac Valley Radio Club began 60 years ago and requires members to participate in at least two of ten specified contests a year to maintain their membership.

And in a true demonstration of the motto the buck stops here, Club President Jim WX3B accepted full responsibility for the inadvertent rules breach, and extended congratulations to the new winner of the 2006 contest.
(VK3PC, ARRL & various)

BPL INTERFERENCE - THE BATTLE CONTINUES

A simple test conducted by a ham radio operator in Manassas, Virginia, USA has provided proof positive that even flea-power Q-R-P ham radio operations can shut down Broadband Over Powerline Internet access operation.

Amateur Radio Newsline's Don Carlson, KQ6FM, reports:

The revelation comes on the website of George Tarnovsky, K4GVT. On it, Tarnovsky shows the results of tests made using only 40 watts and QRP at 2 watts on the 80 through 10 meter bands.

The gear used in his test was an Icom 706 transceiver, with Outbacker Perth antenna on his car parked curb side. The vehicle was approximately 70 feet from his house, and more than 100 feet from the BPL power pole interface. Inside the home a laptop with BPL interface repeatedly downloading a 40 Megabyte file.

Tarnovsky: "Well, what we found is that when we were within reasonably close proximity -- I would say within 100 feet or so of any of the BPL installations -- when we transmitted on E-CARS on 7.225 that we actually had an affect on them. The way ewe knew that we had an affect was that as soon as you released the microphone (PTT), rather than hearing the typical BPL noise, you knew the system was backed up with data and consequently became very aggressive and just blanked (the band). If you looked at a spectrum display of it -- it just covered the entire spectrum. Its almost as though all the stops were off. In other words the band stops were off. Just rip and get the data out and that's exactly what it did."

What K4GVT found was that on all bands the connection suffered at least a major slowdown when he transmitted at the 40 watt level. On 80 through 15 meters the 40 watts caused the download to stop altogether and requiring it to be restarted. But the biggest surprise was on 40 meters where 2 watts of R-F rendered the BPL connection numb. He says that the 2 watts at 7 MHz caused the BPL data transfer to stop.

Tarnovsky: " With the original G1 installation, 2 watts would have an affect on it. Since then they have made some changes in their firmware to the G1. The G2 has agile notching so they can go in and they can notch it (the spectrum), but being agile they can also remove them and that's the problem that we are facing here."

Tarnovsky notes that regardless of what carriers a BPL provider might notch out of a system, the system operator cannot filter its input. As such, R-F ingress to the BPL system is wide open, and susceptible to all near field RF from 2 to 29 MHz. Even one that only 2 watts and more than 100 feet away.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

More on the BPL ingress experiment by K4GVT including a band by band results chart is on his website. Its in cyberspace at www.k4gvt.com/bpl/bplweakness.html
(ARNewslineT, QRZ.com)

AROUND VK in 80 Seconds.
(vk5nz)

VK1

Next Meeting - Tomorrow, Monday 25th June, a "Radio Check" night.

There will be a number of Radio Test Sets available, along with people who know how to use them. Club will check your Transmit Power, Frequency, Modulation, RX sensitivity, etc, to see if they are within "spec" for your UHF & VHF radio's, plus low power AM sets as well.

They will also have access to the Antenna Analysers so you can check your mobile antennas tuning.

And the CRARC is busy as usual on the WICEN scene, with their next WICEN event the L.CCC. BRM Silverstone Safari rally on Saturday 7th July .

VK2

Westlakes Amateur Radio members and visitors to the club Michael Owen VK3KI WIA President will be attending your club on Saturday the 30th of June.

Although our notification advises "be at the club by 1am on the day", even poor old VK3KI has to sleep sometime, so we'll tell you it's 1PM June 30.

VK3

Over the last few months some of members of Melbournes Eastern and Mountain District Radio Club have undertaken proactive approach to their health by joining the local weight loss club.

One member John VK3ARK simply refused to join and said the only way HE would become a member of the weight loss club was if his wife Jean got her Amateur Radio ticket, so guess what ... his wife Jean now VK3FJYL sits in the warm shack with the Alarm group whilst her OM John is down at the weight loss club!

A competition broke out amongst those involved with a prize offered for he who can loose the most weight. To accelerate the weight loss process it was suggested some decent walks may be of benefit, so last Saturday morning morning half a dozen EMDRC members undertook a 8 kilometre round trip walk with a tea and coffee break at the Strictly Ham Amateur Radio shop along

the way. Who turns out to be the biggest looser still remains to be seen, but one things for sure it won't be Ross from Strictly Ham who sold quite a bit of gear that morning.

VK4
Problems for 2 meter simplex operators in the Wide Bay area with at least one echo link station operating outside of our gentlemans agreement band plans, heard on 146.5 the VK national calling frequency. If you see this station on Echlin you might wish to pop up and advise him of the "error of his ways".

VK7

Optical Extravaganza Night

REAST have held a great night of optical history, optical show and tell and practical calibration.

In fact, the clubrooms were so full of optical transceivers and test equipment with four transceivers, five separate transmitters, one dedicated receiver and six pieces of optical test equipment with calibrated transmitters and receivers that there was hardly any room for the people attending...HIHI.

Mike VK7MJ their optical guru initially took REAST through a brief history of optical communications which started back with Alexander Graham Bell who patented the Photo-phone back in 1880s, THEN through the various developments prior to the development of electronics as we know it, through the use of different types of lamps from incandescent, arc, vapour and into lasers and ending in LEDs and finally the recent development of the Luxeon.

All in all a fantastic hands on night.

There are some great photos of the night available on the REAST Website.

http://reast.asn.au/events.php#opticalcalibration

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

A NEW AMATEUR RADIO club FORMS, AT Roxby Downs.

Several months ago there were no radio amateurs in Roxby Downs a remote mining town in northern South Australia

Michael Wright (now a scout leader) decided to do his Foundation Licence by remote assessment and training. Shortly after that Michael when on to do his Standard licence using R&ES self training resources.

Michael is now VK5MCW.

Michael also arranged a arrange a talk to a group of scouts and leaders to be given remotely by Ron VK2DQ.

The hook up lasted about an hour with communications be done by Radio, EchoLink and Video displayed by VOIP.

Multimedia materials were used and a remote Q&A session conducted remotely.

Since then as in excess of 10 Scouts and leaders have decided to do their Foundation Licence and the Roxby Amateur Radio Club is growing.

Michael is now studying for his Advanced Licence and hopes to be successful and then become a WIA assessor

Amateur Radio NewsLine are reporting how Rescue Radio meets Education.

This a very positive story with word that 47 eighth grade students in California are now prepared to serve their community in time of crisis using Amateur Radio.

Representatives of the City of Calabasas, the Los Angeles County Sheriff's Department, the American Radio Relay League and other agencies were on hand recently to congratulate 47 eighth-graders at A.C. Stelle Middle School. This, after they completed a class that lead to their getting the Amateur Radio licenses as a part of the American Radio Relay League's educational incentive known better as The Big Project.

Meantime, emergency services groups are supporting this project with hopes that it will provide a source of communications volunteers.

Sheriff's Department Reserve Captain, Tom Fakehany, N6FDR, says that these students are likely the next generation of emergency volunteers who will provide communications when all else fails. County Disaster Communications Service member Norm Goodkin, K6YXH, says that the plan is to help organize these new hams into a youth group. One with the ability to provide emergency communications services to the school and to the community in the City of Calabasas.

Next semester, the 47 students plan to start an amateur radio club at Calabasas High School, along with the 17 new hams already there from last year's project. According to Beutel, his school nearly tripled the number of students who earned their licenses from the program's inception last year.

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or training in Amateur Radio go to wia.org.au and check out the club pages.

Participating clubs keep this site up to date and post the latest information for all to see.

Next Foundation Licence course, and Standard / Advanced assessments .....

NEW SOUTH WALES

ARNSW regularly holds Foundation Licence Assessments on the last weekend of each EVEN numbered month. The next Assessment will be 30th June & 1st of

July.

WEST AUSTRALIA
Foundation course:-
Assessment on the 28th of July.
VK6 Exams for Standard and Advanced are on June 30th.
Contact Neil VK6BDO.

MEDIA WATCH

Peter Berrett VK3PB is a member of the Eastern & Mountain District Radio Club, a member of the Wireless Institute of Australia and is a keen ATV enthusiast famous for his electronic Fish Bowl on Melbournes VK3RTV repeater.

This month Peter joins the team at Amateur Logic TV as their Australian news presenter and Australian news reporter.

Amateur Logic TV is a Television program made by Radio Amateurs for Radio Amateurs. It is an IPTV program which in simple terms means you download it from the internet and watch it on your PC.

You can download Amateur Logic edition 13 from the following web address. www.amateurlogic.com/downloads.htm

In this latest edition of the show, two of the team members Tommy and Jim visit the Dayton Hamvention, the worlds largest amateur radio gathering and brings back some great coverage of the event, including an interview with the infamous Tom, WA5KUB and his live helmet cam.

Peter Berrett brings to the show some Aussie content with footage of the Moorabbin and District Radio Club Hamfest held recently in Melbourne. The show also contains many practical do it yourself type tips with the current episode showing you how to building your own Homebrew Crimpers for RG213 and LMR400 cable...

All in all its 50 minutes of solid Amateur Radio televisionVisit the website today http://www.amateurlogic.com/downloads.htm

INTERNATIONAL NEWS

NEW ZEALAND - NZART

Highlights from their AGM included the event being opened
by the Honourable Steve Maharey local MP for the Manawatu,
and also Minister of Education, Minister of Broadcasting,
Minister of Research, Science and Technology, Minister for Crown Research Institutes and Minister responsible for the Education Review Office.

Concerns were expressed by the Evan Sayer NZART Treasurer, of the falling numbers in membership, with a critical membership number of 1800 mention. If membership drops below this number then Break-In and NZART Headquarters is seriously at risk.
He urged members to try to get non-members signed up to NZART to

ensure these two valuable asserts are retained.

Mike Newman ZL1BNB was awarded the title Amateur of the Year.
Award was presented by the President of NZART Bruce Douglas Zl2WP,
as recognition of his work as Local Government Liaison Officer.

JULY 14-15
The annual IARU HF World Championship is held on the second full weekend of
July. This year it will be held during the 24-hour period from 1200 UTC
Saturday, 14 July to 1200 UTC Sunday, 15 July.
Rules are at www.iaru.org/contest.html

Because this is unusually late in the month for the event to occur, there
has been some confusion about the dates. The CORRECT dates are 14-15 July.
Any references to 7-8July are INCORRECT.
(David Sumner, K1ZZ Secretary, IARU)

Boat Anchor Sprints:
August (11), October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any
home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200,
FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score
which will be published in the following New Zealand "Break-in".

(Jamie Pye ZL2NN, Editor NZART's InfoLine)

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

Counting down to the 11th Aug and it is now only 48 days to the 2007 RD contest.

We suggest that you take the time between now and the contest, to check that your gear is up to the marathon contest, apart from the Radio equipment check the caffeine machine, or plenty of match sticks for the eyes.

On the WIA Website the rules are available along with associated documents.

Another reminder for those using computer logging programs PLEASE check that you have the current version, your final score will depend on it.

For those using hand written logs I suggest that you look at the logging forms on the WIA website in the Rd section.

7th World HST Championship will be held in Belgrade Serbia September 19-23rd.
www.hst2007.org

NOVEMBER 17/18
Spring VHF-UHF Field Day - November 2007
For everyone who likes to plan ahead - please note the dates for this year's Spring VHF-UHF Field Day. It will be held on November 17/18, a week later than usual. This will prevent a clash with club activities in two states.

SPECIAL EVENTS, BEACON AND NET ADVICE
VK's longest continual net;
The Southern Cross DX Net has been running for 43 years, operates 7 days a week - propagation permitting - on a frequency of 14.238.5MHz at 1215 zulu.

Centenary of Marconi's Clifden station

This year marks the centennial of those first sparks generated from Marconi's historic Clifden station. To commemorate this event W8HC has announced a special amateur radio operation from both locations central to Marconi's fame and success as a pioneer in wireless technology.

Ballycastle-Rathlin was his first wireless telegraph station and the Clifden station was his last, ceasing operation in 1922. In 1907, Guglielmo Marconi's dream of fixed point-to-point wireless telegraph stations linking North America and Europe became a reality. Derrygimla near Clifden, County Galway served as the site of his wireless station. Over the next 15 years, spark-induced blue flashes generated by the station's massive 20 kV generators sent tens of thousands of wireless messages across the Atlantic, linking to its North American counterpart at Glace Bay, Nova

Scotia.

On 4th and 5th August Hal, W8HC, will operate from Ballycastle as GI/W8HC/P. He will also be taking part in the annual Marconi Festival at Ballycastle with the Marconi Radio Group's MN�MRG special event station on 5th and 6th August, he will move to Rathlin Island (EU-122) and operate from East Lighthouse (ARLS designator NTI 011). He will arrive in Clifden on 8th August where he will operate as EI/W8HC/P at the Derrygimla site on 9th and 10th August.

It is hoped that some operating time can also occur from nearby Letterfrack, site of an ancillary receive station built in 1912 to allow for full duplex operation of the transatlantic signals.

All QSOs will be confirmed via Log of The World and special QSLs from each of these historic Marconi locations will be printed and sent via www.globalqsl.com. In addition, a specially designed certificate will be issued to those stations making contact with both GI and EI operations from either Ballycastle or Rathlin and Derrygimla or Letterfrack.

D X A C T I V I T Y A N D D A T E S

Prefixes for Montenegro and Serbia

When Montenegro first became an independent country, the prefix YU6 was tentatively allocated to it. However, it now has a call sign block of its own. The ITU now lists 4O (thats four Oscar) as Montenegros prefix. This means Montenegro stations may use 4O0 through 4O9, while Serbian stations will continue to use YT and YU prefixes for all call districts, 0 through 9. The ITU reportedly wants the two nations to complete the transition to new call sign blocks as soon as possible.

The ITU has taken back the former 4N and YZ prefixes for future reassignment.

Members that use computer logging software should update their software to reflect these new prefix allocations
(IRTS)

AFRI 75 DXpedition QSL Update

The QSL Manager of the recent Swaziland DXpedition, Peter EI7CC, reports that over the past few weeks QSL cards in respect of over 1000 QSOs have been sent to those who requested a direct QSL. The remaining 200 or so requests should be dealt with in the coming week, sent via the bureau.

Hong Kong Special Prefix

Approval has been granted for the use of the Special Prefix "VR10" in addition to "VR2" for Hong Kong Radio Amateurs starting from July One 2007 to the 30th of June 2008 for the 10th anniversary of Hong Kong's

reunification with China.

More details are available in the OFTA letter for Hong Kong Radio Amateurs, which can be found at www.ofta.gov.hk/en/amateur/ama-cir200706.pdf.

HARTS is also going to use the special callsign "VR10HK" as HARTS HQ Station during the IARU HF Contest (14-15/7/2007).

excom2007@harts.org.hk if you want more detail.

WIRELESS WEATHER

In VK6 Graham Rogers reports that the VE7CC cluster and WWV is reporting the solar flux on the 20th June 2007 was 66, if correct, this means that means on Wednesday we reached the bottom of this cycle!!

at last we are there/here.

OR ARE WE?

I guess we now drag along the bottom for a while and the slowly move up

ARISS warns of pirate activity:

Amateur Radio on the International Space Station (ARISS) reports a rumour that the ISS was making direct contacts on the 40 meter band.

ARISS stresses this is not happening, as there is no HF radio equipment on board the space station, although the HF antenna is mounted.

Sometimes the Goddard Amateur Radio Club, WA3NAN, retransmits shuttle audio.

Also in INTRUDER WATCH - ENFORCEMENT ZONE this week, The ARRL has sent out more than 100 letters to repeater owners/trustees who have repeaters affected by the "Pave Paws" radars.

Citing an increasing number of interference complaints, the US Air Force has asked the FCC to order dozens of repeater systems to either mitigate interference to the Pave Paws radars or shut down.

The ARRL is working with the US Department of Defence to develop a plan to mitigate alleged interference from 70 cm ham radio repeaters to this

military radar system on both US coasts.

A mother of two in a suburb of Chicago does not have to turn on the news for an update on NASA's space mission.

She just turns to "on" her baby monitor.

Live video of the mission is available on NASA's Web site, so it's possible the monitor is picking up a signal from somewhere close by.

Officials from NASA have said the signal is not coming straight from the shuttle, according to NASA spokeswoman Brandi Dean.

Summer Infant, the monitor's manufacturer, was looking into what could be causing the transmission, said communications director Cindy Barlow. She said she's never heard of anything similar happening.

"Not even close," she said. "Gotta love technology."
(packet bulls)

NOW ROBERT BROOMHEAD - VK3KRB.

WW SPECIAL INTEREST GROUPS --- Internet Linking of Repeaters

How often, especially when travelling do you need a map of IRLP/EchoLink nodes?

Well Roger VK7ARN has prepared a map of the Tasmanian amateur repeater network designed primarily for Amateur visitors to the State it provides repeater location, frequency, offset, access tone if needed and linking information.

It's all on one page, in colour but prints OK in black and white.

It can be viewed on the WICEN South web site where it will be kept up to date.

Or downloaded as a PDF file at the address that can be found the email and internet editions of this broadcast.

WW SPECIAL INTEREST GROUPS --- RADIO SCOUTING
http://www.scouts.com.au
http://www.scout.org/jota
http://www.wiaq.com/nationalnews/jotahead.htm

SCOUT JOTA HF Voice Calling Frequencies
3590, 7090, 14190, 21190, 28590 kHz
14290, 18140, 21360, 24960, 28390 kHz (DX)

This years 50th JOTA will run from October 19th at 22:00 hours to October 21st at 24:00 hours YOUR local time.

An official start will be given by the World Scout Bureau radio station in Geneva, Switzerland on October 19th at 21:00 h UTC with a transmission in the 20 and 80 meter bands and on EchoLink.

Scouting's Sunrise with Amateur Radio

On 24th July to 8th August both the 21st World Scout Jamboree in Chelmsford in the United Kingdom and Brownsea Island will be on the air with their own fully equipped amateur radio stations.

Both will offer a radio programme to the participating Scouts. The stations are operated by an international team of Scout radio amateurs.

During the Sunrise Ceremony on 1st August, GB100J will have a central role in connecting the world together. It will be part of the Sunrise Network.

The staff at GB100J offer a full radio-scouting set of activities to all Jamboree participants. The station is located at the Central Plaza of the camp site and will be active on all HF bands. Arrangements are being made for a contact with the International Space Station on one of its passes over the Jamboree.

This will undoubtedly be past tense by the time most people read this but I
worked Field Day from home BUT I did so with a twist.

What I did was take my webcam and point it at the display of my ICOM IC-706
MKII-G and put that out on the Internet (Complete with audio) as I worked
mainly 2 meter SSB (My only antenna was a 2m/440 Mhz. vertical mag mount
which was mounted outside on the patio railing and up 7 floors).

On Saturday Night, I also put together a little video describing what Ham
Radio is and some of the many facets of the hobby (I also made sure to
mention Field Day and its purpose too :)). I plan to make this a streaming
video in Windows Media format and made available via video podcast as well.

On Saturday, I was in the chat room on my website, but everyone who logged
into the chat room just simply came and went, so I didn't even bother
logging on today.

>From what I hear, there was LOTS of 6 meter activity, but alas, it would be
just my luck to NOT have a suitable antenna (Not even a 5/8 2 meter vertical
mag mount antenna) to work any of the stations on the band. :(

Oh well. There's always next year....

Who knows, I might even have something for 10 meters next year too.

Oh well....What I wished would've & could've been.....

Cheers & 73 :D

The world of ham radio seems to have left the ARRL behind. It was inexcusably slow to accept the obsolescence of Morse code and, in the process, its curmudgeonly foot dragging alienated most of its potential future members. Its web site suggests that it has no vision of any future beyond the preservation of the status quo. In short, it is so mired in the past that it has no future.
That said, it seems imperative that hams have some sort of functioning and EFFECTIVE membership organization. Is there some existing organization that could serve as the nucleus of a new membership organization or would it make more sense to form a new association from scratch?

I think they are using a laptop, because I don't know any desktops that run on 12 volts DC (though there are probably some). It sounds to me like what they did was to use a laptop with a charging cord meant to go into an auto accessory power socket. That way, the primary power comes from the 12 volt power system they need for the rig, and the laptop's internal battery is used for backup in case there is some sort of power interruption.

FD lasts more than 24 hours, and I don't know any laptops whose batteries will run that long. Using external power means no interruptions.

just got back from FD

1179. Four Months After FCC 06-178

Newsgroup: rec.radio.amateur.moderated
Date: 2007-06-24 22:03:50 UTC
From: AF6AY <LenAnderson@ieee.org>
Message-ID: <1182722608.650590.188710@j4g2000prf.googlegroups.com>
Source record: 4234

U.S. License Changes on After/Before 23 February 2007
from www.hamdata.com:

Hamdata information of four-month period 24 Feb 07 to 24 Jun 07

New Licensees 11,022 \......Positive growth of 671
Expirations 10,351 /
Class Changes 18,603
Call Changes 3,679

By comparison, the SIX-month periods ending 25 Jan 07 and 24 Jun 07
[inside square brackets] show a more averaged effect of FCC 06-178:

New Licensees 10,095 [15,002]
Expirations 12,815 [15,041]
Class Changes 5,921 [20,814]
Call Changes 2,815 [4,621]

The major change was in the ability of "lower" classes to upgrade,
indicated by the Class Changes. There is a slight upturn in Callsign
changes of June v. January which is probably prompted by the ability
to change Class. While new licensees are up by about 50%, the
expirations also rose in June v. January. For the two six-month
periods there is still a difference of new licensees not quite
offsetting the expirations.

Note that the period ending 25 January 2007 includes the FCC 06-178
announcement on 15 December 2006. That may or may not have
some slight bias on numbers. But the six-month period ending
24 June 2007 includes one month where code testing was required
for General and Extra classes, also a slight bias on numbers.

In the comparison of 24 June 2007 to 24 June 2006 the total
individual licensees (exclusive of Club calls) is down, 711,828 in
2007 compared to 728,431 in 2006 for a deficit of 6,603 for one
year. The slow shrinkage of total numbers continues as it has for
four years.

Irish Radio Transmitters Society
Radio News Bulletin

Sunday June 24th 2007

Condolences

We are very sorry to have to tell you of the death of Maurice Moore of Kilmeedy Co. Limerick the father of Dave EI4BZ. Maurice was taken ill and died suddenly in hospital early on Friday the 15th of June.

Dave was on his way by car to the continent for a holiday, which would have included the Friedrichshafen rally. He was just outside London early on the Friday morning when he got a telephone call about the sudden death of his father. He returned home and the funeral was held on Monday last. To Dave and to his family we extend our deepest sympathy and may Maurice rest in peace.

International Museums Weekend

International Museums Weekend took place on Saturday and Sunday last. The Howth Martello Radio Group activated EI0MAR from the vintage radio museum in Howth. Band conditions weren't good, however those who attended enjoyed a very sociable event. After the station went QRT on Saturday, some of the group QSYed to the Yacht in Clontarf to end the day suitably with a meal.

The Howth Peninsula Festival takes place next weekend and EI0MAR will once again be active on Sunday and possibly Saturday. Many of the events taking place during the festival are family orientated with open-air music, dancing, magic and puppet shows. A full listing of events is available at howthpeninsula.com.

AFRI75

During the IRTS Jubilee expedition to Swaziland the team met with the Scout Association and agreed to

support their Thirst for Life Programme, which helps Aids orphans in Swaziland. You will find details of the project on the Afri75 page of the IRTS website. The team is pleased to announce that the first initial funding for the project of 350 Euro is on its way to Swaziland and this will fund the purchase of chickens for their farm. The money was raised by donations included with direct QSL cards received from stations worked around the world, together with funds raised from the sale of Afri75 caps at the AGM in Cork. The team are still anxious to continue support for the project, and if you think you can help please contact Paul EI2CA.

Hong Kong Special Prefix

Approval has been granted for the use of the Special Prefix "VR10" in addition to "VR2" for Hong Kong Radio Amateurs starting from the 1st of July 2007 to the 30th of June 2008 for the 10th anniversary of Hong Kong's reunification with China.

More details are available in the OFTA letter for Hong Kong Radio Amateurs, which can be found at www.ofta.gov.hk/en/amateur/ama-cir200706.pdf.

HARTS is also going to use the special callsign "VR10HK" as HARTS HQ Station especially during the IARU HF Contest (14-15/7/2007).

For further information, please contact the Award and Contest Manager VR2XNG (Dawood Ng) through email at
�excom2007 at harts dot org dot hk�.

---

2 Metre News Bulletin

Tony, EI5EM paid a visit to Sean, EI5GH regular Sunday two-metres newsreader last Friday. Sean has been ill now for several months in St. Vincent's Hospital in Dublin. Sean was in good form and was glad to receive all the latest news from Tony who passed on the good wishes of all those who listen to the news. Sean sends his regards to all and hopefully he will be well enough soon to return home.

Tony and John EI7JG have been trying to keep the news going during Sean's absence on an ad hoc basis. Unfortunately, both will be away next weekend and this means that there probably will be no two-metre news next Sunday. Normal service should be resumed the

following week. Perhaps there are some other operators out there who would like to assist in keeping this long-standing service going. The IRTS would be glad to hear from any volunteers.

Limerick Radio Club

Limerick Radio Club has been invited by the Foynes Flying-Boat Museum to operate a special Amateur Radio Station in conjunction with the commemorative Transatlantic Re-Enactment Flight 1937 from Newfoundland Canada to Foynes Ireland. A special call sign has been allocated to the station EI-70-FOY. The station will be on the air from the 6th to the 8th of July 2007. On HF the station will operate from 80 to 10 metres. It will also operate on VHF / UHF using the EI70FOY call sign.

A special QSL card, commemorating the Re-Enactment Flight, will be sent to all stations worked over the three-day event. All QSL cards should be sent to the Club's QSL Manager Alan Cronin EI8EM at QTHR. Limerick Radio Club can be contacted at ei4lrc at eircom dot net or at www.qsl.net/ei4lrc.

South Eastern Amateur Radio Group

The next general meeting will take place on Monday the 25th of June at 8.00 p.m. in the Roanmore Centre, Waterford.

A portion of the meeting will be for all operators who have volunteered their services for the cycle race on the 1st of July and those operators who will be assisting are urged to attend so that radio protocol and equipment requirements etc. can be discussed.

Foyle and District Amateur Radio Club

Foyle and District Amateur Radio Club, Bready, Strabane, Co. Tyrone will be heading to St. Angelo Airport, Enniskillen for the 2007 Jet World Masters competition. The competition itself runs from the 5th to the 14th of July. The club station will be on the air during the weekend July the 13th and 14th using the club's callsign MN0AKU/P.

This event is the ultimate radio-controlled model aircraft competition. These model planes are capable of speeds up to 250 miles per hour. One hundred pilots

from 31 countries will be taking part in this competition. More information can be found on their website www.jwm2007.com

The club wishes to express its gratitude to all the operators who contacted them during the 2 days of their Amelia Earhart special event station on May the 20th and 21st. A sepia-tone photo of the aviator has been used for a unique QSL card and these will soon be sent out via the buro. Foyle and District Amateur Radio Clubs web address is www.mn0aku.org.uk.

Comeragh Cycle Race

The national under 23 road racing championship will take place in Waterford on the 1st of July. Richie EI9HR is event Co-ordinator and he is being assisted by John EI8JA. This year's race will be on a greater scale with over 160 riders taking part. The Civil Defence have come on board this year to help with marshalling and RTE will be filming the event.

AREN will provide the communications for safe traffic management and accident reporting. There will be more radio reporting points and mobile stations than last year so more radio operators are required. Again newcomers are welcome and training will be provided on the morning of the race. This is an excellent opportunity for operators to put their radio skills to good use in a very enjoyable and rewarding way for the benefit of the Community. All operators irrespective of experience are welcome.

Please contact Richie on mobile 085-1465465 or evenings on 051-854315. You can also contact Richie by e-mail at "ei9hr at yahoo dot com". Those who have volunteered to assist with this event are asked to attend the meeting in Waterford on Monday the 25th.

Rally's

The Cork Radio Club Rally will take place on Sunday the 23rd of September in the Blarney Park Hotel, Blarney, Co. Cork, the Waterford Rally will take place on the 21st of October 2007 in the Woodlands Hotel, Waterford and the Mayo Radio Rally will be on Sunday the 18th of November in the Belmont Hotel, Knock, Co. Mayo.

A full listing of upcoming rally's is available on www.irts.ie.

Items for inclusion in next weeks Radio News should be forwarded to Mark Wall, EI7IS at QTHR or by phone to 051-853806 or 087-6302026. Items for the radio news can also be faxed to 087 5 6302026. News should be submitted via e-mail to ﷺnews at irts dot ieﷺ for automatic forwarding to both the radio and printed news services. Please note that items for the radio news should reach the editor no later than midday on Friday in order to be guaranteed inclusion in the following Sunday ﷺs bulletin.

An awful lot of laptops run on 18 Volts DC. My IBM's Dells, snd most recently, a Toshiba. (actually it is 19 Volts) If you aren't going to run them off 120 volts and their own power supply, you'll need to run a DC to DC p.s.

Hi all,
Hope you all had a great FD, I certainly did. I started out by helping with setup, and then also worked as a VE in a test session we began at 10AM, had one person go from no license to Extra in that one session! The test session really worked out well and we're eager to do that again next year. Got some new club members out of it too *smile*.

I came back at 8pm (an hour earlier than scheduled) with the unlicensed YL who once more worked as my logger (though I had to bribe her with some ice cream on the way *smile) and we had a great time, including contacting W1AW! We also enjoyed contacting many VE3 sations as my wife is Canadian/American.

We headed home for the night and on the spur of the moment I decided to head back and help out, so I ended up logging for 3 more hours then made the last 2 contacts of the event.

All in all , it was a great event for all (with much better weather than last year when I was working the righ with rain water running down my back from a hole in the tent...what a deluge).

Wonder if I worked any of you ? We were using our club call of W3QBD, in Delaware.

Jerry

This is a quite well-trodden subject. I refer you to many, many threads
on the subject in the past in the newsgroups archives. Go to Google
Groups at http://groups.google.com and search for:

ARRL "new organization"

for a start.

Many past efforts at a replacement organization have been tried, and
failed. Most notably was an organization led by "73" Magazine Editor
Wayne Green, W2NSD (the "Institute of Amateur Radio"). Sometimes the
leadership was just too controversial or confrontational. In the case
of Glenn Baxter, K1MAN (American Amateur Radio Association,
International Amateur Radio Network), it's hard to set a good example,
and encourage those to follow you, when you're constantly in trouble
with the FCC and hiding behind the alleged endorsements of many people
who want nothing to do with you, and repeatedly disavow such endorsement
(e.g., Walter Cronkite KB2GSD and Leo Meyerson W0GFQ).

Some organizations are very worthwhile, such as QCWA, AMSAT, TAPR, etc.,
but are too specialized to have very large membership rolls. Some
organizations are for the purpose of seeking specific changes or
political reforms, and lose traction once those reforms have been
achieved (e.g., NCI).

It's been pointed out that many ARRL Director and Section Manager elections run unopposed. Why go to the trouble to build a new organization from the ground up, if getting involved with the ARRL and changing from within might be a better strategy?

It might also be reasonable to assume that those who find fault with the ARRL would find as much, or worse, fault with a new organization. Such an organization can never be perfect, and will not be able to avoid disagreeing with someone on some point of view. Practical administration of such an organization, particularly if it encompasses a large cross-section of amateurs, will likely involve some negotiation and compromises. Organizations also have to be for things, in addition to just being against things. Are the complainers and non-joiners up to the task?

Part of taking the lead in any new effort, whether it be a new newsgroup, a new local club, or a new national organization, is to step up, introduce yourself, and try to build others' trust, such that they would want to follow you. One good first step for such a leader or leaders would be to step out of the shadows of anonymity and identify themselves, IMHO.

75% of all hams are NOT members of the ARRL. I'd start with them.

I so do dislike quoting myself but, "The logging PC will have it's own
homebrew DC-DC boost converter."
The laptop PC's AC power supply produces 16VDC @ 4A. The DC-DC boost
converter produces regulated 16VDC @ 4.5A. The boost converter for the rig
similarly produces 14VDC @ 25A. Both units are dead quiet in terms of EMI,
and aren't upset in the presence of RF.

We *did* use a laptop. The batteries won't run 24 hrs continuously w/o being changed which, in the middle of a pileup, you don't want to have to do. On the other hand, 4 x 80 Ah 12V lead-acid batteries in parallel can more than handle the load of a 100W HF xcvr + the laptop's meager power requirement. We used this unit in Tent2, with zero issues. Tent1 used AC-powered equipment and they had to keep an eye on the generator fuel level... while listening to the drone of the engine.

Respectfully, I would suggest that you start the new organization, Klystron. If the present situation is unacceptable, then go out and change it.

I might caution you that reading that 75 percent figure that a person can get a distorted perspective. Are all those Hams active? Are they from the group of Hams who came in during the so called "honeydo era" when repeaters functioned as a sort of public cell phone for a lot of folks? They started dropping off a few years ago, and will likely continue for several more years.

It is just about a sure thing that most members of the ARRL are a group that is actively involved in amateur radio. So they pay their dues, vote, and get something for their money (in their opinion)

I would suggest that you start the process of forming a new organization.

I would respectfully suggest that you might think about omitting statements about the obsolescence of Morse code. Give some consideration to your statement:

>>It was inexcusably slow to accept the obsolescence of Morse code and,
>> in the process, its curmudgeonly foot dragging alienated most of its
>> potential future members.

You are alienating the users of the mode - who are also more likely to be Active Hams, IMO. As well as those of us who are presumably at least somewhat satisfied with the ARRL's performance, witness our continued writing of dues checks.

After all is said and done, your task is to organize a group that includes inactive Hams, disinterested Hams, Hams who are content to make use of the ARRL's benefits without getting involved personally, and those who are frugally noncommittal to the whole thing.

When you do start this new organization, it might be helpful to provide a monthly post to the newsgroups in the same manner that we have in r.r.a.info and r.r.a.moderated.

As a start,an outline statement about what your organization is going to do for us would be helpful.

Dear "xxx",

ARRL is just one of several amateur radio clubs which I am a member of, each for various reasons. (And I think it is important to note that ARRL is just another amateur radio club, although larger than most.)

I belong to CADXA to associate with others who work DX.
I belong to NCCC to associate with other contesters.
I belong to SOC to associate with other hams who don't take themselves too seriously.
I belong to ARRL because they once gave me a scholarship, and to associate with others who read QST.
If you start a new radio club, maybe I'll find a reason to join it also.

In addition, there are a significant number of people who simply are not
joiners regardless of what they may think of an organization. Of those who
are active but not members of the ARRL, I'd bet the majority of them simply
fall into the "non-joiner" class.

I would caution you not to ask unanswerable questions. :-(

The Publisher's Sworn Statement, the only document able to yield a
direct number of ARRL members to any public individual, has been
missing from their website for over a half year. It is available only
by
surface mail...if they choose to send it to a requestor. From
elesewhere in QST one can glean an approximate membership
number of 152 thousand...which may or may not be accurate.
Assuming it is -

As of 23 June 2007 the FCC database contained 711,828 individual
amateur radio licensees (i.e., exclusive of Clubs). As a percentage
of
those, the ARRL membership is 21.4%. The ARRL's US license
totals page for 23 June 2007 indicates 654,616 individual licensees
NOT in their Grace Period for renewal. Compared to those, the ARRL
membership is 23.2%. Grace Period licensees number are apparently
57,212 total for that database date. That is inferred by subtracting
non-
grace-period individual licensee totals from the grand total of all
individual licensees.

The use of "active" versus "inactive" licensees is incorrect,
disinformative.
It should be Non-Grace-Period versus In-Grace-Period. A licensee may
or not be active in radio operation during their license Non-Grace-
Period;

there is no Poll or other data to prove their radio operation
activity. Those
licensees in their Grace Period may be ill, deceased, on active duty
with
the military, relocated for work purposes, or somewhere off-planet not
on
NASA duty. There is no data available to indicate which or what on
those.
Neither is there any data on the number of "honey-do" licensees. Such
remarks are highly subjective, hearsay, or simply specious.

> It is just about a sure thing that most members of the ARRL are a group
>that is actively involved in amateur radio. So they pay their dues,
>vote, and get something for their money (in their opinion)

The "sure thing" cannot be proven and is merely subjective. There are
many fraternal orders active in the USA with active dues income,
voting,
and so forth but most members do not really concern themselves with
the actions of those fraternal orders.

If all your amateur radio news comes from ARRL sources (as their
origin),
are you getting news in the objective journalistic manner or are you
getting subjective news that is slanted to favor the ARRL? Recall
that
ARRL membership is LESS than a quarter of any 'popular' grouping of
US amateur radio licensees. Since the publishing side of the ARRL
'house' has to make most of the operating income for the League, the
League wants the most positive picture of US amateur radio possible...
and to convince others that League publications are the best to buy.

> You are alienating the users of the mode - who are also more likely to
>be Active Hams, IMO. As well as those of us who are presumably at least
>somewhat satisfied with the ARRL's performance, witness our continued
>writing of dues checks.

"Users of the [CW] mode are the most active hams?!? Just how do you
go about proving that? There are still over 300 thousand US amateur
radio licensees in the no-code-test Technician Class as of 24 June
2007.
Are you not considering that the pro-coders have ALIENATED the no-
coders for years?

> As a start,an outline statement about what your organization is going
>to do for us would be helpful.

Would a Formal Business Plan with Attachments of Monetary Support for
initial start-up be sufficient help? Or have you considered that
"Klystron's"
remarks might be irritation at what the ARRL has NOT done for many or
that their 'support' for certain activities of amateur radio is NOT

there in the
abundance claimed by the League?

The ARRL is the *ONLY* national organization for US amateur radio.
Only
in that sense is it logical to belong. Let me know when the ARRL has
any
national competition for US amateur radio "representation."

AF6AY (dues-paid voting member of the ARRL)

Mike,

These suggestions to "go start your own organization" from you and other
sources strikes most debaters as dismissive sophistry.

ARRL has on the order of many millions of dollars and over 100,000 loyal
members, making your position obviously untenable. Except perhaps on
some narrowly defined issue, the idea that "xxx" ("Klystron"?) could
challenge that pervasive influence by "forming a new organization" is
absurd on its face. We have a new fresh arena here in
rec.radio.moderated to engage in fair discussion and debate of ham
issues. Please don't debase this new newsgroup with messages of such
patronizing tone.

In contrast, I thought that the suggestions from K3FU to "change the
system from within" far more realistic and with more reasonable chances
for success by an individual or relatvely-smaller-than-ARRL groups of
people.

The ARRL is more Publishing House than a membership organization.
That part brings in the majority of a reported income to the IRS of
greater than $10 Million US annually. Can one "negotiate" with a
business? There is NO competitor for the ARRL to work against.

>... Are the complainers and non-joiners up to the task?

I am a voting member of the ARRL. I joined via Internet a couple
days after my name and callsign appeared on the FCC database.
Indeed, at the same time of day as joining, I was in private e-mail
with Ed Hare, W1RFI.

First problem: Someone at ARRL offices added an "Apartment 33"
to my QST address. I live in a single-family residence and have for
44 years. The Fullfillment Office at the ARRL did eventually correct
that. They may not be talking to their ARRL VEC side at Newington.
Not a big problem but it amused our USPS deliverer.

Second problem: Two weeks after receiving my ARRL membership
card in the mail, a "Ham Kit" of literature was in my mailbox,
offering
"my choice of a book 'free' if I were to join." I contacted ARRL by e-
mail
and was - essentially - shined off. Since I had already joined by my
own volition, TS, the 'free offer' doesn't apply to me. Am I happy
with
that? No. Can I do anything about it? No. Did I know about this
'free offer' ahead of time? No. Was the ARRL VEC side of ARRL
talking to the ARRL Membership people? Apparently not.

That's just one small sampling of one very new member of the ONLY
national amateur radio membership organization in the USA. It has
had many variations of problems with many others.

However, it would seem that one should NOT complain about the
League, am I correct? "Bad Form," yes? :-(

I'm not certain about the sophistry part. But it could be considered
dismissive from my experience in amateur radio as well as life.

There are doers, and there are those who talk about doing things. I
really don't think this person is going to do anything about the
egregious wrongs s/he sees coming from Newington.

>
> ARRL has on the order of many millions of dollars and over 100,000 loyal
> members, making your position obviously untenable. Except perhaps on

> absurd on its face.

Why? I'm not naive enough to believe that Klystron is going to form an
organization and topple the ARRL in a year. But all organizations are
formed of men and women who want to do something. They all have to start
somewhere.

If enough people are as "alienated" as he says, it should be possible
to compete however, and build a new alternative to ARRL membership. I've
given enough reasons that I don't think it will work, but I don't mind
being proven wrong.

We have a new fresh arena here in
> rec.radio.moderated to engage in fair discussion and debate of ham
> issues.

Discussion is great, discussion is good. Without someone actually doing
something, it doesn't accomplish much.

I'm much more impressed by discussion followed by action. Sad to say, there isn't much of that.

When someone gets in a leadership position, they are often assailed by other folks who know just exactly what is "wrong". I've had people haranguing me for hours, and evening visits at the front door from people who want to bend my ear to correct some egregious wrong they have suffered.

Those who complain the loudest, and who have the biggest punch list of "things that I have to do", always things that will benefit the person making the demands to the detriment of everyone else, have one thing in common - the second I ask them for help, They disappear.

Please don't debase this new newsgroup with messages of such
> patronizing tone.

My message is pretty simple. Take away all the "sophistry" and it is:

- "If you don't like what is happening, get involved. Change it."

I hope that no one thinks that is a bad idea! 8^)

Talk is pretty inexpensive, action is what gets things done. Many people really dislike that message.

> In contrast, I thought that the suggestions from K3FU to "change the
> system from within" far more realistic and with more reasonable chances
> for success by an individual or relatvely-smaller-than-ARRL groups of
> people.

Of course. Perhaps "Klystron" would like to join the ARRL and work his/her way up through the ranks and if enough people agree with Klystron, change will be made. Now that's good advice!

But at the same time I would say "If it is so bad, start your own organization" is also good advice.

Perhaps. The point is that even if 75 percent of Amateurs are not
members of the ARRL, they should be in a different organization if they
are inclined to be in any organization at all.

We can speculate on the reasons, but it is educated guesses.

>> It is just about a sure thing that most members of the ARRL are a group

Just personal experience from my area. The active hams "round here" are
almost all members, and the inactive ones aren't.

>> You are alienating the users of the mode - who are also more likely to

As I wrote to another, if he is irritated enough, he might think of
doing something about it.

That's what I do. Seems to work too.

> The ARRL is the *ONLY* national organization for US amateur radio.
> Only in that sense is it logical to belong. Let me know when the ARRL has
> any national competition for US amateur radio "representation."

Let me ask the question a different way, one in which I'm not the
discussion stompin' bad guy.

Given that 75 percent of Amateurs are not members of the ARRL, why is
there not another organization that represents this majority of Hams?

I have my opinion, and it is that with the exception of a small
percentage, those Hams don't care to be part of any group.

But my advice is the same as when an amateur wants to build an antenna
that obviously won't work. "Give it a try, and tell us how it works
out". 8^)

That was NOT my irritant. Here were three separate office groups
at Newington (VEC, Fulfillment, Membership) NOT in apparent
communications with one another. Membership was the slowest;
based on a five-day worst-case surface mailing diagonally across
the contiguous USA, they were still lagging the VEC section by a
week. Here I was, a new member, joining of my own volition, and
they don't seem to appreciate that.

If the office staff can make such mistakes with one member, what
could they do to 152 thousand others? What of bigger issues such
as "Regulation by Bandwidth" proposal? [which was withdrawn]

For the record, I agree that Mike's alternative is valid also. If you
want to change the largest amateur radio membership organization in the
U.S., consider getting involved in its elected leadership. If you feel
that that's not possible for some reason, then help create an
alternative. A little healthy competition can be a good thing, also.
As I hinted at previously, this involves leadership, trust, and
certainly even a bit of marketing. Sometimes the suggester is the best
initiator, because he has the most passion, and stake in the outcome.

There's many alternatives. Lead, follow, or get out of the way. What
is your choice?

More to the point, there's been lots of talk on this issue over the
years, but very little substantive action. Talk is extremely cheap.
For some topics that have been beaten to death over the years, without
practical solutions being offered, sometimes talk is too cheap for the
valuable time of others, including the readers of this newsgroup.

The have tried in the past. It is difficult to compete in anything
which
has a Monopoly on US amateur radio news and opinion.

The ARRL was NOT the first radio club in the USA. They were
incorporated 5 years after the first one, RCA. The Radio Club of
America still exists, by the way, it doesn't bother much with
amateurism now.

ARRL leaders saw early-on that its survival meant some kind of
amateur-radio-related business needed to be done to enable
monies for growth as well as sustenance. Publishing was a
natural since a periodical would be a regular members' information
source. Texts followed. Publishing grew until it sustained ARRL
and QEX and the contest journal; QST manages to support itself
on advertising space sales.

Think about this: Any publisher has Total Control over what is
printed. Absolute power. Now, from what source does all the
US amateur radio news flow? CQ and Pop Comm reprint news
from the ARRL. Both are independents of lesser financial backing.

Profit from publications supports all of the 'free-to-members'
services, the legal counsel billings in DC, the expense vouchers
for executives traveling to Switzerland, lots of things. Even with
170 thousand paying members, annual dues would NOT be
enough to cover much more than the heating bills of Newington
offices in wintertime.

A larger membership number and the more the ARRL can charge
for advertising space in their publications. More profit. But, it is
also a capability to reach More US amateurs to influence their
thinking, their decision-making. Power.

The old "Change It From Within" ploy revisited: It can't be done in much less than half a lifetime. Not with an established oligarchy, a virtual monopoly on publications. Case in point is the eventual FCC 06-178 Report and Order. That was NOT "changed from within the ARRL" at all. The ARRL hierarchy was dead-set against abolishing the code test or even reducing the test rate back in 1998. ARRL was against it even though the IARU recommended the changes to S25.5 at WRC-03. League hierarchy was adamant despite members' pleas to go along with change. The "use member voting power to get elected officials in there who see one's point" corollary: Twaddle in itself. Most offices have no competition. Elected office terms are too long to handle immediate problems. Even if there is SOME change effected, the reporting of such elections, board meetings, etc., is all provided only by the ARRL itself.

The League is a juggernaut of an organization that can eat any start-up competitor as a light snack and never worry about indigestion. It would take massive amounts of cash to mount any campaign for a new start-up national membership organization, more to keep it going.

I have no idea what the "honeydo era" refers to, but the notion that active hams are (or aren't) members of ARRL is not proven here.

I became licensed about 35 years ago as a teen, and joined ARRL the same day I got their "welcome to ham radio" letter and membership solicitation. There was some discount because I was a teenager. For the rest of my teen years, through college, I was barely off-and-on active as a ham, mostly as a visiting operator at contest stations. Out of college I went completely QRT until just a few months ago, the intervening years being spent in a career with frequent moves and little free time for hobby activities. Recently a career change made it possible for me to look at ham radio again. Over all that time, out of habit, I kept the license current and my ARRL membership intact. So much for "ARRL members are active hams".

On the inverse side of the coin, I don't think that non-membership in ARRL correlates in any meaningful manner with "non-active ham". To some, being a ham is an individual experience with no corresponding "membership in a fraternal group" motivation or inclination. I drive a Corvette, but don't belong to a Corvette club. I'm a military veteran but I don't belong to any vets organizations. Couldn't I be a very active ham without belonging to ARRL? Personally, I think that is the case with many licensees, but that belief is just as unfounded as your unfounded presumption that ARRL non-members are "dropping off and will likely continue".

1204. June 24, 2007 ARS License Numbers

Newsgroup: rec.radio.amateur.moderated
Date: 2007-06-26 00:44:18 UTC
From: N2EY@AOL.COM
Message-ID: <1182814309.704919.86590@w5g2000hsg.googlegroups.com>
Source record: 4259

These are the number of current,
unexpired FCC-issued amateur
radio licenses held by individuals
on the stated dates, and the
percentage of the total number
of active licenses that class contains.

Percentages may not add up to exactly
100.0% due to rounding.

These totals do not include licenses
that have expired but are in the grace
period, nor do they include club, military
and other station-only licenses.

Effective April 15, 2000, FCC no longer issued
new Novice, Technician Plus and Advanced
class licenses, so the numbers of those license
classes have declined steadily since then.

Also since April 15, 2000, FCC has renewed all
existing Technician Plus licenses as Technician.
It is therefore informative to consider the totals of
the two classes, since the Technician class
includes a significant number of Technician Plus
licenses renewed as Technician.

On February 23, 2007, the last Morse Code
test element, the 5 wpm receiving test, was
eliminated as a requirement.

The ARS License Numbers:

As of May 14, 2000:

Novice- 49,329 (7.3%)
Technician - 205,394 (30.4%)
Technician Plus - 128,860 (19.1%)
General - 112,677 (16.7%)
Advanced - 99,782 (14.8%)
Extra - 78,750 (11.7%)

Total Tech/TechPlus - 334,254 (49.5%)

Total all classes - 674,792

As of February 22, 2007:

Novice - 22,896 (3.5%)
Technician - 293,508 (44.8%)
Technician Plus - 30,818 (4.7%)
General - 130,138 (19.9%)
Advanced - 69,050 (10.5%)
Extra - 108,270 (16.5%)

Total Tech/TechPlus - 324,326 (49.5%)

Total all classes - 654,680

As of June 2, 2007:

Novice - 21,940 (3.3%)
Technician - 287,530 (43.9%)
Technician Plus - 27,197 (4.2%)
General - 140,044 (21.4%)
Advanced - 67,809 (10.4%)
Extra - 110,428 (16.9%)

Total Tech/TechPlus - 314,727 (48.1%)

Total all classes - 654,948

As of June 24, 2007:

Novice - 21,781 (3.3%)
Technician - 287,037 (43.8%)
Technician Plus - 26,507 (4.0%)
General - 141,042 (21.5%)
Advanced - 67,552 (10.3%)
Extra - 110,697 (16.9%)

Total Tech/TechPlus - 313,544 (47.9%)

Total all classes - 654,616

Changes:

>From May 14, 2000, to February 22, 2007:

Novice - decrease of 26,433
Technician - increase of 88,114
Technician Plus - decrease of 98,042
General - increase of 17,461
Advanced - decrease of 30,732
Extra - increase of 29,520

> The ARRL hierarchy was dead-set against
> abolishing the code test or even reducing the test rate
> back in 1998.

That's simply untrue. You are mistaken, Len.

Here's what really happened back then:

In its 1998 restructuring proposal to FCC, the ARRL proposed the
following changes to Morse Code testing:

1) The General Class code test rate reduced from 13 wpm to 5 wpm

2) The Advanced Class code test rate reduced from 13 wpm to 12 wpm

3) The Extra Class code test rate reduced from 20 wpm to 12 wpm

That's a significant reduction in code testing for both General and
Extra class licenses. The proposal was in development for more than a
year before it was released in late 1998.

In addition, ARRL proposed in 1998 that all existing Novice and
Technician Plus licensees be given free and automatic upgrades to
General.

ARRL also proposed in 1998 that all Technician licensees have some HF
operating priviliges *without a code test*. This was seen by many as a
first step towards code test elimination for all HF amateur licenses

Those are the facts.

The ARRL hierarchy was *not* dead-set against
reducing the Morse Code test rate back in 1998, because they proposed
doing just that for both General.and Extra class licenses.

> ARRL was against it even though the IARU recommended
> the changes to S25.5 at WRC-03.

Incorrect.

In early 2001, ARRL changed its policy of support for S25.5 from
supporting continued code testing to no opinion.

In its proposal to FCC after ITU-R S25.5 was revised, ARRL proposed
that all Morse Code testing for all amateur radio licenses except
Extra be eliminated.

> League hierarchy was adamant
> despite members' pleas to go along with
> change.

The League proposed changes in both cases cited above. They did not support the status quo. They were not "adamant".

ARRL's proposals, and the comments to them, can be downloaded from the FCC website.

Do you have any solid evidence that the majority of ARRL members wanted all Morse Code testing eliminated, Len?

It should be noted that when the comments to the 2000 restructuring were counted, the majority of those commenting supported at least two code test speeds. And when the comments to the 2006 restructuring were counted, the majority of those commenting supported at least some code testing be retained.

In 1999, reduction of all Morse Code testing to 5 wpm was not the majority opinion of those who bothered to comment.

In 2005, complete elimination of all Morse Code testing was not the majority opinion of those who bothered to comment.
.
In both cases, FCC went *against* what the majority of those who voiced an opinion wanted.

Should ARRL have ignored what the majority wanted, too?

Results of the above operation:

We had 3 HF stations on the air, and one VHF/UHF. HF rigs were all
100-watt-class middle-of-the-line transceivers, with various dipole
antennas (OCF and G5RVs). N3FJP computer logging with networked
computers at each setup.

We made 470 CW and 342 'phone QSOs, with just one HF station on CW vs.
two HF and one VHF/UHF on 'phone. Bonus points for 100% emergency
power, "natural" power, W1AW message, SM message, information table,
public location, publicity, and electronic log submittal.

Great wx, lots of new and old friends, good food and lots of good
times. Some folks dropped by for a few minutes, some were there
beginning to end, and everything in between. Setup and takedown were
done in record time due to good planning and experience.

Only 368 days till the next one!

Considering the poor solar activity, that sounds pretty good! Though I haven't seen the exact tally for the Machias Radio Group (W7MRG) running 2A + VHF, I think we'll come pretty close to your's.

We had CW & fone tents (I stayed w/ the fone tent). The CW guys forgot to bring the 80m antenna and had to make-do w/ the 40m antenna + tuner. Still, they had just over 400 Qs. The fone tally was 360 Qs. We also had the usual bonus points... emergency power, public location, info table, publicity, and W1AW message.

We had some snafus w/ setup of the fone antennas so, we weren't operational until late Friday night. An interfacing problem w/ the intended DVK made us switch to Plan B. I'm glad it worked... we didn't have a Plan C! The wx here in the Pacific "Northwet" cooperated, for the most part. The rain didn't happen until we had the tents up, and then abated until *after* we were packed up for the drive home. :))

[...]

I do not mind offending the old-timers who are living in the past
and struggling to hold ham radio captive (they have never minded
offending new or future hams). The future of ham radio is likely to
include digital (possibly D-star, possibly others). It is likely to make
extensive use of computers and the Internet. It is just not likely to
include much along the lines of Morse. The Morse zealots have already
lost the fight for the issue that means the most to them - code testing.
The reduction of the dedicated CW segments is probably a harbinger of
things to come. My guess is that they know (and have always known) that
anything that Morse can do, digital can do better. For that reason, they
have fought to stop digital (I remember when it was dismissed and
disparaged as wideband "pulse").
Do this simple calculation: multiply what you consider to be a good
sending rate in words per minute by the number of letters in a word by 7
(there are 7 bits to an ASCII character). The result will be bits per
minute. Divide that by 60 to get bits per second. The result will be
quite laughable. I have seen people throw in the garbage old modems that
were capable of 1,000 times that speed.

As far as starting a new organization by myself is concerned, I have started a small business, a political action committee and an Internet users group. Be careful what you ask for; you just might get it. My guess is that a new group could be started in a single region and then bootstrapped into a national organization, within five to ten years. The obvious constituency would be people who would, more or less, agree with my (admittedly inflammatory) comments above. I would make no attempt to capture the telegraph key cohort of the ARRL, but the more progressive members might change sides. Nevertheless, people who are dissatisfied with an existing organization are always the greatest asset of a new or rival organization. The prospect of offending the core loyalists of the old group is just not an issue.

1210. Re: Field Day?

Our 1B WV K8MN operation (K8MN + N8NN) used a single HF transceiver
with TR for logging on a laptop computer. Our primary antenna was a
200' flattop which varied in height--60 feet at one end and about 40
feet at the other. It was fed with ladder line through a Johnson
Matchbox. Our bonus points were for the information table, publicity,
local emergency personnel visit,
SM message, emergency power and electronic submittal.

We made 1070 FD QSOs (957 on CW) for 2027 points.

Source record: 4266

Most tests result in around a 15% LoTW return within the first 24-
hours.

FD this weekend returned about 3% on LoTW.

What's up with that?

I'm not particularly worried about either one. I won't comment more
about that, because you are swinging the topic toward me, and away from
the ideas regarding forming a new organization.

> patronization.

Illitoi, would I do better to tell the guy, "Give up, you can't do
anything about it?

Let me tell you a little story, then see how condescending you think I
am. In our local club, we were dying the death of a thousand cuts.
Membership was down, interest was disappearing quickly. We were lucky if
we got 10 members to a club meeting. Field day might get 4 of us.

I got together with another officer, and said Let's change this.
Initially there was lots of resistance by members. "Hams are getting old
and don't care any more. "Testing requirements are letting in rifraff,
and that's why no one is interested. "Ham Radio is dying, and our
generation is the last". On and on and on.

My reply was that "All that is possible, but I want to try something".

First thing I demanded was a change in attitude. No Morse code supremacy. A person might know that he is better than other Hams because he took a Higher speed test, but let's keep it to ourself for a while. Morse code proficiency is really cool, and I respect that a lot, but it doesn't make me a better Ham than the Technician who volunteers for all the public service work. Respect for ALL the Hams is Job One.

Second thing is everyone was reminded that they were once newbies, and didn't come into radio knowing everything. We set up training classes in the basics, and even put together a workbench for training at our "shack".

Third was "Quit complaining, daggonit!" Does the new guy really need to hear about how much you hate (insert topic here) within five minutes of meeting him? Give it a break, it isn't a good way to attract new folks, and those it might attract are likely to be complainers.

Fourth was institute testing before club meetings. We did this as soon as the F.C.C. rules changed to allow it. Works wonderfully. Test applicants get a round of applause, and another if they pass. Those who do not are offered help to be sure to pass the nest time.

Finally, and this one takes constant watching, is that members have to avoid being an "UberHam". You may have a hundred foot tower with a 40 meter beam, and Yaesu's fine 12K offering running into an Alpha, but the guy with a Swan into a dipole is doing okay too.

Results? The quixotic quest that was doomed to failure, trying to regenerate interest resulted in local growth in new Hams at the 2 percent rate, increased membership in the club, and at least a quadrupling of Field day competition. We have alternating weekend breakfasts and weekend mountaintop days, all heavily attended.

So while some might think that I am being condescending when I tell someone to get out and do something, I have to note that I am dead serious. Maybe my reasons that I think it will fail are wrong, just like I proved the local naysayers wrong. But unless the guy gets moving and proves me wrong, it just ends up being another Ham complaining in a newsgroup, or eHam, or QRZ.com, or on the air. And that really doesn't accomplish much.

Thunder is impressive, but it is lightning that does the work.

At one point a lot of husband and wife teams got their licenses and used local repeaters to call each other at lunchtime or on the way home from work in order to exchange info on say stopping off at the grocery store to pick up something for dinner, or at the hardware store to pick up something.

Hence the name "Honey, do this, Honey, do that. 8^)

Many people in that group kind of dropped out of the picture as cell phones became ascendent.

> out of habit, I kept the license current and my ARRL membership
> intact. So much for "ARRL members are active hams".

That is a sample of one.

> is the case with many licensees, but that belief is just as unfounded
> as your unfounded presumption that ARRL non-members are "dropping off
> and will likely continue".

RDW (Can't we all get some names here? If a person wants to be anonymous, fine, but it seems a little odd to be seriously discussing anything with "Klystron" "illitoi" and RDW)

I most emphatically did not say that non members are dropping off and likely to continue. You should quote the whole statement if you mean to take something from the words.

I did say that those hams in the group that I referred to as "Honeydo" hams were dropping off and would probably continue to do so.

I'm not sure how we can have a meaningful discussion if you try to debunk my points first with a sample of one, and then try to debunk

another point by quoting out of context, then extrapolating it to an entire group.

Well there ya go! I wish you success. If I could offer a little advice, it would be that it is time to get a name here. I can understand anonymity, but if you are going to be a leader, you'll need to be known.

My whole point in this discussion has been that too many Hams spend way too much time complaining, some to the extent that they are unpleasant to be around. Then they don't do anything.

Thunder is impressive, but it is lightning that does the work.

I stated an opinion. Opinions aren't "test" answers. There are no
"incorrect" or "correct" lables except from one's own subjective
viewpoints. You subjective viewpoint does not over-rule mine. :-)

I used the "code thing" as illustrative of the ARRL's conservative
attitudes towards code testing. It was not an attempt to revive
some ages-old argument over just code testing. It was an
illustration,
an example.

>Here's what really happened back then:

What "really happened back then" is history. It is documented.
By others.

>In its 1998 restructuring proposal to FCC, the ARRL proposed the
>following changes to Morse Code testing:

The ARRL has never given up on trying to KEEP code testing for at
least Amateur Extras up to and including NPRM 05-235. That is
also documented. At the FCC.

>> ARRL was against it even though the IARU recommended
>> the changes to S25.5 at WRC-03.
>
>Incorrect.
>
>In early 2001, ARRL changed its policy of support for S25.5 from
>supporting continued code testing to no opinion.

How is having "no opinion" a "support?" :-)

Incidentally, MOST of ITU-R S25 was rewritten at WRC-03; S25.5
only applied to administrations' license testing requirements in
regards to international morse code.

>In its proposal to FCC after ITU-R S25.5 was revised, ARRL proposed
>that all Morse Code testing for all amateur radio licenses except

>Extra be eliminated.

The ARRL refused to bend on code testing for Amateur Extra...they
HAD to have it in there. :-) That is only natural. The ARRL
represents its membership. The ARRL's core membership is made
up of long-time amateurs favoring morse code skill as the epitome of
US amateur radio skills.

ITU-R S25 does not directly apply to United States radio regulations.
It has no force of law. The United States is obliged to follow the
decisions of this UN body on the basis of Foreign Policy and all
treaties made by the United States to others.

As rewritten, ITU-R Radio Regulation S25.5 removed the requirement
that all adminstrations mandate code testing for all administrations'
licenses yielding amateur operating privileges below 30 MHz to
making it Optional for each administration to do as it wished. There
is no direct relationship between S25 and whatever the ARRL wanted.

>In 2005, complete elimination of all Morse Code testing was not the
>majority opinion of those who bothered to comment.

Comments on Notices of Proposed Rule Making (NPRMs) are not a
"vote." They never had such a definition. The Commission issues a
Notice of Proposed Rule Making, then invites Comments on same.
The FCC is not, nor has it ever, been "required" to obey any
"majority" opinion of Comments. The Commission will, after the
official end of the Comment period, consider all such Comments
and make a final decision on the NPRM. That final decision then
becomes a Memorandum Report and Order, colloquially known as
an "R&O." Once that R&O is published in the Federal Register, it
become law.

Anyone who wishes to look can go to the FCC's ECFS and Search
under 05-235 and 25 November 2005. On that date I submitted an
EXHIBIT done after the end of official Comment period on 05-235 and
offered solely as an Exhibit. In that I made tallies day-by-day of
each
and every Comment and Replies to Comments totaling 3,795 made
from 15 July 2005 to past the official end of 14 November 2005. I
read
each and every one of the 3,795 documents. Note that nearly half of
the documents were posted before the official start of the Comment
period on 05-235. I commented on that fact in the Exhibit.

That Exhibit has been argued before and I will not reprise it. The
Exhibit document stands on its own and was done over a year and a
half ago. The FCC accepted it enough to post it for public viewing
on their ECFS.

The ARRL is not obliged to publish my views on anything despite my
being a dues-paid voting member. That is as it should be. The ARRL
is a private membership organization and is NOT a part of the

government of the United States. The FCC is a part of the government. The FCC is obliged to answer to all citizens of the USA. ARRL membership is less than a quarter of all licensed US radio amateurs. ARRL members cannot constitute a "majority" of amateur licensees.

That's one factor.

There's also the fact that most FD operations are club or group efforts, rather than those of individuals. Also, the FD entry is somewhat more complex than just sending in the log, since many of the bonus points require documentation. End result is that it may be a while before the "paperwork" gets done.

You stated:

"The ARRL hierarchy was dead-set against
abolishing the code test or even reducing the test rate
back in 1998."

How is that an opinion? It sure looks like an attempt to state a fact
- except that it's not true.

> Opinions aren't "test" answers. There are no
> "incorrect" or "correct" lables except from one's own subjective
> viewpoints.

All opinions are not equally valid. A person can have, and state the
opinion that the moon is made of green cheese, or that the sun
rises in the west and sets in the east, but that is clearly not the
case.

> You subjective viewpoint does not over-rule mine. :-)

The objective facts prove that your statement about the ARRL
hierarchy in 1998 is false. It is simply not true. Your belief in it
does not make it valid.

> I used the "code thing" as illustrative of the ARRL's conservative
> attitudes towards code testing.

The facts prove the opposite. In 1998 the ARRL proposed across the
board reductions in Morse Code testing for General, Advanced and
Extra class licenses. Hardly a "conservative attitude". Yet you
stated:

"The ARRL hierarchy was dead-set against abolishing the code test or
even reducing the test rate back in 1998."

If they were "dead-set against...reducing the test rate back in
1998.",
then why, in 1998, did ARRL propose those reductions?

> It was not an attempt to revive
> some ages-old argument over just code testing. It was an
> illustration, an example.

Your example was faulty, because it was not based on what
actually happened.

> >Here's what really happened back then:
>
> What "really happened back then" is history. It is documented.
> By others.

And those documents prove that you were mistaken about
the ARRL's position on Morse Code testing in 1998. They prove
that what I wrote is what actually happened.

> >In its 1998 restructuring proposal to FCC, the ARRL proposed the

>
> How is having "no opinion" a "support?" :-)

You wrote that "ARRL was against it.". But ARRL wasn't against it
at all. The policy changed more than two years before WRC-03.

> Incidentally, MOST of ITU-R S25 was rewritten at WRC-03; S25.5

Should a membership organization not do what the membership wants?

> >In 2005, complete elimination of all Morse Code testing was not the
> >majority opinion of those who bothered to comment.

> Comments on Notices of Proposed Rule Making (NPRMs) are not a
> "vote."

Nobody says their a vote, Len.

What the comments are is the voice of those who bother to express an opinion to FCC. And when those comments were counted, the majority opinion did not support the reductions and elimination of Morse Code testing that were later enacted by FCC.

The comments are not limited to those with amateur licenses, or even those who intend to get amateur licenses.

> Anyone who wishes to look can go to the FCC's ECFS and Search

You just did.

> The
> Exhibit document stands on its own and was done over a year and a
> half ago. The FCC accepted it enough to post it for public viewing
> on their ECFS.

FCC does that with practically all comments or exhibits sent in. That does not mean the comments or exhibits are valid or correct, or that FCC agrees with them.

But that's all besides the point.

In 1998, the ARRL hierarchy was not against reductions in Morse Code testing. That is proved by the ARRL's proposal to reduce the Morse Code test speeds for General, Advanced and Extra licenses from 13 wpm, 13 wpm and 20 wpm to 5 wpm, 12 wpm, and 12 wpm, respectively.

Fact - not opinion.

Did you discuss this with your Division Director? The DD is your
"Senator" when it comes to dealing with the Newington Mob. Things
like this get resolved to your satisfaction many times through that
route.

The MO&O is only one type of Order used in both rulemaking and
adjudicative proceedings.

No. It was not that big a deal to me.

However, it indicates that three separate office groups at
Newington have some lack of internal communications.
<shrug>

>The DD is your

How? I found and corrected my address for QST...and it got
righted after three issues. I wrote personally to Membership folks.
I was only interested in one 'free' item, the Repeater Directory. I
found lots of Repeater listings on the web for no cost.

I am of the mindset that small problems can be handled
personally without resorting to "representative" assistance. If
that is the wrong approach, I apologize.

Thank you for the additional information. I was not trying to
write a treatise on law, just making a simple explanation of
how the FCC does its thing for the benefit of those who are
less informed.

Never fear, I shall endeavor to keep quiet on "adjudicative
proceedings" until I have been admitted to the Bar. [when
do they open and close?]

N2EY@AOL.COM wrote:

> Should a membership organization not do what the membership wants?

Pardon my taking a single line from your article, but it's the topic I want to discuss.

The first problem is figuring out "what the membership wants". What do you do when the membership is split into approximately equal factions with opposite opinions and both feel passionately that their position is Right? Do you develop a position that pleases one faction and is completely unacceptable to the other, or a compromise that no one agrees with 100% but most folks can accept?

But the second problem is that "what the membership wants" may not be the best course of action. It is perhaps arrogant of the management of an organization to think that they are more qualified to set a policy than the members, but sometimes that's the case. Back in the 1960s the ARRL lost a lot of support from their membership when they supported incentive licensing; this seems to be a case of the organization doing the opposite of "what the membership wants". I suppose we'll be debating forever whether the ARRL support for incentive licensing was the Right Thing to do for the hobby, but I'm only trying to use it as an illustration that there are cases in which a membership organization does *not* set policy based on membership consensus.

Setting policy for a large national organization is a complex task. I don't agree with everything that the ARRL does, but I don't expect to. I suppose I have a mental threshold and as long as I agree with "enough" of what the organization espouses, I'll continue to be a member.

The other aspect for the ARRL is that there's a Field Organization that provides support for various aspects of the hobby. At various points in my ham radio career, I have used that support structure and been a part of it, adding to my enjoyment of the hobby. I find it a significant disappointment that this organization does not exist in my current ARRL section, and this may have more to do with whether I maintain my ARRL membership than the organization's position on national issues.

Before someone says, "If you're upset that the ARRL Field Organization is broken, why don't you fix it?", let me explain my position on that. When I moved here, I did the same sorts of things that I've done on other occasions in terms of getting involved in the local organizations. It became quickly apparent that the ARRL officials at the section level had no interest in actually *doing* anything. (There was one exception, but with no support from the Section Manager, even that

individual was unable to accomplish much.) So where does this leave me? I considered the option of trying to "fix" things, but it would require many hours of work to accomplish anything. Ham radio is a hobby, and I'm not inclined to invest that amount of effort into it. So I have contented myself with helping at the local club level. Maybe there are lots of other hams in this ARRL section who would like to see an effective Field Organization, and if we all worked together it would happen, but I have no way of knowing if that's the case.

Yeah, we have a few of those yet locally. One is an elderly couple staying in touch with their son as he does his rounds. Its actually great that the old folk can do that.

Sometimes it's good for a few chuckles, as when the mother calls the son to ask his location, and he answers "I'm in the driveway, Ma! Bless 'em all.

I hear ya Steve! In a former life as a President of a Youth athletic organization, I had just that situation. Hockey parents are at least as passionate as Amateurs, and more shrill, since their dealing with their children.

The association had to carry multiple insurance policies on my person as well as liability for any decisions made by the BOD and myself. Its a little disconcerting when the two sides of any argument each threaten lawsuits if your decision goes against their wishes.

There were times I got to stand and deliver to a room in which at least half of the people wanted me dead (seriously). I was glad that I am a fairly formidable physical presence.

Somewhere along the line, compromise became a dirty word.

> But the second problem is that "what the membership wants" may not be

One of the less pleasant parts of being on a board of directors is that you occasionally have to make one of those painful decisions that will really split the troops. But you have to make a decision, so you do it, and sometimes you take the heat.

Even worse, sometimes you get in a hard place where the BOD makes a decision that is so out of touch with the desires of most of the members that you get to a crisis (one of the times I feared a bit for my health)

In that case, I did the right thing in the case, in defiance of the board, 'fessed up, then offered my resignation. It wasn't accepted -

they were actually glad I got them out of a real jam.

Sorry for digressing - this was just a small example of some of the
issues that people on the other side don't get to see or think about.
All jobs are easy for those who don't have to do them. 8^)

There will be disagreements in any organization. If everyone agrees, we
can get rid of all but one person. 100 percent lockstep in opinion is
just not realistic.

Steve, where is that? It seems really odd that they don't have a Field
Org there.

Not everyone can "lead the charge" so to speak. I would think that this
is a case for gentle persistent pressure by as many people as you can
muster. Then the ARRL might either acquiesce because it is a good idea,
or if that doesn't work, just to get your folks to "go away"

I didn't say that last sentence! ;^)

Recently I was chided here by one of the managers for being anonymous (even though my name appears in the "from" line of every message I've posted here), and some others have also been gigged (Klystron, Iitoi) for the same reason.

I think it's commonly accepted that on the internet some people prefer not to disclose their personal data (in the Army we call that "OPSEC"). As long as the information posted meets the rules, I think we should refrain from such scolding.

A quandry worthy of Soloman. Natuarally, the organization splits
into two and each organization can then rightly claim to "represent"
its
membership. Every organization meeting night will be equitable as to
opinions. :-)

Everyone in both camps thinks they are "doing things" until they
need assistance from outside of a club group and run into
competition for assistance services from the other club. Then the
"battle" of wills begins anew, just at a different venue.

>Setting policy for a large national organization is a complex task. I
>don't agree with everything that the ARRL does, but I don't expect to.
>I suppose I have a mental threshold and as long as I agree with "enough"
>of what the organization espouses, I'll continue to be a member.

The ARRL is the *ONLY* national organization of radio amateurs.
It has no competition...which can lead to a very small minority
directing or strongly influencing what the majority wants. But,
without any national competition for a long time, the ARRL has
gained a reputation with the FCC and has some status of some
representation. It must be blatantly obvious to the FCC that the
ARRL does NOT represent any sort of majority of US amateur
radio licensees, just less than a quarter of those.

But, in trying to discuss the matter of efficacy of the ARRL, we all
run into the League Zeolots to whom the ARRL is perfect, without
flaw, and get denounced for daring to negatively criticize their idol.
That clouds the issue and destroys any possible discussion.

I say you do the latter. It's called consensus. Since there is no way
to give everyone everything they want, you work out a scheme that
gives everyone *some* of what they want.

And that's pretty much what ARRL has done.

But there's a couple of other steps. For one thing, it's important to
actively seek out what the membership wants. For another, it's
important to publish that information so that the membership and
others can see what the actual results are.

> But the second problem is that "what the membership wants" may not be
> the best course of action.

In whose judgement?

> It is perhaps arrogant of the management of
> an organization to think that they are more qualified to set a policy
> than the members, but sometimes that's the case.

If so, then the management has to make their case to the membership.

The recent "regulation by bandwidth" fiasco is a clear example of how
not to do a proposal, IMHO. ARRL did a lot of things right, and the
proposal had lots of good points. But the BoD did not do a good job of
explaining the proposal, nor of getting widespread membership support
before submitting it to FCC. The end result was it got
overwhelmingly negative comments - mostly because 'phone ops don't
want wide data signals all over the 'phone subbands. Particularly
robot data signals.

> Back in the 1960s the
> ARRL lost a lot of support from their membership when they supported
> incentive licensing; this seems to be a case of the organization doing
> the opposite of "what the membership wants".

I was a ham back then, and it was a lot more complicated than that.

What happened was that, in 1963, the ARRL BoD proposed a return to the pre-1953 system, which required an Advanced or Extra to operate 'phone on the bands between 3 and 25 MHz. They claimed to have majority support of their membership and the amateur community as a whole. And perhaps they did.

But there was a vocal minority who loudly opposed the 1963 proposal. There were also others who supported the *concept* but wanted a different implementation. There were no less than 10 alternative proposals that got RM numbers, comments, etc.

After several *years* of comments, arguments, proposals, counterproposals, information and misinformation, FCC changed the rules. The final rules changes bore little resemblance to the 1963 proposal from ARRL.

Good example. Even if there was majority support for incentive licensing, there wasn't a consensus.

One of the main problems with the Field Organization is that it's all volunteers. If nobody steps up to those jobs, they go vacant.

> Before someone says, "If you're upset that the ARRL Field Organization

That's the classic "bell the cat" problem facing any volunteer
organization.
My suggestion would be to take one small part of the Field
Organization and make it your own.

Out of curiousity - what is it that needs fixing in your section?

DXNL 1525 - Jun 27, 2007
DX Newsletter

a free and weekly service of
DARC Committee "DX and HF contesting"
(http://www.darcdxhf.de)

editor: Helmut Schlaffer, DL7MAE
(e-mail: dxnl@dxhf.darc.de)

translation by: Bob, DL7VOA
(e-mail: dl7voa@darc.de)

HB0 - LIECHTENSTEIN
Pierre,HB9QQ, will go on top of the Sareiserjoch in Malbun (2015m asl) from Jun 29 until Jul 2 and again from Jul 6-9. Pierre will be active as HB0/HB9QQ on HF, 6m, 2m and via meteor scatter. QSLs via HB9QQ.

HL7 - SOUTH KOREA
Since Mar 30 HL7WR is handing out the prefix HL7 for the first time on the bands (until Jul 2). This special event station has been put up for the "World Rafting Championships 2007" (http://www.2007wrc.com) which takes place in Sangdong-Ri/Inje from Jun 27 until Jul 2.
HL7WR is working in SSB/CW/FM/digital modes on 80-6m.
The QSL Manager DS2UAL confirms the QSLs direct or via the bureau.

HZ - SAUDI-ARABIA
After the deregulation of amateur radio there are about 100 licensed amateurs in Saudia-Arabia now. Class 1 licensees (HF and VHF) are using the prefixes HZ1 or 7Z1, HZ2 stations have licenses class 2 (VHF only). They are also allowed to work on HF when using the station of a license class 1 holder. Operation on 6m, 30m and 80m is not allowed in Saudi-Arabia. If you have worked 7Z1AB, HZ1AB, HZ1HZ or members of the royal family in former times you do not have to worry about your DXCC credit because these stations had a special permission until 2004. The same applies to 7Z5OO who was working as a private teacher for the royal family and had a special license as well. Only few HAMs are really active on the bands but most of them are foreign nationals. There is no amateur radio society or a QSL bureau in Saudi-Arabia.

KH3 - JOHNSTON ATOLL, OC-023
A second try of Susan,W7KFI, to leave Honolulu for the Johnston atoll had to be cancelled again. The lusty 73-year old yachtswoman had to return to the island again to attend a dentist. However she has to leave Honolulu before the hurricane season starts in August. Now Susan

thinks that she may show up as KH3/W7KFI during the last week of Juli
or the first week of August.Her preferred QRGs are 14036 and 14236 kHz.

OJ0 - MARKET REEF, EU-053
Three to four different OPs will be QRV in CW/SSB/digital modes on
160-2m. They will sign OJ0/homecall from Market Reef (EU-053) from
Jul 5-9. More information is not available yet.

R1F - FRANZ JOSEF LAND, EU-019
Victor,UA4RC, the QSL manager of R1FJT writes that a few scientists
will do some researches on Franz Joseph Land from Jul 15 until Aug 20.
Eugene,R1FJT, will give his complete log to a scientist. As soon as
Victor has the logs he will start sending out the QSLs. R1FJT is
operating a beacon on 24.898 and 28.012 MHz running in 15min intervals
every day from 1830 UTC.

SV9 - CRETE, EU-015
Theo,SV9/SV1EJD, announced to be QRV in SSB and RTTY on 80-10m from
Jul 3-17. His QSL manager is IZ8CCW, via bureau or direct.

VP2E - ANGUILLA, NA-022
Common trends are not for everyone. This applies also to Jim,WB2REM,
who is expected to show up in CW/SSB on 80-10m signing VP2EREM from
Anguilla (NA-022) between Jun 28 and Jul 8. QSL via homecall.

3A - MONACO
Slavo,3A/SP2JMB, is working in CW/SSB on 40m-70cm from Jun 26-28.

5X - UGANDA
Vladimir,UA4WHX, has left Ruanda and is now active from Uganda signing
5X1VB. Last weekend he appeared mostly in CW on 80/17/12m. The length
of his stay is unknown. QSLs via UA4WHX, direct or via bureau after his
return.

N1DL SOUTH PACIFIC TRIP
Karl,N1DL, is sailing with his yacht through the South Pacific between
Jun 27 and Jul 11. He starts working in CW/SSB as FO/N1DL from several
islands in French Polynesia and will hit the airwaves as E51ADL from
Rarotonga (OC-013, South Cook) later. QSLs via his homecall.

RUSSIA, SPECIAL EVENT STATION
Gerhard,DL6XK, will operate from a clubstation in Swerdlowsk signing
UE9CXK from Jul 1-15. QSLs via DL6XK (ONLY via bureau).

UPCOMING CONTESTS

July 1: RAC Canada DX RTTY Contest

IOTA collected by Fredy,DE0MST (e-mail: iota@dxhf.darc.de)

Island activities:
AF-104, 7X, Grand Cavallo Island/Mediterranean Sea Coast East Group: This new IOTA counter is activated by 7U5CI in all modes on 6-160m until Jun 28. The team of Ivan,OM3CGN, Robert,OM1KW, Afif,7X2RO, Yves,7X0MT, Youcef,7X2HF, Sofiane,7X2GF, Faouzi,7X2FB, and Frantise,7X0RY, is working with three stations, spider beams and wires. QSL via OM3CGN.

AS-100, 4X, Israel Group: The Holyland DX Group (4Z4KX, 4Z5LA, 4X6HP, 4Z5FI, 4X1VF) will be QRV as 4X7AZ from Akhziv Island on Jul 28/29 including participation in the IOTA Contest. QSL via 4Z5LA.
More information can be found on: http://www.4z5la.net/4x7az

AS-151, BY2, Liaoning Prov. W. Group: Zhang,BD3APX, will be QRV as BD3APX/2 from Juhua Island from Jun 29 until Jul 1. QSL via homecall.

EU-006, EI, Aran Islands: EI/G3ZAY/p, EI/M0HSW/p and EI/M0TJH/p are working from Inishmore Island from Jun 27-29. QSLs via homecalls.

NA-091, VE7, BC Prov. South Group: Heinz,VA7AQ, is very active from Quadra Island (BC-006) between Jul 26 and Aug 1. QSL via homecall.

John,VE7JZ, is working from Minstrel Island in SSB and digital modes on 20m/15m until Aug 1. QSL via VE7JZ.

NA-196, VY0, Nunavut Group: VE3IKV and W4TAA plan to hit the airwaves in CW/SSB on all bands signing VF0X from CQ zone 2 between Jun 29 and Jul 4. QSL via VE3IKV (d/b).

JIIA: If you want more information about the "JIIA Activity Year" lasting until the end of 2007 please ask Yuki,JI6KVR (ji6kvr@dance.ocn.ne.jp). This is to celebrate the 5th birthday of the "Japanese IOTA Islands Award" (JIIA). The JIIA diploma is awarded for at least ten contacts with Japanese islands.

Lighthouse activities (WLOTA/ARLHS):

IA5/IZ4DYQ LH 0609/ITA022 Jul 2-13
PJ2HQ LH 0942 Jul 14/15
PJ2/DL6LAU LH 0942 Jul 9-16

There are many radio amateur organizations in the US with national scope. AMSAT, TAPR, NCI, and FISTS are a few which immediately come to mind.

But none of those is the size of ARRL nor has it's financial strength, and each of them is of narrower focus. So ARRL remains without anyone to seriously challenge it's tagline of "The national association for Amateur Radio".

The model of a single dominant national radio club isn't unique to the US --- in fact it seems to be the worldwide model. Britain has RSGB, Germany has DARC, Japan has JARL, Australia has WIA, China has CSRA, France has REF-Union, Russia has SSR, and so on. These are all large countries with healthy populations of licensees, but each with only one "substantial" national radio club.

The only example of a country with two "large" radio clubs was Canada during the period that both CARF and CRRL were in existence. That period was quite short lived, and the two clubs merged to become RAC, so now even Canada has just one large national radio club.

It would be an interesting study to determine why this worldwide model of a single dominant national radio club has so consistently evolved.

The organization exists in the sense that people are assigned to the statewide positions. The "latest news" on the state ARES web page is from September, 2006. The section traffic net summary includes the slow speed net, which hasn't existed for years. There's no EC for some important metro areas; in fact, there's a non-ARRL organization that coordinates ham radio emergency response for that area.

So I suppose I shouldn't have used the phrase "does not exist". Perhaps "nonfunctional" would have been more accurate.

That was not my point. My point was about Who controls the
dissemination of news and information and, most importantly,
the subtle influence of a very very few on the vaster majority of
amateur radio licensees. The major income of the ARRL is from
publishing. RSGB does that to some extent and may someday
pose a real competition for League publications. With the virtual
monopoly on influence comes the clear and present danger of
youknowwhat of a certain fictional year.

> The only example of a country with two "large" radio clubs was Canada

The population of the state of California is approximately that
of all Canada. Have you counted the number of licensees just
in California lately? Note that the ARRL's daily tally of licensees
doesn't lump California with Hawaii or other places of the USA
even though all must be in "six land."

> It would be an interesting study to determine why this worldwide model

> 73, de Hans, K0HB

Well, "RDW," it is a matter of convenience for a SMALL group
of hobbyists. You stated not too long ago that amateur radio
in the USA was merely a fractional percentage of the population.

The Radio Club of America was incorporated five years before
the ARRL. They are still in existance. While some members
of the RCA are licensed radio amateurs, their prime interest
focus is no longer on amateurism. Neither is RCA in the
publishing business simultaneous with membership doings.

If you have read Thomas H. White's remarkable history of
early radio in the USA, you will find out more about how the
ARRL got their first steps up the ladder.

Yep. Other organizations have come and gone, usually centered on a
single issue or a few issues. None since the end of WW1 has ever
really been a contender.
>
> It would be an interesting study to determine why this worldwide model
> of a single dominant national radio club has so consistently evolved.

Here's my theory, at least about ARRL:

>From at least the WW1 restart, ARRL has aimed to be a "general
purpose" amateur radio organization. ARRL publishes a wide range of
books and periodicals, has the Maxim Memorial station on the air every
day, sponsors a wide variety of contests and operating activities, is
present at most major hamfests, is constantly involved with FCC, has
the QSL bureau, ARRL VEC, and a host of other things, all amateur
radio related.

That doesn't mean ARRL always does the best possible job in every
possible area, or that other organizations don't also do those things.
What it does mean is that ARRL offers something of value to more hams
than any other national organization. And it means ARRL's focus is
amateur radio *only*, which is as it should be.

The result is that more US hams join ARRL than any other amateur radio
organization.

IOW, the real question is "why doesn't a rival organization arise?" I
think the answer is that no other organization wants to take on all
the tasks ARRL does, or even the majority of them. Nor do rival
organizations want to deal with the challenge of balancing all the
various interests and opinions of a general membership organization.
Other organizations focus on a limited number of areas, which
naturally limits the number of hams who will join those organizations.
Narrow focus also avoids having to make the kinds of compromises
needed in a general-purpose organization.

Except that ARRL does not have a monopoly of any kind on publishing to the amateur radio community. There's CQ, Worldradio, and other non-ARRL periodicals. There are other publishers such as RSGB as well.

There are also the vast resources of the internet, where ARRL has one website. (An extensive website, but still just one).

Before the internet there were more US amateur radio publications that were independent of ARRL, such as 73, ham radio, and the Howard W. Sams books, yet none of them ever reached the popularity of QST and ARRL publications.

What's the point? There are a lot of people in California, and a lot of hams. Does California need its own amateur radio organization?

> Well, "RDW," it is a matter of convenience for a SMALL group

How many members does the Radio Club of America have today?

What does that organization do for amateur radio?

>While some members
> of the RCA are licensed radio amateurs, their prime interest

No one has claimed that ARRL is older than the Radio Club of America.

> If you have read Thomas H. White's remarkable history of
> early radio in the USA, you will find out more about how the
> ARRL got their first steps up the ladder.
>
I've read it, and it goes something like this:

In 1914, ARRL arose out of the Radio Club of Hartford, led by Hiram Percy Maxim.

There were other amateur radio organizations then, such as Hugo Gernsback's Radio League of America (RLA). Some were regional, some were national. All were new, because radio itself was new.

The term "radio amateur" wasn't even well defined back then. To many, anyone interested in radio that wasn't commercial or government was "a radio amateur". This included folks with only receivers, folks who were primarily experimenters, etc.

The coming of mandatory licensing for transmitters in 1912 had a major effect, but the biggest effect was the 1917 WW1 shutdown of non-government/commercial radio, including receiving. The shutdown could have meant the end of amateur radio.

Most of the pre-WW1 radio organizations, including ARRL and RLA, simply disappeared or continued to exist only on paper, as their members and officers went to war, antennas were lowered, equipment was sealed or confiscated, and even listening was banned.

When WW1 ended, some of the prewar radio organizations reappeared. ARRL did, and sent people to Washington in order to get the bans on receiving and transmitting lifted. Some other organizations did the same thing. But in the post-WW1 broadcasting boom, none of the other organizations remained strictly focused on amateur radio. Gernsback's RLA focused more on broadcasting, for example, and quickly vanished from the amateur scene.

What really cemented ARRL's position was what happened at the various international radio conferences of the 1920s, culminating in the 1927 conference which made amateur radio a separate and distinct radio service, with amateur bands as part of international treaty, rather than at the mercy and good graces of national governments.

Did the Radio Club of America send anyone to represent the interests of amateur radio operators at the Paris conferences of 1924, 1925 and 1927?

I'd offer it as a point of debate Jim (Curiously of course :D). What
would your new organization offer that ARRL & the many, many other
worldwide clubs don't already offer, Klystron & Iitoi?

I'm a member of one of the local clubs here in Denver. I'm also one of
those hams who IS NOT a member of ARRL itself. It's NOT because I don't
want to be. It's just that, with a fixed income, if I were to go pluncking
down PRECIOUS $$$ left and right for each and every organization covering
each and every interest of mine, I'd not only go insane, but I'd also GO
BROKE. As such, I have to ask myself WHERE DOES IT END? I don't *need* QST
Magazine to keep me updated on the world of Amateur Radio. Besides...Quite
frankly, compared to Newsline and ARRL Audio News & the ARRL Newsletter,
ANYTHING in QST Magazine would be DATED INFORMATION by the time I got it
anyway.

True, ARRL does do some valuable things for the Amateur Radio Service and
since I *am* a validly licensed Ham, they *do* represent me in various
political and legal capacities (For which I am eternally grateful BTW), I
still see a reason to join them if they're going to represent me anyway.
They know my position on various issues because much the same sentiment is

shared by SCORES of Hams like me. And many of those Hams have made their sentiments public. I don't need to submit what would sound like a broken record in the eyes of ARRL because they've heard it many times before.

Well...I could go on and on, but I think you get the idea. So I ask again....What *would* your new organization offer that ARRL & the many, many other worldwide clubs don't already offer, Klystron & Iitoi? I'm really curious.

Cheers & 73 :D

I am having trouble getting a straight answer I am hoping someone here can help me.

How do I submit my 4 band log to the ARRL and a 5th band as a checklog for the same June VHF contest?

>From the General Rules for ARRL Contests on Bands Above 50 MHz: http://www.arrl.org/contests/announcements/rules-vhf.html

2.4.2.Limited Multioperator: Stations submit logs with a maximum of four bands used. (Logs from additional bands used, if any, should be included as checklogs.)

I am trying to follow this rule, but I do not know how to accomplish the task. We will get killed in the Multi-Multi category, Limited Multi is where we want to be with our 4 bands, the other band as a checklog.

Thanks for any help and 73,

Matthew

I still hold membership in the Israel Amateur Radio Club, the
voluntary-membership national club (I was 4X4UQ in the '60s).

>It would be an interesting study to determine why this worldwide model
>of a single dominant national radio club has so consistently evolved.

It is interesting to note that in some of those countries, one has to
be a member of the club to be licensed, and only the club gave the
license exams.

When the question of privatizing the license testing came up at the
FCC in the 80s, I pointed out this anomaly to the manager who was
dealing with it (Elliot Ours, one of the best folks whom I had the
opportunity to work with) and questioned whether we were going down
that route. I was told to "shut up and deal" to use a common humorous
phrase of the time. The agency was hell-bent to privatize as much as
it could and "damn the torpedoes".

Call the ARRL.

Otherwise simply submit them individually per the rules below. I.e. the four band log as one submittal and the single band log as a check log. Specifically state in your submission that the single bander is a check log.

Or simply don't submit the 5th band at all. There really is no need to. The stations you contacted will still get their points even if you don't submit a log.

"6.1.1. Electronic submissions in the Cabrillo format may be emailed to JuneVHF@arrl.org
6.1.2. Hand written paper logs or diskettes mailed to June VHF, ARRL, 225 Main St, Newington, CT 06111.

6.1.3. Web entries submitted via the web-based applet at:
http://www.b4h.net/cabforms/ "

This is not true anymore, if the contact is not in both logs it is no longer counted. The log checking reposrts will show this.

I was hoping the robot was smart enough to remove my 5th band if I submit as a limited multi-op station but the ARRL person said nothing in response to this question.

>>> Try the telephone.<<<

I will call tomorrow.

>>> Please cite that rule. I find nothing on any of the ARRL rules sites (neither contest specific nor general rules).<<<

I have submitted several logs that have results that fall into the "log checking reports" category, below is a sample from the report:

*** Not In Log ('N') ***
Lines beginning with the letter 'N' are judged to be 'Not In Log'. This means
we have the other station's log, and your call, or a call close to it, does not appear in that log on this band. This QSO is removed from the log and an extra one qso penalty is assessed.

>>> Submit your 5th band after the due date. That should automatically make it a check log.<<<<

I fear if you submit a second log at any time it will invalidate the old log.

We're only 1/3 of the way through the first year, though. And the numbers have taken ups and downs all over the place.

A couple of things to remember when looking at these numbers:

- Any time a rules change is being considered, or is pending, there will probably be an effect on licensing behavior. Just like the announcement of an upcoming sale at a store. If the pending change makes it easier to get a license, people who were considering getting that license may simply wait until the change occurs. I suspect that more than a few people who were planning to get amateur licenses, or to upgrade, before February 23, 2007 decided to wait until after the rules change.

- News like the rules change travels slowly, and its effects even slower.

- While the rules changes have not resulted in steady new growth, it appears to me that the decline has at least slowed, and probably stopped.

My prediction, IIRC, was that in the first year we would see anywhere from 0 to +1% growth in the total number of currently licensed US hams.

Amateur Radio Newsline(tm) Report 1559 - June 29, 2007

Amateur Radio Newsline report number 1559 with a
release date of Friday, June 29, 2007 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham operating mobile
in New Jersey win an exemption from a tough new
cellphone law, hams in California practice their
emergency communications skills in a mock bird
flu exercise and on the FCC dismisses a pair of
Regulation by Bandwidth petitions but leaves the
door open to future requests. Find out more on
Amateur Radio Newsline(tm) report number 1559 coming your way right now.

(Billboard Cart Here)

**

RADIO LAW: HAMS WIN MOBILE IN MOTION EXEMPTION IN NEW JERSEY

Amateur Radio has won an important exemption in
New Jersey. One that should keep the states hams
running mobile for a long time. Amateur Radio
Newsline's Henry Feinberg, K2SSQ, reports:

--

New Jersey Assembly Bill A 4146 and Senate Bill S
1099/2764 were introduced in the New Jersey
legislature to restrict cell phone use and text
messaging while driving. The twin measures were
passed on June 21st and await the governor's signature.

As originally introduced, the bills would have
prohibited the use of any and all electronic
communications devices for talking, listening or
text messaging while driving. This could have
meant that New Jersey hams would have effectively
been banned from operating while mobile in motion.

But that won't be the case. This is because the
combined measure as passed includes a sentence
that makes Amateur Radio the only service exempt
from the all inclusive ban. That hard fought for
exemption reads -- and we quote: "For the
purposes of this section an 'electronic

communication device' shall not include an Amateur Radio".

Talk about getting a broadly worded exemption
that covers every aspect of Amateur Service
communications. More important it means that use
Amateur Radio while driving will continue to be
permitted in New Jersey. The only caveat is that
it is done safely and the ham operator is not engaging in inattentive
driving.

The new law goes into effect four months after
the governor signs it. From that point on, hams
are advised to keep a copy of the measure and
their Amateur Radio license in your glove
compartment if you drive in the Garden State.

For the Amateur Radio Newsline, I'm Henry
Feinberg, K2SSQ, in West Orange, New Jersey.

--

The exemption for Amateur Radio came about thanks
to the work the hams in the Northern New
Jersey and Southern New Jersey ARRL sections who
contacted their legislators. This, to make sure
that Amateur Radio mobile operations weren't
adversely affected by the then pending legislation (Published reports)

**

RADIO LAW: REGULATION BY BANDWIDTH PETITIONS DISMISSED BY FCC

With little fanfare, the FCC granted separate
requests to recall two petitions for rulemaking
dealing with Regulation by Bandwidth. On June
25th the commission approved requests from the
Communications Think Tank and the American Radio
Relay League to withdraw petitions RM-11305 and
RM-11306 respectively. In a brief notice issued
on June 27th, the FCC stated that both Petitions
for Rulemaking are dismissed without prejudice.

Without prejudice is legal term. It means that a
claim, lawsuit, or law proceeding has been
brought to a temporary halt but that no legal
rights or privileges have been determined,
waived, or lost by the result. In this case it
means that these two parties can file petitions
on this matter again, if they choose to do so. (FCC)

**

RESCUE RADIO: MOCK EPEDEMIC CHALLENGES CA HAMS

The scenario of a mock bird flu a pandemic was
the basis of a simulated emergency exercise,
called "Operation Kung Flu." This, involving
about 200 Santa Barbara California County public
health and disaster planning officials along with
medical service representatives and of coarse a
number of ham radio volunteer
communicators. Bruce Tennant, K6PZW, has the rest of the story:

--

The drill took place on June 20th. In past
exercises members of the Santa Barbara Amateur
Radio Emergency Service have played an important
role in the Health Department's backup
communications between it and the local
hospitals. In this drill officials realized the
only contact they had with medical clinics and
facilities for the was by telephone and cell
phone. Neither would be very reliable if all
members of the community were to try to use these
services at the same time. So they requested the
ARES group conduct a communications survey during
the exercise to evaluate how effective it could be as a backup.

ARES members identified 34 facilities in the area
and sent a team out to each location to record
G-P-S coordinates. They also drew a map of
directions to each location, conducted a radio
check using mobile and handheld gear and sent
back a slow scan television picture of the site.
The exercise proved ARES could establish solid
communications at all locations tested. The data
will be used to develop an information packet
containing details on each facility for ARES
members to use should they be deployed in an emergency.

During the actual drill, the County's Emergency
Operations Center was activated. It dealt with
the challenges of coordinating health, logistics,
communications, law enforcement, and information
distribution to the media and public. Because of
this the ARES radio station at the E-O-C was
itself brought on line. It was used for both
voice communications and to receive slow scan
pictures from the teams in the field.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Following the exercise Bruce Carter, the Manager
of the Office of Emergency Services for the

County of Santa Barbara issued a letter praising the ARES hams. He said and we quote: "ARES is always there, willing and up to any task." (N6ZKJ)

**

RESCUE RADIO: MORE HAMS MAY BE NEEDED IF WEATHER SAT FAILS

Ham radio severe weather spotters could have additional responsibilities come their way. This, if an aging weather satellite crucial to accurate predictions on the intensity and path of hurricanes fails.

According to published news reports, the National Oceanic and Atmospheric Administration's chief said the failure of the QuikScat satellite could bring more uncertainty to forecasts. Also that it could force his agency to widen the areas that are placed under hurricane watches and warnings.

If the QuikScat were to die on-orbit, then forecasters may have to rely on less accurate satellite observations and alternate sources of data. Experts estimate that the accuracy of two-day forecasts could suffer by 10 percent and three-day forecasts by 16 percent. This could translate into miles of coastline and the difference between a city being evacuated or not.

As of now, plans to launch a replacement satellite have been pushed back seven years to 2016. And if QuikScat dies before that launch takes place it will likely also mean that many more severe weather storm spotters would be needed along coastal areas of the United states. This is a job that has traditionally fallen to ham radio volunteers. (Science Online)

**

HAM RADIO TRENDS: LEAGUE CITES NO-ODE AS REASON FOR MEMBERSHIP GROWTH

Thee ARRL Letter says that its membership in the League is up and the trend is toward continued growth. With now close to 152,000 members, Customer Service Manager Amy Hurtado, KB1NXO, says the League is a viable, up-to-date organization that every ham should be a part of.

Hurtado credits the rise in membership in part to the FCC rule changes earlier this year that eliminated Morse code testing for the General and Amateur Extra license classes. She says that

since more people are upgrading their licenses as
a result of there being no Morse code
requirement, the League is now successfully able
to show them the benefits of being an ARRL member. (ARRL)

THE BPL FIGHT: SARL SPEAKS OUT IN OPPOSITION TO BPL

Broadband over Powerline Internet access is not
an acceptable system while interference to High
Frequency communications is potentially high. So
says one of the worlds most respected national
ham radio societies. Bill Pasternak, WA6ITF, has more:

--

Broadband over Powerline is not an acceptable
system to provide Internet access
connections. This, while the interference
potential to High Frequency communications remains high.

This was the message that the South African Radio
League delivered to a Broadband Conference held
last week. One where the proponents of B-P-L
see it as the solution to bridging the digital divide.

These people must think again, says the S-A-R-L's
Hans van de Groenendaal, ZS6AKV. van de
Groenendaal told delegates that bridging the
digital divide is about access to Personal
Computers and computer literacy and not about cheap broadband delivery.

ZS6AKV said that the South African Radio League
is not against new technologies. This, as long
as these technologies are not at the cost of the
High Frequency spectrum which he terms as a scarce national resource.

van de Groenendaal said that radio amateurs are
always embracing new technologies. It is part of
being an communications experimenter.

With so many successful and more mature
technologies available, ZS6AKV concluded by

saying that it is difficult to understand why PLT
is still pursued so vigorously.

At the studio in Los Angeles, I'm Bill Pasternak
reporting for the amateur Radio Newsline.

--

Currently there is no Broadband over
Powerline equipment "type approved" by for use
in South Africa and no licenses for it have been
issued. The South African Radio League and the
South Africa ham community are hopeful to keep it that way. (Southgate)

**

ENFORCEMENT: SAN DIEGO FCC OFFICE JUMPS ON THE
LATEST 96.9 MHZ UNLICENSED STATION

Back in the United States, the San Diego FCC
field office lost no time in going after the
latest unlicensed broadcast operation on 96.9
MHz. A Notice of Unlicensed Operation was issued
June 12th to Jose Partida of Chula Vista. In it
the regulatory agency warned Partida to cease
operation at once or face sanctions that could
include heavy fines, seizure of station
equipment and criminal sanctions including
imprisonment. Partida was given ten days from
the June 12th date of the notice to respond. (CGC)

**

RADIO LAW: FCC DENIES UFO CALLSIGN

The FCC has denied a request that the call sign
NM5UFO be assigned to the New Mexico's Saucer
Ridge Amateur Radio Association. In filing its
request the club had maintained that the
assignment of NM5UFO would be in keeping with the
theme that Roswell, New Mexico which has been
known since 1947 as the site of a UFO crash. In
denying the request the FCC simply said that the
requested call did not follow the
agency's sequential callsign assignment system. (HandiHam News)

**

HAM RADIO TRENDS: THE ICOM ON-LINE SURVEY

Icom is conducting an on-line survey to find out
how, where and when hams operate their
stations. And as an incentive for taking part
you will be entered to a drawing to win one of two IC-R5 portable receivers.

The survey is quite simple and takes only a few moments to complete. And you do not have to own or use any Icom brand gear to take part. All you need to do is take your web browser over to www.icomamerica.com/amateur/survey and follow the simple instructions. According to Icom your opinions are very important to its Product Development Team.

Again, the URL for the Icom survey is www.icomamerica.com/amateur/survey Just fill it in and one of these days you might find yourself listening to an IC-R5 that you won for simply taking part. (Icom Release, WB9QZB)

**

HAM RADIO BUSINESS: KENWOOD SAYS ITS HERE TO STAY

Once again the bloggers are wrong. Contrary to what some hams have conjectured on the Internet, Kenwood Communications has no plans to leave the ham radio marketplace. Amateur Radio Newsline's Fred Vobbe, W8HDU, has the rest of the story:

--

Kenwood, which has just announced that is acquiring famed consumer electronics manufacturer J-V-C from Matsushita Electric says that it sees ham radio as an important part of its overall future business plan. And in a letter to the Amateur Radio community, Phil Parton , N4DRO, who is the Kenwood's National Sales Manager for Amateur Products makes it clear that the company is in ham radio to stay.

Parton writes -- and we quote: "I would like to take a moment of your time with this open letter and help dispel rumors, and falsehoods that have been stated as fact. I have been assured from Top Management in Japan and the U.S. and I can assure you that the Kenwood Communications Sector has no intention of exiting the Amateur Radio Marketplace. It is a viable market. The Amateur Division has been running in the black since our restructuring several years ago. In fact, even with the loss of models over the last four years the Amateur Division has grown in market, speaking highly of Kenwood quality and the loyalty of our customers." -- End quote.

Parton goes on to say that at the recent Dayton Hamvention, Kenwood introduced its new dual band TM-V71A and that dealers report many were sold at the show. The TM-V71A is billed as the worlds

first Echolink ready transceiver with ten dedicated Echolink memory channels as well as Echolink sysop mode of operation.

Parton also notes that the company also had a pre-production prototype of the Dual Band TM-D710A was under Plexiglas. This radio, due out in late August, will serve as a replacement for the soon to be discontinued TM-D700A.

In his letter, Parton also touches on the reason Kenwood has been taking its time in bringing our new models. He says that a good portion of the delay is because Europe has already adopted a Restriction of Hazardous Substances Directive and the rest of the world is likely soon to follow their lead. The directive sets collection, recycling and recovery targets for electrical goods and is part of a legislative initiative to solve the problem of huge amounts of toxic electronic waste. This means that all new consumer electronics that you will buy in the coming years will have to meet the directives criteria. Developing products to meet the new standard has taken a bit of time, but since ham radio gear is a world wide market Kenwood believes that it is imperative that any new products it brings to that marketplace do comply.

The bottom line says Parton is that Kenwood is very much alive, well committed to serving the needs of the world-wide Amateur Radio community for years to come. He ends by saying to please standby for more quality products bearing the Kenwood name.

For the amateur Radio Newsline, I'm Fred Vobbe, W8HDU, in Lima, Ohio.

--

One thing you can be sure about. Whatever new products Kenwood introduces will be environmentally friendly. Phil Parton says that some of them will soon be coming your way soon. (ARNewsline(tm) from Kenwood open letter to all hams.)

**

NEW PRODUCTS: HEIL SOUND ANNOUNCES THE PR-R

Another new product from ham radios own Mr. Audio. This with word that Bob Heil, K9EID, the president of Heil Sound has announced the model PR-R omnidirectional microphone designed

specifically for Electronic News Gathering and news reporting.

The PR-R is 12 inches long and features a moving-coil dynamic element with an internal shock mount that reduces handling noise. It also has a non-glare, slim profile; and zinc die-cast body construction. The latter means that it can withstand physical and environmental conditions encountered during field production operations.

Frequency response is 50 Hz to 16.5 kHz, sensitivity is -68 dB and output impedance is 600 ohm balanced. Additional features include a foam pop shield and extended frequency response with rising high end.

Heil Sound says the mic is now in production with delivery expected in August. Amateur Radio Newsline had a chance to try out a pre-production unit at the recent Dayton Hamvention. Even just connected to our $30 G-E microcassette recorder the PR-R really proved its ability to make interview audio easy to understand even in the noisy environment of the Hara Arena. To us, that says a lot. (RW)

**

NAMES IN THE NEWS: WB4GCS WINS TECH AWARD

Some names in the news. First up is Jim Sanford, WB4GCS, who has been named as this years ARRL Atlantic Division Technical Achievement Award winner.

Sanford was selected for this honor in recognition of his involvement with AMSAT where he is currently serving as the Project Manager for the OSCAR Eagle project. Eagle is the next generation high earth orbit satellite under construction now by AMSAT North America. (K3IO, Southgate)

**

NAMES IN THE NEWS: PAVEK MUSEUM HONORED FOR PRESERVING ELECTRONIC MEDIA

Meantime, Minnesota's Pavek Museum of Broadcasting has been presented with the Richard M. Uray Alpha Epsilon Rho Award for Excellence for its efforts and achievements in preserving the history of electronic communication.

The museum is said to feature one of the world's finest collections of early radio, television, broadcasting and recording equipment, as well as an archive of regional radio and television program material. Pavek also is home to the

Museum of Broadcasting Hall of Fame.

The award is given by the National Broadcasting Society and Alpha Epsilon Rho. The latter is a national honor society of electronic media students. (RW)

EMERGING TECHNOLOGY: GOOGLE MAP IMAGRY GOES TO THE STREETS

Want to see your antenna farm from street level from the comfort of your hamshack? Well Google has announced that it will soon be introducing street-level map views of various U.S. cities, giving Web surfers a panoramic, 360 degree images as well as the overhead views Google Maps has offered.

With the new "Street View" feature in Google Maps, street level images will be available for maps of the San Francisco area, New York, Las Vegas, Denver and Miami. The service will then expand to other metropolitan regions nationwide.

Users looking at Google Maps through a Web browser will be able to navigate around a city,. This will mean web surfers can virtually walk the streets, check out restaurants and landmarks and even zoom in on street signs to make travel plans.

No word as to how often the street level images will be updated or if they will be clear enough to pick out rusty mounting hardware on your tri-band quad. (Google)

**

EMERGING TECHNOLOGY: APPLE SAFARI BROWSER NOW FOR WINDOWS

Apple has released a new version of its Safari Web browser for Windows-based PC. The free program is the latest move by Apple to expand its reach beyond its Macintosh computers and, at the same time, attract new converts to its products.

Safari, was released a few years ago for Apple's Macintosh computers. It has so far captured about 5 percent of the world's market share for Internet browsers with more than 18 million users. Microsoft's Internet Explorer is the dominant browser with a 78 percent share, while Mozilla's Firefox has rapidly climbed to gain about 15 percent of the market.

The release of Safari for Windows is seen as yet another part of Apples multi-pronged encroachment of what has long been held to be Microsoft's almost private turf. (Published news reports)

WORLDBEAT - AUSTRALIA: VK6XW NEW WIA INTRUDER WATCH COORDINATOR

Karl Hennig VK6XW has been appointed by the Wireless Institute of Australia Board as its new Intruder Watch Coordinator. The WIA operates the Intruder Watch program as a centralized regional clearing house for reports on intrusions from non amateur activities in the ham radio bands. Hening replaces Glenn Dunstan, VK4DU, who retired from that post at the recent Wireless Institute of Australia annual general meeting. (WIA News)

**

WORLDBEAT - JAPAN: TOKYO TO HOST WORLDS TALLEST TOWER

Wired.com says the tallest broadcasting tower ever built is coming to Tokyo, Japan.. The 2001 foot high structure, which still doesn't have a name, will host the digital radio and television transmissions plus a mobile TV network. When completed in 2011 the concrete-and-steel tower will be the highest free-standing antenna in the world. (RW)

**

WORLDBEAT - UK: VOLUNTEER COMMUNICATORS NEEDED FOR THE TOUR DE FRANCE

The United Kingdom's Raynet emergency communications system says that ham radio volunteers needed for the British leg Tour de France bicycle race. Hams free on July 8th are invited to apply. If you can help contact Dennis Spalding, by e-mail to dennis@spalding.freeserve.co.uk as soon as you possibly can possible. (GB2RS)

**

WORLDBEAT - UK: GB2RS TO DISCONTINUE PACKET NEWS

Call this one the end of an era. This with word that the Radio Society of Great Britain's GB2RS News Service will no longer be distributed via Packet Radio. This, after Roger Harris, G3ZFR, is no longer in a position to distribute the weekly GB2RS news bulletin via that early digital mode.

The GB2RS news will continue to be distributed with scheduled on-the-air broadcasts and via the Internet. The RSGB also hosts a subscription remailer on yahoogroups for those who want their news to come to them by electronic mail. (GB2RS)

**

WORLDBEAT - UK: HAM RADIO COMEDY ON YOUTUBE

Still in the U-K, an episode of the 1960 BBC TV comedy series 'Hancock's Half Hour' starring Tony Hancock as a bungling ham radio operator is now on YouTube. This classic episode shows Hancock as a ham radio enthusiast who receives a mayday call from a ship in distress but keeps getting distracted just before he can take down its position. The episode is split into three parts. To view this and other classic Hancock clips, go to www.youtube.com and enter Tony Hancock in the search box. (GB2RS)

**

ON THE AIR: SCHEDULE CHANGE FOR WEST COAST QUALIFYING RUN

On the air, the ARRL has announced that there will be a slight change to the July 2007 West Coast Qualifying Run schedule. The Run will be transmitted by the Maritime Radio Historical Society station using the call KPH stroke K6KPH. This station is the same one that sends out the W1AW Field Day Bulletin for the benefit of West Coast amateurs.

Look for K6KPH to transmit the West Coast Run on three bands on July 12 at 0400 UTC. That computes as 9 PM PDT on July 11th. The Morse code speeds will remain at 10 to 40 Words Per Minute with transmission made on 3.590, 7.047.5 and 14.047.5 MHz.

All Qualifying Run submissions should still be sent to the ARRL for processing. (ARRL)

**

DX

In D-X, UA4WHX is once again active from Uganda
as 5X1VB. As always there is no indication on
how long he will be there but he has been heard
this past weekend on 80, 17 and 12 meters mostly
CW. QSL via his home callsign, direct or by the bureau. It is recommend
to send direct cards after he has gotten home from his travels.

And word that the 3B7 Dxpedition to the Brandon
Islands was expected to have gone Q-R-T on June
21st. If you worked this one please QSL via SP9SX.

EA5RM, has announced that a multi-national team
is planning to be on the air from Kigali, Rwanda
later this summer. Details will be shortly.
Susan Meckley, W7KFI, who is sailing her boat the
USS Dharma to Johnston Island has been forced to
return to Honolulu because of a bad
toothache. She told the O-P-D-X newsletter that
the pain was so unbearable that decided to return
to Hawaii to see an oral surgeon.

Meckley tells the OPDX that she will again
attempt her trip to Johnston Island in less than
two weeks. It will take about a week to travel
there. Listen out for her on C-W 36 Kilohertz
above any High Frequency ham band edge and on SSB
on selected voice frequencies. She plans on
visiting a number of rare DX spots over next 3 years in the South Pacific.

Lastly, HB9QQ, will be active portable HB0 from Lichtenstein between
June 29th and July 2nd and again between July 6th
to the 9th. Activity will be on the High
Frequency bands along with 6 and 2 meters. QSL via his home callsign
address.

(Above DX news from various DX sources)

**

THAT FINAL ITEM: FIELD DAY 2007

And finally this week, Field Day 2007 seems to
have been a mixed bag. Most hams report less
than good conditions with the upper High
Frequency bands fairly quiet over the entire
operating event. The opposite was true on the
lower bands like 40 and 75 where contact runs
like this one were common in the hours after dark:

--

Contact audio here

--

While the ARRL bills Field Day as an operating event to test the emergency preparedness skills of radio amateurs, hams themselves have other reasons for taking part. Some look at it as yet another contest to see how many stations they can contact from a location away from home. Others look at it as a public relations event to make the public aware that Amateur Radio is out there, ready and willing to serve in time of crisis. Many like James Osment, W6OZZ, of the Santa Clarita Amateur RadioClub in California have another reason for taking part. They see it as a chance to share time with some very special friends:

--

Osment: "For me, I guess its about comoradory. The people I have met in Amateur Radio are to me long lasting friends, I mean that they are forever-lasting friends and to me that's very important. Its very important in your lifetimre to have friends that you can turn to for any problem in the world, and they are there itt seems to help you, no matter what."

--

It will be a few months before the scores are tallied and we all know who won in each operating category. No matter. With Field Day all who take part win something, in one way or another. And this operator is already looking forward to Field Day, 2008. (ARNewsline(tm))

> extra one qso penalty is assessed.

Hi Matt,

That isn't unusual. There might be some confusion that 2 logs are
needed to give out points though. In many (most) contests not everyone
submits a log. The one that I have the most experience with is the PAQSO
party. I estimate that 50 percent of the participants send in logs.

We can see who hasn't sent in a log, because their call signs show up
in a lot of logs.

If an Ops log has QSO's with other Ops who submitted logs, they can be
cross referenced for accuracy.

If an Ops log has contacts who didn't send in a log, they are still
counted. You won't be penalizing anyone if you don't send in the log.

There is one exception to this: Occasionally a log will come in that
has a high percentage of "uniques", who don't show up in any one else's
logs. We scrutinize those logs carefully, because it just isn't very
likely that that many people who just make one QSO are going to be
having that single QSO with that one station.

>
>>>> Submit your 5th band after the due date. That should automatically make
> it a check log.<<<<
>
> I fear if you submit a second log at any time it will invalidate the old

> log.

Your best bet if you are concerned, is to just submit your good logs.
You won't be penalizing anyone.

Hope this helps.

Absolutely. We had a test session scheduled for February 23rd and had a
monster turnout. All but two were for upgrades.

> - News like the rules change travels slowly, and its effects even
> slower.

Yes I still get people asking about the General credit for the pre-March,
1987 Tech and that has been in effect for 7 years now.

> - While the rules changes have not resulted in steady new growth, it
> appears to me that the decline has at least slowed, and probably

That may be only temporary though. It will probably take more than a year
to see if that is real or temporary. Yes it will be interesting to see the
results on the one year anniversary.

> My prediction, IIRC, was that in the first year we would see anywhere
> from 0 to +1% growth in the total number of currently licensed US

> 73 de Jim, N2EY

>

Well I predicted -1% to +1%.

By the way, your "official guess" on the list I was running was +1% to +2%.
Would you like to change it or just stand on your existing numbers?

Here's the list as it stands right now:

N8UZE: 1% less to 1% more
N2EY: 1% more to 2% more
KH6HZ: 1% less to 0% change
N3KIP: 2% more to 6% more
KH6O: 6% more to 10% more
KK6J: 12% more to 14% more
KC2HMZ: 5% more
K8BSG: 2% to 3% more <--- Added 02/18/06

Dee, N8UZE

==> ARRL Diamond Terrace Nears Completion

With only a few more steps to go, the Diamond Terrace at ARRL
Headquarters is just about complete. The building has had a new paint
job and looks spiffier than ever. The bricks for the Terrace have been
laid, creating a pleasing panorama at the entrance to HQ. Soon granite
benches will grace the Diamond Terrace, providing a resting place on a
lovely summer's afternoon for visitors, friends and staff alike.
```

ARRL Chief Development Officer Mary Hobart, K1MMH, said, "It's wonderful to see the transformation of ARRL Headquarters building after the months of planning. We have all been watching the progress of the painting, sidewalk construction and finally the laying of the bricks in the Diamond Terrace."

Hobart said that the benches, "the capstone of the Terrace," will be installed in the next several weeks. "Six garden benches of Vermont granite will be put into place on the Terrace, thanks to the contributions of six incredibly generous hams," she said. Bench donors include Larry Price, W4RA; Dick Isely, W9GIG, and Paul Rinaldo, W4RI.

Besides the benches, the Terrace will host up to 5000 personalized, 4x8-inch laser-engraved bricks. Gracing the new entrance to ARRL Headquarters, the Diamond Terrace will recognize donors wishing to venerate their own call signs or to honor or memorialize the call sign of a family member, club or "Elmer" (mentor). "I have heard wonderful stories from donors who are honoring their Elmer or a family member, and clubs who are honoring a founder or influential leader. There is no limit to the reasons why bricks are placed to honor a call sign," Hobart said.

Hobart continued, "We already had plans to refurbish the Headquarters entrance area, so this was an ideal opportunity to invite our members to participate in the project and support League programs at the same time. We want to grow the Diamond Club, which enables the ARRL to continue programs that require revenue above and beyond what annual dues provide, ensuring their long-term health and enabling the League to do more on behalf of Amateur Radio."

A total of 168 personalized bricks were laid this week, the first set of bricks to grace the Terrace. "Many people have requested more than one brick through their donations. Some have requested five bricks," Hobart said. "There is room for everyone at the Diamond Terrace."

ARRL President Joel Harrison, W5ZN, was the first in line to buy a Diamond Terrace brick. Others can join President Harrison with a $250 annual Diamond Club membership contribution. The Diamond Club now has more than 2100 members, and the unrestricted funds it takes in support such ARRL activities as spectrum defense, educational initiatives, field services, DXCC, publications, contesting and the ARRL Volunteer Examiner Coordinator program, among others, Hobart points out. "You pick an area that's near and dear to your heart, and Diamond Club revenue is very likely supporting it."

The bricks placed in the Diamond Terrace are treated to withstand Connecticut's weather and placed in a sand setting. The list of bricks will be posted on the ARRL Web site and will be available to visitors at ARRL Headquarters who wish to locate their brick in the Diamond Terrace. Brick requests will be accumulated throughout the year and placed in the Diamond Terrace starting in late spring of each year.

The staff has followed the progress of the Diamond Terrace, built by Robert Antonello and Son, under the watchful eye of ARRL Building Manager Greg Kwasowski, W1GJK, and Hobart. "I hope that those who are fortunate to visit ARRL Headquarters this summer and in the future will enjoy the new look of their Amateur Radio home. It has been a pleasure to work with each Diamond Club donor to craft the engraving for their brick, and I hope many can come and see the terrace personally," Hobart said.

If members are not able to stop by ARRL Headquarters and see the Diamond Terrace in person, they can view the almost 200 photos taken by ARRL News Editor Khrystyne Keane, K1SFA, that document the construction <http://www.arrl.org/development/donations/diamondclub/terrace/photos.html >. To find out more about the ARRL Diamond Terrace, please visit the Diamond Terrace Web site <https://www.arrl.org/forms/development/donations/diamondclub/terrace.html>.

==> Field Day at W1AW: "It Was a Blast!"

With the 2007 Field Day now a part of history, it's time to begin planning for 2008. With that in mind, ARRL Regulatory Information Branch Manager and Field Day Coordinator Dan Henderson, N1ND, said, "From the phone calls and e-mails I have received, people all over the country had a great Field Day. It was a blast. Now it's time to get started planning for next year!"

W1AW Station Manager Joe Carcia, NJ1Q, said, "Field Day conditions were weak, but we managed some good contacts, nonetheless. All the W1AW Field Day bulletins were sent without a hitch."

Henderson agreed. "Propagation was not the best up here in New England. But we managed to pull through, and had a lot of fun doing so." W1AW made a total of 804 contacts: 317 on CW, 466 on Phone and 21 on the digital modes; each mode ran at 100 W. Taking into account all the bonus points available, W1AW's claimed score is 2284. "We ran Field Day as 4F. Since W1AW is an EOC station, we are allowed the 'F' designator. Although we didn't make any satellite contacts, we did demonstrate it to staff and visitors," Carcia said.

W1AW managed to make contacts with 42 of the 50 US states. Unfortunately, operators were not able to make contact with South Dakota, Wyoming, Alaska, Hawaii, New Mexico, Nevada, Oregon or Kansas. "We're okay with that, because at W1AW, we view Field Day as more of a teaching, or educational, experience. There are times where we are not operating, or not operating that much, because we are showing new or prospective hams what Amateur Radio is all about," Carcia said.

Carcia noted that just as during regular W1AW operating hours, visitors were "more than welcome" to come by W1AW on Field Day. "We had one visitor from Hawaii. He and his family were in Connecticut on family business, and he operated pretty much both days. In addition to visitors, we had 11 ARRL HQ staffers show up to both operating and to

conduct a VE test session on Saturday," Carcia said. A total of eight people took exams, with six passing.

Carcia said that the W1AW 60 kW diesel generator suffered "some nastiness" the Saturday before Field Day, but was repaired in the days prior to the operating event. "As near as we can tell," Carcia said, "lightning struck a power line a street over, inducing voltage in the line. We are guessing the induced voltage arced across from the neutral side in the transfer switch and 'whacked' the solenoid coil and control board in the transfer switch. We think this only because the coil is about an inch away from neutral buss." The generator story, as well as pictures from W1AW's Field Day, are on the ARRL Field Day Web blog <http://www.arrl.org/blog/Field%20Day%202007>. Post your Field Day experiences on the Field Day Soapbox < http://www.arrl.org/contests/soapbox/?con_id=133>.

==> FCC Enforcement Actions for the Week of June 25, 2007

In May and June of this year, the FCC's Enforcement Bureau, Spectrum Enforcement Division, sent out radio amateur enforcement correspondence via certified mail to four hams and one commercial company regarding alleged misuse of Amateur Radio activities.

In two unrelated cases, letters were sent to William E. Westley, Jr, AF4GC, of New Port Richey, Florida, and Donald E. Ellis, KB0TVP, of Sioux Falls, South Dakota, for repeater interference and included warnings to stay off certain repeater systems. Westley was asked by the licensee of the W4FLG repeater to stop using the repeater. Ellis was requested by the licensees of W0MXW and K0RGR to refrain from using said repeaters. According to the FCC, requests to Westley and Ellis were issued both verbally and in writing. The FCC said both Westley and Ellis were cited for "failure to follow operational rules set forth by the licensee/control operators of the repeater system."

Oscar Resto, KP4RF, of San Juan, Puerto Rico, was cited by the FCC from a complaint originating with the Puerto Rico Virgin Islands Volunteer Frequency Coordinators, Inc. They allege Resto caused "interference from your station operating at 145.450 MHz to coordinated repeater KP4IA, operating at 144.770 MHz." According to the FCC, PVRI has found and coordinated another frequency pair for Resto "that would cure the present interference problem, as well as another interference situation involving other coordinated repeater stations." The FCC requests that Resto "either resolve the interference problem or comply with the frequency' coordinator's recommended frequency change by midnight July 1, 2007."

The FCC also sent a letter to Mark F. Hubeny, N9ZHW, citing the "operation of your Amateur Radio station on non-Amateur Radio frequencies," resulting in "deliberate interference. Although the complaints relate to non-Amateur operation, if true they raise serious question regarding your qualifications to remain an Amateur licensee." The FCC requested Hubeny to respond to the FCC within 20 days of receipt

of the letter to fully address the complaint. He was also asked to clarify his mailing address for his amateur license.

In a complaint against Tennessee Steel Haulers of Nashville, Tennessee, the FCC notes that "one of your drivers has been operating radio equipment without a license on 28.085 MHz and causing interference to licensed stations in the Ten Meter Amateur Band." The letter goes on to state that the driver was observed operating on May 3, 2007 on Interstate 85 in Gastonia, North Carolina. The penalty for such actions include fine or imprisonment, as well as seizure of any non-certified radio transmitting equipment. Fines can range from $7500-$10,000.

To read the correspondence in its entirety, please see the Enforcement Bureau's Web site <http://www.fcc.gov/eb/AmateurActions/Welcome.html>. Address all inquiries regarding this correspondence to Riley Hollingsworth <riley.hollingsworth@fcc.gov>.

==> Amateur Radio and ARES Assist Flood Victims in Central Texas

In floods that have ravaged across central and north Texas for more than 11 days, Amateur Radio Emergency Service (ARES) members were activated to assist those in need. In those 11 days, 11 people were killed due to the severe weather conditions. More than 10 inches of rain was predicted to fall Thursday; the area only received three inches, but more rain was expected Thursday and Friday, and flash flood warnings were in effect.

In Williamson County, north of Austin, a search has been under way for two motorists apparently swept off a road. According to the Williamson County Sherriff's office, a search was underway for a woman and her boyfriend after their car was found abandoned; the car appeared to have been swept off the road by flood waters. Almost a week of nonstop rain -- including 18 inches near Marble Falls in Burnet County, about 40 miles northwest of Austin, on Wednesday morning -- left dozens of people stranded on rooftops, cars and in trees.

According to Williamson County ARES member Tom Whiteside, N5TW, "The regular communication infrastructure has been working well, but we are participating mostly 'just in case.' We have had the Williamson County EOC staffed since Wednesday morning, and then continuously since 1 AM Thursday. In that time, we have provided communications at two shelters -- one at the Georgetown Recreational Center and one at the Liberty Hill Middle School. We are using both conventional voice and portable Winlink at the EOC. The Winlink connection is quite handy for sensitive messages, as well as for passing more complicated intelligence in and out than could be done efficiently with voice." Williamson County ARES was activated.

Jim Taylor, NQ5L, Emergency Coordinator for Williamson County, concurred. "The Williamson County EOC was opened due to the severe rains in Burnet County, with spill over into Williamson. Rain fall has slowed with several roads closed and some water rescue efforts. So far, there have been no reports of fatalities here, but people are still driving

into dangerous situations." Authorities also closed several impassable roads in Williamson County. Some cars stalled in the high water, but the occupants escaped.

Saying that helicopter reconnaissance would commence during daylight hours, Taylor added that two major storm systems to the west are expected to merge and create a situation with up to 10 inches of rain expected.

A good deal of damage occurred in Marble Falls and Highland Lakes (Llano County), according to the National Weather Service and Rick Chapman, K5RIK, Emergency Coordinator for Highland Lakes. "There are extensive rains in the area, with a measured rainfall of 1.5 feet over the past 24 hours. This has resulted in many flooding situations in the low areas. Marble Falls and Kingsland were particularly hard hit. People have been forced out of their homes by the high water, and low water crossings were dangerous yesterday, with some still having high levels of water today."

Chapman added that thus far, "Our served agencies have not requested ARES/SKYWARN communications support, and we do not deploy without specific requests. With the saturated soil conditions and expected additional rainfall, our deployment status may change quickly."

The Texas National Guard dispatched troops and vehicles to Central Texas, as well as other areas hit by storms from the Oklahoma border to the Rio Grande Valley. About 150 troops and 50 vehicles were mobilized. This has been the wettest year on record in Austin, where more than 30 inches of rain has fallen since January, and Dallas-Fort Worth, Waco and Wichita Falls have near-records. The rainfall has more than compensated for a drought that much of Texas had been experiencing since 2005, the National Weather Service said.

==> Kenwood Purported to Merge with JVC in 2008

A consumer electronic magazine, This Week in Consumer Electronics (TWICE), reports that Kenwood has agreed to merge in 2008 with Victor Company of Japan (JVC) under a holding company. JVC is owned by Matsushita Electric Industrial Company. Japan's Nikkei business newspaper reports that the final details should be worked out by the end of the month, and that under the plan, Kenwood will buy 20 billion yen ($161,469,466) in JVC shares as early as this summer, raising its stake to 13 percent. Matsushita will also sell part of its 52.7 percent of JVC to Kenwood's top shareholder, the Sparx Group. When JVC and Kenwood integrate operations under the holding company in 2008, Matsushita will sell the rest of its JVC shares to the holding company to complete the transaction. The holding company's stock will be listed instead of Kenwood and JVC, according to Nikkei. Combined, Kenwood's and JVC's sales are $7.3 billion dollars annually for their fiscal year that ended March 31.

==> Astronaut Suni Williams, KD5PLB, Back on Terra Firma

Suni Williams, KD5PLB, International Space Station (ISS) Expedition 15 Flight Engineer, came back to Earth Saturday, June 23 on the space shuttle Atlantis (STS-117), wrapping up a six month stay during which she became the new record holder for the longest single spaceflight by a woman. While on the ISS, Williams participated in 33 Amateur Radio on the International Space Station (ARISS) contacts. ISS Expedition 12 Commander Bill McArthur, KC5ACR, holds the record for the most ARISS school contacts in a single mission at 37.

Williams launched with the crew of the space shuttle Discovery (STS-116) on December 9, 2006. She docked with the ISS on December 11. Clay Anderson, KD5PLA, part of STS-117, replaced Williams as ISS Flight Engineer. STS-117 was launched from Florida June 8 and docked with the ISS June 10. Its mission lasted almost 14 days.

"The space station's just a stepping-stone to get us to understand space, and how to live and work in space, and then potentially get back to the moon is the next stepping-stone. How to work in a low-gravity environment and how to work in an environment that is not habitable for us that will take us to the next place, maybe Mars and then beyond," Williams said.

While in space, Williams, a US Navy helicopter pilot who holds the rank of Commander (O5), worked with robotics operation on the ISS and participated in four spacewalks. She was also NASA ISS Science Officer for part of her time in space. The primary focus of US science on the ISS is research on how people can live and work safely in weightlessness.

Williams participated in the 2007 Boston Marathon from the ISS. She competed as an official entrant in the annual Patriots Day event from 210 miles above Earth. Williams ran on an ISS exercise treadmill, circling Earth at least twice in the process and going as fast as 8 MPH while flying more than 5 miles per second. "I [hope to] encourage kids to start making physical fitness part of their daily lives," she said. "I think a big goal like a marathon will help get this message out there."

==>SOLAR UPDATE

Tad "Don't Let the Sun(spots) Go Down on Me" Cook, K7RA, this week reports: We are seeing new sunspots over the past few days after 11 days with none at all. Lack of solar activity made Field Day this year (June 23-24) a real cycle minimum experience. Most areas saw very little 10 and 15 meter activity, so 80, 40 and 20 meters were the places to be. Sunspot numbers for June 25-28 were 11, 11, 15 and 27. The numbers may edge a little higher over the next few days, with more zero sunspot days possible around mid-July. Geomagnetic activity is expected to remain quiet. Sunspot numbers for June 21 through 27 were 0, 0, 0, 0, 11, 11 and 15 with a mean of 5.3. 10.7 cm flux was 65.5, 65.3, 65.9, 66.9, 67.6, 70.5, and 73.2, with a mean of 67.8. Estimated planetary A indices were 14, 16, 11, 6, 5, 5 and 5 with a mean of 8.9. Estimated mid-latitude A indices were 8, 12, 8, 4, 3, 4 and 5, with a mean of 6.3.

For more information concerning radio propagation, visit the ARRL Technical Information Service Propagation page <http://www.arrl.org/tis/info/propagation.html>.

==>IN BRIEF:

* This weekend on the radio: This weekend, the NCCC Sprint Ladder and the Digital Pentathlon are June 29. The WLOTA is June 30-July 1. The RAC Canada Day Contest and SKCC Weekend Sprint are July 1. During the week, the RSGB 80m Club Championship (CW) is July 2, and the ARS Spartan Sprint is July 3. Schedule the Michigan QRP July 4th CW Sprint around your hot dogs and fireworks on July 4-5. Next weekend is VK/Trans-Tasman 160m Contest (SSB) on July 7. The Venezuelan Independence Day Contest, the DL-DX RTTY Contest and the Original QRP Contest are scheduled for July 7-8. On July 8, look for the DARC 10-Meter Digital Contest and the ARCI Summer Homebrew Sprint. Later in the week on July 11, the SKCC Sprint and RSGB 80m Club Championship (SSB) are on the air. See the ARRL Contest Branch page http://www.arrl.org/contests/, the ARRL Contester's Rate Sheet <http://www.arrl.org/contests/rate-sheet/> and the WA7BNM Contest Calendar <http://www.hornucopia.com/contestcal/index.html> for more info.

* ARRL Certification and Continuing Education course registration: Registration remains open through Sunday July 8 for these online courses beginning on Friday July 20: Amateur Radio Emergency Communications Level 2 (EC-002); Amateur Radio Emergency Communications Level 3 (EC-003); Antenna Modeling (EC-004); Radio Frequency Propagation (EC-011); HF Digital Communications (EC-005), and VHF-UHF (EC-008). To learn more, visit the CCE Course Listing page <http://www.arrl.org/cce/courses.html> or contact the Continuing Education Program Coordinator <cce@arrl.org>.

* Magic Band Opens Wide to Allow Cross-Band Transatlantic Contact: On Monday, June 25, there was a big opening to Europe on 6 meters (50 MHz), also known as the "magic band." In most areas, the opening started in the local US mid-morning, lasting until dark. According to QST column author of "The World Above 50 MHz" Gene Zimmerman, W3ZZ, "Many areas of the country that do not normally work Europe, including the Midwestern states, West Texas and Colorado, worked stations in Europe. At one point near the end of the opening, stations on the East Coast of the US were working stations in Hawaii on the Big Island." In this opening, Mike Smith, VE9AA, in New Brunswick was on 50 MHz when he worked Nigel Coleman, G7CNF, on CW cross-band; Coleman was on the 70 MHz band (4 meters) in England. Zimmerman said, "Though a few cross-band contacts were made via F2 propagation during the sunspot maximum period in the 1970s, this is believed to be the first 50/70 transatlantic cross-band contact ever made on multi-hop sporadic-E propagation." RSGB VHF/UHF Manager David Butler, G4ASR, concurred: "It certainly isn't the first United Kingdom-North America 4 meter/6 meter cross-band QSO, but it probably is the first via multi-hop sporadic-E." In North America, 70

MHz is channel 4 on television sets. Watch a YouTube video of the contact posted by VE9AA at <http://www.youtube.com/watch?v=kVlVWPJWcPo>, and G7CNF's version with some audio enhancements at <http://uk.youtube.com/watch?v=X0wel14KAD0>.

* North Carolina Governor Signs Antenna Bill: On Friday, June 29, North Carolina Governor Mike Easley signed HB1340, the "Amateur Radio Antenna" bill into law. North Carolina becomes the 25th state to pass a state model of the FCC's 1985 PRB-1 regulation, and becomes the halfway point for all 50 states having some kind of state antenna legislation. The bill was introduced for the first time in February and passed unanimously in both the House and the Senate. The law takes effect October 1 and permits antennas up to 90 feet in height in areas regulated solely by municipal (county and city) ordinances.

* Ducie Island, VP6, DXpedition Gears Up: The Daily DX reports that the Ducie Island DXpedition Team, VP6DX, has been busy behind the scenes preparing for the much anticipated February 2008 DXpedition. It was also announced that the VP6DX team decided to extend the duration of the DXpedition. Plans are to depart Mangareva Island, part of the Gambier Islands in French Polynesia, via ship on February 5, 2008 and head for Pitcairn Island; this trip normally takes about 36 hours. The ops will spend a few hours on Pitcairn before taking another 36 hour trip boat ride to Ducie Island; they plan to arrive at sunrise on February 9, and hope to be up and running within 24 hours. The team needs to be back on Mangareva by March 3. If all goes well, including the weather, they will have VP6 on the air for as long as 19 days. There is a slight chance of a short visit to another uninhabited island if things on Ducie slow down. Henderson Island (also VP6, not a separate DXCC entity) is the only island on the way to and from Ducie Island.

* FCC Dismisses Petitions for Rule Making: The FCC today granted requests to withdraw two Petitions for Rule Making (PRM) concerning "spectrum deregulation in the Amateur Service," as well as a vanity call sign request for a call sign outside the Commission parameters. In the Order, the FCC first granted a request to withdraw a PRM by the Communications Think Tank (CTT), filed June 20, 2005, that requested the FCC "discontinue mandatory segmentation of emission modes and the activities using these modes in the Amateur Service, and substitute a voluntary system of coordination to achieve greater, and more efficient, utilization of frequency allocations within the amateur radio bands." On November 6, 2006, CTT requested its PRM be withdrawn. On November 14, 2005, the ARRL requested the FCC "comprehensively modify the means by which the extremely varied emission modes in the Amateur Radio Service are developed, experimented with, implemented and regularly utilized in the course of normal Amateur Radio communications." On April 27, the ARRL requested its petition be withdrawn. In the Order, the FCC agreed to drop both PRMs, saying they will take "no further action with respect to these petitions for rulemaking or the comments filed in response thereto." The Commission went on to say in the Order that both PRMs are "dismissed without prejudice," meaning the subject may be revisited at a

later date.

* ARRL Congratulates Two New Top of Honor Roll Recipients: Dave Brindle, K1WER, of Nashua, New Hampshire and Bob Hall, W8QHG, of Barboursville, West Virginia, achieved Top of Honor Roll after completing confirmed contacts with BS7H, the Scarborough Reef DXpedition. Hall will turn 91 this October. By special arrangement with the ARRL DXCC Desk and West Virginia DX Association, Hall received the first #1 Honor Roll Award issued following the BS7H operation.
Top of Honor Roll is awarded to those who complete confirmed contacts with each of the current DXCC entities. As of this date, there are 337 DXCC entities. According to DXCC Manager Bill Moore, NC1L, there are currently 869 Top of Honor Roll recipients. More than 25,000 people participate in the DXCC awards program, and more than 40,000 awards have been bestowed since the inception of the DXCC awards program in 1945. For more information on ARRL DXCC awards, please see the DX Century Club Web page < http://www.arrl.org/awards/dxcc/>.

* Duncan McArthur, GM3TNT (SK): Duncan McArthur, GM3TNT died suddenly at his home in Avalon, Peninver, Scotland on June 19, 2007. He was 65. McArthur was the "Scottish link" in last year's "Hello" campaign, celebrating 100 years of voice over radio. During the "Hello" finale when three stations -- W1AW in Connecticut, W100BO/W1F in Brant Rock, Massachusetts and GB1FVT in Machrihanish, Scotland -- were on the air the last weekend in December 2006, McArthur manned GB1FVT. This station, built by Reginald Fessenden in 1905, received the first voice transmissions sent across the Atlantic. Until then, this site had only been using Morse code when, by accident, a voice transmission which was only intended to go between Brant Rock and Cobb Island was received at Machrihanish. ARRL Public Relations and Media Manager Allen Pitts, W1AGP, said, "I never met Duncan in person, but we talked a lot about the "Hello" campaign and I really liked him. He was pure Scot (never English!) and the brogue was most pleasant -- like my grandmother. He was willing to do whatever he could -- and came through on his promises; that always counts a lot with me. I liked knowing people like that were still in my world -- and now he's gone. I will miss him." McArthur is survived by daughter Diane and son-in-law Morris, granddaughter Hannah and mother Alexina. The funeral service took place in Campbeltown, Scotland on June 22, 2007.

* Let Us Know: What's your favorite part of The ARRL Letter? What kind of stories would you like to see in the Letter? Would you prefer the Letter in an HTML format? This is your Letter and your chance to let your voice be heard. Please send your suggestions to ARRL News Editor S. Khrystyne Keane, K1SFA, at k1sfa@arrl.org, with the subject line "ARRL Letter Suggestions." All messages will be read and discussed, and we look forward to implementing positive suggestions into the ARRL Letter.

==========
The ARRL Letter is published Fridays, 50 times each year, by the American Radio Relay League: ARRL--the National Association for Amateur

Radio, 225 Main St, Newington, CT 06111; tel 860-594-0200; fax
860-594-0259; <http://www.arrl.org>. Joel Harrison, W5ZN, President.

The ARRL Letter offers a weekly e-mail digest of essential and general news of interest to active radio amateurs. Visit the ARRL Web site <http://www.arrl.org> for the latest Amateur Radio news and news updates. The ARRL Web site <http://www.arrl.org/> also offers informative features and columns. ARRL Audio News <http://www.arrl.org/arrlletter/audio/> is a weekly "ham radio newscast" compiled and edited from The ARRL Letter. It's also available as a podcast from our Web site.

Material from The ARRL Letter may be republished or reproduced in whole or in part in any form without additional permission. Credit must be given to The ARRL Letter/American Radio Relay League.

==>How to Get The ARRL Letter

The ARRL Letter is available to ARRL members free of charge directly from ARRL HQ. To subscribe, unsubscribe or change your address for e-mail delivery:
ARRL members first must register on the Members Only Web Site <http://www.arrl.org/members/>. You'll have an opportunity during registration to sign up for e-mail delivery of The ARRL Letter, W1AW bulletins, and other material. To change these selections--including delivery of The ARRL Letter--registered members should click on the "Member Data Page" link (in the Members Only box). Click on "Modify membership data," check or uncheck the appropriate boxes and/or change your e-mail address if necessary. (Check "Temporarily disable all automatically sent email" to temporarily stop all e-mail deliveries.) Then, click on "Submit modification" to make selections effective. (NOTE: HQ staff members cannot change your e-mail delivery address. You must do this yourself via the Members Only Web Site.)

The ARRL Letter also is available to all, free of charge, from these sources:

* ARRLWeb <http://www.arrl.org/arrlletter/>. (NOTE: The ARRL Letter will be posted each Friday when it is distributed via e-mail.)

* The QTH.net listserver, thanks to volunteers from the Boston Amateur Radio Club: Visit Mailing Lists@QTH.Net <http://mailman.qth.net/mailman/listinfo/letter-list>. (NOTE: The ARRL cannot assist subscribers who receive The ARRL Letter via this listserver.)

IMHO, the major effect of the rules changes have been to increase
upgrades rather than to bring in lots of new hams. But it's only been
four months.

I still encounter people who think they can get a new Novice, Tech
Plus or Advanced license.

Obviously I didn't recall correctly! Thanks for the right numbers.
I'll stick with my original guess. of +1 to +2%.

btw, you might want to run the prediction "contest" rules again in a
new thread so folks who haven't seen it before will know what it
means.

The objective would be to provide an organization to those hams who wish to make ham radio innovative and progressive (again). By comparison, the ARRL exists to serve those hams who wish to keep ham radio retrogressive, insular and xenophobic. Certain technologies would be championed (digital voice, digital data, e.g.) while other technologies would be abandoned to their fate (Morse).

> I'm a member of one of the local clubs here in Denver. I'm also one of

If you look at those organizations that are EFFECTIVE in representing their members and advancing the members' agenda (NRA, teachers' union, tobacco lobby, trade associations that represent defense contractors, etc.), certain patterns emerge, regardless of the nature of the organization or the type of agenda. Such organizations tend to be politically astute when dealing with government. They use PAC's, they organize letter writing campaigns, they advise their members on the voting records of their elected officials, they can deliver votes in support of those who help them and in support of the OPPONENTS of those who oppose them. Further, such constituencies often have MULTIPLE organizations that pursue their agenda separately and with varying levels of militancy (you will recall the fiasco when the NRA tried to

pull even with its more militant rivals by speaking of "jackbooted thugs," which was a rare misstep by private-sector Beltway insiders). By comparison, the ARRL's approach of being the FCC's lapdog is laughable. If we haven't lost as much spectrum as we might have, it is certainly not the result of astute lobbying.

> Well...I could go on and on, but I think you get the idea. So I ask
> again....What *would* your new organization offer that ARRL & the many, many
> other worldwide clubs don't already offer, Klystron & Iitoi? I'm really
> curious.

Long story short: Once upon a time, hams were viewed as 'rocket scientists' and were a force for progress and innovation. Now, they're viewed as cranky old geezers who are living in the past and pounding Samuel Morse' old telegraph key while whining about young whippersnappers who don't respect their elders. A new organization would break free of that past and move forward. It goes without saying that ARRL types will not want this and will try to stop it.

One more thing ARRL does: in-depth, Consumer-Reports-style Product
Reviews.

The ARRL Lab runs Amateur-Radio-related products
through a wide variety of independent lab tests and
on-the-air operating environments, and publishes detailed
reports of the results. They've been that sort of review
for over 25 years, and the Product Reviews from all that time are
available to members free.

Want to know the difference between a TS-950SD
and a TS-950SDX, or compare them to a current-
production rig? Just download the reviews.

In some cases, such as the Elecraft K2, there is an expanded review at
the website.

The way I figure it, if a Product Review from ARRL helps me make
better-informed choices, the whole cost of membership may be recouped
in savings. One Maxcom
Matcher situation can spare a lot of hams a lot of expense
and wasted effort. (A Maxcom Matcher cost about as much
as an ARRL Life Membership at the time).

Yes, there are product reviews on websites like eham.net.
They are valuable because they are owner's opinions and experiences.
But AFAIK, nobody does extensive
independent lab testing of amateur gear except ARRL.

1254. WIANEWS for week commencing JULY 1 2007

Newsgroup: rec.radio.amateur.moderated
Date: 2007-06-30 11:51:36 UTC
From: nationalnews@wia.org.au
Message-ID: <200706301000.l5UA09m10984@panix2.panix.com>
Source record: 4159
Cross-posted to: rec.radio.amateur.moderated,aus.radio.amateur.misc,rec.radio.info

This is WIANEWS for week commencing JULY 1 2007

The WIA offers to it's members a range of services, including a personalised WIA email address..

Since the start of the year, the WIA has added over 120 member email address to our mailserver, taking the total number of people who have availed themselves of this member service to around 800.

So what does it all mean and how does it work?? .... well ...the WIA email server allows you to establish "yourcallsign@wia.org.au" with all emails sent to this address automatically forwarded to either your home or work email account..

So what benefits does really provide?

Well, firstly it provides YOU with ONE consistent email address. If at some time you choose to change your ISP, (for one with a better plan) then by having a WIA email address, means your friends and colleague will still be able to email you after you have changed ISP meaning you don't have to contact them all and advise them of your new address. When you change ISP all you need to do is advise the WIA via a simple form on the WIA website and we do the rest.

It couldn't not be any easier !!

A second benefit of the WIA email address, is in receiving informative Amateur Radio news as it breaks sent directly to YOUR email box..

To obtain your own WIA email address today, visit our website www.wia.org.au and simply click on member services, then select email address, and fill out the application form.

WIA Director Trevor Quick says that on 25 June 2007 WIA President Michael Owen VK3KI and WIA Director Peter Young VK3MV met with Mark Loney, Executive Manager Pricing and Policy, Alan Jordan and John Kington at the ACMA Central Office in Canberra.

The meeting was initiated at the request of the WIA for a briefing on the delays in dealing with a number of matters, particularly arising out of the Amateur Service Review Outcomes Paper. The ACMA acknowledged the delays and sought to work with the WIA in addressing its concerns.

Of particular concern to the WIA was the delay in the making of the further amending Determination to give effect to the balance of the matters identified in the Outcomes paper, now a delay of 3 years. The WIA also raised the delay in finalising the arrangements with CEPT to allow

Australian amateurs travelling overseas the privilege of operating in other countries without the need to obtain an individual authorisation in those countries, and the delay in the issue of a Class Licence to enable amateurs visiting Australia to operate here without the need for an individual licence.

Another concern was the delay in the finalisation of the issue or re-issue of 2 letter callsigns.

The WIA is also concerned at the continuing uncertainty about the future of the management of the amateur examination and the related certificate issue, as well as the callsign management function.

The WIA pointed out that the delay in the LCD meant that uncertainty prevailed over the power Foundation licensees permitted, the privileges of Foundation licensees and also that the WIA's publication "The Foundation Licence Manual" was running short and it could not be reprinted until the regulations could be up dated.

While the WIA accepted that the current delay in the LCD was beyond the direct control of ACMA, Mr Loney offered to do all he could to achieve a speedy finalisation of that, and that other immediate solutions would be investigated to address a number of the other problems faced by the WIA and its members. Mr Loney indicated that more resources would commence next week to address these outstanding issues with the view to finalisation as soon as possible.

In particular, work on the visiting/visitor licence issues has commenced and will be completed as soon as the enabling legislation is drafted.

The ACMA advised that a statement on the allocation process for the issue of two-letter callsigns would be made shortly, and the announcement may be made within a statement addressing the broader issues surrounding callsign management.

In relation to the outsourcing arrangements, the WIA was given a briefing on the process the ACMA intends to follow.

The WIA representatives felt that the meeting was positive and conducted in a constructive manner with a commitment to explore a range of options to meet the concerns expressed by the WIA on behalf of its members.

Jeff VK4XJJ is still going strong on his walk across Australia, and again this

week we'll talk to Jeff as he leaves Birdsville, the half way point in his trek.

But he still wants to hear from YOU, and it is these calls in particular that keep him going!!

Every Day, from 5:30pm Eastern on 40 meters, 7045 put out a call to VK4XJJ

>From Wednesday 20th to Tuesday 26th June Jeff walked 165 Kms to Birdsville.

Arrived at 11:45, just in time for lunch.

During one evening sked he said " I am going like a train".

Temperatures have ranged between 8 to 25 degrees C.

Not always warm enough early in the morning but comfortable in the tent.

Jeff sent over 600 pictures, we will pick out 40 for the web pages.

Single pictures are free to download.

He will stay in Birdsville for a few days to catch up on emails, phone calls to family and collect some supplies posted in.

179 Kms after Birdsville will be half way on this great walk.

On this walk to Karumba in the Gulf and on the return drive to Port Augusta Jeff's goal is to raise $10,000.

All proceeds to DeafBlind (NSW) Inc. to aid the purchase of a small bus with some places for wheelchairs.

Regards,

Bill Johnson VK2FWGJ

AMATEUR RADIO - HOME OF THE GOOD GUYS

AFRI75

During the IRTS Jubilee expedition to Swaziland the team met with the Scout Association and agreed to support their Thirst for Life Programme, which helps Aids orphans in Swaziland.

The team is pleased to announce that the first initial funding for the project of 350 Euro is on its way to Swaziland and this will fund the purchase of chickens for their farm.

The money was raised by donations included with direct QSL cards received from stations worked around the world, together with funds raised from the sale of Afri75 caps at the IRTS AGM in Cork.

The team are still anxious to continue support for the project, and if you think you can help please contact Paul EI2CA. You will find details of the project on the Afri75 page of the IRTS website.

BPL INTERFERENCE - THE BATTLE CONTINUES

VK7news says Owen Duffy VK1OD has prepared some notes on his interpretation of the ACMA Mt Nelson report that was recently released.

Owen suggests that the background measurement are most likely the reporting instrument's internal noise as they do not match expected ambient noise levels.

The BPL emission levels are up to 55dB above the expected ambient noise levels and even within the notch on the 20m band emissions are 37dB above the expected ambient noise level.

Notch depth is on average about 22dB less on 20m band, 21dB on average in the 17m band and on average about 18dB on the 15m band.

Owen concludes that the measurements taken using Conrad's 20m quad once you take into account the difference in test receiver and amateur receiver bandwidth results in a noise floor degradation in the order of 11.4dB within the 20m notched segment.

It is an interesting read and I encourage everyone interested in BPL to take a look. The notes can be found at the address on the email and internet editions of this broadcast.

http://www.vk1od.net/bpl/HobartBPLTrial.htm .
(vk7news)

AROUND VK in 80 Seconds.
(vk6fxyl)

VK2

Allan VK2 JED is asking those in the Westlakes club and region to fossick through their gear to see if there is anything that they would like to donate to the club Market/Field day organised for the 14th of July.

If you find anything, you may leave it at the club premises on either Tuesday nights or Saturday afternoons.

July 14 again is the date, the time 8am.

VK3

July 21 - Gippsland Gate Radio & Electronics HamFest - 10am

David Ryan VK3LOZ says the EMDRC has a propposal for a club project, construction and tuning of a wire dipole for use on the 80 metre amateur band.

For those who require it they'll will be making a "Ugly Balun" to match the antenna to the feed wire. (Those who wish to use a commercial Balun are also welcome to do so, or omit the Balun altogether.)

Following construction they will demonstrate the various methods used to tune antennas:-

1/ with a SWR meter
2/ with a Grid dip Oscillator
3/ with an MJF 259B HF/VHF SWR Analyzer

The proposed date of the make day is Saturday July 28 10.00 AM to 4.00 PM at the EMDRC Burwood club rooms. Register interest at VK3AMN@wia.org.au

VK4

The Annual general Meeting of the Dalby & District ARC will be held on Sunday August 5th at 2PM at the 4DDD FM studios 107 Drayton street Dalby.

All members are encouraged to attend, and visitors are welcome. Also please note that the postal address for the club is 15 Bunya Street Dalby, and all correspondence should be directed to this address. All Emails should be sent to HYPERLINK holmzie@bigpond.com
(Neil VK4NF).

VK5

Saturday 23 June, the VK5 VHF/UHF beacons VK5VF fell silent, after some 44 years of operation from their Mt Lofty broadcasting site.

The 52.450 MHz, 144.450 MHz, 432.450 MHz and 145.650 MHz Morse transmitters were switched off at 0215UTC and the equipment removed at the request of the national owners of the site.

1296.450 MHz has not been on air recently.

Mark VK5AVQ told us "The beacons have been a reliable signal source across much of South Australia and Western Victoria since their commissioning in June 1963. The only significant down time was following the 1983 Ash Wednesday fires.

Thanks to VK5ACE, VK5KK and VK5KDK and the many others who have supported the project, even those just offering reports.

Hopefully we will find another suitable site, but the current one will be a hard act to follow.

VK6

August 5 - HAMFEST 2007 happens in Perth at 9am.
Cyril Jackson Recreation Centre Fisher Street Ashfield

Also in the State of Excitement VK6 Next Monday... Tomorrow is the Monthly Meeting of the West Australian Repeater Group, 1930 h @ the 1st Hillview Scout Hall, crn Gibbs St and Welshpool Rd East Cannington...
Visitors welcome.

VK7

Coming up in the apple isle over the next few months:

AUSRADIO FoxHunt • Tuesday the 3rd July at 7pm meet at Parks St Launceston.

REAST • Independence Day Mid-Winter Feast on July 4th at 6:30pm at the Domain.

NTARC • Meeting - Wednesday July 11th at 7:30pm at Block B Alanvale
TAFE College Launceston.

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

The Wireless Institute of Australia's Foundation Licence Manual is a
full colour manual consisting of 95 pages of information for those
studying, or those who would just like a reference book for
Foundation Licence Operators.

The manual contains the all relevant information you will need to know to
successfully complete a training course to obtain our foundation licence.

It also contains a wealth of information a Foundation Licence operator will
need. Items like Band Plans, Electrical Safety information, operating
procedures such as the Q code, how to contact you local radio club, the
WIA and much more.

For more information on obtaining the foundation licence manual please
visit wia.org.au
(Alan VK4YAR)

FUTURE EXAMS

To find out when a club in YOUR area is hosting assessments and/or
training in Amateur Radio go to wia.org.au and check out the club pages.

Participating clubs keep this site up to date and post the latest
information for all to see.

Also check the text edition of each news edition, where we do keep a
secondary listing.

On the audio broadcast we will continue to give new information when
it is received, but just in case you miss it one week, you can always
access our text

Help amateur radio continue to grow

Do you know someone who could be interested in joining our hobby? Then
encourage them to enrol in a Foundation Licence training course.

Next Foundation Licence course, and Standard / Advanced assessments .....

NEW SOUTH WALES

ARNSW regularly holds Foundation Licence Assessments as well as Exams for
Standard and Advanced Licences.
Held on the last weekend of each EVEN numbered month.

Waverley Amateur Radio Society (SYDNEY)
They hold Foundation Licence courses regularly, email the club at
exams@vk2bv.org
OR visit vk2bv.org or call Simon, VK2UA on 9328 7141.

VICTORIA

At Bendigo classes and licence assessments are conducted by Ross Pittard VK3FCE who can be contacted via email vk3fce@internode.on.net

The Central Goldfields Amateur Radio Club, Maryborough regularly holds classes. Contact Peter Rafferty VK3CC on 5460 4387 or email majorca49@hotmail.com

QUEENSLAND

On the Gold Coast and want to talk to the world through their IRLP and EchoLink systems? Or already licensed and wish to upgrade Foundation to Standard? Well classes are held at the Nerang Clubhouse of the GCARS, ring Roy VK4IG on 5539 3530 Exams can be taken at a time to suit you.

TARC WIA Exams Information
Exam sessions are held on demand with WIA Assessors and assessment packs available for all 3 levels of licensing.
Contact theTARCinc WIA Exams Regional Co-ordinator Roger/VK4CD 0417 638366.
www.tarc.org.au/tarcexam.htm

Tablelands Radio and Electronics Club
TREC WIA Exams Information
TREC will conduct exam sessions as required, at a time to suit the candidate. WIA Assessors and assessment packs are available for all 3 levels of licensing.
Contact the TREC WIA Exams Co-ordinator Dale VK4DMC on 4091 3700 or vk4dmc@wia.org.au for further information.

SOUTH AUSTRALIA

Adelaide Hills Amateur Radio Society will run Foundation licence's at the Aviation Museum, 56 Lipson Street Port Adelaide, 2 weekends August 4th and 5th then November 3rd and 4th.
Contact the course convenor, Sasi Nayar on 0417 858 547

Examinations are hosted by South Coast Amateur Radio Club.
Those interested in sitting for foundation or license upgrades, please contact by email
vk5kbj@internode.on.net

TASMANIA

Radio and Electronics Association of Southern Tasmania

For more information or enroll please contact Reg Emmett VK7KK by emailing regemm@ozemail.com.au or calling 0417 391 607

And remember Foundation Licence Manuals and CD's are available for purchase at McCann's Model World in Elizabeth St. Hobart at $20.

A quick reminder about "Intro to the Standard Licence" sessions on a Saturday afternoons from 1:00 to 4:00pm in the Domain clubrooms.

These sessions are an introduction to the standard licences and
attempt to de-mystify the upgrading process.
(Ken VK7DY/Reg, VK7KK)

DISCUSSION POINT

Further on the reported intrusion of an echolink node on the vk 2 meter fm
calling frequency in VK4.

gLENN vk4bg/TZL drew our attention to some Amateurs in the Bundaberg /
Hervey Bay Region in Queensland operating on the node in this important
and nationally approved segment of our band.

Although allegedley suggesting perhaps 146.500 was not the spot for such
activities he apparently has not gotten the positive result he expected.

These days 146.500 is totally useless for the purpose it was 'gazzetted'.

Glenn was told that the node had existed for some 4 years
...and NOT ONE Amateur had seen fit to complain on the Band Plan issue.

So, as there are always 2 sometimes 3 sides (hihi) to every story,

Gordon VK4KGS is in Bundaberg and Rob vk4mod setup the node some 4 years ago
and the reason they chose 146 500 was because they monitored quite a few
different frequencies over a couple of months and found 146 500 did not get
ANY traffic on it as opposed to adjacent simplex channels.

Also another reason for ch50 being chosen is that any hams travelling in the
area in simplex range of the node will hear the echolink node id on ch50,
which quite a few hams sit on while travelling), and when they hear the
echolink ident they will know that they can use it to call back home or
anywhere else in the world.

The echolink node is also used daily by locals in Bundaberg and in fact there
is a ex navy net on it daily connecting ex navy hams all over the world.

Also it is busy at night with VK and international contacts.

VK4KGS told WIANational News this simplex node id's every 10mins and has a
3min time out and abides by all of the determinations set out in the LCD as
well as the rad ACT.

Back to the south, in the Wide Bay members of the MERG(e) group when asked
said they were a little puzzled by the item last week as in the Wide Bay
neither President, nor any of the MERG members he asked, have any
recollection of ever hearing such on 146.500.

Moreover, no-one recalls ever hearing ANYTHING on 146.500 in Maryborough
and they generally use 146.550 as a local listening and working frequency.

Ray went on to tell WIA National news there could even be argued a case for
146.500 to be designated as a nation-wide Echolink frequency so that
travellers would not need to change frequency for each town they came to in
order to maintain contact with "Home Base".

This of course would not work if the node was connected to, say live streaming ot NASA's Shuttle Missions or similar, but thereby hangs a different tale.

So what do YOU think?

Is this "out of our bandplan activity, in this case a good idea? OR do you think it could be the start of caos as far as who does what where?

As in our sign off each week..... we've reported, you decide.

==========
NEWS FROM ARNEWSLINE

MICROWAVE SDR RADIO BEING DEVELOPED

Radio amateurs interested in the microwave bands may find the Microwave Software Defined Radio project interesting. Its goal is to provide a transceiver operating on the 144, 422, 1268, 2400 MHz and above bands, covering the whole of each band. Full duplex cross-band operation is also planned specifically for satellite use. More details are on line at the Microwave Software Defined Radio website. Its in cyberspace at http://uwsdr.berlios.de

JPL CONGRATULATES AMSAT-DL ON VOYAGER 1 INTERCEPT

The Flight Team that oversees NASA's Voyager One deep space probe has congratulated AMSAT Germany on its reception of a signal from the spacecraft. In March 2006, the signal from Voyager 1 was received by the AMSAT D-L team using the 20 meter dish in Bochum.

Voyager 1 is the furthest object away from earth to be built by humans. As a token of their collective appreciation, the controllers not only confirmed the reception report. They also sent Amsat Germany a photo of the Voyager Flight That picture can be found on line at
http://www.amsat-dl.org//
index.php?option=com_content&task=view&id=142&Itemid=97

COMMEMORATING 70 YEARS OF TRANS ATLANTIC FLIGHT

To commemorate the 70th anniversary of the first transatlantic passenger test flight, a special re-enactment flight is planned by Captain Patrick White and his son Ian. The two will be flying their "Vintage Lady", a PBY Catalina Flying Boat, from Botwood Newfoundland to Foynes, Ireland, on the 5th and 6th of July. To celebrate this event, Ireland's Limerick Radio Club has been invited by the Foynes Flying Boat Museum to operate a special Amateur Radio station in conjunction with the commemorative reenactment of the 1937 flight. EI70FOY will be on the air from the 6th to the 8th of July on 80 throughh10 meters as well as locally on VHF and UHF. A special QSL card, commemorating the flight, will be sent to all stations worked over the three days . All QSL cards should be sent to the Club's QSL Manager Alan Cronin EI8EM at his callbook address.

FIGHTING THE 10 METER FREEBAND INVASION
If you are wondering what all those conversations without call signs are on 28.085 MHz, well it appears to be a small invasion of unlicensed truckers and so called Freeband operators of our 10 meter band.

We have more in this report:

Originally confined to portions of the mid-West, the pirate trucker and Freeband epidemic appears to be spreading nationwide. This, as more and more of these illegal operators are making their unauthorized home on 28.085 Megahertz and several other 10 meter frequencies.

And what is the Amateur Radio community doing about this invasion? On the surface at least, very little. With the upper High frequency bands not offering very much D-X these days, the majority of hams are sticking to 20, 40 and 80 meters with few stations heard in the 15, 12 and 10 meter spectrum. So the truckers and Freebanders see this is fair game for their unlawful operations and are busy establishing squatters rights in these bands.

What about the FCC? Well its doing what it can. There have been several well publicized violation notices sent to trucking firms. They request owners to instruct their drivers to curtail any operations for which they are not licensed and threatening punitive action such as fines. But that's about it. With the FCC enforcement folks stretched thin and Freeband operations being among the lowest of priorities on the enforcement agenda, there is no reason to believe that there is going to be any sort of massive sweep by the Federal government to clear these pirate operators out of the ham radio bands.

In the end, it will be the ham radio community that will have to defend these frequencies. And it does that by using them. If hams load up 10 meters or any band with legitimate Amateur Radio operations, there will be no place for the illegals to play and they will go elsewhere.

In the case of 28.085, there have been suggestions that this frequency become a national C-W or RTTY Calling Channel. That's a pretty good approach. Another is for every ham with the capability of operating 10 meters to start holding QSO's on that frequency. As any Morse enthusiast will tell you, C-W can get through even when faced with all sorts of QRM including pirate operators using voice.

The bottom line. if licensed radio amateurs fill up 10 meters even for local chats, the truckers and Frreebanders will soon be looking elsewhere for a new home.

For the Amateur Radio Newsline, I'm Evi Simons, in New York.

About two decades ago, then 73 Magazine editor Wayne Green, W2NSD, coined the phrase "Use it or loose it." Back then it was applied to the pending transfer of 220 to 222 MHz away from Amateur Radio. Today the same words ring important in fighting those without licenses who are trying to take 10 meters forcibly from hams.

==========

NEWS SOURCED TO THE RSGB NEWS SERVICE AND READ BY G4NJH FROM GB2RS NEWS

Foyle and District Amateur Radio Club (FADARC) will be heading to St Angelo Airport, Enniskillen for the 2007 Jet World Masters competition.

The competition runs from 5 July to 14 July the club will be on the air during the final two days of the event with its call sign MN0AKU/P.

This event showcases model aircrafts capable of flying at up to 250 mph.

In attendance will be 100 pilots from some 31 countries demonstrating their skills in what has been described as the ultimate radio-controlled model aircraft competition. More details can be viewed at www.jwm2007.com.

Help is still needed for the British leg of the Tour de France. Kent RAYNET requires a large number of RAYNET members being able to pass third party traffic on 8 July.

Special event station 9A07P will be active on all bands and modes until 31 December to celebrate the city of Djurdjevac. All QSOs will be confirmed automatically via the bureau.

The annual transmission on Alexanderson Day with the Alexanderson alternator on VLF 17.2 kHz will take place Sunday 1 July at 0900 UTC. Tuning up will be from 0815 UTC and the transmission will be repeated at 1300 UTC, tuning up from 1215 UTC. The station will be open to visitors. There will be activity on amateur radio frequencies with the call SK6SAQ. For more information log onto www.alexander.n.se/. QSL reports are very welcome.

JULY 14-15

Rules are at www.iaru.org/contest.html

Participation in the IARU HF World Championship has grown steadily for the past four years, despite solar activity trending in the wrong direction. The creation of Low Power and QRP categories has contributed to increasing both the popularity and the competitiveness of the event.

The ARRL administers the HF World Championship on behalf of the IARU. At its May 2007 meeting the IARU Administrative Council discussed various issues related to the event and asked that the ARRL devote the resources necessary to maintain a high standard of adjudication.

A condition of entry in the IARU HF World Championship is that each entrant agrees to be bound by the provisions of the announced rules, by the regulations of his/her licensing authority, and by the decisions of the ARRL Awards Committee acting for the IARU International Secretariat.Leading competitors should expect their entries to be carefully scrutinized. If exceptional results are claimed, entrants must be prepared to explain how they were achieved.

Reminder: In addition to the zone and "HQ station" multipliers there are four additional multipliers available per band by contacting members of the IARU Administrative Council and the regional IARU executive committees. Administrative Council members may send "AC" instead of their zone, while regional executive committee members may send "R1," "R2" or "R3" as appropriate.

See you on the air for the 24 hours beginning at 1200 UTC Saturday, July 14! - David Sumner, K1ZZ, IARU Secretary

Boat Anchor Sprints:
August (11), October (13).
Local ZL time: 2000 to 2100 hrs

Section 1: Old radios - all valves - i.e. ZC1, 19 set, Heathkits, any home brew set, but must have all valves.

Section 2: Any Hybrid transceiver (must have valve finals i.e. FT200, FTDX400/401, Drake, FT 101s, etc..

Amplitude Modulated signals only.

The overall winner shall be the entrant having the highest points score which will be published in the following New Zealand "Break-in".
(Jamie Pye ZL2NN, Editor NZART's InfoLine)

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

Well the month of June is gone and we are counting down to the 11th Aug and is now only 41 days to the 2007 RD contest.

An email query that came across the desk this week, concerns the use of Computers within the RD.

Within the rules in paragraph 10b reads :
Automated operation is not permitted. The operator must have physical control of the station for each contact. However CW and voice keyers are

permitted, although the use of computers is restricted to logging purposes only.

The keywords here are ‘Automated Operation’ I believe is self explanatory, and that Computers is restricted to logging purposes.

On the WIA Website the rules are available along with associated documents.

7th World HST Championship will be held in Belgrade Serbia September 19-23rd. www.hst2007.org

NOVEMBER 17/18
Spring VHF-UHF Field Day - November 2007
For everyone who likes to plan ahead - please note the dates for this year's Spring VHF-UHF Field Day. It will be held on November 17/18, a week later than usual. This will prevent a clash with club activities in two states.

Night Broadcast Update

Now that there has been a vast improvement in the speed and capacity of the Internet services at Club Host Station VK7AX, testing is now under way with video streaming from this facility.

Shortly it is anticipated the Amateur Broadcasts emanating from Club Station VK7NW on 70CM ATV during the week will be available world-wide using video streaming. The facility is currently being tested and listeners will be advised when and where the stream is available as soon as the tests are completed and the performance is rated as acceptable.

Also being planned is a audio stream of the broadcasts via the Sydney IRLP Reflector on proposed Channel 5907.

Listeners will also be advised when the feed is being sent to the reflector.

Stay Tuned for further updates.

(73's until next time... Tony VK7AX, President, NWTARIG)

The episode of the 1960 BBC TV comedy series 'Hancock's Half Hour' starring Tony Hancock and in particular, the infamous bungling radio ham segment containing those now classic lines "It is ah not raining in Tokyo" and "GLK London calling the world" is available on YouTube.

This classic episode shows Hancock as a ham radio enthusiast who receives a mayday call from a ship in distress but keeps getting distracted just before he can take down its position.

The episode is split into three parts.

To view log onto YouTube and type in Tony Hancock.

WIRELESS WEATHER

Last week we brought you the new courtesy of Graham Rogers in VK6 that the solar flux figure of 66 was reached June 20 and maybe we were at the bottom of the cycle, Graham said maybe we drag along the bottom for awhile OR enter a 'Maunder minimum'.

So what is a Maunder minimum I hear you ask.

Justin VK7TW in the VK7 news explains it thus:-

"The Maunder Minimum is the name given to the period roughly from 1645 to 1715, when sunspots became exceedingly rare, as noted by solar observers of the time. It is named after the solar astronomer Edward W. Maunder (1851–1928) who discovered the dearth of sunspots during that period by studying records from those years. During one 30-year period within the Maunder Minimum, for example, astronomers observed only about 50 sunspots, as opposed to a more typical 40,000–50,000 spots."

This is WIANEWS for week commencing JUNE 24 2007

This is an appeal again to all WIA members for assistance with the WIA QSL
Collection. Members will already know that this collection of nearly
one million QSLs is one of the finest QSL Collections in the world,
containing thousands of modern QSLs and very valuable archival QSLs
dating back to 1921. It would be a tragedy indeed if this collection were
to fall in a heap.

Listeners who heard last weeks VK1WIA news expressed sorrow at hearing
Honorary Curator of this Collection, Ken VK3TL has recently undergone
surgery for a cancerous tumour of the brain. He still maintains the
Collection, which gives him a great deal of pleasure. However he has been
forced to work on the Collection at rather short intervals and cannot give

his full-time attention to it.

For this reason we are appealing for help from WIA members, especially those in the Melbourne area. No knowledge of DX is necessary for the sorting of QSLs, the placing of QSLs in albums and similar tasks.

Would you care to lend a hand for an hour or two?

Contact Ken on 9728 5350.

AMATEUR RADIO - HOME OF THE GOOD GUYS

The Potomac Valley Radio Club in America's mid-Atlantic has shown that it takes ethics very seriously, by winning a major contest and then voluntarily forfeiting the victory because it was outside the rules.

Club President Jim Nitzberg WX3B examined the result closely to find that the club's score included measurable activity of members who were outside the required 175 mile radius stipulated in the ARRL Sweepstakes contest rules.

The Potomac Valley Radio Club began 60 years ago and requires members to participate in at least two of ten specified contests a year to maintain their membership.

And in a true demonstration of the motto "the buck stops here", Club President Jim WX3B accepted full responsibility for the inadvertent rules' breach, and extended congratulations to the new winner of the 2006 contest.
(VK3PC, ARRL & various)

BPL INTERFERENCE - THE BATTLE CONTINUES

A simple test conducted by a ham radio operator in Manassas, Virginia, USA has provided proof positive that even flea-power Q-R-P ham radio operations can shut down Broadband Over Powerline Internet access operation.

Amateur Radio Newsline's Don Carlson, KQ6FM, reports:

The revelation comes on the website of George Tarnovsky, K4GVT. On it, Tarnovsky shows the results of tests made using only 40 watts and QRP at 2 watts on the 80 through 10 meter bands.

The gear used in his test was an Icom 706 transceiver, with Outbacker Perth antenna on his car parked curb side. The vehicle was approximately 70 feet from his house, and more than 100 feet from the BPL power pole interface. Inside the home a laptop with BPL interface repeatedly downloading a 40 Megabyte file.

Tarnovsky: "Well, what we found is that when we were within reasonably close proximity -- I would say within 100 feet or so of any of the BPL installations -- when we transmitted on E-CARS on 7.225 that we actually had an affect on them. The way ewe knew that we had an affect was that as soon as you released the microphone (PTT), rather than

hearing the typical BPL noise, you knew the system was backed up with data and consequently became very aggressive and just blanked (the band). If you looked at a spectrum display of it -- it just covered the entire spectrum. Its almost as though all the stops were off. In other words the band stops were off. Just rip and get the data out and that's exactly what it did."

What K4GVT found was that on all bands the connection suffered at least a major slowdown when he transmitted at the 40 watt level. On 80 through 15 meters the 40 watts caused the download to stop altogether and requiring it to be restarted. But the biggest surprise was on 40 meters where 2 watts of R-F rendered the BPL connection numb. He says that the 2 watts at 7 MHz caused the BPL data transfer to stop.

Tarnovsky: " With the original G1 installation, 2 watts would have an affect on it. Since then they have made some changes in their firmware to the G1. The G2 has agile notching so they can go in and they can notch it (the spectrum), but being agile they can also remove them and that's the problem that we are facing here."

Tarnovsky notes that regardless of what carriers a BPL provider might notch out of a system, the system operator cannot filter its input. As such, R-F ingress to the BPL system is wide open, and susceptible to all near field RF from 2 to 29 MHz. Even one that only 2 watts and more than 100 feet away.

For the Amateur Radio Newsline, I'm Don Carlson, KQ6FM, in Reno.

More on the BPL ingress experiment by K4GVT including a band by band results chart is on his website. Its in cyberspace at

AROUND VK in 80 Seconds.
(vk5nz)

VK3

Over the last few months some of members of Melbourne's Eastern and Mountain District Radio Club have undertaken proactive approach to their health by joining the local weight loss club.

One member John VK3ARK simply refused to join and said the only way HE would become a member of the weight loss club was if his wife Jean got her Amateur Radio ticket, so guess what ... his wife Jean now VK3FJYL sits in the warm shack with the Alarm group whilst her OM John is down at the weight loss club!

A competition broke out amongst those involved with a prize offered for he who can loose the most weight. To accelerate the weight loss process it was suggested some decent walks may be of benefit, so last Saturday morning morning half a dozen EMDRC members undertook a 8 kilometre round trip walk with a tea and coffee break at the Strictly Ham Amateur Radio shop along

the way. Who turns out to be the biggest looser still remains to be seen, but one things for sure it won't be Ross from Strictly Ham who sold quite a bit of gear that morning.

VK4
Problems for 2 meter simplex operators in the Wide Bay area with at least one echo link station operating outside of our gentleman's agreement band plans, heard on 146.5 the VK national calling frequency. If you see this station on Echlin you might wish to pop up and advise him of the "error of his ways".

Optical Extravaganza Night

REAST have held a great night of optical history, optical show and tell and practical calibration.

In fact, the clubrooms were so full of optical transceivers and test equipment with four transceivers, five separate transmitters, one dedicated receiver and six pieces of optical test equipment with calibrated transmitters and receivers that there was hardly any room for the people attending...HIHI.

Mike VK7MJ their optical guru initially took REAST through a brief history of optical communications which started back with Alexander Graham Bell who patented the Photo-phone back in 1880s, THEN through the various developments prior to the development of electronics as we know it, through the use of different types of lamps from incandescent, arc, vapour and into lasers and ending in LEDs and finally the recent development of the Luxeon.

All in all a fantastic hands on night.

There are some great photos of the night available on the REAST Website.

http://reast.asn.au/events.php#opticalcalibration

EDUCATION YOUTH AND ADVANCEMENT OF AMATEUR RADIO
PRESENTED BY KYLEA VK6FXYL

A NEW AMATEUR RADIO club FORMS, AT Roxby Downs.

Several months ago there were no radio amateurs in Roxby Downs a remote mining town in northern South Australia

Michael Wright (now a scout leader) decided to do his Foundation Licence by remote assessment and training. Shortly after that Michael when on to do his Standard licence using R&ES self training resources.

Michael is now VK5MCW.

Michael also arranged a arrange a talk to a group of scouts and leaders to be given remotely by Ron VK2DQ.

The hook up lasted about an hour with communications be done by Radio, EchoLink and Video displayed by VOIP.

Multimedia materials were used and a remote Q&A session conducted remotely.

Since then as in excess of 10 Scouts and leaders have decided to do their Foundation Licence and the Roxby Amateur Radio Club is growing.

Michael is now studying for his Advanced Licence and hopes to be successful and then become a WIA assessor

Amateur Radio NewsLine are reporting how Rescue Radio meets Education.

This a very positive story with word that 47 eighth grade students in California are now prepared to serve their community in time of crisis using Amateur Radio.

Representatives of the City of Calabasas, the Los Angeles County Sheriff's Department, the American Radio Relay League and other agencies were on hand recently to congratulate 47 eighth-graders at A.C. Stelle Middle School. This, after they completed a class that lead to their getting the Amateur Radio licenses as a part of the American Radio Relay League's educational incentive known better as The Big Project.

Meantime, emergency services groups are supporting this project with hopes that it will provide a source of communications volunteers.

Sheriff's Department Reserve Captain, Tom Fakehany, N6FDR, says that these students are likely the next generation of emergency volunteers who will provide communications when all else fails. County Disaster Communications Service member Norm Goodkin, K6YXH, says that the plan is to help organize these new hams into a youth group. One with the ability to provide emergency communications services to the school and to the community in the City of Calabasas.

Next semester, the 47 students plan to start an amateur radio club at Calabasas High School, along with the 17 new hams already there from last year's project. According to Beutel, his school nearly tripled the number of students who earned their licenses from the program's inception last year.

MEDIA WATCH

Peter Berrett VK3PB is a member of the Eastern & Mountain District Radio Club, a member of the Wireless Institute of Australia and is a keen ATV enthusiast famous for his electronic Fish Bowl on Melbourne's VK3RTV repeater.

This month Peter joins the team at Amateur Logic TV as their Australian news presenter and Australian news reporter.

Amateur Logic TV is a Television program made by Radio Amateurs for Radio Amateurs. It is an IPTV program which in simple terms means you download it from the internet and watch it on your PC.

You can download Amateur Logic edition 13 from the following web address.
www.amateurlogic.com/downloads.htm

In this latest edition of the show, two of the team members Tommy and Jim visit the Dayton Hamvention, the worlds largest amateur radio gathering and brings back some great coverage of the event, including an interview with the infamous Tom, WA5KUB and his live helmet cam.

Peter Berrett brings to the show some Aussie content with footage of the Moorabbin and District Radio Club Hamfest held recently in Melbourne. The show also contains many practical do it yourself type tips with the current episode showing you how to building your own Homebrew Crimpers for RG213 and LMR400 cable...

All in all its 50 minutes of solid Amateur Radio television Visit the website today http://www.amateurlogic.com/downloads.htm

INTERNATIONAL NEWS

NEW ZEALAND - NZART

Highlights from their AGM included the event being opened by the Honourable Steve Maharey local MP for the Manawatu, and also Minister of Education, Minister of Broadcasting, Minister of Research, Science and Technology, Minister for Crown Research Institutes and Minister responsible for the Education Review Office.

Concerns were expressed by the Evan Sayer NZART Treasurer, of the falling numbers in membership, with a critical membership number of 1800 mention. If membership drops below this number then Break-In and NZART Headquarters is seriously at risk.
He urged members to try to get non-members signed up to NZART to ensure these two valuable asserts are retained.

Mike Newman ZL1BNB was awarded the title Amateur of the Year.
Award was presented by the President of NZART Bruce Douglas Zl2WP, as recognition of his work as Local Government Liaison Officer.

OPERATIONAL NEWS -

AUGUST 11/12 Remembrance Day Contest (The RD) wia.org.au

Counting down to the 11th Aug and it is now only 48 days to the 2007 RD contest.

We suggest that you take the time between now and the contest, to check that your gear is up to the marathon contest, apart from the Radio equipment check the caffeine machine, or plenty of match sticks for the eyes.

On the WIA Website the rules are available along with associated documents.

Another reminder for those using computer logging programs PLEASE check that you have the current version, your final score will depend on it.

For those using hand written logs I suggest that you look at the logging forms on the WIA website in the Rd section.

7th World HST Championship will be held in Belgrade Serbia September 19-23rd.
www.hst2007.org

NOVEMBER 17/18
Spring VHF-UHF Field Day - November 2007
For everyone who likes to plan ahead - please note the dates for this year's Spring VHF-UHF Field Day. It will be held on November 17/18, a week later than usual. This will prevent a clash with club activities in two states.

SPECIAL EVENTS, BEACON AND NET ADVICE
VK's longest continual net;
The Southern Cross DX Net has been running for 43 years, operates 7 days a week - propagation permitting - on a frequency of 14.238.5MHz at 1215 zulu.

Centenary of Marconi's Clifden station

This year marks the centennial of those first sparks generated from Marconi's historic Clifden station. To commemorate this event W8HC has announced a special amateur radio operation from both locations central to Marconi's fame and success as a pioneer in wireless technology.

Ballycastle-Rathlin was his first wireless telegraph station and the Clifden station was his last, ceasing operation in 1922. In 1907, Guglielmo Marconi's dream of fixed point-to-point wireless telegraph stations linking North America and Europe became a reality. Derrygimla near Clifden, County Galway served as the site of his wireless station. Over the next 15 years, spark-induced blue flashes generated by the station's massive 20 kV generators sent tens of thousands of wireless messages across the Atlantic, linking to its North American counterpart at Glace Bay, Nova Scotia.

On 4th and 5th August Hal, W8HC, will operate from Ballycastle as GI/W8HC/P. He will also be taking part in the annual Marconi Festival at Ballycastle with the Marconi Radio Group's MN&#65533;MRG special event station on 5th and 6th August, he will move to Rathlin Island (EU-122) and operate from East Lighthouse (ARLS designator NTI 011). He will arrive in Clifden on 8th August where he will operate as EI/W8HC/P at the Derrygimla site on 9th and 10th August.

It is hoped that some operating time can also occur from nearby Letterfrack, site of an ancillary receive station built in 1912 to allow for full duplex operation of the transatlantic signals.

All QSOs will be confirmed via Log of The World and special QSLs from each of these historic Marconi locations will be printed and

sent via www.globalqsl.com. In addition, a specially designed certificate will be issued to those stations making contact with both GI and EI operations from either Ballycastle or Rathlin and Derrygimla or Letterfrack.

D X A C T I V I T Y A N D D A T E S

Prefixes for Montenegro and Serbia

When Montenegro first became an independent country, the prefix YU6 was tentatively allocated to it. However, it now has a call sign block of its own. The ITU now lists 4O (that's "four Oscar") as Montenegro's prefix. This means Montenegro stations may use 4O0 through 4O9, while Serbian stations will continue to use YT and YU prefixes for all call districts, 0 through 9.
The ITU reportedly wants the two nations to complete the transition to new call sign blocks as soon as possible.

The ITU has taken back the former 4N and YZ prefixes for future reassignment.

Members that use computer logging software should update their software to reflect these new prefix allocations
(IRTS)

AFRI 75 DXpedition QSL Update

The QSL Manager of the recent Swaziland DXpedition, Peter EI7CC, reports that over the past few weeks QSL cards in respect of over 1000 QSOs have been sent to those who requested a direct QSL. The remaining 200 or so requests should be dealt with in the coming week, sent via the bureau.

Hong Kong Special Prefix

Approval has been granted for the use of the Special Prefix "VR10" in addition to "VR2" for Hong Kong Radio Amateurs starting from July One 2007 to the 30th of June 2008 for the 10th anniversary of Hong Kong's reunification with China.

More details are available in the OFTA letter for Hong Kong Radio Amateurs, which can be found at www.ofta.gov.hk/en/amateur/ama-cir200706.pdf.

HARTS is also going to use the special callsign "VR10HK" as HARTS HQ Station during the IARU HF Contest (14-15/7/2007).

excom2007@harts.org.hk if you want more detail.

WIRELESS WEATHER

In VK6 Graham Rogers reports that the VE7CC cluster and WWV is reporting the solar flux on the 20th June 2007 was 66, if correct, this means that means on Wednesday we reached the bottom of this cycle!!

at last we are there/here.

OR ARE WE?

I guess we now drag along the bottom for a while and the slowly move up

28.000 to 29.700

ARISS warns of pirate activity:

Amateur Radio on the International Space Station (ARISS) reports a rumour that the ISS was making direct contacts on the 40 meter band.

ARISS stresses this is not happening, as there is no HF radio equipment on board the space station, although the HF antenna is mounted.

Sometimes the Goddard Amateur Radio Club, WA3NAN, retransmits shuttle audio.

Also in INTRUDER WATCH - ENFORCEMENT ZONE this week, The ARRL has sent out more than 100 letters to repeater owners/trustees who have repeaters affected by the "Pave Paws" radars.

Citing an increasing number of interference complaints, the US Air Force has asked the FCC to order dozens of repeater systems to either mitigate interference to the Pave Paws radars or shut down.

The ARRL is working with the US Department of Defence to develop a plan to mitigate alleged interference from 70 cm ham radio repeaters to this military radar system on both US coasts.

A mother of two in a suburb of Chicago does not have to turn on the news for an update on NASA's space mission.

She just turns to "on" her baby monitor.

Live video of the mission is available on NASA's Web site, so it's possible the monitor is picking up a signal from somewhere close by.

Officials from NASA have said the signal is not coming straight from the shuttle, according to NASA spokeswoman Brandi Dean.

Summer Infant, the monitor's manufacturer, was looking into what could be causing the transmission, said communications director Cindy Barlow. She said she's never heard of anything similar happening.

"Not even close," she said. "Gotta love technology."

Now that you have made the rather strong claims, will you be able
to provide some evidence? If you start your organization, you'll be asked
to "prove it" by people who will be a lot less kindly than me.

What are some examples of ARRL catering to retrogressive Hams?

ARRL caters to a large and varied group of Hams. While some issues
deal with vintage radio, others deal with antennas, all kinds of
subjects.

Some examples of catering to insular Hams?

ARRL is constantly experimenting with methods to attract new blood.
I've used some of the material to attract new Ham in my area. I couldn't
disagree more with your assertion. The results are a 2 percent growth in
our area.

Some examples of Xenophobia?

I really don't know how to approach this one.

> If you look at those organizations that are EFFECTIVE in
> representing their members and advancing the members' agenda (NRA,

<snip>

What is your fund raising approach? All of those groups have some
pretty deep pockets. You are going to have to raise a lot of money in

order to operate as they do. There are 625,000 of us, and with all due respect, you're present approach alienates a lot of them. So you are going to have to generate those funds from say 300.00 people tops; probably a lot less.

Might I respectfully suggest that you are engaging is some serious profiling? In addition, some proof would go a long way to advance your argument.

I haven't been able to find any evidence of ARRL's "serving" of the amateurs you've mentioned above. The closest thing to it is on the QST opinion pages, and people are entitled to their opinions. A look at their web pages doesn't show any evidence of what you are accusing them of, nor does their magazine.

I haven't found anyone with the opinion that Hams are "cranky old geezers who are living in the past and pounding Samuel Morse' old telegraph key while whining about young whippersnappers who don't respect their elders" except for certain Hams who have an axe to grind, for whatever reason. The general public doesn't have much of an idea about us one way or the other IMO.

Why, when I read stuff like this, and I reminded of Robert Heinlein's
classic short story "The Roads Must Roll" ? (If you are not familiar
with it, READ IT before your next posting.)

This "cranky old geezer" was licensed with that call sign since 1952
and is on the air daily with HF and VHF digital data and voice while a
WW-II J-38 telegraph key sits next to a modern kit-built HF SSB and
data transmitter with all the bells and whistles. I've mentored more
hams than I can think of and have testified for and represented quite
a number of hams in hearings and court trials over their right to
operate their stations.

None of that would have happened without the ARRL teaching me, helping
me, and backing me. None of it.

"Cranky old geezer" ? Hardly. And there's a lot more folks like me
out there.

If you think that the League is "static" then you aren't looking in
the right places. It's your problem, not the League's.

>From my viewpoint of this discussion, what it really seems like you are championing is an organization consisting of people who hate morse code.

That's ok, I guess, but I think you should simply be upfront and honest about it, by calling it the "We hate Morse Code Ham Radio Society", rather than attempting to veil it in bogus atruistic poppycock.

> It goes without saying that
> ARRL types will not want this and will try to stop it.

I suppose it is easier to blame your own failure on others, rather than acknowledge the fact that your idea is faulty from the onset.

SOUTH AFRICAN RADIO LEAGUE

SARL NEWS SUNDAY 01 JULY 2007

You are listening to ZS6SRL the official Radio Station of the South African Radio League, the National Body for Amateur Radio in South Africa, with a news bulletin that is transmitted every Sunday at 08:15 CAT in Afrikaans and at 08:30 CAT in English. To listen to a web stream or Echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links for details.

This, and previous bulletins, can be downloaded from www.sarl.org.za and you can also subscribe there to receive future bulletins by email.

This transmission is by Hans, ZS6KR, on 145,725 and 7,066 MHz from Pretoria with relays on 3,695, 10,135, 14,235 and 51,400 MHz as well as 438,825 MHz in the Pretoria area. (Other newsreaders please change to suit).

In the news today:

SARL PRESIDENT TO DISCUSS SOME MAJOR CHANGES ON TONIGHT'S NET

SA AMSAT CHANGES ITS CONFERENCE DATE AGAIN

HELP US SAVE ON OUR TELEPHONE BILLS

GET READY FOR THE IARU HF WORLD CHAMPIONSHIP, JULY 14-15

You are listening to ZS6SRL. Stay tuned for more detail on these and other important and interesting news items.

SARL PRESIDENT TO DISCUSS SOME MAJOR CHANGES ON TONIGHT'S NET

At last weekend's strategic session the Council of the SARL agreed on some major changes that will enhance the development of Amateur Radio and increase the benefits that will accrue to members. Graham Hartlett will during this evening's President's Net discuss the new proposals and implementation dates. Some changes will be implemented almost immediately while others will be phased in over the next 6 - 9 months. Join Graham at 19:00 this evening on a repeater near you.

The President's Net will be followed at 20:00 by the INTECNET featuring a discussion on the SARL transceiver project by Andrew Roos. The objective is to design and industrialise an entry-level HF transceiver that can be produced at low cost to facilitate access to HF by new amateurs, including the youth. Join Andrew as he takes the lid off this

exciting project.

Visit www.sarl.org.za and click on ARMI for full details, frequencies and a link to internet streaming and echolink. Clubs are encouraged to link up to the conference bridge. Send telephone number and details of the repeater to be used to armi@sarl.org.za by not later than noon today, 1 July.

SA AMSAT CHANGES ITS CONFERENCE DATE AGAIN

Due to venue constraints SA AMSAT had to change the date of its 2007 Space Symposium. It will now be held on 6 October. More details can be found on the web at www.amsatsa.org.za. The September date announced last week clashed with another conference being held at the Sentech venue.

A synopsis for proposed papers are invited and should be of a technical or operational nature and cover any of the following subjects: satellite communication, weak signal communication, orbital mechanics, software applications and exploration of space such as SETI. Other related subjects will be considered. The deadline for the submission of a synopsis is 15 August 2007.

HELP US SAVE ON OUR TELEPHONE BILLS

The SARL Treasurer has highlighted the dramatic increase in our monthly communications cost which on analysis points to outgoing cellphone calls. Please, when leaving a message at the NARC, leave your landline number or if it is a request for information your email address. The saving is almost three fold per call which, when calculated over a month, amounts to a substantial sum of money which could be better utilised for other amateur radio projects and member services.

The office telephone is answered between 09:00 and 13:00 Mondays to Fridays which are our public office hours. The rest of the time the office administrator is attending to administrative matters. Emails and faxes can be sent at any time, day or night. Also remember to use the full 13 digit number 088 011 675 2793 when sending a fax.

GET READY FOR THE IARU HF WORLD CHAMPIONSHIP, JULY 14-15

According to the Secretary of the IARU, Dave Sumner, participation in the IARU HF World Championship has grown steadily over the past four years, despite solar activity trending in the wrong direction. The creation of Low Power and QRP categories has contributed to increasing both the popularity and the competitiveness of the event.

The ARRL administers the HF World Championship on behalf of the IARU. At its May 2007 meeting the IARU Administrative Council discussed various issues related to the event and asked that the ARRL devote the resources necessary to maintain a high standard of adjudication.

A condition of entry in the IARU HF World Championship is that each entrant agrees to be bound by the provisions of the announced rules, by

the regulations of his/her licensing authority and by the decisions of the ARRL Awards Committee acting for the IARU International Secretariat. Leading competitors should expect their entries to be carefully scrutinized. If exceptional results are claimed, entrants must be prepared to explain how they were achieved.

Reminder: In addition to the zone and "HQ station" multipliers there are four additional multipliers available per band by contacting members of the IARU Administrative Council and the regional IARU executive committees. Administrative Council members may send "AC" instead of their zone, while regional executive committee members may send "R1," "R2" or "R3" as appropriate.

CONTEST NEWS

The Durban ARC Midwinter 80 metre Sprint will be run on Wednesday 4 July 2007 starting at 19:00 CAT and ending at 20:00 CAT. It is a phone and CW/PSK sprint and the exchange is a RS or RST report and your age, ladies may use 21.

Contacts with stations in the same ZS call area or Southern African country is worth 2 points and contacts with stations in different ZS call areas or Southern African countries are worth 4 points. Log sheets must be sent by e-mail to zs5lp@sharksden.co.za or by snail mail to the Durban Amateur Radio Club, 17 Brownlee Place, Bluff, Durban, 4052.

On Sunday 22 July, the Boland ARC 40 Metre Contest will be on the air from 15:00 to 18:00 CAT.

The SARL HF Phone Contest will be run on Sunday 5 August 2007.

Provisional Contest Results:

The 80 Metre QSO Party Contest Committee has notified SARL News that the name of Jan, ZS1VDV, must be added to the results of the April leg of the 80 Metre QSO Party. Jan made 480 points which places him in second place with the East Rand ARC.

There was a typing error in the English results of the SARL Hamnet Contest. For the Single Operator Stationary Mobile category, Theunis, ZS2EC, and not Barry as reported took the second place. The results in the Afrikaans version are correct.

PROPAGATION REPORT

Hannes Coetzee, ZS6BZP, reports that the expected solar activity will be at low to very low levels. The geomagnetic field is expected to be quiet in general while reaching active levels on 11 till 12 July. The expected Effective Sun Spot number for the coming week will be less than 10.

20 m and 40 m will provide best opportunities for DX. There is a possibility of 20 m openings towards India from about 15:30 CAT. 40 m may open towards Australia from 18:00. From about 17:00, there may be

20 m openings towards Europe. At about 16:00 short 20 m openings towards the West Coast of the USA are possible. Otherwise contacts to the USA are going to be very challenging. For the CW and digital enthusiasts it will also be worth monitoring 10 MHz.

Locally 40 m is going to be the band to be on for the PSK31 contest with good propagation throughout South Africa till at least 16:00. It is once again time to work on your 80 m WAZS award in the evenings. Remember that HF always has the capability to surprise you. You will never know what you are missing unless you switch your rig on, listen and also call CQ.

Please visit www.spaceweather.co.za for further information.

CLUB NEWS

The Port Elizabeth Amateur Radio Society (PEARS) held its AGM on Saturday 23 June, and the following members were elected to the committee:

Chairman: Donovan, ZS2DL; Vice-Chairman: Chris, ZS2AAW; Treasurer: Clive, ZS2RT; Secretary: Beavan, ZS2RL; Members: Anthony, ZS2BA, Barry, ZS2EZ, Bill, ZS2ABZ, and Eric ,ZS2ECH.

The meeting was followed by the traditional bring-'n-braai,

The Hibiscus Coast ARC also held the AGM recently and the following members were elected to serve on the committee:

Chairman: Garnett, ZS5ZT; Secretary /Treasurer: Brian, ZS5AZH; Committee Members: Jan, ZR5JAN, Sid, ZS5AYC, Peter, ZS5SK, Gawie, ZS5R, Mervyn, ZS5QI and Rob, ZS5XS.

DIARY OF EVENTS

1 July, tonight - President's Net and Intechnet; 4 July - Durban ARC Midwinter 80 m Sprint; 14 - 15 July - IARU HF World Championship; 22 July - Boland ARC 40 m Contest; 5 August - SARL HF Phone contest; 15 August - Last day to submit synopsis of proposed papers for SA AMSAT Space Conference; 23 August - Class B RAE; 6 October - SA AMSAT Space Conference; 18 October - Class A RAE.

SARL News invites clubs and individuals to submit news stories of interest to radio amateurs and shortwave listeners. Submit news stories if possible in both English and Afrikaans to www.sarl.org.za/newsinbox.asp not later than the Thursday preceding the bulletin date.

The SARL also invites you to listen to the programme Amateur Radio Mirror International, on the air every Sunday morning at 10:00 CAT on 145,750 MHz in the Pretoria area with relays on 7 082, 7 205 and 17 695 kHz. For the web stream and echolink by ZS6FCS visit www.sarl.org.za, click on ARMI and follow the links. A repeat transmission can be heard Mondays at 21:00 CAT on 3 215 kHz. Sentech sponsors the ARMI

transmissions on the non-amateur frequencies.

Today's South African Radio League news bulletin was compiled by Roger Conroy, ZR3RC ,and transmitted by (your name and call sign)

Thank you for listening. 73.

1 GB2RS NEWS Sunday 1 July

The news headlines

* RSGB President opens Friedrichshafen show

* Red Sands Radio to broadcast RSL operation

* Special call signs for 50th JOTA Last weekend RSGB President Angus Annan was given the rare honour of making the opening address at the annual Friedrichshafen radio show. His speech, delivered to an invited audience and relayed to a giant screen, covered the recent successes and tribulations of the amateur radio scene.

A ten day Restricted Service Licence (RSL) operation will take place from 14 to 23 July from the same Fort used by British offshore broadcaster Radio 390 in 1964 to 1967.

The location is Red Sands Fort, seven nautical miles off Whitstable in Kent. Ofcom has allocated 1278kHz for the operation. For those outside the local area, the programmes will be streamed online.

Red Sands Radio will pay tribute to the pirate radio stations of the 1960's that influenced how commercial radio developed in Britain. There will also be some of the original programmes and radio documentaries with a mix of the best of yesterday and today.

Red Sands Radio is part of the overall Project Redsand who have long term plans to preserve the last full set of Army Forts for future generations.

Ofcom has agreed to issue special call signs to all UK JOTA stations this year in recognition of the role that the event has played in enabling scouts to talk to other scouts around the world by amateur radio.

When applying for one of these licences you must observe the following instructions that are associated with this special event call sign.

* The call sign is only available for the 50 hours of JOTA, from 19 October 2200 local time to 21

October 2400 local time.

* All applications must be made within 28 days of the event, no late applications will be accepted.

* All applications must, in keeping with the SSES policy, be accompanied by a supporting letter signed

by the scout leader or equivalent from the troop that the SSES will be representing. Applications should be made on the usual form, OfW287 that can be found on the Ofcom website. During the Irish Radio Transmitters Society's Jubilee expedition to Swaziland, the team met with the Scout Association and agreed to support their Thirst for Life Programme, which helps Aids orphans in Swaziland.

Details of the project are on the Afri75 page of the IRTS website. The team is also pleased to announce that the first initial funding for the project of 350 Euro is on its way to Swaziland and this will fund the purchase of chickens for their farm.

The money was raised by donations from direct QSL cards received from stations around the world, together with the sale of Afri75 caps at the AGM in Cork.

The team is still anxious to continue support for the project, and if you think you can help please contact Paul, EI2CA.

2 Nominations for the 2007 AMSAT Board of Directors have closed. The list of qualified candidates is: Barry Baines, WD4ASW, Drew Glasbrenner, KO4MA, Rick Hambly, W2GPS, Lee McLamb, KU4OS, Gunther Meisse, W8GSM.

The terms of four directors are up this year. Directors serve a two year term. Ballots and biographical information submitted by each candidate will be in the mail to current AMSAT members by 15 July and completed ballots must be received at the AMSAT office in Silver Spring no later than the close of business on 15 September. Terms of the new directors start upon certification of the election.

Gloucester County RAYNET Team has now received clearance for the use of two VHF frequencies during their support for the Royal International Air Tattoo at Fairford on 10, 12, 14 and 15 July.

The choice of working frequencies at any operational RAF base has always been agreed with MoD to avoid any possibility of interference with vital communications traffic. This year, Gloucestershire has been allocated 144.650 voice and 144.625 data.

They intend to use directional antennas to try to minimise problems for other RAYNET Groups working in the area, but advise that they will not be allowed to QSY in the event of co-channel interference and ask for the cooperation and understanding of other groups in their choice of working frequencies.

The Maidstone ARS has recently carried out two special event days one for the Windmills On The Air and another for the 30 years of sailing at Bewl Water in Lamberhurst, Kent.

These two events were well supported by two other clubs, The Weald and North Kent ARS. Both stations operated on 2 meters and HF and in the

case of Bewl Water over 400 QSOs were made. This excellent site which is surrounded by plenty of water demonstrated how propagation can be improved. Two particular contacts were VP8LP Bob in Stanley on the Falkland Islands and to keep the sailing connection EA0SAT was the special event station for The Americas Cup.

The World Scout Jamboree, GB100J, will be held in Hylands Park, Chelmsford from 24 July to 8 August. It is expected that over 40,000 scouts from all over the world will attend the event.

The Chelmsford Echolink Node MB7IDA, node number 265297, on 144.8375 MHz, 110.9 Hz CTCSS, covers 8 seperate scouting camp sites in Essex. It is the closest node to the Jamboree site and it is requested that scouts be given priority on the node during this event.

On Sunday 1 July the RSGB will be supporting British Wireless for the Blind with the participation by Angus Annan, MM1CCR, RSGB President and Marilyn Slade, 2E1GKR, Financial Controller in the British London 10K run. For more details contact British Wireless for the Blind at www.blind.org.uk.

RAYNET groups in many parts of the country were placed on standby at the weekend as torrential rains caused rivers to overflow.

The RSGB Sheffield and Rotherham RAYNET Group were called out on Sunday to provide point to point communications and finally stood down on Tuesday evening. Controller Mark Harrison, G6NVT, commented that it had been an exhausting 30 hours.

And now for the details of rallies and events for the coming week

[Note to newsreaders: please exercise your judgement on which of the 24 June events to read, based on your service area and time of transmission]. On Sunday 1 July the Barford radio rally takes place from 0900 at Barford, 9 miles southwest of Norwich, close to the A11 and A47. Contact David, G7URP, on 01953 457322/458844 or email radio@dcpmicro.com.

3 On Sunday 7 July the Reddish Rally takes place from 1030 at St Mary's Parish Church Hall, Reddish Road, Stockport. Details from Bernard, G3SHF, on 01625 850088, daytime or on the web at www.m5mdx.com/reddishrally.

More details of these and future events can be found on pages 88 and 89 of the July edition of RadCom. Now for the news of special events

Special event station 9A07P will be active on all bands and modes until 31 December to celebrate the city of Djurdjevac. All QSOs will be confirmed automatically via the bureau. The annual transmission on Alexanderson Day with the Alexanderson alternator on VLF 17.2 kHz will take place Sunday 1 July at 0900 UTC. Tuning up will be from 0815 UTC and the transmission will be repeated at 1300 UTC, tuning up from 1215 UTC. The station will be open to visitors. There will be activity on

amateur radio frequencies with the call SK6SAQ. For more information log onto www.alexander.n.se/. QSL reports are very welcome. On the 7 and 8 July, the Sudbury and District Radio Amateurs, SAnDRA, will be putting on special event station GB4LMR. It will take place at the Long Melford Rally, at the Farm Machinery Preservation Society's steam rally at Melford Hall, Long Melford in Suffolk. Operation will be from 80m to 10m and possibly 160m on SSB and digimodes. QSL via M0MJH direct or via bureau. Finchampstead Scout Group will be putting on a special event station GB1FSG on 22 July to 30 July on the scouting HF bands (SSB) on either 3.690, 3.940, 7.090, 7.190 or 14.290MHz + or - QRN. The station will be operated from the Lake District. And now the HF DX news compiled from 425 DX News, the Ohio-Penn DX Bulletin and other sources.

Pierre, HB9QQ, will operate as HB0/HB9QQ from Liechtenstein until 2 July and again on 6 to 9 July. Jan, PA4JJ, will be active as 9A/PA4JJ/p from Porec, Croatia until 7 July. Operating on WARC bands using RTTY and PSK. QSL direct or via bureau. A QSL request form for bureau cards can be found at www.pa4jj.nl. A Swedish expedition to Market Reef, is planned to take place on 5 to 9 July. Three or four operators will be active as OJ0/homecall on 160 to 2 metres CW, SSB and digital modes. More information will follow. Jim, WB2REM, will be operating the special 4 letter suffix call sign VP2EREM from Anguilla, NA-022 until 8 July. Expect him to be active on 80 to 10 metres CW and SSB. QSL via home call. Art, KG6ZWD, will be active as SV1/KG6ZWD/p from mainland Greece on 11 to 15 and 24 to 25 July. He will also operate as SV8/KG6ZWD/p from Andros Island, EU-067, on 17 to 23 July. Expect holiday style activity on 10 to 40 meters SSB and PSK31. QSL via home call, director bureau. Hank, W0CZE, will be active as YJ0CZE from Vanuatu on 14 to 21 July. He will operate on 10 to 80 meters SSB, 28495, 24950, 21295, 18150, 14190 & 14250, 7082 and 3795 kHz and CW 28020, 24895, 21025, 18075, 14020, 10105, 7010 and 3505 kHz. Rod, YJ8RN, of the Vanuatu Amateur Radio Society, is helping with preparations on site. QSL via W0FF.

4 Marq, CT1BWW, Juan Carlos, EA3GHZ and Tomas, EA5YH, will operate as FS/home call and PJ7/home call from Saint Martin and Sint Maarten on 15 to 25 July. They plan to be active on 80 to 6 meters CW, SSB and digital modes with two stations. Further information can be found on their web site www.dxciting.com/index.htm. Jose, CT1EHX, Toze, CT1GFK, Goncalo, CT1GPQ, Miguel, CT1IUA, Rui, CT2IHP, Jose, CT1DVG, Jose, CT1EPS, Arnaldo, CT2IOV and Antonio, CT2IOU will operate SSB, CW and RTTY on 160 to 6 meters as CS26X on 1 to 22 July for the 26th International Motorcycle Rally in Faro. QSL via CT1EHX, direct or bureau. Look for RV3ATS, RV3ATT and RU3AVF to operate on 10, 15, 20, 40, 80 and 2 metres as RV3ATS/p from 16 mountains located in various different Russian Districts until 21 July. They also plan to participate in a number of contests on the VHF and HF bands. QSL via RV3ATS, direct or bureau. Pete, W2GJ, C6APR, Ed, K3IXD, C6AXD and Randy, K4QO, C6AQO, will be active from Crooked Island, NA-113, ARLHS BAH-005 on 26 to 30 July. They will operate CW, SSB, and RTTY on 80 to 6 meters and will participate in the IOTA Contest as C6APR. All QSLs

via K3IXD. Now the contest news

The RSGB 80m Club Championship takes place between 1900 and 2030 on 2 July on the 3.5 MHz band, CW. The exchange takes the form of RST and serial number. The RSGB 144MHz activity and Club Championship takes place between 2000 and 2230 local on 3 July on 2 metres, all modes. The exchange takes the form of RST, serial number and locator. The RSGB VHF Field Day takes place between 1400 on 7 July to 1400 on 8 July on the 50MHz to 1.3GHz bands, all modes. The exchange takes the form of RST, serial number and locator.

Now the solar factual data for the period from the 18 to 24 of June, compiled by Neil Clarke, G0CAS.

The Sun was spotless every day. Solar activity was very low. Solar flux levels declined from 67 units on the 18th to 65 by the 22nd, levels then returned back to 67 by the 24th. The average was 66 units. The daily solar flux figure on the 22nd was 65 units. This would appear to be as low as the solar flux can go. During the last solar minimum only three days saw the solar flux at 65 units, they took place in July 1996. The 90 day solar flux average on the 24th remained at 74 units. X-ray flux levels remained well below the A1 level throughout. Geomagnetic activity started at quiet levels but as expected increased on the 21st due to a recurring coronal hole. The most disturbed day was the 22nd with an Ap index of 16 units. The average was Ap 9 units. The ACE spacecraft saw solar wind speeds increase from 370 kilometres per second to 580 by the 22nd. Particle densities were low except for the 21st, which increased to 38 particles per cubic centimetre late on the 21st. Bz varied between minus 2 and plus 4 nanoTeslas on the quiet days and between minus 9 and plus 10 nanoTeslas during the disturbance. In a week of typical summer propagation the principal feature was again sporadic-E, with several strong 6- metre openings to the northern fringe of South America, the Caribbean and the Gambia, and smaller ones to the North-East USA.

5 And now the solar forecast. This week the active side of the Sun is expected to be looking our way. On the last solar rotation, activity increased to moderate on some days, however, this rotation activity should only be low. Solar flux levels are expected to slowly decline and by next weekend be in the low 70's. Geomagnetic activity should be quiet all week. MUFs during daylight hours at equal latitudes should be around 19MHz for the south and 16NHz for the north. The darkness hour lows are expected to be about 10MHz. Paths this week to Japan should have a maximum usable frequency with a 50 per cent success rate of about 18MHz. The optimum working frequency with a 90 per cent success rate will be around 14MHz. The best time to try this path will be between 1000 and 1500 hours UTC. Sporadic-E should take place most days this week with the possibility of openings up to 70MHz and to a lesser extent to 144MHz. And that's all for this week from the propagation team.

6 Next, the Local News:

Please note that details of all RSGB-affiliated clubs and societies can be found on the RSGB website, including e-mail addresses

and website links where known.

[Note to newsreaders: Please read the local news items appropriate to the service area of your

transmission.]

NEWS FOR THE SOUTH-EAST

and EAST ANGLIA On Sunday 1 July Harwich Amateur Radio Interest Group is running a 70cms DF hunt in the Harwich area. Contact James, M0ZZO, on 01255 242 746.

On Sunday 1 July Norfolk Amateur Radio Club is attending Barford Radio Rally. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Sunday 1 July Radio Society of Harrow is operating De Havilland Heritage station GB2DHH. Contact Linda, G7RJL, on 020 8386 8586, or on the web at www.g3efx.org.uk or Chris 01895 621 310.

On Sunday 1 July Torbay Amateur Radio Society is operating GB60TR. Contact Dave, G6FSP, by email to g6fsp@tars.org.uk.

On Monday 2 July Braintree and District Amateur Radio Society is having a talk on navigating the Chelmer by Colin Edmond. Contact John, M5AJB, on 01787 460 947.

On Monday 2 July Cray Valley Radio Society is taking part in the 80m CW club championship. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Monday 2 July Felixstowe and District Amateur Radio Society is having a talk on contesting followed by a visit to the MRS shack, Steve M1ACB and Keiron M0HKB. Contact Paul, G4YQC, by email to paul.whiting@bt.com.

On Monday 2 July Southdown Amateur Radio Society is having a talk on foxhunting by Peter, G6GVM. Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com.

On Monday 2 July Surrey Radio Contact Club is having its construction contest. Contact Ray, G4FFY, on 020 8644 7589.

On Tuesday 3 July Chelmsford Amateur Radio Society is having a talk by Robin Butcher. Contact Martyn, G1EFL, on 01245 469 008.

On Tuesday 3 July Cray Valley Radio Society is taking part in the 2m Club Championship. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Tuesday 3 July Horndean and District Amateur Radio Club is having a social evening. Contact Stuart, G0FYX, on 023 9247 2846, or on the web at www.hdarc.co.uk.

On Tuesday 3 July Leiston Amateur Radio Club is having a foxhunt antenna construction evening. Contact Dave, G4HUP, on 01473 737 717, g4hup@btinternet.com.

On Wednesday 4 July Chesham and District Amateur Radio Society is having a general meeting. Contact Terry, G0VFW, on 01442 506 344, or by email to terry.g0vfw@ntlworld.com.

On Wednesday 4 July Dover Radio Club is having a presentation on amateur radio and disabilities by Catherine, M1CVF. Contact Brian, G4SAU, by email to g4sau@DARC.org.uk.

7 On Wednesday 4 July Fareham and District Amateur Radio Club is having a natter night and club station operating evening with G3VEF and G8KGI. Contact Jim, M1JJN.

On Wednesday 4 July Havering and District Amateur Radio Club is having a business meeting review of the second quarter of 2007. Contact Dave, 2E0EBV, on 07956 594 514.

On Wednesday 4 July Norfolk Amateur Radio Club is having a talk on traps with David, G0PFN. Contact Mark Taylor, G0LGJ, on 01362 691099, or by email to narc@g0lgj.co.uk.

On Wednesday 4 July Southdown Amateur Radio Society is operating slow scan TV from Halisham shack. Contact John, G3DQY, on 0124424319, or by email to vaughdqy@aol.com.

On Wednesday 4 July Worthing and District Amateur Radio Club is having members talks on the subject of 'my other hobbies'. Contact Roy, G4GPX, on 01903 753 893.

On Thursday 5 July Cray Valley Radio Society is having a talk on antenna analysers by G3SPJ. Contact Bob, BRS32525, on 020 8265 7735 after 8pm.

On Thursday 5 July Horsham Amateur Radio Club is watching the Peter 1 Island DXpedition 2006 video. Contact or on the web at www.harc.org.uk.

On Thursday 5 July Shefford and District Amateur Radio Society is having a mobile direction finding event. Contact David, G8UOD, on 01234 742 757.

On Friday 6 July Cambridge and District Amateur Radio Club is having a talk on getting started with FPGA devices and retro-computing by Andrew, M0BXT. Contact David, G8JKV.

On Friday 6 July Loughton and Epping Forest Amateur Radio Society is having a review of the Friedrichshafen 2007 rally by John, G8DZH. Contact Marc, G0TOC, on 020 8502 1645, or by email to info@lefars.org.uk.

On Friday 6 July Mid-Sussex Amateur Radio Society is making preparations for NFD weekend. Contact Sue, G6YPY, on 01273 845 103, or by email to sue@figgerit.co.uk.
